Here, in our judgment, the voice of humanity is so near the tone of the burlesque and ridiculous, that it is calculated to do more harm than good. The cruelties of the knackers' yards ought to be prevented, and any effective police would prevent them; but the picture drawn of horses eating each others' tails, &c. is too apt to raise a laugh, at least among the multitude, and the ludicrous idea is a fatal association to twice blessed mercy. But as if this were not enough, there is an etching of the knackers' yard, by George Cruikshank, which makes misery so irresistible a jest, that we are surprised the force of the thing did not occur to the worthy editor. On the contrary, he calls the artist the Hogarth of the age, and pronounces his engraving to be "an inimitable production of natal genius." He goes on to apologise for introducing pigs and poultry fattening on dead horses, in this yard, for the London market. We acknowledge that the evil is disgraceful and disgusting, but this sort of exposure of it is in bad taste.

Neither can we say that we entirely like the plate of the Abattoir at Montmartre, prefixed to the first Number of the publication; it is neatly executed; but why, in recommending these excellent erections, display outside men striking and hauling cattle, dogs and animals fighting, and sheep driven with uplifted staves? There must of necessity be compulsion and a measure of severity in all such business; but the aim of the philanthropist should be to mitigate both as much as possible, and keep the rest from offending public feeling.

The Parisian Abattoirs are, indeed, most worthy of imitation. "They are placed towards the suburbs of the town, for the sake of easy access to the two cattle-markets of Sceaux and Poissy, from which Paris is supplied at a distance of two and five miles; whence the butchers, or, more properly designated now, meat-venders, attend one day in the week at each of these markets, to purchase the cattle for which they have occasion. These are then immediately carefully conducted, under the inspection of persons appointed by the police, to the Abattoirs, crossing only a very small portion of the town. The cattle, calves, and sheep, are here distributed into the places appointed for them, stables, enclosures of various kinds, &c. All these are arranged in a large court or square, which, shut in by handsome iron gates, make a very ornamental appearance. Every attention is paid to the different animals, till they come in turn to be slaughtered; and that this operation may be performed in the most prompt, dexterous, and humane manner, every instrument and convenience that can be imagined for this purpose is

provided; and likewise for cleansing and preparing the meat with the greatest nicety, that it may be exposed in the shops for sale in the purest and healthiest state possible."

These establishments, the editor tells us, were warmly advocated by a "talented" friend of his, since dead, but who (he adds, in the style which we consider to be mischievous from its exaggeration and bathos) "if the spirits of the blessed are permitted to behold from their exalted station what is passing below, must bend with satisfaction over every effort that is now making to bring the subject before the public."

Several improvements are suggested for the metropolis,—one a very obvious one, viz. "The meat to be conveyed, for the purpose of convenience and coolness, early in the morning, or late in the evening."

Describing the mal-practices of London, it is observed—"When arrived at their final destinations, it is only the humane butcher who thinks it of any importance to give food or water to animals, though often frothing at the mouth from fatigue and thirst, who are in a few hours to have the *coup de grace* given them. So little accommodation can be obtained for slaughter-houses, in this densely crowded metropolis, that situations the most objectionable, both as regards the health of the neighbourhood and the preparation of the meat, are unavoidably chosen [this is a bull, by the by]; and even such places as underground cellars, where there cannot possibly be any ventilation, are used in hundreds of instances for sheep, &c. in the heart of the city. This, then, is the state, for the most part, of the sheep and cattle which are fattened for the London market. Their fevered blood, from fatigue and ill-usage, must be in a state little short of putrefaction, and their flesh must be as far removed as possible from that healthy state in which alone it ought to become the food of the meanest of the people; yet from such meat are the tables of the rich and the luxurious supplied. Contrasted with those of the *abattoir*, a word may be added with regard to the ulterior operations of our butchers. There being no interference with any slovenly habits they may have, the blood, the offal, and all the impure refuse of their trade, may remain unremoved as long as it may suit their lazy convenience; and no inquiry is ever made whether the immediate neighbourhood of their domiciles are as healthy as others, though they congregate in masses, as in Whitechapel and other places; or are suffered to exist singly, pell-mell, among the habitations of people of all classes, in some of the finest parts of the town. To give an idea of the handsome appearance which such buildings as the abattoirs would give to the town,

* And so it is (p. 43) to speak of animals penned up for slaughter, with "the big tears trickling from their eyes, while anxiously awaiting their own death." Such writing does not affect, it revolts us. The understanding must go along with the sympathy: how much more true and fine is it to read of the unconscious lamb which "licks the hand just raised to shed its blood!"

and by way of hint to the architect, we have annexed an engraving of the abattoir of Montmartre. The slaughter-houses, which are considered the nuisance and disgrace of the English metropolis, are placed in the outskirts of Paris, and under the inspection of the police."

The next paper is against an annual exhibition at Stamford, called the Bull-running, and a relic of the barbarous sports of our ancestors. Public notoriety will, we think, suffice to put an end to this savage custom; and the *Voice of Humanity* deserves credit for directing attention to it. In his notes, however, the editor has been guilty of an injustice to the clergy which ought to have been corrected, or rather the first error, as indicating an animus likely to estrange a powerful body from the cause, ought not to have been committed.

"Why do the clergy (he says page 16) allow this? Does it not appear as if they sanctioned the custom?" This innuendo is exceedingly unfair; and it is rendered the more glaring, when we read, only five pages farther on, "the truth is, that *parliament*, alone, can wipe off this foul stain, disgraceful as it is to the history of our country;" and yet more, when it is stated, at page 67, "The clergy of Stamford, however, and ministers of different denominations, regarded their sacred trust. At the church of St. Mary, on the 6th Inst., a most eloquent and impressive sermon was preached by the Rev. Thomas Roberts, rector, most forcibly denouncing the ensuing scene, and depicting in glowing language (the effect of which might have been supposed irresistible) its attendant evils, offensive to God, and injurious to the interests of man." What then becomes of the stigma so injudiciously attempted to be cast on the clergy?

Publicity alone, as we have observed, will contribute much to correct the evils which it is the object of the *Voice of Humanity* and its supporters to eradicate: we therefore highly approve of such accounts as are given of the cruelties exercised at the East Kent fox-hunt, and at bear-baitings, pits, and other monstrous nuisances, in various parts of the capital. Wherever a sense of decency and a love of morality exist, these abominations must be quashed as soon as they are discovered: more vigilance, indeed, is to be desired in seeking them out, and not winking at such vitiating receptacles for all that is wicked and criminal. These haunts of the lowest and deepest guilt have been tolerated far too long; and the punishment of death can hardly be avoided while such schools of training for the galleys are permitted to exist. The wisdom of legislation must look to causes, if it be desired to preclude effects; and we fear this is only one revolting instance among many, where the latter are detected for punishment, and the former neglected for prevention.

At page 37 we find a silly letter signed Frances Maria Thompson,—such a letter as weakens a benevolent design: it is about the pitiable condition of dogs drawing trucks, &c. Now, why should not dogs be made useful, as well as horses, asses, or oxen, in this country? In other quarters of the earth, among the Esquimaux, for example, they do all the drudgery, as rein-deer, llama, camels, and other animals, do elsewhere. It is nonsense, merely because we are not accustomed to a thing, to run-a-muck against it, armed with a straw and in the weak panoply of morbid sensibility. Let us strive to correct real grievances, which are sufficiently numerous; not encumber our exertions with mawkish affectations.

On the subject of surgical experiments

upon animals, we can neither condemn what the writer says, nor go the length to which he carries his censure. We fear that, under the pretence of science, there is much needless cruelty inflicted in this way;—cruelty, the still worse quality of which is, that it also hardens the hearts of the inflictors through all their future life; but it is nothing short of senseless abuse to speak of Dr. Majendie, on account of his experiments (p. 157), as "*the blood-thirsty, the fiendish MAJENDIE!*" What value can be set on the dictates of a person who can be so ignorant of the benefits which have resulted to mankind from Majendie's investigations, as thus to misrepresent his motives? Let us learn to allow to others as much virtue as we claim for ourselves; and then it would be but a question whether Dr. Majendie, with all his painful operations upon dogs and rabbits, had not as just a right to be considered a beneficent genius towards his species, as the friends and supporters of the *Voice of Humanity*. Illiberality is the bane of good and good intentions.

We shall not, because we do not think entering upon such minutiae would answer the end, criticise the description of the methods employed to make white veal (p. 96); nor the hyperbole (p. 97), that "the man who started the first steam carriage was the greatest benefactor to the cause of humanity the world ever had;" nor other similar imperfections in this publication. If we remark upon them at all, it is only with the view to procure the consideration of the subscribers to so excellent an undertaking to this fact,—that if they hope to accomplish a great national object, they must take care not to offend prejudice, or provoke opposition, or excite ridicule, by admitting foolish clamours, unjustifiable attacks, cant or ludicrous caricatures of suffering, in style or engraving, to form part of their public appeal. The latter are the besetting drawbacks in these four Nos. The knackers' yard is, as we have noticed, more calculated to beget mirth than pity; and people read without commiseration the inflated narration of "heart-rending statements" respecting "the last agonised groans" of calves,* of heart-broken coach-horses; and "in taking life, that the feelings of the poor animals are not only not consulted, but wantonly trifled with." Nor can we readily credit the truth of the following statement, since the mere convenience of the most barbarous wretch in existence would induce him to save trouble by avoiding such gratuitous barbarity. But the writer asserts: "Another, and I fear not an uncommon cruelty with respect to sheep and lambs, is the beginning to flay them before life is extinct. *I have seen three legs of a sheep flayed before it was dead*, and not unfrequently heard an oath from the mouth of the operator at every movement of the suffering animal, because that movement interfered with the next cut of his knife!"†

With this we close our remarks on a periodical, to which, and to its purpose, there cannot be a warmer friend than we are. If we have found fault, it is with the hope of amending and strengthening its future operation; for ours, though a somewhat different, is also a strenuous and decided *voice of humanity*. We

* The context runs thus: "If our legislature, disregarding the convenience and caprices of butchers, were to enact, that before the termination of that day on which a calf was taken to the slaughter-house, it should be stunned by a blow upon the head, after which the throat to be cut—we should then have true reason to congratulate our country on the advancement of humanity."

† Apropos: one of the best suggestions in the book is that of a small truck or carriage for a sheep, which might either relieve the fatigued and perishing, or by carrying a loader, induce the flock to follow where required.

think the appeal so irresistible, that it need only be made to reason; and, therefore, we blame any attempt to enlist the passions.

We dare say our readers are at a loss to discover why we have put the title of another and very dissimilar work at the head of this paper. We will briefly explain the why and wherefore. Among other important discussions connected with the laws of humanity, the most important is, the reckless readiness with which the punishment of death is inflicted in this country. Though we are all to the manner born, and our souls seared by custom; yet on the slightest moment's reflection, nature shudders at this abhorrent process. We cannot express the feelings with which we regard the whole machinery set in motion to perpetrate this atrocity; the solemn mockery of the scene of judgment, the awful guilt of the scene of death. To our sense, nothing can be more encouraging to crime than the lottery of penalty which attends its commission;—nothing more murderous than the execution of sentence upon one convict, while his fellow is permitted to escape;—nothing more perilously responsible before God than the office of a judge who makes these selections of victims for sacrifice.* We would not have the blood of one such sacrifice on our heads, for all the ermine and revenue of the bench.

With these sentiments we have read, as coupled with the *Voice of Humanity*, a republication of a powerful speech, delivered by Sir W. Meredith in 1777, against a bill in the Commons for creating a new capital felony,† which we earnestly recommend to the public attention: convinced that it will help to abridge the period during which our sanguinary and uncertain code, with between two and three hundred offences punishable by death!! may yet be suffered to stain our history.

Let us take a lesson from savages: the following is a Report of Parliamentary proceedings,—where? in the windward islands of the South Pacific Ocean, where the barbarous, tattooed, half-naked, and ferocious-looking chiefs met to revise their code of laws! Alas, for civilised England!

* We can never forget the shock we received at a county assize, which we happened to attend as a friend of the high sheriff, and had consequently an opportunity of witnessing the internal proceedings. One fire-looking peasant, of so good an aspect that we would have distinguished him in a crowd as the pattern of an English countryman, was found guilty, as well as several others, of a crime which, from its prevalence at that period, it was thought necessary to repress by severity. There were no more atrocious crimes in the calendar,—there were too many for this offence to execute them all,—and it was expedient to "make an example." The judge, humane individual too, was led to inquire, in order to ascertain who was the worst among the convicted. He asked the clerk of the court, who, knowing no more than himself, asked the gaoler. The gaoler was only aware of their conduct since they had been under his charge in prison; for they came from distant parts of the county; and he asked the various constables who had apprehended and brought them. The constable who had taken the unhappy individual alluded to, reported unfavourably of his character; and the report was carried up to the judgment-seat. The dreadful mark of black-letter, was underscored beneath his name in the general list delivered to the sheriff; and the poor wretch was hanged. We should mention that the conviction was for administering medicines, with an unlawful intent to an unhappy young woman; and that the principal evidence was a little girl about ten years old, who listened to a conversation on the other side of a door. The nature of an oath was explained to her, and she said she understood it; if she told a lie she would go to the fire!!!

What a lottery was here! Had there been murders, or even horse-stealing, in the calendar, the life of this victim would have been spared; as it was, and we are firmly persuaded he was the least guilty of the number, he was made the solitary sacrifice.

† Pp. 8, Harvey and Darton. One of a series of tracts by the Society for the Diffusion of Information on the subject of Capital Punishments, and a sound, unsensational argument.

On the question in reference to death or banishment for murder being proposed, "Hitoti, the principal chief of Papeete stood up, and, bowing to the president and the persons around him, said: 'No doubt this is a good law,'—the proposed punishment was exile for life to a desolate island,—but a thought has been growing in my heart for several days, and when you have heard my little speech you will understand what it is. The laws of England, from which country we have received so much good of every kind—must not they be good? And do not the laws of England punish murderers by death? Now, my thought is, that as England does so, it would be well for us to do so. That is my thought.' Perfect silence followed:—and it may be observed here that, during the whole eight days' meetings of this parliament, in no instance were two speakers on their legs at the same time; there was not an angry word uttered by one against another; nor did any assume the possession of more knowledge than the rest. In fact, none controverted the opinion of a preceding speaker, or even remarked upon it, without some respectful commendations of what appeared praiseworthy in it, while, for reasons which he modestly but manfully assigned, he deemed another sentiment better. After looking round to see whether any body were already up before him, Utami, the principal chief of Buanaania, rose and thus addressed the president: 'The chief of Papeete has said well, that we have received a great many good things from the kind Christian people of England. Indeed, what have we not received from Beretane? Did they not send us (*area*) the gospel?—But does not Hitoti's speech go too far? If we take the laws of England for our guide, then must we not punish with death those who break into a house?—those who write a wrong name?—those who steal a sheep? And will any man in Tahiti say that death should grow for these?—No, no; this goes too far; so I think we should stop. The law, as it is written, I think is good; perhaps I am wrong; but that is my thought.' After a moment or two of stillness, Upuparu, a noble, intelligent, and stately chief stood forth. It was a pleasure to look upon his animated countenance and frank demeanour, without the smallest affectation either of superiority or condescension. He paid several graceful compliments to the former speakers, while, according to his thought, in some things each was right, and each was wrong. 'My brother, Hitoti, who proposed that we should punish murder with death, because England does so, was wrong, as has been shewn by Utami. For they are not the laws of England which are to guide us, though they are good;—the Bible is our perfect guide. Now, *Mitti Trutu* (the Missionary Crook) was preaching to us on (naming the day) from the Scripture, 'He that sheddeth man's blood, by man shall his blood be shed;' and he told us that this was the reason of the law of England. My thought, therefore, is not with Utami, but with Hitoti (though not because the law of England, but because the Bible, orders it), that we ought to punish with death every one found guilty of murder.' There was a lively exchange of looks all through the assembly, as if each had been deeply struck with the sentiments of the speaker, especially when he placed the ground of the punishment of death, not upon English precedent, but Scripture authority. Another chief followed, and 'rising, seemed a pillar of state,' one whose aspect, and presence, and costume of dress (richly native), made the spectators forget even him who had just sat down.

His name was Tati; and on him all eyes were immediately and intensely fixed, while, with not less simplicity and deference to others than those who had preceded him, he spoke thus:—'Perhaps some of you may be surprised that I, who am the first chief here, and next to the royal family, should have held my peace so long. I wished to hear what my brethren would say, that I might gather what thoughts had grown in their breasts on this great question. I am glad that I waited, because some thoughts are now growing in my own breast which I did not bring with me. The chiefs, who have spoken before me, have spoken well. But is not the speech of Upuparu like that of his brother, Hitoti—in this way? If we cannot follow the laws of England, in all things, as Hitoti's thoughts would perhaps lead us, because they go too far,—must we not stop short of Upuparu, because his thought goes too far likewise? The Bible, he says, is our perfect guide. It is. But what does that Scripture mean, 'He that sheddeth man's blood, by man shall his blood be shed?' Does not this go so far that we cannot follow it to the end, any more than we can follow the laws of England all the way? I am Tati; I am a judge; a man is convicted before me; he has shed blood; I order him to be put to death; I shed his blood; then who shall shed mine? Here, because I cannot go so far, I must stop. This cannot be the meaning of those words. But, perhaps, since many of the laws of the Old Testament were thrown down by the Lord Jesus Christ, and only some kept standing upright,—perhaps, I say, this is one of those which were thrown down. However, as I am ignorant, some one else will shew me, that, in the New Testament, our Saviour, or his apostles, have said the same thing concerning him that sheddeth man's blood as is said in the Old Testament. Shew me this in the New Testament, and then it must be our guide.' Much cordial approbation was evident at the conclusion of Tati's speech, and its evangelical appeal seemed to remove some difficulty and doubt respecting the true Scriptural authority applicable to the case. Next rose Pati, a chief and a judge of Eimeo, formerly a high-priest of Oro, and the first who, at the hazard of his life, had abjured idolatry. 'My breast,' he exclaimed, 'is full of thought, and surprise, and delight. When I look round at this *fare bure ra* (house of God) in which we are assembled, and consider who we are that take sweet counsel together here, it is to me all *mea huru e* (a thing of amazement), and *mea faa oaoa te aau* (a thing that makes glad my heart). Tati has settled the question; for is it not the gospel that is our guide?—and who can find directions for putting to death? I know many passages which forbid, but I know not one which commands, to kill. But then another thought is growing in my breast, and, if you will hearken to my little speech, you shall know what it is. Laws, to punish those that commit crime, are good for us. But tell me, why do Christians punish? Is it because we are angry, and have pleasure in causing pain? Is it because we love revenge, as we did when we were heathens? None of these: Christians do not love revenge; Christians must not be angry; they cannot have pleasure in causing pain. Christians do not, therefore, punish for these. Is it not that, by the suffering which is inflicted, we may prevent the criminal from repeating his crime, and frighten others from doing as he has done to deserve the like? Well, then, does not every body know that it would be a greater punishment to be banish-

ed for ever from Tahiti, to a desolate island, than just, in a moment, to be put to death? And could the banished man commit murder again there? And would not others be more frightened by such a sentence than by one to take away his life? So my thought is that Tati is right, and the law had best remain as it has been written.' One of the *taata rii*, or little men, a commoner, or representative of a district, now presented himself, and was listened to with as much attention as had been given to the lordly personages who preceded him. He said:—'As no one else stands up, I will make my little speech, because several pleasant thoughts have been growing in my breast, and I wish you to hear them. Perhaps every thing good and necessary has been said already by the chiefs; yet, as we are not met to adopt this law or that law, because one great man or another recommends it, but as we, the *taata rii*, just the same as the chiefs, are to throw all our thoughts together, that out of the whole heap the meeting may make those to stand upright which are best, whencesoever they come—this is my thought. All that Pati said was good; but he did not mention, that one reason for punishing (as a Missionary told us, when he was reading the law to us, in private) is, to make the offender good again if possible. Now, if we kill a murderer, how can we make him better? But if he be sent to a desolate island, where he is all solitary, and compelled to think for himself, it may please God to make the bad things in his heart to die, and good things to grow there. But, if we kill him, where will his soul go?' Others spoke to the same purport; and, in the result, it was unanimously determined that banishment, not death, should be inflicted on murderers. It followed, of course, that the extreme exercise of magisterial power, to take away life, was excluded from every other case."

Comment would weaken such a lesson: we leave it to, we trust, its irresistible influence on the public mind.

Philip Augustus; or, the Brothers in Arms. By the Author of "De L'Orme," "Darnley," &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

SOME years ago it was the fashion for authors to assume some disguise, and bring out their works like heroes in romances, ignorant of their real parent, till the honour they had acquired, or some chance circumstance, induced their incognito father to claim his child. A coffer was discovered in some old house, which contained a worm-eaten manuscript—or a chest floated on shore—or a portmanteau was forgotten at an inn—or a trunk left in lodgings—all holding the same contents—papers which the finder was induced to publish. Had Mr. James adopted this concealment, to declare that he had found an old chronicle in some antique chateau, he would have been readily believed—such knowledge of the time, and such verisimilitude, does the accuracy of manner, speech, and costume, give to *Philip Augustus*. We cannot but think it a very futile objection raised against this species of romance, that, forsooth, it interferes with the study of history's self. These cavillers seem entirely to forget, that if the subject had not been pleasantly brought forward, a large class would never have read at all; and, secondly, they have not sufficiently considered, that general knowledge is the really useful part of history: a mere itinerary of dates and facts is the most useless thing in the world. To illustrate by an example: it was of slight moment to the reader

to know that Richard Cœur de Lion ascended the throne, went to Palestine, and, after a long absence, returned; and yet this is a summary of the information contained in the majority of historical abridgments. But a new stock of ideas was excited, a more accurate notion of the times entertained, when, in *Jeannette*, the miseries of feudal tyranny were brought forward in active operation on a land where the people were not in a state to resist, or the government to repress. A new interest was excited; and the history of our country has had more attention attracted to it by the works of Sir Walter Scott, than by any historical impetus ever given to the human mind. It is in this spirit we bestow our warm praises on Mr. James's volumes: his general picture of the age is true, correct, and verified by careful research; while the antiquary's labours are engrafted on an animated story, which has long been, and long will continue to be, the primary attraction to the plurality of readers. Mr. James has chosen a most interesting period; the great qualities of Philip Augustus were fitted to meet the momentous circumstances in which he was placed; his whole character was a singular mixture of policy and energy. Our author has two heroes; one, Thibault d'Auvergne, connects the narrative with Agnes, the second wife of Philip; the other, De Coucy, with the unfortunate Arthur of Brittany. We observe the materials of these pages are drawn from those of M. Capefigue, whose work is one of the most important additions to French history. Mr. James has deviated much from his authority, sometimes not to advantage—for the actual narrative is so very marked and touching. He represents Agnes as separated at last from her husband through the operation of jealousy, and finally dying of grief; while her beautiful rival, Ingerberge, is kept quite out of sight. This is not true—she died in childhood; and a very pathetic account is given in the old chronicles, of her appearing, dressed in deep mourning, before the peers of France, where her tears and her situation excited the strongest interest—but in vain. We also think Philip's celebrated speech on the Pope's refusing to take off the interdict, very much weakened. On hearing this refusal, Agnes exclaimed—"My God! my God! where shall I, then, take my grief?" When Philip, in his rage, replied—"Well, then, I will turn my back on the church; Saladin was happy to have no pope." Mr. James makes this a mere threat used before one of his ministers. We must also observe, that the phrase *beau sire* is too evident a favourite of the writer's: its use is frequent even to affectation. We now proceed to give a specimen of the narrative. As Agnes acts a prominent part, we will quote that which introduces her.

"We must now change the scene, and, leaving wilds and mountains, come to a more busy though still a rural view. From the small, narrow windows of the ancient château of Compiègne might be seen, on the one side, the forest with its ocean of green and waving boughs; and on the other, a lively little town on the banks of the Oise, the windings of which river could be traced from the higher towers, far beyond its junction with the Aisne, into the distant country. Yet, notwithstanding that it was a town, Compiègne scarcely detracted from the rural aspect of the picture. It had, even in those days, its gardens and its fruit-trees, which gave it an air of verdure, and blended it, as it were, insensibly with the forest, that waved against its very walls. The green thatches, too, of its houses, in which slate

or tile was unknown, covered with moss, and lichens, and flowering houseleek, offered not the cold, stiff uniformity of modern roofs; and the eye that looked down upon those constructions of art in its earliest and rudest form, found all the picturesque irregularity of nature. Gazing, then, from one of the narrow windows of a large, square chamber in the keep of the château, were two beings, who seemed to be enjoying, to the full, those bright hours of early affection, which are the summer days of existence, yielding flowers, and warmth, and sunshine, and splendour;—hours that are so seldom known—hours that so often pass away like dreams—hours which are such strangers in courts, that, when they do intrude with their warm rays into the cold precincts of a palace, history marks their coming as a phenomenon, too often followed by a storm. Alone, in the solitude of that large chamber, those two beings were as if in a world by themselves. The fair girl, seemingly scarce nineteen years of age, with her light hair floating upon her shoulders in large masses of shining curls, leaned her cheek upon her hand, and gazing with her full, soft blue eyes over the far extended landscape, appeared lost in thought; while her other hand, fondly clasped in that of her companion, shadowed out, as it were, how nearly linked he was to her seemingly abstracted thoughts. The other tenant of that chamber was a man of thirty-two or thirty-three years of age, tall, well-formed, handsome, of the same fair complexion as his companion, but tinged with the manly florid hue of robust health, exposure, and exercise. His nose was slightly aquiline, his chin rounded and rather prominent, and his blue eyes would have been fine and expressive, had they not been rather nearer together than the just proportion, and stained, as it were, on the very iris, by some hazel spots in the midst of the blue. The effect, however, of the whole was pleasing; and the very defect of the eyes, by its singularity, gave something fine and distinguished to the countenance; while their nearness, joined with the fire that shone out in their glance, seemed to speak that keen and quick sagacity which sees and determines at once, in the midst of thick dangers and perplexity. The expression, however, of those eyes was now calm and soft, while sometimes holding her hand in his, sometimes playing with a crown of wild roses he had put on his companion's head, he mingled one rich curl after another with the green leaves and the blushing flowers; and, leaning with his left arm against the embrasure of the window, high above her head, as she sat gazing out upon the landscape, he looked down upon the beautiful creature, through the mazes of whose hair his other hand was straying, with a smile strangely mingled of affection for her, and mockery of his own light employment. There was grace, and repose, and dignity, in his whole figure, and the simple green hunting tunic which he wore, without robe, or hood, or ornament whatever, served better to shew its easy majesty than would the robes of a king; and yet this was Philip Augustus. 'So pensive, sweet Agnes!' said he, after a moment's silence, thus waking from her reverie the lovely Agnes de Meranie, whom he had married shortly after the sycophant bishops of France had pronounced the nullity of his unconsummated marriage with Ingerberge, for whom he had conceived the most inexplicable aversion. 'So pensive,' he said; 'where did those sweet thoughts wander?' 'Far, far, my Philip!' replied the queen, leaning back her head upon

his arm, and gazing up in his face with a look of that profound, unutterable affection which sometimes dwells in woman's heart for her first and only love;—far from this castle, and this court—far from Philip's splendid chivalry, and his broad realms, and his fair cities; and yet with Philip still. I thought of my own father, and all his tenderness and love for me; and of my own sweet Istria! and I thought how hard was the fate of princes, that some duty always separated them from some of those they love, and—' 'And doubtless you wished to quit your Philip for those that you loved better,' interrupted the king, with a smile at the very charge which he well knew would soon be contradicted. 'O no! no!' replied Agnes; 'but as I looked out yonder, and thought it was the way to Istria, I wished that my Philip was but a simple knight, and I a humble demoiselle. Then should he mount his horse, and I would spring upon my palfrey; and we would ride gaily back to my native land, and see my father once again, and live happily with those we loved.' 'But tell me, Agnes,' said Philip, with a tone of melancholy that struck her, 'if you were told, that you might to-morrow quit me, and return to your father, and your own fair land, would you not go?' 'Would I quit you?' cried Agnes, starting up, and placing her two hands upon her husband's arm, while she gazed in his face with a look of surprise that had no small touch of fear in it—'would I quit you? Never! And if you drove me forth, I would come back and be your servant—your slave; or would watch in the corridors but to have a glance as you passed by—or else I would die,' she added, after a moment's pause, for she had spoken with all the rapid energy of alarmed affection. 'But tell me, tell me, Philip, what did you mean? For all your smiling, you spoke gravely. Nay, kisses are no answers.' 'I did but jest, my Agnes,' replied Philip, holding her to his heart with a fond pressure. 'Part with you! I would sooner part with life!' As he spoke, the door of the chamber suddenly opened, the hangings were pushed aside, and an attendant appeared. 'How now!' cried the king, unclasping his arms from the alight, beautiful form round which they were thrown. 'How now, villain! Must my privacy be broken at every moment? How dare you enter my chamber without my call?' And his flashing eye and reddened cheek spoke that quick impatient spirit which never possessed any man's breast more strongly than that of Philip Augustus. And yet, strange to say, the powers of his mind were such, that every page of his history affords a proof of his having made even his most impetuous passions subservient to his policy—not by conquering them, but by giving vent to them in such direction as suited best the exigency of the times, and the interest of his kingdom. 'Sire,' replied the attendant, with a profound reverence, 'the good knight Sir Stephen Guerin has just arrived from Paris, and prays an audience.' 'Admit him,' said Philip; and his features, which had expanded like an unstrung bow, while in the gentler moments of domestic happiness, and had flashed with the broad blaze of the lightning under the effect of sudden irritation, gradually contracted into a look of grave thought as his famous and excellent friend and minister Guerin approached. He was a tall, thin man, with strong marked features, and was dressed in the black robe and eight-limbed cross of the Order of Hospitaliers, which habit he retained even long after his having been elected Bishop of Senlis. He pushed back his hood, and bowed low in sign of reverence as he

approached the king; but Philip advanced to meet him, and welcomed him with the affectionate embrace of an equal. 'Ha! fair brother!' said the king. 'What gives us the good chance of seeing you, from our town of Paris? We left you full of weighty matters.' 'Matters of still greater weight, beau sire,' replied the Hospitaller, 'claiming your immediate attention, have made me bold to intrude upon your privacy. An epistle from the good Pope Celestin came yesterday, by a special messenger, charging your highness—' 'Hold!' cried Philip, raising his finger as a sign to keep silence. 'Come to my closet, brother; we will hear the good bishop's letter in private. Tarry, sweet Agnes! I have vowed thee three whole days, without the weight of royalty bearing down our hearts; and this shall not detain me long.' 'I would not, my lord, for worlds,' replied the queen, 'that men should say my Philip neglected his kingdom, or his people's happiness, for a woman's smile. I will wait here for your return, be your business long as it may, and think the time well spent. Rest you well, fair brother,' she added, as it were in reply, to a beaming smile that for a moment lighted up the harsh features of the Hospitaller; 'cut not short your tale for me.' The minister bowed low, and Philip, after having pressed his lips on the fair forehead of his wife, led the way through a long passage with windows on either side, to a small closet in one of the angular turrets of the castle. It was well contrived for the cabinet of a statesman, for, placed as it was, a sort of excrecence from one of the larger towers, it was cut off from all other buildings, so that no human ear could catch one word of any conversation which passed therein. The monarch entered; and, making a sign to his minister to close the door, he threw himself on a seat, and stretched forth his hand, as if for the pontiff's letter. 'Not a word before the queen!' said he, taking the vellum from the Hospitaller, 'not a word before the queen, of all the idle cavilling of the Roman church. I would not, for all the crowns of Charlemagne, that, Agnes should dream of a flaw in my divorce from Ingerberge—though that flaw be no greater a matter than a moat in the sore eyes of the church of Rome. But let me see! What says Celestin?' 'He threatens you, royal sir,' replied the minister, 'with excommunication, and anathema, and interdict.' 'Pshaw!' cried Philip, with a contemptuous smile; 'he has not vigour enough to anathematise a flea! 'Tis a good mild priest; somewhat tenacious of his church's rights,—for, let me tell thee, Stephen, had I but craved my divorce from Rome, instead of from my bishops of France, I should have heard no word of anathema or interdict. It was a fault of policy, so far as my personal quiet is concerned; and there might be somewhat of hasty passion in it too; but yet, good knight, 'twas not without forethought. The grasping church of Rome is stretching out her thousand hands into all the kingdoms round about her, and snatching, one by one, the prerogatives of the throne. The time will come—I see it well—when the prelate's foot shall tread upon the prince's crown; but I will take no step to put mine beneath the sandal of St. Peter. No! though the everlasting buzzing of all the crimson flies in the conclave should deafen me outright. But let me read.' The Hospitaller bowed, and silently studied the countenance of the sovereign, while he perused the letter of the pontiff. Philip's features, however, underwent no change of expression. His brow knit slightly from the first; but no more than so far as to shew atten-

tion to what he was reading. His lip, too, maintained its contemptuous curl; but that neither increased nor diminished; and when he had done, he threw the packet lightly on a table, exclaiming—'Stingless! stingless! The good prelate will hurt no one!' 'Too true, sire,' replied the impassible Gnerin; 'he will now hurt no one, for he is dead.' 'St. Denis to boot!' cried the king. 'Dead! why told you it not before? Dead! when did he die? Has the conclave met? have they gone to election? Whom have they adored? Who is the pope? Speak, Hospitaller! speak!' 'The holy conclave have elected the Cardinal Lothaire, sire,' replied the knight. 'Your highness has seen him here in France, as well as at Rome: a man of a great and capacious mind.' 'Too great! too great!' replied Philip thoughtfully. 'He is no Celestin. We shall soon hear more!'"

For that more we must refer our readers to the volumes themselves: they will well repay the perusal; for they are, indeed, very valuable additions to our stock of pleasure and literary enjoyment.*

Travels in Russia, Persia, Turkey, and Greece, in 1828-9. By Thomas Alcock, Esq. London, 1831.

THE difference between travelling and writing for publication, or rather for publishing; and of travelling for one's own gratification, and printing an account of what seemed most

* We take this opportunity of doing Mr. James a long-delayed justice. After the publication of his *History of Chivalry*, we received an epistle of remonstrance from him, touching our review of that work. Many slight circumstances, to which even reviewers are subject, caused the omission of the following note; and we are glad to take this opportunity of shewing the writer it was unintentional neglect on our part. The space required for three closely-written pages, and those not on subjects of general interest, must be our apology to Mr. James for answering, instead of inserting, his letter; particularly as his complaints may be condensed into four heads. First, that we called his history of the crusades, not of chivalry. We repeat, we still consider it such. That he alludes in his preface to his publisher's desire of the materials being condensed into one volume, accounts for the fact—but rather confirms our assertion. The praise we gave his work, sufficiently shews we meant not to impeach his manifest research. Secondly, that his censure of Henry II. was only applied to his personal character. Mr. James certainly does not state that he intended to draw a line between the private and public life of this monarch. Thirdly, that we accuse him of leaning to a belief in the romantic legends of the time, which, to use his own words, is "perfectly damnable to the fame of an historian." The instances in point are, the Princess Elenore and Fair Rosamond. In the first case, we did not say he made an assertion: we stated he had better have explicitly mentioned the falsehood of the tale, which is, as Sir James Mackintosh so well expresses it, "a beautiful invention in honour of female devotedness." It was first told of Robert, Duke of Normandy. Fair Rosamond is more debatable ground. Mr. James holds to the belief that she was poisoned by Queen Elenore:—we think the evidence inconclusive. Higdon, the monk, who seems to have originally put forth the story, is very apocryphal authority. Speede, in his *Chronicles*, alludes to it but as a popular legend; and Hume positively states his disbelief. The minstrels seem to have chosen, with peculiar partiality, the annals of the house of Plantagenet as the theme of their inventions. Stowe mentions a tradition, not generally known, that in those days, when the city was the court-end of the town, besides the Labyrinth at Woodstock, Rosamond had another for the London season on Paul's Wharf Hill, where, says he, "Henry II. kept, or was supposed to have kept, the jewel of his heart: she whom he there called Rosa Mundi, and here by the name of Diana." Hence it was called Diana Camera—a rather a misnomer. We should not omit, that Mr. James mentions Capetique as another authority for his side of the question; and we must add, want of research is the last charge we ever intended to bring against one who had evidently bestowed much time and care, as well as great ability and talent, on his subject. But we must reserve the exercise of our own opinion, without which our censure is void, and our praise valueless. It is curious to observe, how some incidents seem the stray waifs of history, and adhere, as they float down the stream of time, first to one, and then to another. The anecdote just dramatised as of Henry IV. of France, was originally told of Agesilaus, King of Sparta, who pursued his game with his children before the Persian ambassador.

worthy of attention, for private circulation among friends, is strikingly exemplified in this volume, which belongs to the latter class. It is the production of Mr. Alcock, of Curzon Street, and of Kingswood Warren, Epsom, who was, we believe, a member of the parliament before last. The tour he performed was one such as few but Englishmen, and but few of them, with all their energy, spirit, and thirst for information, are in the habit of attempting; for in eighteen months, avoiding much of common routes, he traversed a very considerable portion of Southern Europe and Asia, as an indication of some of the leading points will shew, namely, Calais, Blenheim, Vienna, Cracow, Brody, Odessa, Sevastopol, Nikita, Alushta, Sudack, Kersch, Taman, Karass, Caucasus, Tiflis, Erivan, Ararat, Makoo, Tabreez, Tebrau, Kirmanshah, Sennah, Hoey, Wan, Arzroom, Tokat, Constantinople, Nice, Therapia, Tenedos, Egina, Napoli, Sparta, Corinth, Athens, Corfu, Milan, Paris, and Calais again! This includes a *giro* of about a thousand miles in Persia, from and back to Tabreez; and a journey *en courier* thence through Asia Minor to the capital of Turkey.

To an intelligent mind,* such travel, and at so interesting a period to the countries visited—for the Turkish war was at its crisis, and the Russian embassy had just been massacred at Tebrau—could not fail to be deeply instructive. Yet, as we have observed, not being in the act of book-making, Mr. Alcock has confined his remarks to a summary, incredible as it may seem, of 227 pages!! A tolerable manufacturer would not have got to Vienna in a hundred pages more, with Brussels, and Waterloo, and Spa, and Aix-la-Chapelle, and Cologne, and Coblenz, and Mayence, and Worms, and Heidelberg, and Baden-Baden, and Stuttgart, and Ulm, and Ratisbon, and Passau, and the Danube, and the Castle of Cœur de Lion, &c. &c. all on his way, with their proper episodes of revolutions, battles, waters, congresses, kings, antiquities, great tuns, baths, and legends. In very moderate hands indeed, we would have gladly compounded for four thick volumes, first edition quarto, and a second edition, octavo, to follow immediately.

As Mr. Alcock, however, has been content with a very rapid glance, we must merely employ the favour in hand by taking an equally rapid glance at it. At page 2 we find ourselves in Vienna: previous to which the author says—

"On leaving Ulm, when we approached the village of Hochstadt, our interrogations about Blenheim were answered with a vacant stare: but it was not a little gratifying to the ears of an Englishman, and quite sufficient to identify the memorable spot, to find that the name of Malbrook was still familiar to the ignorant peasants of the neighbourhood. The position of the French and Bavarians at Schellenburg, close to Donawert; is still very easily to be traced. The duke took it by assault a few days before the battle of Blenheim."

At Tiflis, our extract reads: "We visited here the remains of an ancient temple of the fire-worshippers, at present converted into the dwelling of an old Georgian woman; there was nothing in the ruin itself worthy of observation. The old lady was employed in making a bridal dress for her daughter, of more value, apparently, than her whole property; such is the oriental love of finery. In the interior of the country we happened to see

* That Mr. Alcock's is eminently so, we gather not only from the volume before us, but from a pamphlet on Reform, published by J. Liberty, Titchfield Street.

the merriment of a wedding, which consisted chiefly of dancing and drinking. The men were formed in a ring, leaping and hallooing with such vigour, that the exercise was excessive; and the bride and bridegroom, standing together, having on their heads crowns of gilded ornaments to distinguish them, as is generally the custom in marriages of the Greek church, looked like two egregious fools [an appearance not altogether uncommon even in England, though the parties wear no crowns]. Before the possession of Georgia by the Russians, the women wore their faces covered, according to the fashion and religion of their eastern neighbours: but as the result of all sudden conversions is generally a falling into the contrary extremes, they now volunteer a greater display of their charms than is becoming, and which, leaving nothing to the imagination, destroys the interest one would otherwise take in the contemplation of their handsome features. There are twenty-eight thousand inhabitants in Tiflis, and it is a very flourishing town, carrying on considerable trade with the East and Moscow. It is probable that its commerce will continue to increase, and that a new channel of communication will be opened by the Black Sea, through the province of Gouriel, having Poti as the port, from whence there is a good road, which will enable them to trade directly with the Mediterranean. We arrived at Tiflis a few days after the return of Count Paskevitch's army from a series of successes against the Turks; having first taken Kars after some resistance; Akhalkalaki, which capitulated; and then Akhalstic, where the general was employed five days in entrenching himself on one side of the town only, during which time there was an encounter, and five hundred Turks were killed: he then besieged it from the opposite side; the *ruse de guerre* succeeded, though not without difficulty, or before five or six thousand Turks (the Russian accounts say more) were killed. The siege occupied ten days altogether. In addition to the places already mentioned that fell into the hands of Russia in the campaign of 1828, may be added Poti, Anapa, Diadeen, Bayazeed, Topra-Kalla, and Ardahagn. On some occasions the Turks fought like madmen; so great indeed was their antipathy to the Russians, that even the women blackened their faces, and did their utmost against them. The desperation of the Turks led them to acts of pertinacious courage scarcely conceivable. An officer told me he had seen an old woman present a pistol at some Cossacks who had entered her house after the siege; the soldiers unwilling to kill so old and infirm a person, besought her to drop the weapon; she refused, and they were obliged to run her through with the bayonet. Others, carried by the fanaticism of their religion, threw themselves into the flames, rather than incur the ignominy of becoming slaves to Christians."

The following is a curious illustration of the military discipline of Russia:

"One of the regiments of guards generally stationed at Petersburg, was in Georgia at this time, having been sent there in disgrace, for this is a customary mode of punishment in the Russian army. The officers of this corps are so superior in every respect to those of other regiments, that they can scarcely be supposed to belong to the same service. They are the *élite* of the army, and were of great service in doing the honours of the ball [a ball at Tiflis], and making it such as would have done credit to any regiment in any country. All of them speak French, and German is very ge-

nerally understood: the Russians indeed are remarkably good linguists; their own language is so difficult, and such are the combinations of sounds, and the variety of accents, that those who speak Russ have a great facility in acquiring other languages. It is not an unfrequent custom also to transfer officers in disgrace from one regiment to another: thus no more disagreeable punishment can be imagined for an officer of the guards, than to be sent from Petersburg or Moscow, to serve in a regiment on the coast of the Black or Caspian Sea. For greater offences they are sometimes reduced to the ranks, and are obliged to fall in with the men on parade, although they are mostly allowed certain privileges, such as a servant to clean their horse, if in the cavalry; and they may generally hope to be reinstated on good behaviour. Similar degradations take place in the navy; for I remember, whilst in the Mediterranean, hearing of an officer, who had been a *capitaine de frégate*, on some offence being reduced to the condition of a simple sailor, and being seen swabbing the decks of the vessel he had previously commanded."

Our countryman was much gratified by an excursion, under the protection of Paskevitch, through Kaketia, the finest province of the whole Caucasus, abounding in vines, extensive forests, and splendid scenery, to the little Lesghian republic of Balakan, where, though their hosts were most formidable and ferocious-looking gentry, Mr. A. says, "we passed a most amusing evening. The Russian soldiers were feasted and fêted, as well as ourselves, and played and sang alternately with the Caucasians, who performed their national dance, which more resembles a Scotch hornpipe than any thing I had ever seen."

We continue our selections: "The metropolitan church at Echmiatsen is represented to contain, among many relics, a piece of the ark; although Mount Ararat, whose top is eternally capped with snow, is so conical and difficult to approach, that it has as yet resisted every attempt to attain the summit. There is a ridiculous picture in the church, representing the ark on the top of the mountain, and a Saint Jacob attempting to ascend to it: he is attended by several labourers to clear away the snow; but after various fruitless attempts, (for whenever he slept he found he sank down to the same place), he was at length met by an angel, who handed him a piece of the ark. This interview is introduced into the painting. The Armenians receive this tale as a command that the top of the mountain shall never be ascended, as their holy Jacob was not permitted to succeed in his attempt. On the side of Ararat is a hermitage, supposed to be Noah's habitation on his descent, and the first in the world. This venerable mountain has a most imposing appearance; in addition to its peculiar form, it rises from a campaign country, and appears to much greater effect from there being no other eminences in the vicinity of it, on the side from which we viewed it. On leaving Erivan we had intended to visit the seven churches of Guerni, cut out of the solid rock; but on this occasion our first disaster befell us, and we failed in the object of our expedition. Having set out late, night overtook us before we could expect to arrive at the village, and as it snowed the whole day, our guide had every excuse for mistaking the road. We had observed him for some time looking from right to left, as if he was out of his latitude, and he at length acknowledged he had lost his way. For many long hours we endeavoured by loudly

hallooing to make ourselves heard, but our vociferations were vain: we were creeping into a chimney, in despair of a better place of rest, when, about one o'clock in the morning, we thought we discerned the bark of a watch-dog; having advanced towards the sound, we found in a ruined church our baggage, for the men with the mules had fortunately found their way there also, and an immense flock of sheep; and we began now to understand the cause of our misfortune. The poor guide, whom we had abused for stupidity, had directed his course properly enough; but the village had been demolished when the Russians had passed through in their pursuit of the Persians in the late war, and nothing remained but the stone walls of this welcome church, which now formed an asylum for sheep, and which from the darkness of the night we should not have discovered but for the shepherd's dog. No hotel, however well provided and sumptuous, was ever so welcome as this old church, which afforded at least a shelter against a continued fall of snow. We soon made a fire, and an attack upon the provision-basket made amends for previous cold and hunger. We congratulated ourselves that we had gained experience, which might afterwards be of use to us, not to place too much reliance upon the existence of towns, and run the risk of being benighted in a similar manner. As the villages are universally built of earth, they disappear altogether from time to time, and so complete is the destruction, that it is no exaggeration to say that the mud walls once fallen, soon unite with the ground, and the plough goes over them, leaving not a vestige to be seen. There seems to be nothing to remind the traveller in Armenia of its ancient kingdom, and, like Poland, and several other states, now under the dominion of Russia, (the crowns of most of which are deposited among the regalia at Moscow), it is scarcely known to exist."

Reserving some further extracts for another *Gazette*, we must now finish with the very striking and important portraits of the three great monarchs, as drawn from personal observation by Mr. Aloock.

"The czar, at Odessa, full of energy and activity, was on the point of embarking for Varna, which was daily expected to fall. He is a superb man in person, of good countenance, and without the least ostentation; being dressed in the simplest manner, attended only by three or four courtiers. He seemed engrossed by one object alone—that of carrying on the war vigorously. He is deservedly loved by his subjects—for he is very desirous to improve their condition; and so much good is said of him by strangers, as well as by his own people, that he is greatly to be esteemed as an individual, and as a monarch to be respected and admired. There could not be a greater contrast to the czar than the shah of Persia. Squatting in his oriental apartment, dressed in large flowing robes of cachmere, with bouquets of roses casting their perfume in the air, and fountains of water playing before him; a black and brilliant beard, and remarkably agreeable countenance; all combined to render the appearance of his majesty peculiarly attractive. As we approached his presence, we passed by a long train of his courtiers, and bowed to him three different times, throwing off our slippers at the second bowing, and waiting for an invitation to proceed, which did not fail to come with all the grace and winning manner of the distinguished Persian."

"The former Persian ambassador in England, now minister for foreign affairs, presented

us; and we stood at the end of a moderately sized room, whilst the shah addressed us in a manner the most flattering to our country, and drew a comparison between the Russians and ourselves, not very complimentary to the former. He said, 'that England and Persia were one; that we had been intimately connected for thirty years, and had never had any disputes; but the first moment a Russian embassy came, a most melancholy event occurred.' It will be remembered, that the massacre of the embassy took place a few days before our arrival at the Persian capital. He then dismissed us, offering to appoint one of his servants to attend us on our journey, which we readily accepted. The effeminacy and childlikeness of this great monarch, compared with the energetic character and the mental and bodily exertions of the Emperor Nicholas, were extremely apparent. Let us now speak of the haughty monarch of Turkey—of him who has had the daring to attempt reforms that had previously caused two revolutions, and the death of two sultans, his predecessors. His pride is, indeed, not less than we could have supposed from what we had always read and heard. I had several opportunities of seeing his majesty, on horseback, and in his barge on the Bosphorus; but the best view I had of him was at the audience of our ambassador. Upon this occasion his eyes (very large and dark) darted from side to side with a quickness scarcely conceivable, whilst he endeavoured to penetrate the characters of those presented before him. His countenance is most singularly striking, full of resolution and fire; a broad, open face, with a dark beard, which being clipped, and made short and stubby, loses all its natural beauty and elegance, and appeared to me with peculiar disadvantage, having recently left a country whose only excellence perhaps consists in the beauty of this unusual but graceful appendage. The sultan of the Mahomedan empire is so great a being in his own estimation, that he does not condescend to address the representative of the king of England but through his minister; or to receive him before he has been fed and clothed, and rendered fit to appear in his presence. It is, indeed, curious that the English, or any European nation, can reconcile themselves to such degrading indignities."

[To be continued.]

Sir Edward Seaward's Narrative of his Shipwreck, and consequent Discovery of certain Islands in the Caribbean Sea; with a Detail of many extraordinary and highly interesting events in his Life, from the year 1733 to 1749, as written in his own Diary. Edited by Miss Jane Porter. 3 vols. 12mo. London, 1831. Longman and Co.

A DIARY of remarkable adventures, preserved for a century in the family of the writer, and certainly never penned with a view to publication, is precisely one of the works which meets with our greatest regard. Since the spirit-stirring narratives of the bucaniers, we have met with nothing of this kind which has interested us more than this curious history; for the adventures have as much of the advantage of the marvellous, and never offend by details of cruelty and massacre. Sir Edward Seaward, it seems, was born about 1710 or 11, and died in 1774, at his seat, Hartland in Gloucestershire. Early impressed, as if his name had an influence on his destiny, with a fondness for a sea life, his wishes were first gratified by a voyage to Virginia, as supercargo of a vessel belonging to his uncle, a Bristol mer-

chant. This voyage he performed in 1733, and on his return married Eliza Goldsmith. With her he again sailed for Jamaica; and from Jamaica in a trip to the Honduras was wrecked;—the crew took to the boat; but Seaward, his wife, and a little dog, were saved by the brig's being drifted ashore. Here they were in a very Robinson Crusoe-like condition, on an uninhabited island; and the chief difference between the employments and exploits of the hero of De Foe and them, as related in these volumes, consists in the former being solitary, and the latter a united pair. Amply supplied with tools, seeds, necessaries, and poultry, from the vessel, they become builders, horticulturists, agriculturists, fishers, &c. and the island soon smiled beneath their industry into a Paradise, of which they were the Adam and Eve. Their mutual affection, amiable feelings, humanity, and piety, are very naturally and touchingly drawn; and though the daily details are rather minute, we do not think that readers of any class (except perhaps the few who can only enjoy the feverish excitement of romance, or high-seasoned pungency in poetry,) will deem them tedious. We will endeavour to convey a notion of their character by a few extracts.

"Saturday, 2d. In the morning we found ourselves very stiff from the efforts of the preceding day; and had recourse to a copious ablution of sea-water upon the deck, immediately after getting up; which was succeeded, as on former occasions, by a perfect renovation. My wife had experienced so much utility in her change of costume, that with my permission she would henceforth dispense with the petticoats, and dress *à la Turque*: I was quite agreeable; the new dress was sufficiently modest, and more appropriate to her present situation; and in truth it was very becoming, being not a little graceful."

"Friday, 8th.—My dear wife kept closely at her needle-work, while I employed myself in cutting some small trees and brushwood. During my task, she got a little tired of being from me; and to my own glad greeting, too, suddenly joined me with her fishing-rod ready baited in her hand, and invited me to accompany her to the rock. 'The day wears,' said she, smiling, 'and I come to my duty.' 'Dearest,' cried I, 'no duty; only thy pastime; but I will now do it, for it is sometimes rather tugging work.' 'Oh, no, dear Edward; you allotted it to me, and I will not give up my office. So long as you replenish the conservatory, I will furnish you with its fish. 'Well, well, be it so,' said I; and, instantly resolving on a bit of merriment, determined to leave the matter entirely to herself; so, walking up with her to the rock over the cask, she dropped in the bait, which was greedily seized by some strong fish, and the action pulled the rod by a jerk from her hand; but she quickly picked it up, (for I did not), while I said, 'You shall have fair play, and the fish too.' Fidele would have helped her if he could; he seemed to understand what was going forward, for he jumped off the rock on to the top of the cask, and I really thought he was going to take the line in his mouth. The fish, however, kept its station; and the delicate arm of my dear wife was unable to drag him forth. I now offered to assist her. 'No, no; fair play, Edward,' she cried; 'no fish, no dinner.' She did indeed tug, and the fish tugged, and my poor love was almost tired out; at last, by one great effort, she raised him out of the hatch, on to the top of the cask, where Fidele stood; but the fish made a bound, and carried line and rod

into the open water; while Fidele, struck with terror, leaped back upon the rock; but as since our arrival here we had accustomed him to go into the smooth sea, and bring out pieces of stick, he now, with a little encouragement from his mistress, who ran round with him to the sandy beach of the inlet, immediately took the water; and, laying hold of the rod, (the fish being almost spent by its preceding exertion), kept it fast in his mouth, and, after many fruitless efforts, managed to get footing with his cumbrous prize, and, to the great joy of my wife, placed the rod in her hand. She then drew up the fish with a triumph, which, she declared, was all their own. I gave the dear pair a cheer of applause, which Fidele returned with an extraordinary howl, that made us both laugh. Before we carried away her prize, as the rest of the fish in the conservatory had been some days without food, I threw some in to them, and then turned my steps homeward with my sweet helpmate. Together, we prepared the calipeavar for dinner, which duly appeared, with all the *et-ceteras*, limes and peppers. In honour of the contest, my wife set before me a bottle of our canary wine; and she placed a rich dessert also on the table, namely, an over-ripe pine and a fine shaddock. After so sumptuous a feast, I was not disposed to sink into the woodman again that day, but sat like a nabob, enjoying the fruit and beverage, drinking the health of my most excellent and courteous fisherman. My dear Eliza was quite happy in seeing me, for once since our landing, laying aside all care; and I believe, on this occasion, I became a little exhilarated. We talked over the battle of the fish, which reminded us of Waller's battle of the Bermudians with the whale; and I laughed heartily again and again,—an excess of mirth neither natural nor habitual to me. After our more than usually generous regale, we extended some of its indulgencies to our crowding retainers without. We fed the armadillo from our fruit, played with the young kids, and treated their mothers with the parings of our shaddock and pine-apple. The poultry, too, were not forgotten. At sunset we retired to our marine abode."

Besides the armadillo, which they caught and tamed, Fidele, the dog, used occasionally to catch an iguana, which made an excellent dish of fresh food; and on one occasion they had a famous battle with a herd of peccaries, of which they slew seven. But the chief incidents are the discovery of a great treasure in a cavern, where it had been left by some Spanish pirate; and the arrival of a canoe, with two negroes, their wives, and a young girl, who of course becomes attendant on Mrs. Seaward. The colony thus increased is threatened by a *guarda costa*, in pursuit of a trader from Virginia: the former is gallantly repulsed, and the latter finally removes the Seawards to Jamaica.

Their future voyages backwards and forwards; the increased prosperity of the island, or rather islands (for there were two, divided by a channel); their visits to England; interviews with ministers on the subject of these colonies; the knighting of Seaward; and the final surrender of his islands to Spain; are all related with much verisimilitude. So in the end, with its good moral inculcations, its style well befitting the period to which it is assigned, and the general interest of the story; we can very cordially recommend this work—*si non e vero e ben trovato*.

Pin Money; a Novel. By the Authoress of the "Manners of the Day." 3 vols. 12mo. London, 1831. Colburn and Bentley.

KEEN in observation, lively in detail, and with a peculiar and piquant style, Mrs. Charles Gore gives to the novel that charm which makes the fascination of the best French memoir-writers. Her novels are social biographies, only rather more amusing than real life. She does in narrative what Horace Walpole did in letters—embody the passing time with its follies and its vanities, whence is drawn the bitter satire of wit, and the bitter moral of truth. We do not believe in transmigration, therefore do not suppose his spirit actually animates the lady; but much of his spirit animates her pages. There is the same malice, the caustic remark, the quick eye for the false and for the ludicrous, and a taste for the luxurious—witness the fêtes, &c. so richly described, which might well have suited the epicurean cynic of Strawberry Hill. The heroine is one who illustrates in her own person the many difficulties, vexations, and dangers, that beset even one in possession of, as an old essayist in the *Mirror* would say, "all the blessings of life." Two underplots, mysteries both, are interwoven with her story; but we are too desirous of giving our readers as much pleasure as possible, to think of unravelling them. We shall make a few chance extracts, which will rather give an idea of the author's style than her story.

Falling in love in a large family.—There was a certain Lady Mapleberry, "with six unmarried daughters;—one of those large, lively, goodhumoured, singing, dancing, riding, chattering families, where a young man seeking a wife is apt to fall in love with the joint-stock merit and animation of the group; and to feel quite astonished on discovering, after his union with Harriet or Jane, how moderate a proportion he has received in his lawful sixth of the music, information, accomplishments, and good-humoured gossipry of the united tribe."

There is much feminine tact in the following remark:—

"We have been admonished by the royal philosopher of the Jews, that the sun should not go down upon our wrath: but had Solomon penetrated half the mysteries of the female breast, he would have additionally interdicted a sunset upon our coolness! Anger is of brief endurance, and soon raves itself to rest; but coolness is as long-lived as other cold-blooded animals:—it is as the toad which exists for a thousand years in the heart of a rock! Were I, like Dr. Gregory and other moral tacticians, to bequeath a legacy of counsel to my daughters, I would say—'Never sleep upon a misunderstanding with those you love;—if you feel less kindly towards them than usual, the chances run that you are in the wrong.'"

So is there in the next scene:—

"Among the incidents and passions influencing the variabilities of woman's humour, few are more potent, yet more indignantly disavowed, than the love of finery. From the moment a girl becomes conscious of the difference between sky-blue and rose-colour, it is astonishing what wonders can be wrought in the temper of her mind, and mood of her feelings, by the acquisition of a new dress, or the sight of some particular friend's Parisian bonnet; and there scarcely exists a woman wise or virtuous enough to be insensible to the change produced in her appearance by variation of attire. Goldsmith knew more of woman-kind than they know of themselves, when he

made Dr. Primrose declare that a set of new ribands sufficed to metamorphose his philosophical daughter Sophia into a coquette! Lady Rawleigh, saddened by her husband's absence, and vexed by the *contretemps* of the morning, entered her dressing-room at night to prepare for Almack's with a mien of sober wisdom such as might have become Mrs. Elizabeth Carter, and formed an edifying frontispiece to her translation of Epictetus. But when, on opening the door, a bevy of female domestics took flight, like a covey of partridges, through the opposite entrance, to whom Mrs. Pasley had been displaying 'my lady's court-dress, and my lady's *sumsious* plume just mounted by Monsieur Nardin,'—and Frederica, through the door of the open *commode*, caught a glimpse of the splendours which were to enhance her public appearance on the morrow,—she crossed the room with a lighter step; and a regret arose in her bosom, that Sir Brooke's absence and her mother's indisposition would deprive her of the support of their presence, and themselves of the gratification of witnessing her triumph;—for triumph it must be,—or her second glance at the glistening satin and waving feathers had strangely deceived her. In defiance of her previous intention, she even complied with Pasley's request, that she would wear her set of turquoises at the ball, in order that her diamonds might be free from a particle of dust for the drawing-room. To own the truth, the 'three-piled hyperbole' of the lady's maid, that my lady was in too good looks to need the 'forrun laid of hornament,' was rather less figurative than many of Mrs. Pasley's suggestions; Frederica's cheek was flushed with the flurry of her spirits, and her eyes were irradiated with the unnatural brilliancy which a heightened complexion naturally imparts. Scarcely had she entered the ball-room at Willis's, when Mrs. Erskyne spitefully whispered in her ear, 'My dear Fred., you must have certainly rubbed your face against one of the red morocco library chairs, or Sir Brooke's yeomanry uniform, or your rouge is full three shades too deep!'—an observation which deepened the flush of Lady Rawleigh's blushing cheeks full three shades more; while Lady Rochester, no longer solicitous to decompose so exaggerated a complexion, shook her head, and complained aloud, 'that the true French pink had never been worn by a single Englishwoman since the days of the beautiful Lady Coventry;—that even Lord Calder's new Venus did not find herself at all times sufficiently fair to venture upon rouge of real delicacy.' Delicate or indelicate, the augmented brilliancy of Frederica's complexion was received with universal applause; and while she advanced side by side with Mrs. William Erskyne indiscreetly escorted by a single admirer, she found herself followed by half-a-dozen; by Sir Robert Morse buzzing his indiscriminate flatteries with the drone of a blue-bottle fly; Lord Putney occasionally breaking forth into some bitter sarcasm, intended to brand him with the reputation of romantic misanthropy; Colonel Rhysse unconsciously tendering to her acceptance some of those cut-and-dried sentences of ready-made admiration which he had bestowed upon the successive beauties of that ball-room (and Miss Rawdon among the number) for the last fifteen years; a young guardsman, galloppe-mad, tormenting her to augment the list of unhappy females whom his awkwardness had assisted to stretch upon the slippery boards; and Lord George Madrigal, the Bayly of the aristocracy, whose witticisms are unfortunately borrowed from the most approved

authorities, and whose poetry—still more unfortunately—is unquestionably original, and borrowed only from himself: a young gentleman personifying, according to his own *living proverb*,
proponuntialthon,

The ecthpechtanthy and wothe of the fair thate!

It was the first time Lady Rawleigh had appeared in public without her husband; and she was astonished to find that in her independent position of matron, she was a thousand times more in want of the sanction of her own sex, than she had ever been as Frederica Rawdon. A ball-room is the natural element of extreme youth—the becoming sphere of an unmarried girl; but a young wife seems to need some excuse for her presence there unsupported by her husband's company. She is rejected from the sofas of the elderly chaperons, who regard her as an interloper, and suspend in her presence their mutual inquiries into the extent of young Lord Priory's rent-roll;—the young ladies shrink from her with the briefest possible replies to her observations and civilities, in order that they may resume their private flirtations and partner-hunts;—and unless, by joining in the dance, she chooses to avoid the perils of her isolation, it passes into a general opinion that *she is there to flirt, and to be flirted with*. Very soon after Lady Rawleigh's entrance she found herself deserted by Mrs. Erskyne, who went off to waltz, and to repose herself afterwards in one of the least ostensible corners of the tea-room; and unwilling to linger near the ropes with the homage of so extensive a group devoted to herself, she accepted the arm of Sir Robert Morse, her oldest and least attractive acquaintance among them, and retired to an upper sofa, on which her intimate friends and country neighbours, Lady Lawford and Lady Huntingfield, were seated in rigid chaperonship, with *sea* in hand and glassy eyes fixed upon their several daughters, like the immobile effigies of the queen and princesses arranged in chairs of state at Mrs. Salmon's wax-work! But, to her great embarrassment, they became, on her arrival, as mute as the puppets in question; and she found herself treated with a degree of polite reserve, plainly indicating that they regarded her as twenty years too young for the station she had chosen. How could Lady Lawford continue in her presence the narrative with which she had been recreating Lady Huntingfield, concerning the extremely unhandsome conduct pursued by Lord Putney towards her niece Araminta the preceding summer at Ryde; when it was so probable that his lordship's friend, Sir Brooke Rawleigh's pretty wife, might acquaint him with every word of complaint that proceeded from her lips? Or how could Lady Huntingfield inquire of Lady Lawford whether it was true that the estates of Lord Offaley (the father of Colonel Rhysse, who was dancing with her daughter Lady Margaret Fieldham) were likely to come round, when the affairs of Lord Launceston were so notoriously implicated in the same embarrassment; when *there* sat Lord Launceston's sister in judgment upon their curiosity?"

We conclude with a very beautiful image:—
 "Alas! how rarely amid the scenes of polished life are the surface and substance truly identified;—how seldom does the word on the lip, or the expression glancing in the eye, accord with the mighty feeling labouring within! A diamond melts in the crucible—but the exhalations emanating from its decomposition are not a degree more noble than those which arise from an ordinary conflagration;—the heart

consumes away in secret corrosion—but flip-pant wit and hollow laughter grace its martyrdom."

We now leave these three pleasant and lively volumes with one question—Does the author of the *Tuilleries* write by steam?

The Botanical Miscellany. Parts V. and VI.
By William J. Hooker, LL.D., &c. 8vo.
London, 1831. Murray.

Illustrations of Indian Botany; being Supplement I. to the Botanical Miscellany. By Richard Wight, M.A. 4to. London, 1831. Murray.

PROFESSOR HOOKER's resources, which equal those of any society in this country in the at once popular and interesting branch of natural history which regards plants and flowers, promises well for a periodical under his guidance. There have been rumours of insufficient patronage; but, after a slight delay, we hope that the appearance of two parts at once, and of a supplement, will not only prove these rumours to be unfounded, but shew that the work is going on with increased vigour and success. Men of science, in speaking of one another's labours, often address eulogies to their contemporaries which are not common among a more sensitive class of writers; and the reason is very appreciable, when we consider the difference between the efforts of the two classes, which in the latter case are devoted to the communication and perfection of the product of the mind—the treasures of reason and imagination; and in the former are enlisted in the service of nature, in the study of her phenomena, in classing her products, in expounding the wisdom with which she has created her chain of being, and with which she continues the destiny of the world in its circle of decay and regeneration. It will be sufficient, however, in favour of the *Botanical Miscellany*, to point out the fact, that the investigations of our naturalists in the North American expeditions, and the collections of several lengthened voyages, are ransacked for its pages; while the researches of several gentlemen long resident in South America, in Chili, in Peru, in Brazil, of able and active collectors at the Cape, in our various colonial possessions, more especially the West Indies, and the results of an extensive European correspondence—are also digested and wove into a legible form for this periodical.

With regard to the botany of India, it has taken entirely a new face within a short time; partly from the interest excited in what relates to our eastern possessions, and partly from the liberality of the East India Company. Of the several herbariums lately added to Dr. Wallich's immense collections, it appears that that of Dr. Wight stands pre-eminent. It was compiled while he was director of the Botanic Garden at Madras. He has diligently explored the neighbourhood of Negapatam; he has sent collectors, at his own expense, to various distances, and employed draughtsmen; and the plants thus discovered and delineated are (as we judge from Part I.) to be made known to the world in a Supplement, in every respect worthy of the excellent periodical it accompanies—the *Botanical Mis-*

rights is vested. They announce their intention of republishing the other great historical works, &c. of this country in a similar form, and at a like low price—for Gibbon, heretofore 8 vols., and 3*l.* 4*s.*, is now in 1 vol. at 2*0s.*, which is less than even the cost of Mr. Robinson's edition lately noticed in the *Literary Gazette*, the appearance of which probably led to this revolution. But whatever the cause, we are glad to see sterling authors like Gibbon, Robertson, Dugald Stewart, and others, produced entire, in this manner; and we approve of it the more, because we cannot help feeling a doubt, or rather a presentiment, that many of the monthly abridgments and selections are calculated to injure the writers so edited, to prevent the diffusion of full information, and greatly to hurt the interests of living authors, and, through them, the general cause of literature. The system of manufacturing from old materials is very much against original production.

The Gardens and Menagerie of the Zoological Society delineated; being Descriptions and Figures in Illustration of the Natural History of the living Animals in the Society's Collection. The Drawings by W. Harvey; engraved by Branstons and Wright, &c. 2 vols. C. Tilt.

THIS beautiful work we have frequently noticed as its parts appeared, and we need only say that it is altogether, in design and in execution, as interesting a publication as could well be imagined. The wood engravings are the perfection of art: the animals scientifically correct, yet spirited, and the tail-pieces admirable. The first volume is assigned to quadrupeds; the second to birds. The letter-press descriptions and notices are full of entertaining knowledge; and some of the specimens described are so rare and curious as to add greatly to the pleasure we derive in being made acquainted with their habits. In short, these volumes are an honour to the Zoological Society, and to all those who have been concerned in producing them in their handsome form.

Divines of the Church of England, No. XIII.
Jeremy Taylor; Vol. I. Pp. 344. London, Valpy.

THE works of Jeremy Taylor have been so lately and admirably revived in the 8vo. edition with Bishop Heber's biography, that we have nothing to say of this new publication, but that its moderate form is a great recommendation.

Epitome of English Literature, No. III.
Philosophy; Locke. Pp. 427. Valpy.
ANOTHER neat and useful republication.

Family Classical Library, No. XVIII. Horace.
Vol. II.; Phædrus. Valpy.

THE conclusion of the Horace of Dr. Francis, with an appendix containing odes, satires, &c., by various authors, some of them living aspirants to and ornaments of our Parnassus; and eighty pages of Phædrus's Fables, as translated by Smart. These together form a delightful little volume. Several of the new Horatian translations are extremely well done, and impart much additional interest to the work.

Sacred Lyrics. By Alfred Bartholemew, Architect. Pp. 457. Rivingtons.
"AN attempt to render the Psalms of David more applicable to parochial psalmody." We

cannot tell what the versification might do for psalmody; but the sense of David's Psalms is much altered by the refinements of the author.

Roscoe's Novelist's Library, Vol. II.; De Foe's Robinson Crusoe. Cochrane and Pickersgill. LIKE Vol. I., neatly ornamented and prettily got up. The immortal and ever-pleasing adventures of Robinson Crusoe are here concluded; and brief accounts of Juan Fernandez and Alexander Selkirk judiciously added.

Henry Pestalozzi, and his Plan of Education; being an Account of his Life and Writings, with copious Extracts from his Works, and extensive Details illustrative of the Practical Parts of his Method. By E. Biber, Ph.D. 8vo. pp. 468. London, 1831. J. Souter.

THE title-page so sufficiently explains the nature of this publication, that we need only say it is an interesting and complete exposition of the celebrated system of Pestalozzi; and that a portrait of this virtuous and philanthropic individual is prefixed to the volume.

A Letter to the Editor of the Edinburgh Review, in answer to his Criticism on a Journal of a Passage down the River Marañon, &c. By Lieut. H. Lister Maw, R.N. Pp. 15.

WE know very well—"none so well as we"—how difficult a matter it is for reviewers to satisfy authors; and, on general principles, we ought to range ourselves on the side of *The Edinburgh* in this collision. But a certain little ingredient called truth will not let us. Lieut. Maw clearly as well as piquantly demonstrates that some of his statements have been misrepresented by the Review in question; and we have no doubt the editor will do him justice, by a note setting things in their right light, in his earliest succeeding publication. Lieut. Maw's journey was a very interesting one; and men who perform such laborious and dangerous services are entitled to liberal criticism, as well as to liberality in every other point of consideration: but we are particularly bound to notice this case, as we perceive, page 5, that the northern reviewer charged the author with not having even "attempted to describe" a certain scene, the description of which very scene the *Literary Gazette* declared to be "picturesque;"—a striking enough difference as to a fact!!!

The History of English Dramatic Poetry to the Time of Shakespeare, and Annals of the Stage to the Restoration. By J. Payne Collier, Esq. F.S.A. 3 vols. 12mo. London, 1831. Murray.

A PUBLICATION of vast research and great ability, bringing to light a multitude of most interesting facts connected with the early drama of England,—we have only had time hastily to look over these volumes; but a very brief inspection has sufficed to shew us, that for curious and hitherto unexplored dramatic antiquities, for pictures of manners, for entertaining anecdotes, and for the revival of literature which ought never to have fallen into oblivion,—a production more deserving of universal popularity has not issued from the press for very many years. In our ensuing Nos. we shall do our best to exemplify the riches contained in these pages.

ARTS AND SCIENCES.

LINNÆAN SOCIETY.

A. B. LAMBERT, Esq. V.P., in the chair. A portion of a paper, on the organic matter found

Gibbon's Decline and Fall of the Roman Empire. Complete in 1 vol., double columns, pp. 1256. London, 1831. T. Cadell.

THIS new edition of Gibbon is published by that numerous body of "the trade," in which a large proportion of old and valuable copy-

in sulphurous springs, by Dr. Daubeny, Professor of Chemistry in the University of Oxford, was read. The learned professor agrees with M. De Gimbernat and others in referring this organic matter to the vegetable kingdom: it is nearly allied to the *confervee*—and its occurrence in hot sulphurous springs may be considered a remarkable circumstance in nature. On the table were specimens of the fruit of a new species of Sago palm, from the island of Rotuma, and of a new kind of tree of the order *proteaceae*. Robert Brown, Edward Forster, Aylmer Bourke Lambert, Esqrs., and Dr. Matton, were elected vice-presidents for the ensuing year.

RICHARD LANDER.

OUR enterprising traveller and his brother reached Portsmouth on Wednesday afternoon in the William Harris; and on Thursday morning Richard arrived in London, leaving his brother in charge of their property, and to pass it through the Custom-house. The latter had been ill nearly throughout the whole of their perilous journey, and was not in town when we wrote this notice for the press yesterday afternoon.

Richard fully confirms the accuracy of the first account, which we had the satisfaction to communicate to the public in the *Literary Gazette*. No white man ever descended the Niger before, in the memory of the natives, or in any tradition among them. This, therefore, is the accomplishment of a great event,—the complete solution of a very interesting, and, as the results may prove, a very important problem.

Lord Goderich has received Lander with great affability and kindness; and under such auspices, we have no doubt his merit will be justly appreciated, and his exploit liberally rewarded.

Richard Lander himself looks well, though he is as brown as a Moor.

We learn with much pleasure that, though despoiled by the Hibboos, the journal of their progress has been preserved in a complete state; so that there will be no difficulty in having a narrative of this interesting journey sent immediately to press. It would be injudicious, under these circumstances, to weaken the public curiosity by any partial details; and the travellers are properly counselled not to relate their adventures in order to gratify private news-mongers. For ourselves, we should be very sorry to impair the interest in the individuals and in their achievement so highly felt by the public; and we shall only add, that the commercial and political prospects opened by this discovery are not only likely to be of considerable advantage to this country and to Africa, but that no time will be lost ere their consequences will be put to trial.

LITERARY AND LEARNED.

ROYAL SOCIETY.

H. R. H. the Duke of Sussex in the chair.—Three papers were read: the first was entitled, "researches on physical astronomy," by J. W. Lubbock, Esq.; the second, "on the theory of elliptic transcendent," by James Ivory, Esq.; and the third, "an experimental investigation of the phenomena of endosmose and exosmose," by William Ritchie, Esq. After noticing the views entertained on this interesting subject by Porrett, Dutrochet, Poisson, and others, the author of this paper enters on an experimental investigation into their truth. He is of opinion that Porrett's and Dutrochet's ar-

rangement is the best for exhibiting the facts of endosmose and exosmose. A funnel-shaped tube, an inch in diameter at the bottom, and terminating upwards in a bore one-eighth of an inch; the lower orifice covered with bladder, deprived of its fatty matter by ammonia, and the interior of the tube partly filled with alcohol, on being placed in water, the increase of fluid in the tube by the water passing into it, takes place; a result directly the reverse occurs when water is made the included liquid. The phenomenon shews the attraction of alcohol for water, and the facility with which membranes allow water to permeate them. Whalebone, from its attraction for water, and want of it for alcohol, has the same effect as membrane. The feathers of birds have so strong an attraction for moisture, that they can instinctively feel a presentiment of change of weather from this circumstance; quills, therefore, have been used as intermedia, and found to act as membrane, when sufficient time had been allowed for the pores to afford an easy passage for water. With a tube sixteen feet long, and similar in bore to a spirit thermometer, Dutrochet found that in twenty-four hours the fluid rose to the upper extremity of the tube, and flowed over. After a variety of minute details, Mr. Ritchie closed his paper with some clever remarks touching the analogy of these experiments to vegetable physiology. The white and delicate filaments of roots of plants are considered the membrane; the sap in the plant the attractive fluid; and the moisture of the earth the water. The force with which the sap rises will depend on its nature, the strength of the radical fibres, and the quantity of moisture in the ground. The vine raises its sap with greater force than any other plant experimented on by Hales. Several fellows were elected, and others admitted.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON in the chair.—Mr. Britton exhibited three drawings, by the late Mr. Capon, of antiquities discovered on or near the site of the ancient palace at Westminster. One was a carved capital, found built into a wall in 1807: it had three sides, on one of which the carving was defaced; on the other sides were sentences explaining the subjects carved; one represented William Rufus, and the other Gislebertus, sub-abbot of Westminster. Another of the drawings was of part of an ancient painting of the decollation of St. John; the other represented part of a beautifully carved and painted ceiling, which was destroyed in 1808. W. Hoskins, Esq. exhibited a small sketch from a monument in the street of tombs at Pompeii: the subject was a ship,—the crew were represented as boys, who were taking in the sail, with an adult sitting at his ease at the helm; which Mr. H. considered an allegorical allusion to the conclusion of the voyage of life, when the steersman's occupation was gone. The secretary read a further portion of Mr. Grover's dissertation on ancient history. On the table was laid a bronze lamp, of very rude construction, in the form of a man on horseback, which, from the shape of his beard and the dress, appeared to be of the time of James I.; also, part of a chestnut beam, from the roof of St. Saviour's Church, Southwark, which had been placed there in the reign of King John, and lately removed on account of its decayed state.

ROYAL SOCIETY OF LITERATURE.

LORD BEXLEY, V.P. in the chair.—A notice of some Egyptian antiquities, by Sir William

Ouseley, R.A., R.S.L., was read. This memoir chiefly consisted of descriptions of four drawings, which accompanied it:—No. 1, various hieroglyphic inscriptions, from a small mutilated statue. No. 2, characters copied from a papyrus. No. 3, fragments of a very curious manuscript, exhibiting hieroglyphic figures and characters, found in the coffin of a mummy near Thebes. No. 4, hieroglyphic devices on a piece of red cornelian. To the description of the above remains of Egyptian antiquity, the writer appended some remarks respecting the period when the art of embalming was discontinued in Egypt, and on the time of the disuse of the sacred Egyptian characters.

The Right Hon. Lord Carrington was admitted a member. Mr. Millingen presented his work on ancient coins of Greek cities and kings.

ROYAL ASIATIC SOCIETY.

Anniversary Meeting.—The Hon. C. W. W. Wyna in the chair. Raja Rammohun Roy was introduced to the President, and formally admitted a foreign member of the Society, as was also Seyd Khan, agent to H. R. H. Abbas Mirza. The report of the council on the Society's proceedings during the last year, was read and adopted. It adverted to the loss of the Society's first patron soon after the last anniversary, and the acceptance of that office by his present majesty; likewise the election of H. R. H. Prince Leopold to the vacant office of vice-patron. The report then noticed the exertions making by the Auxiliary Society of Madras in furtherance of the views of this Society, particularly in the examination of the Mackenzie collection; and next enumerated the principal donors to the library and museum. It stated that Part I. of Vol. V. of the Transactions was laid upon the table; and concluded with expressions of regret that the continued indisposition of Mr. Colebrooke had prevented him from making any communication to this Number. The report of the auditors was delivered by Mr. Mackle; and, we are sorry to say, did not present such a favourable view of the state of the Society's finances as could be wished. It was received, and ordered to be printed. Sir A. Johnston delivered the report of the Committee of Correspondence, and addressed the meeting at considerable length in elucidation of the various topics therein alluded to. In the course of his address, Sir Alexander spoke of various distinguished individuals, in connexion with the Society, making great efforts for the promotion of the objects which it has in view; and, in particular, he paid a glowing compliment to the illustrious native of India (Rammohun Roy) then present, who by his writings and example has almost solely accomplished a great moral change in the minds of the people of India.*

Lord Amherst, Melville, and Bexley; Hon. M. Elphinstone, Col. Doyle, N. B. Edmonstone, Esq., Capt. Grindley, and H. P. G. Tucker, Esq., were withdrawn from the council, and succeeded by the Duke of Somerset, Lord Kingsborough, Sir J. Malcolm, C. Elliot, J. Hodges, R. Jenkins, and A. Mackle, Esqrs., and Colonel T. P. Thompson, were elected in their place. The officers were all re-elected.

Among the members present were the Earl of Munster, Right Hon. R. Wilmot Horton, Sir W. Ouseley, Lieut.-General Macaulay, the Abbé Dubois, &c. &c.

* As this very able address was ordered to be printed, we abstain from attempting what must have been a very imperfect report of it.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Concluding Notice.]

THERE are some things which the members conducting the business of the Royal Academy cannot do; and there are some things which, if they chose, they could do. They cannot hang every deserving picture in a good light or situation; but they could return it with civility, and not as if it were rejected with scorn. They cannot help the up-and-down toil of the visitors to their exhibition, the dungeon-like gloom of the model-room, or the chaotic assemblage in the antique; but they could prevent the architectural department from being mixed up with portraits in oil, and other incongruous works. In this last objection, however, we do not comprehend the casts from gems, the models in wax, and other materials, &c. Of these, there is a number of very clever specimens in the library. Some of the most striking are—No. 1077, *Medallio Portrait of his late Majesty George IV.*, A. J. Stothard; No. 1079, *Impression from the obverse and reverse of the Gold Prize Medal of the Royal Academy*, W. Wyon; No. 1081, *Medal of His Majesty, struck by command of the Queen*, W. Wyon,—a most exquisite performance; No. 1072, *Medallio Portrait of the Rev. T. J. Judkin*, A. M., A. J. Stothard; No. 1040, *A Bacchanalian Head*; J. Parry, Sen.; No. 1042, *Portrait of Miss Emma Murray, as Spring*, T. Smith; No. 1078, *Model of the Daughters of the Earl of Radnor*, R. C. Lucas; No. 1083, *Model of the Daughters of the Earl of Carlisle*, R. C. Lucas; No. 1082, *Race-horses, an impression from an Intaglio*, J. T. Williams; No. 1126, *Bust of the Rev. Daniel Wilson*, M.A., C. A. Rivers; No. 1122, *Venus and Adonis*, R. C. Lucas; &c. &c. &c.

SCULPTURE ROOM.

Both within and without the walls of the Academy, we do not remember a season in which the native talent of our sculptors has appeared to more advantage, or in which there has been a richer display of works of excellence in their high department of the arts.

No. 1190. *Bust of His Majesty*. F. Chantrey, R.A.—One of the most striking proofs of his peculiar genius that Mr. Chantrey has ever produced; and in which the purity of the marble (for it is an exquisite specimen) is in perfect accordance with the chaste and dignified character of the features and expression. Slightly generalised, the resemblance is, nevertheless, admirable; and in execution nothing can surpass this beautiful and highly finished work.

No. 1195. *A Nymph untying her Sandal*. J. Gibson.—We consider this performance not only as the finest in the present exhibition, but as the finest single figure which has appeared in Somerset House since one of a similar character by Nollekens;—if, indeed, in purity of design, and beautiful delicacy of expression, it does not go beyond that well-known chef-d'œuvre.

No. 1197. *Statue in marble of the late Mrs. T. Rawson, of Nield, Yorkshire*. R. Westmacott, R.A.—Devotion and adoration were never more ably and interestingly represented than in the unaffected grace and simplicity of this statue.

No. 1162. *Alto Relievo, Maternal Affection*. E. H. Baily, R.A.—The lines attached to the title in the catalogue of this admirable group are quite supererogatory. Distinguished throughout by taste and feeling, it could never have been mistaken for any other subject.

No. 1165. *Alto Relievo, the Outrage of the Centaurs at the Nuptials of Pirithous and Hippodamia*. W. Pitts.—Few artists have more skilfully or more powerfully executed classical and mythological subjects than Mr. Pitts. The able performance under our notice is replete with spirited action, variety of form, and diversity of character.

No. 1194. *Satan*. W. G. Nicholl.—Mr. Nicholl has shewn great energy in this attempt; but we question whether even the powers of a Michael Angelo would be adequate fully to embody the sublime description of the poet.

No. 1192. *The Husbandman*. C. Rossi, R.A.—Subjects in common life—such, for instance, as the cricketer, the boxer, &c.—have frequently been invested by Mr. Rossi with the dignified simplicity of the antique; and the same quality distinguishes the present performance. This veteran artist appears to have thoroughly understood the value of the advice which Polonius gives to Laertes—

“Be thou familiar; but by no means vulgar.”

The sentiment of the figure is finely in unison with the sentiment in the quotation from Thomson.

No. 1196. *A Group in marble of Cupid and Hymen*. G. Rennie.—A very able performance; although we feel a little annoyed by the inflated cheeks of Cupid. The action would hardly be allowable even in a zephyr.

Among other well-designed and well-executed figures and groups are—No. 1226, *Infant Moses, in marble*, S. Nixon; No. 1131, *Historical Group, Virginius and Virginia*, J. Deare; No. 1224, *The Madness of Athamas*, J. Gott; No. 1191, *A Nymph going into the Bath, a statue in marble*, R. J. Wyatt; No. 1159, *Vertumnus, a statue in marble*, J. G. Bubb, &c. &c. Besides that of his Majesty, there are many busts of distinguished excellence; such as No. 1218, *Bust of H. R. H. the Duke of Sussex*, F. Chantrey, R.A.; No. 1183, *Marble Bust of the Countess of Sheffield*, W. Behnes; No. 1185, *Bust in marble of Lady Thorold*, P. Roux; No. 1199, *Bust in marble of Davies Gilbert, Esq., M.P.*, S. Joseph; No. 1200, *Marble Bust of the Earl of Eldon*, W. Behnes; No. 1201, *Marble Bust of H. R. H. Prince George of Cambridge*, W. Behnes; No. 1212, *Model of a Bust of J. Northcote, Esq., R.A.*, E. H. Baily, R.A.; No. 1213, *Model of a Bust of Lord Chancellor Brougham*, E. H. Baily, R.A.; &c. &c. &c.

We have thus, in our usual way, pointed out some of the principal performances in the present exhibition. In so doing, we have freely and gladly bestowed praise where praise has appeared to us to be due; and where we have been compelled to disapprove, we trust that our remarks have not been made in an unkind or unfriendly spirit. We are, indeed, too well aware of the great difficulties in the practice of the arts, and of the various obstacles which impede the progress of their professors, to be betrayed into a severity of criticism, as opposed to good taste as to good feeling; and which can be gratifying only to the thoughtless, the ignorant, or the malicious. Of some vulgar attempts which have recently been made to depreciate, not only artists, but the arts themselves, we shall merely observe, that they are disgraceful to the writers from whom they proceeded, and to the publications in which they appeared. Were any refutation of such calumnies necessary, a noble one might be found in the following extract from the eloquent speech of the present highly gifted Lord Chancellor, at the last anniversary dinner of the Royal Academy:—

“This is, indeed, not more a display of the triumph of the fine arts than of the deep interest which the most distinguished classes of the community take in their progress; and well they may! Of those pursuits, what has not been said, what panegyrics not pronounced, hundreds, almost thousands, of years ago, by the most eloquent of tongues! That they are the ornament of prosperous fortune and the solace of adverse, give a zest to our daily toil, and watch with us through the sleepless night, enliven the solitude of the country, and tranquillise the bustle and turmoil of the town—all this is true, but it is not the whole truth. All this they do, and much more. The fine arts are great improvers of mankind; they are living sources of refinement—the offspring, indeed, of civilisation; but, like her of Greece whose piety they have so often commemorated, nourishing the parent from whom their existence was derived—softening and humanising the characters of men—assuaging the fierceness of the wilder passions; substituting calm and harmless enjoyment for more perilous excitement—maintaining the innocent intercourse of nations, and affording one more pledge of Peace, their great patroness and protectress, as she is of all that is most precious and most excellent among men. It becomes us all, then, most diligently to foster them. It is the duty of the government, it is the interest of the country. No station is so exalted, no fortune so splendid, as not to derive lustre from bestowing such patronage—no lot so obscure as not to participate in the benefits they diffuse.”

BRITISH GALLERY.

THE British Gallery, for years one of the chief and most efficient instruments in the advancement of our native school of painting, is again about to open with a collection of ancient masters, liberally contributed by their several proprietors. In about ten days we understand the exhibition will be opened; and in the mean time we have great pleasure in stating that some splendid pictures have been already received.

BRITISH INSTITUTION.

By the report of the directors to the annual meeting of the British Institution, we have the satisfaction to learn that it has received the high sanction and approbation of his majesty; who, in condescending to become its patron, has expressed his full sense of the benefit and utility of the establishment in promoting the cultivation of the fine arts throughout the United Kingdom. It farther appears, that the profits arising from the exhibition of Sir T. Lawrence's works, amounting to £3,000 have been presented to his family, according to the intention of his late majesty. “The governors of this Institution (adds the report) have taken so much interest in the success of the National Gallery, that it will be gratifying to them to learn that the Rev. William Holwell Carr, one of the directors and most zealous promoters of the objects of the Institution, has bequeathed his valuable collection of the paintings of ancient masters to the trustees of the British Museum, with a view to their being placed in the National Gallery for the benefit of the public. It is to be hoped that this splendid donation may induce his majesty's government to appropriate some public building for the reception and display of these valuable works; which the directors have no doubt would induce other liberal admirers of the art to make similar donations for the same public purposes. The present building

in which they are placed will not contain the whole number of which the nation are now in possession; nor are these inestimable works free from danger, arising from the state of the building in which they are deposited. The pictures painted by modern artists which have been disposed of during the exhibition of the present year have exceeded those of last year both in number and value: there have been sold 110 pictures, to the amount of 5,318*l.* 9*s.*"

NEW PUBLICATIONS.

A New Illustrated Road-Book of the Route from London to Naples. Containing Twenty-four highly finished Views, from original Drawings by Prout, Stanfield, and Brockedon; engraved by William and Edward Finden. Part I. Route from London to Paris. Edited by W. Brockedon, Member of the Academies of Fine Arts in Florence and in Rome, Author of "The Passes of the Alps." Murray.

THIS is decidedly the best publication of the kind that we have met with; comprehending in a small compass a great deal of information of the utmost practical utility to the traveller. Whoever attends to the advice Mr. Brockedon has here given—advice, the result of considerable experience, and which extends to the arrangements for the journey, the mode of obtaining passports, the safest and most efficient method of carrying or receiving money, the best means of conveyance, the regulations with respect to private and to public carriages, the management of luggage, and many other important matters, will be exempted from numerous evils and inconveniences with which he may otherwise be beset. The description of the route is simple and perspicuous; and the illustrations are beautifully executed. The view of Dover especially, engraved by E. Finden, from a drawing by Stanfield, is one of the most brilliant little prints that it is possible to conceive.

Views in the East. From original Sketches by Captain Robert Elliot, R.N. With historical and descriptive Illustrations. Parts IX. and X. Fisher, Son, and Co.

THE plates in these two parts of Captain Elliot's interesting publication are, a graceful "Chinese Pagoda, between Canton and Whampoa;" "Hindoo Temple at Chandnogan;" the singularly curious and elegant "Grass-rope Bridge at Tere, Gurwall;" "Hurdwar, a place of Hindoo pilgrimage," where, in the year 1819 or 1820, seven hundred natives lost their lives in consequence of their superstitious impatience to plunge into the Ganges at a particular moment; "Jerdair, a hill-village, Gurwall;" and "the Water-palace, Mardoo." The last-mentioned place is one of the principal ruins of a city of the Malwa province, that was once very celebrated. "There is something," says Captain Elliot, "in the situation of this ancient city, and a stately grandeur about its venerable ruins, and an utter desolation spread over the whole surface of the place on which it stood, and a rankness about the vegetation and jungle that cover the site of this once immense and magnificent capital, and a total relinquishing of the land to the wild beasts of the earth—that renders Mardoo a place of uncommon interest to the European traveller. The stillness that prevails around the palace which is represented in this plate is solemn, and even melancholy, to the last degree; a deep gloom may be said, indeed, to have gathered over its gates, and it is hardly possible to conceive a mind that would not be

awe-struck with the depth of the solitude that pervades the whole scene."

The History and Topography of the United States of North America. Edited by John Howard Hinton, A.M. Parts XIII. XIV. and XV.

THIS work is proceeding in a very satisfactory manner. Many of the views are exceedingly beautiful. Among the most so, in these three Parts, are "Monte Video, the residence of D. Wadsworth, Esq. near Hartford, Connecticut;" "Rapids and Bridge above the Falls of Niagara;" "the Falls of Catskill, New York;" and "the Palisade Rocks on the Hudson River, West Bank, New York." The History is brought to the Declaration of Independence (fac-similes of the signatures to which are given); and we may say of it, *en passant*, that it appears, as far as it has gone, to be written in a philosophical spirit, highly honourable to the historian, who seems to be strongly impressed with the truth of his opinion, that "the noblest employ of the pen of history is to develop facts which illustrate the progress of the human mind."

The Spirit of the Plays of Shakspeare.

By Frank Howard. No. XXI.

NOTWITHSTANDING his labours as a painter, of which the present exhibition at Somerset House affords several highly pleasing specimens, especially No. 10, *Portraits of the Daughters and Granddaughters of Sharon Turner, Esq.*, and No. 205, *The Pride of the Village*; Mr. Frank Howard continues to produce his Outline Plates from Shakspeare with steady and laudable perseverance. The present No. illustrates two of the noblest dramas of our great bard, Richard the Third and Henry the Eighth. It is not surprising that they have furnished Mr. Howard with opportunities of which he has very successfully availed himself of shewing his skill and taste in composition and character. Of the twenty-three plates of which the No. consists, our principal favourites are, "Queen Margaret's curse," "the Queen of Edward the Fourth receiving the news of his death," "Buckingham led to execution," "Queen Katharine accusing Wolsey of exaction," "the Trial of Queen Katharine," "the Coronation of Anne Bullen," and "Cardinal Wolsey received in a dying state by the Abbot of Leicester."

History of the County Palatine of Lancaster, embellished with Views, Portraits, Maps, Armorial Bearings, &c. By Edward Baines, Esq. The Biographical Department by W. R. Wharton, Esq. F.S.A. Part IV. Fisher, Son, and Co.

"CLITHEROE Castle," "Croxteth Hall," and two views of "Liverpool," are the well-executed embellishments of the fourth part of this valuable topographical publication.

Landscape Illustrations of the Waverley Novels. Part XIV. Tilt.

IT is difficult to imagine a more picturesque and diversified assemblage of scenery than the plan of this ingeniously conceived work enables its proprietors to display, a fact of which the plates in the present part—"Castle of Ashby," drawn by G. Cattermole, from a sketch by J. Skene; "Old Bridge of Tweed," drawn by W. Westall, A.R.A., from a sketch by J. Skene; "White Horse Inn," drawn by G. Cattermole, from a sketch by J. Skene; and "Whitehall," drawn by D. Roberts, from a sketch by Hollar;—afford very satisfactory proofs. They are all beautifully engraved by E. Finden.

Portrait of Allan Cunningham.

A LITHOGRAPHIC portrait of this valued individual and popular writer, of the life size, has just been produced by Mr. Wilkin. It is a good likeness of honest Allan, and a very favourable specimen of a series of portraits, under the patronage of the Duke of Sussex, intended to preserve the features of distinguished characters during the reign of William IV. The style is rather new among us, and the execution very creditable to the art.

STATUE OF MR. CANNING.

WE have a melancholy gratification in seeing the preparations for the immediate erection of this monument. The site is most appropriate—near the scene of his patriotic and splendid triumphs in the British House of Commons—near the ancient cathedral where his mortal remains are laid. Its exact place is in the enclosed and ornamented ground by St. Margaret's church, nearly close upon the railing, and with the figure looking across the centre of Palace Yard towards the Thames. There may it stand for ages, and inspire generations of senators yet unborn with an ambition to emulate the virtues, if they cannot rival the genius, of this lamented statesman—a man whose death was not mourned by his country alone, but by the world!

MR. BARING'S PICTURES.

THE noble collection of engravings, etchings, &c. made some forty years since, in Holland, by the elder Mr. Baring, has just been disposed of at auction, by Messrs. Christie and Manson. The Rembrandts were extraordinarily fine; and here, at least, as the subjoined extract from the catalogue will evidence, there can be no complaint of low prices.

Lot	Rembrandt's Portraits.	£. s. d.
66	Remier Analo	17 6 6
67	Abraham Frants	26 15 6
68	Old Haaring	51 9 0
69	Young Haaring	11 0 6
73	Wtengobardus	12 12 0
74	The Gold-weigher with the white face	26 5 0
75	The statue on India paper	16 16 0
76	Another impression	16 16 0
77	The Little Coppenol, on India paper, first state, exceedingly fine and rare	91 7 0
78	The Large Coppenol	18 7 6

The Berchems, consisting chiefly of brilliant specimens and rare proofs, were warmly contested. We select an item or two from the number.

Lot	Berchem's Works.	£. s. d.
88	The drinking Cow, the first impression with the name	7 0 0
94	The watering Cow, three different impressions	17 6 6
95	The Three Cows reposing	8 5 0
97	The Bagpiper, first impression before the name	7 0 0
111	Two small Goats' Heads on one plate, an exceedingly beautiful print and of great rarity	26 7 0

BIOGRAPHY.

REV. H. A. DELAFITE.

WE feel that some apology is due to the friends of a valuable Institution, in the prosperity of which we have never ceased to take a lively interest, the Royal Society of Literature, for not having hitherto noticed in our pages the loss which it has lately sustained by the decease of one of its officers. We allude to the Rev. H. A. Delafite, foreign secretary to the Society, whose death was announced two or three weeks since.

In this excellent clergyman, and modest but accomplished scholar, the Society has been deprived of an ornament, and the world has lost an admirable man. Though little known

generally as an author, Mr. Delafite has not left the public altogether without proofs of his scientific information and extensive reading. Having lived upon terms of strict intimacy with the late illustrious geologist, De Luc, during the latter years of that eminent man's life, he, in the year 1812, published, under the eye of the author, a translation of De Luc's *Elements of Geology*; and in other respects was instrumental in making the English public acquainted with the immortal labours of the father of that important science. But his most valuable service to the geologic student was the composition of a work which he had just completed at the time of his decease, being a new edition of De Luc's *Letters on the Physical History of the Earth*; to which he has prefixed an Introduction, containing a general view of the labours of that great geologist, and a vindication of his claims to original views respecting the fundamental points in the science. This, at least to the general reader, will be found the most entertaining, if not the most useful part of the volume. (The work, we observe, is published; and we hope to present our readers with an early notice of its contents.)

Such being the limited extent of the late foreign secretary's labours for the press, they alone who enjoyed his friendship are in a condition to appreciate his talents and acquisitions; his various erudition; his enlightened opinions, at once orthodox and liberal; and his familiar acquaintance with the stores of ancient and modern learning and science. To them, however, these were the least endearing points in his character; since all who knew him are prepared to afford heartfelt testimony to his having possessed, in an eminent degree, the still more estimable qualities peculiar to the Christian and the gentleman. He was distinguished by the absence of all personal pretensions, united with the warmest zeal for the honour and interests of his friends; by an almost excessive charity in word and opinion; and by an activity and efficiency in works of private beneficence truly astonishing, when the mediocrity of his circumstances and his retired and studious habits are considered.

The family of Mr. Delafite was among those virtuous and exemplary citizens who were driven out of France by the revocation of the Edict of Nantes. His father, a man of great piety and learning, was chaplain to the Prince of Orange; while the virtues and accomplishments of his mother attracted the notice of the late Queen Charlotte, and, on the death of her husband, recommended her to the office of French governess to the princesses. This appointment, (which Mad. Delafite filled many years, with the high esteem of the illustrious family to whom she was attached), led to her son's receiving an English education at Trinity College, Oxford. Mr. Delafite was nearly thirty years lecturer of St. Paul's, Covent Garden; but, though not altogether forgotten by the exalted personages who enjoyed the benefit of his mother's eminent services, and who originally directed his choice of a profession, he never emerged, even to a benefice in the church in which he was a zealous labourer, from that humble station which he was satisfied to adorn with his intelligent conversation and his mild and benevolent virtues.

"DEATH'S shafts fly thick." We ought, before, to have mentioned the loss the world of art has sustained by the death of Mr. Jackson, R.A. Mrs. Siddons, also, the Tragic

Muse, has departed from life, in, we believe, the 78th year of her age. Mr. Hamper, the excellent antiquary, died a few weeks ago. The venerable Northcote is so ill that there is hardly a hope of his ever leaving his chamber again.

MUSIC.

PHILHARMONIC SOCIETY.

BEETHOVEN's symphony in B flat, with which the eighth and last of these excellent annual performances, on Monday, commenced, is one of those wonderful productions of genius which delight us in proportion as we become acquainted with them. Of the author's first six symphonies it is least frequently brought forward, though not inferior to any. The andante has, indeed, long been considered the most original and pathetic Beethoven ever conceived. Not to perform such a magnificent work with all the effect of which it admits, is only to give a better chance to the succeeding pieces. We have heard it more to our mind on former occasions. Mozart's aria, "Non paventar," by Madame Stockhausen, written in the old bravura style, excited in the audience the strongest desire for a repetition, which was, however, not attended to. We know no singer who could execute that air more chastely, and, altogether, more beautifully than Madame Stockhausen. In Onslow's sextuor, a masterly original composition, Mrs. Anderson, assisted by Nicholson, Willman, Platt, Mackintosh, and Dragonetti, distinguished herself by the same brilliancy of execution and delicacy of expression which she has lately so often displayed on public occasions. In the first part of Rossini's terzetto, "Or che la sorte," MM. Rubini, Lablache, and E. Seguin, commenced in a regular steady pace; but in the latter part it was very much as if the one walked, the other trotted, and the third galloped. The confusion mainly originated with the orchestra. Spohr's overture, "Der Alchymist," would probably please more than it did, if we were acquainted with the opera for which it is written. Mr. Ries's symphony, No. VI., was, in a great measure, performed out of compliment to his visit to old England, after an absence of some years. The minuet and trio, not to be mistaken for being in the style of Handel, may be called the best movement. The two allegros would be better if the motives were of a less common, dance-like character. The fine duetto from Spohr's Faust, "Segui, oh cara," gained Madame Stockhausen and Signor Lablache much applause; but their voices are too dissimilar, or, rather, too unequal in point of strength. Mr. Mori's playing in Haydn's delicious quartet was unanimously pronounced to be perfection; and whether he was inspired by the presence of so great a judge as Paganini, or to whatever other cause it was owing,—we never heard him surpass himself as he did on this occasion. The concert was under the direction of Mr. Weichsel and Mr. Bishop.

PAGANINI.

THE *début* of this extraordinary man was all that admiration and enthusiasm could anticipate. His performances are not merely wonderful—they are beyond measure delightful. It is not simply such command of an instrument as never was witnessed before—it is the production of music which may literally be said to ravish the sense. Paganini himself seems as if he were an exquisite incarnation of composition—harmony embodied in a human frame. No description can convey an idea of his powers; and every journal has been so filled

with remarks, that were we competent to do justice to his genius, we should abstain from a task which must of necessity involve so much of repetition. Our recommendation to every one is—make a point of hearing him: it will be a gratification beyond belief, and to miss it, a very severe regret. Old Cramer, it is said, exclaimed, he was glad he was not a fiddler, implying that the impossibility of attaining such excellence would have broken his heart; and T. Cooke declares that Paganini is equal to any four he ever saw. Such are the flattering testimonies of his brethren. We may notice that his hand, and especially his thumb, which is of uncommon length, give him the unexampled facilities which he possesses over his violin.

SEDLATZKE'S CONCERT.

ON Wednesday this musical entertainment was crowded, and deserved it by its excellent selection, and the great talents engaged in it; including not only the fine instrumental performances on the flute by Sedlatzke himself, and Moscheles on the piano, but the vocal contributions of Pasta, Stockhausen, Rubini, Lablache, and other first-rate singers.

VARIETIES.

French Legion of Honour.—Thorwaldsen, Berrzelius, and Humboldt, have been appointed members of the Legion of Honour.

Effect of the Fine Arts.—A letter from Rome states, that Madame Lætitia Buonaparte was lately extremely ill, and was given over. Her son Jerome read to her an article in a Parisian journal, announcing that the statue of Napoleon was about to be re-instated in the Place Vendôme. From that moment the mother of the emperor was convalescent!

Music Mad.—London is swarming with musicians, till it is humming all over like a bee-hive. Ries has come, in order to conduct a new oratorio of his at Dublin; Hummel is going to try his luck at Manchester; what the celebrated Field, from Petersburg, is come for, we have not yet been able to learn: and there are fifty more (at least) all ready to rival Paganini, and delight John Bull.

Cholera Morbus.—The committee of health at Warsaw has published a description of the indications of cholera morbus, and of the proper treatment of persons attacked by it. The malady usually begins with vertigo, and with cramps in the limbs, so violent, that the individual falls to the ground, powerless and motionless. These symptoms are followed by excessive vomiting and dreadful pain. The patient, according to the experience here promulgated, ought to be entirely undressed, laid upon his back on a bed, and covered with a sheet. Hempseed, previously steeped in boiling water, should then be heaped upon him, outside the sheet, from the neck to the feet, as hot as he can bear it. When this cataplasm begins to cool, it should be renewed three or four times, until the patient breaks out into a profuse perspiration. To increase this perspiration he should drink a sudorific pisan made of elder-flowers. If he complain of nausea, a spoonful of magnesia, or of olive oil, should be administered to him. When he has remained for a considerable time in this state, he should be wiped and dried, and his bed-linen changed; great care being taken that he does not become cold. He is then out of danger; and all that remains is to re-establish his strength.

Pouch in the Lion's Tongue.—In dissecting

a lion, sent to the Edinburgh College Museum, Messrs. Cheek and Jones have discovered on the under surface of the tongue, near the tip, a structure, which may be considered as a rudiment of the worm in the dog. It is marked by three longitudinal dilatations, separated by contractions; and in the specimen dissected, was three-fourths of an inch long.

A Blue.—A true blue has appeared in France in the person of a girl, aged seventeen, near Angers. This young lady, though she has never yet written a book, is blue from the waist upwards (consequently she is not a *bas-bleu*); and, what is more extraordinary, when any thing is said or done which causes her to blush, instead of red, she blushes a deeper blue.

Ural Mountains.—The gold and platina obtained from the mines of these mountains in 1830, is estimated at—

	Poods. Pounds.	Value.
Gold	355 ¼	17,750,000 rubles.
Platina	105 1	1,300,600 ditto.

Gold is estimated at 50,000 rubles per pood (40 lbs., or 36 lbs. English); platina, at 11,520 rubles. M. Demidoff, counsellor of state, received from his mines of Nijne-Tahel, a unique specimen; viz. a piece of native platina weighing about 20 lbs.; the largest piece before known weighs 10½ lbs. The new platina coin has very speedily got into circulation in the interior of the empire; and the greater part of the platina found has been converted into coin.

Babylon.—Captain Mignan, who published an account of his visit to Babylon, has now paid a second visit to that city. Letters have been received from him from Bombay by a gentleman in London, whom he informs that he had brought for him, from Babylon, various curiosities, including a fine specimen of the *attlah* tree (we believe a kind of tamarisk). He mentions that he should send these things by a ship, which has since arrived, and also a MS. on Kurdistan, which, he says, is quite ready for publication, and will make a large and very interesting volume.

Antiquities.—Bronze medals have frequently been found on the two shores of the Bosphorus, inscribed with the name "Agrippia," and others inscribed with the name "Cæsarea." Antiquaries have hitherto ascribed the former to Agrippia, or Antioch, a town of Judæa; the latter to Cæsarea of Bithynia, or to Tralles of Lydia, which, like so many other towns of Asia Minor, received the surname of Cæsarea. The Journal of Odesa, however, announces the discovery, in February 1830, near the town of Taman, of a Greek inscription, which, by mentioning "a monument consecrated to the memory of Adronicus, the son of Pappus, by the Archontes of Agrippia Cæsarea," shews that the names of Agrippia and Cæsarea belonged to the same place; probably an ancient town of the island of Taman; and very likely Phanagoria, which was situated in the neighbourhood of the modern town of Taman.

Our popular Queen.—Her Majesty, it seems, has visited several public places without state, going in a private carriage; and being thus enabled to see and enjoy what is to be seen. Among others, we are told the Zoological Society's Garden has been thus honoured—at least it is stated of one of the check-takers, an Irishman, that he mentioned the Queen's having been at the garden *inco* on a particular day. "Why," said the person he was informing, "it is odd we never heard of it!" "Oh, not at all, at all," rejoined Pat; "for she didn't come like a queen; but *clane* and *dacent* like another lady!"

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXIV. June 11.]

The fifth, and perhaps not the last, volume of Allan Cunningham's Lives of the most eminent British Painters, Sculptors, and Architects, is now ready for the press: it contains the following names:—George Jamesone, born 1586; Allan Ramsay, 1713; George Romney, 1734; Alexander Runciman, 1736; John Singleton Copley, 1737; John Hamilton Mortimer, 1741; Sir Henry Raeburn, 1758; John Hoppner, 1759; William Owen, 1769; Sir Thomas Lawrence, 1769; George Henry Harlow, 1787; Richard Parkes Bonington, 1801.

LIST OF NEW BOOKS.

Seaward's Narrative, edited by Miss Jane Porter, 3 vols. 8vo. 11. 11s. 6d. bds.—Beattie's Courts of Germany, 3 vols. 8vo. 11. 1s. bds.—Index to Hall's Atlas, royal 8vo. 11. 1s. cloth.—Drummond's Letters to a Young Naturalist, 12mo. 10s. 6d. bds.—Burder's Oriental Customs abridged, fcp. 8s. 6d. bds.—Kennedy on Ancient and Hindu Mythology, 4to. 2l. 12s. 6d. bds.—Montague's Ornithological Dictionary, 8vo. 11. 1s. bds.—Arrian on Coarsing, with Notes and Illustrations from the Antique, Imperial 8vo. 11. 6d. bds.—Gems of Modern Sculpture, No. 1, 8vo. prints, 4s. 6d.; No. 2, folio, before letters, 10s. 6d.—The Cabinet for Youth, 12mo. 4s. 6d. bd.—Collier's Annals of the Stage, 3 vols. crown 8vo. 11. 11s. 6d. bds.—Essay on the Origin and Prospects of Man, by Thomas Hope, Esq. 3 vols. 8vo. 11. 16s. bds.—Berkedon's Route from London to Naples, Part I. London to Paris, demy 8vo. 6s. sewed; Imperial 8vo. plain, 8s.; India, 12s.; Imperial 4to. India, before letters, 16s.—Pickering's diamond edition of Homer, 3 vols. 48mo. 12s. bds.; large paper, 18s. bds.—Pin Money, by the authoress of "Manners of the Day," 3 vols. 8vo. 11. 11s. 6d. bds.—Lives of the Actors, by John Galt, 2 vols. 8vo. 11. 1s. bds.—Cobbitt's Instructive Reader, 12mo. 3s. sheep.—The British Preacher, Vol. 1. 8vo. 7s. 6d. cloth.—The Greek Testament, with English Notes, by Dr. Burton, 3 vols. 8vo. 11. 10s. bds.—Cramp's Text-Book of Popery, 12mo. 6s. bds.

Wind N.E. and S.E., the former prevailing. Alternately clear and cloudy, except the 29th, when rain fell incessantly throughout the day.

Rain fallen, .525 of an inch.

Thursday, June 2d.—The occultation of Jupiter and his satellites this morning was seen under very favourable circumstances, particularly the emersions, the atmosphere being very clear and calm. The bright limb of the lunar disc, together with the slight haze which is almost invariably found about our horizon, prevented any accurate observance of the immersion of even the fourth satellite (the other three were not discoverable): the western limb of the planet was for several seconds after contact distinctly visible, and might have led those unacquainted with the fact, to believe that the planet was, instead of being on the point of occultation, about to transit the lunar disc: the elongation of the eastern limb of the planet was not so distinctly visible as during the immersion of the 7th of April, 1824. The emersion of the fourth satellite took place at 2h 4' 2" of the second; at 2h 18' 29" of Jupiter's western limb at 2h 14' 0"; of his eastern limb at 2h 15' 33"; of the first satellite at 2h 18' 30"; and, lastly, the third satellite reappeared at 2h 24' 53".

CHARLES H. ADAMS.

TO CORRESPONDENTS.

There has been an unusual influx of new publications this week, through which we have gone as far as we could. But we have been obliged to postpone Mr. Bowles' concluding volume of the Life of Kem-Ingis' Travels in Spain—the Glances at Various Objects (a private volume), for which we have to thank the author—and several other interesting communications.

We do not know any thing of the anonymous notice sent to us about the Royal Society of Warwick.

A Member of the British and Foreign Unitarian Association is not warranted either by our notes or the work of Rammohun Roy in his pretension to set us right.

ADVERTISEMENTS,

Connected with Literature and the Arts.

THE LITERARY FUND GREENWICH

A MEETING will be held at the Crown and Sceptre, on Wednesday, the 29th of June.—This Meeting is not restricted to members of the Society; the company of any Nobleman or Gentleman who may take an interest in the objects of the Institution will be welcome and agreeable.

Gentlemen who intend dining are requested to apprise Mr. Snow, at the Chambers of the Society, 4, Lincoln's Inn Fields, on or before Tuesday the 28th.—Dinner at Four precisely.

The Rev. John Clowes.

Society for printing and publishing the Writings of the

Hon. Emanuel Swedenborg.

Committee Room, Featherston Buildings, June 8, 1831.

THE DECEASE OF THE REV. JOHN CLOWES.

M.A. Rector of St. John's, Manchester, and late Fellow of Trinity College, Cambridge, which took place at Warwick, on the 29th of May last, in the 88th year of his age, having been communicated to the Committee of the above Society, it was

Resolved, That this Committee cannot hear of this dispensation of the Lord's all-merciful Providence, without recording their feelings upon the afflictive event. Yet why should an event be decried as afflictive, which, to the highly prepared subject of it, is only a deliverance from the pressure of the material frame no longer suited to be the organs of the active and heavenly-minded spirit which tenanted it so long, and a removal to that heavenly world which will be felt by him as his native sphere; where those principles of love, intelligence, and use, which constituted his life here, will expand into all the fulness which even he can desire, and will be the source of eternal blessedness and joy? Yet the members of this Society, even beyond multitudes of others who will deeply feel the loss, cannot but experience in his removal a sense of bereavement; for peculiarly might they regard him as a father of the Society, inasmuch as he was the first to introduce the Writings of the Hon. Emanuel Swedenborg into the Unitarian community; and he was almost the first who laboured with effort to bring those Writings into notice, was the translator into English of the greater part of them, and was the unwearying promoter, through the period of thirty-eight years, of every effort for conveying the salutary principles which they develop into the understanding, and the hearts of his fellow-creatures. When the members of this Society reflect on the intuitive perception with which, on these writings being brought by a peculiar providence under his observation, he at once appreciated the incalculable value of the divine truths which they contain; when they reflect on the reception of those truths, he then, in this country, stood almost alone; when they consider the zeal and self-devotedness with which he set himself to make them accessible to others, notwithstanding the opposition which was soon arrayed against him; when they think of the eminent usefulness of his labours, and of the formation of a Society at Manchester having that object in view, which still perseveres in its valuable labours, and to which this Society has since associated itself in the same work; when they consider the engaging manner in which, in his affectionate remembrance, he invited his brethren of the establishment to Address to the Clergy, he invited his brethren of the establishment to examine those writings, the power of argument and force of evidence with which, in his Letters to a Member of Parliament, he refuted the calumnies against them of the Abbe Barthelemy; the commanding ability and convincing clearness with which he replied to the objections of the Unitarians, and the Unitarians, in his Answers to the Editors of the Christian Observer, to the Rev. W. Roby, and to the Rev. J. Grundy; when they add to this the amiable light in which he placed the principles of true Christian life and doctrine in his other writings, his treatises on Meditation, on the Human Soul, and on the Human Body, his many volumes of admirable sermons, his charming little works for children, or his various other excellent publications; when, turning from the abundant displays of superior intellect, they contemplate the simplicity and lowliness of his heart, the truly Christian humility, piety, love, and benevolence, and the undeviating purity of character which marked his whole life; when they call to mind how he turned from the attractions of the academic and scientific distinction which attended his early career, to discharge his simple and unobtrusive duties of a minister of the gospel; when they remember that, at a period somewhat later, on having received views of truth which are too generally unpopular, he never shrank from the most open avowal of them, and relinquished for their sake the most flattering prospects of preferment and celebrity; and when they know that, though for a while the object of persecution, he actually lived down all opposition, and, by the exalted excellence of his character and conduct, secured the universal esteem, testified by a permanent memorial, of the populous parish of which he was rector for more than sixty years; when the members of this Society reflect on these and numerous similar features in the life and conduct of their venerated friend, they cannot but feel how exalted was the character with whom they have been associated, (in which sentiment they know they shall be joined by some of the most respectable and elevated characters in the land); and they cannot but regard it as their duty to acknowledge, in the most public manner, the privileges they have enjoyed. Whilst then they are deeply sensible of their loss in the removal of such a friend and coadjutor, they feel truly grateful to the mercy of the Lord that opportunities are afforded, and they are conscious that they can only worthily show their gratitude by striving, with increased zeal, to follow in the path in which he walked before them; and, especially, by continuing their efforts to promote the knowledge of those truths, of the effects of which, when received in the heart, he was so irrefragable and so bright an example.

The permanent memorial above mentioned is an elegant piece of sculpture, by Flaxman, erected by subscription in the church. The inscription is as follows:—In the year of the fiftieth year of the ministry of the Rev. John Clowes, M.A. the first and the present rector of this church, and to testify their affectionate esteem and veneration for the piety, learning, and benevolence of their amiable pastor, the congregation of St. John's Church, in Manchester, erect this tablet, with feelings of devout gratitude to Almighty God who hath hitherto preserved, and with their united prayers that his good Providence will long continue to preserve amongst them, so eminent and engaging an example of Christian meekness, purity, and love. MDCCCXXXI.

Among the most active promoters of this most honorable testimonial of esteem, were some who, at a former period, had conscientiously endeavored to obtain the removal of Mr. Clowes from the rectorship. A complaint that was carried to Bishop Hurdis, when he presided in the see of Chester, was, after investigation by that liberal and judicious prelate, and his observation, that he saw, in the sentiments complained of, no ground for his interference, and that he wished he had, in his diocese, many more such clergymen as Mr. Clowes.

EXHIBITION of PORTRAITS to be
 Engraved in LODGE'S PORTRAITS and MEMOIRS
 of the MOST ILLUSTRIOUS PERSONAGES of BRITISH
 HISTORY—Open Daily, at Messrs. Harding and Lepard's, No. 4,
 Pall Mall East, London.

Admission is free, which may be obtained on
 application, free of expense.
 The great celebrity this work has acquired throughout the
 country, and the very general desire of the subscribers to inspect
 the collection from which the engravings are executed, have led
 the proprietors to adopt the medium of a gratuitous public exhi-
 bition, to display in an collected view the whole series of illus-
 trations prepared to be engraved in this work, elaborately ex-
 ecuted and coloured, from the Galleries of His Majesty, the Nobil-
 ity, and from the Public Collections, preparatory to commencing
 an entirely new edition, in Monthly Numbers, on the 1st of July,
 1831; a Prospectus and Catalogue of which may be obtained
 (gratis) from every Bookseller in the Kingdom.
 Persons residing in the Country, and intending to visit the
 Metropolis, may obtain Tickets of Admission, free of any ex-
 pence, from the principal Booksellers throughout the Kingdom.
 "In the overwhelming mass of trash which is weekly, if
 not hourly, pouring in upon the republic of literature, it is plea-
 sing to alight upon such productions as this, which cheer and
 guide us, like friendly watchfires, across a country of darkness
 and peril."—*Dublin's Literary Companion*, 2d edition, p. 516, in
 review of "Lodge's Portraits."

THE IMPROVED WRITING INKS.
 Meriton and Co.'s Office, Copying Record, Japan and
 Red Ink—Black and Red Ink—Powders, and the Portable Ink-
 Case. These universally approved of Writing Materials are to
 be had of all respectable Stationers in Town and Country. They
 are the result of many years' experience, and of one of the most
 extended series of investigations, comparisons, and tests, that has
 been applied to any branch of the useful arts.
 15, Abchurch Lane.

**CAOUTCHOUC, or Indian Rubber, ren-
 dered Elastic, and manufactured into Braces, Belts, Gait-
 ers, &c. &c.** is ranked amongst the most curious productions of
 the present day, the most remarkable of which is, that it con-
 tains more tension, strength, and elasticity, than any other known
 substance, and is impervious to air or water, consequently will
 wash without losing its elasticity, or sustaining injury in any other
 of its properties.

On sale at the Warehouse of C. Keane and Co.
 108, New Bond Street.

**MESSRS. PHILLIPS and CO., Law and
 General Stationers, No. 100, Chancery Lane, appointed
 Agents by Mr. Charles Terry, of Shoe Lane, beg leave to inform
 the Legal Profession, that they can be supplied with the Prepared
 Parchment, in every variety of Size and Form, as well as engrossed
 with the proper Stamps, for any Deed or Document.**

REVIEW OF NEW BOOKS.

THE CHOLERA MORBUS.

[In the midst of the great political affairs with which the civilised world is at this moment heaving, there is, nevertheless one object of paramount importance to the living race of man—we allude to the plague-like disease which is becoming so fearfully known in Europe by the name of the *Cholera Morbus*. In preceding *Literary Gazettes* we have noticed its progress while yet at a distance; the ravages it committed in Asia, and the extraordinary nature of its dreadful march from the southern towards the northern hemisphere. But the attention must be more strongly fixed upon, and the mind excited, when we find the giant malady, as it were, at our own door; when we daily hear of its destructive operation in parts with which we are in direct intercourse; and when the unusual sight of quarantine is enforced by only common prudence and caution in the ports of Britain. At such a crisis, every particle of information which can be gathered and diffused on the subject is of national value, as well as of deep individual concernment; and we have the satisfaction of performing a public duty in laying the following paper before our readers.—Ed. L. G.]

Mittheilungen über die morgenländische Brechruhr—Communications concerning the Cholera Morbus. By Dr. R. A. Riecke. Vol. I. Stuttgart, 1831.

EVER since the year 1817, that pest, the cholera, has been sweeping like a whirlwind, without apparent direction or control, through India, Persia, China, Turkey, and Russia; and it has at length approached so near to the frontiers of the more civilised countries of Europe, as to excite very serious apprehensions of its invasion of our own shores. Whatever tends, therefore, to elucidate the history and nature of this wide-spreading and devastating disease, must at this moment be peculiarly interesting.

The volume before us is occupied with the history of the cholera morbus; and the author intends to treat in a second of the method of cure. He sets out with a comprehensive view of the phenomenon, of which he presents the following sketch:—

“Asia, the cradle of the human race and of its civilisation, is at the same time the birth-place of the contagious diseases which have at various periods ravaged the world. There originated the black death, which, in the middle of the fourteenth century, traversed Asia and Europe, like a destroying angel, and is said to have carried off thirteen millions of persons in China alone; there was generated the influenza of the last century, which spread from the eastern parts of Asia over the whole of that quarter of the globe and Europe, and even crossed the wide Atlantic to America; and there, too, first appeared the cholera morbus, which in the space of thirteen years has ex-

tended its ravages over the half of Asia and a considerable portion of Europe. In the whole, it is true defective, history of diseases; there is no example of so speedy a succession of two wide-spread epidemics as the latest times have exhibited. The influenza of 1782 and the cholera have occurred within half a century; and this striking phenomenon of our eventful times may justly be regarded as evidence in favour of a conjecture hazarded by a modern philosopher, that there exists an intimate connexion between the political vicissitudes of the human race and the extraordinary occurrences in the physical world so frequently coincident with them. Striking as is the resemblance between the two great disorders of modern times in one point, they are very dissimilar in other respects. The first assumed the form of a catarrhal fever; the second that of vomiting and diarrhoea—both diseases which are disposed to an epidemic extension. The catarrh is more a disease of northern countries; the influenza originated in north-eastern Asia; the birth-place of the cholera is southern Asia. As the catarrhal fever is generally a mild disease; but the cholera, on the other hand, requires speedy and potent aid from art to obviate a disastrous issue; so both retained their character on their appearance as epidemics. Though the influenza spread itself very generally in the places which it visited—as, for example, at Petersburg, where 40,000 persons were attacked by it in one day, yet very few died of it. The cholera, on the contrary, has thus far carried off one third, if not half, of the persons whom it has seized; but the proportion of the latter to the population of countries in which it appeared, has been, upon the whole, smaller than in the influenza; and the diffusion of the influenza much more rapid than that of the cholera.”

Dr. Riecke then follows, historically, the course of the disorder from its origin at Noddia on the Ganges, in May 1817, through all its labyrinthine ramifications to its reappearance in Russia last year. He pays, at the same time, particular attention to all the symptoms, distinguishing those which have invariably attended the disorder, and such as have varied with time, place, and circumstances. The following is a condensed view of the whole:—

“In many cases the disorder commences suddenly, with its characteristic symptoms; but in others it is preceded for a short time by various prognostics, such as a sense of fulness of the stomach, nausea, debility, shivering, vertigo, and frequently an inexpressible anxiety. The disease itself mostly breaks out in the night or morning: the stomach discharges its contents by vomiting; the matters contained in the bowels are speedily expelled; and a sudden feeling of exhaustion ensues. These first evacuations are soon succeeded by others in both ways; but the discharged matter is of a totally different nature, mostly resembling turbid water; it is often greenish and yellowish, and in the more advanced stages of the disease occasionally contains gall, which in general is

a favourable sign. The alvine discharges resemble those thrown up from the stomach; many slimy flakes are observed in them, and their quantity is in most cases very considerable: the former are generally preceded by pains, which frequently become very acute, but in some cases do not occur at all. Tenesmus is often associated with these symptoms, but in general it is not severe. Greater inconvenience is sustained from a burning sensation and oppression in the region of the stomach, accompanied by such torturing thirst, that even medical men, well aware of the danger of cold drinks, have not been able to refrain from urgently soliciting the indulgence. The region of the stomach feels hot externally. At the same time excessive debility and exhaustion supervene, and frequently increase to fainting. Soon after the commencement of the copious evacuations, cramps ensue: they commonly begin in the extremities, and gradually pass from these to the muscles of the trunk. It is but rarely that these cramps are aggravated into general convulsions: in many cases they are absent altogether, but this is far from being a favourable sign. Convulsions of the muscles have frequently been observed even after death. The pulse is at first small, weak, and quick; but soon after the cramps take place it is not to be felt in any external parts. The skin loses its natural warmth, becomes as cold as marble, is mostly covered with a cold clammy perspiration, and assumes a livid hue; the lips and nails turn quite blue. In this state the skin is even proof against chemical agency, such as that of boiling water and the like, though the patient complains of heat in the superficial parts. The eyes sink in their orbits, the features of the face quickly collapse, and have a corpse-like appearance. Respiration, which is at first accelerated, becomes, with the increase of the disorder, difficult and slow: in one case only seven respirations occurred in a minute. The breath has little warmth. Blood taken during the disease exhibits scarcely any serum, and no crust, and rapidly congeals: as it runs out it is thick and black, even from the arteries. During the disease an extraordinary anxiety frequently supervenes: it proceeds, no doubt, in part from moral influences, but is always an unfavourable symptom. In India it was more frequent in Europeans than in the natives. The secretion of the saliva and urine is generally suspended, but not that of the gall, though gall is rarely discharged. On the dissection of bodies, the gall-bladder is commonly found full of a blackish gall. The functions of the brain seldom suffer any material derangement, though a kind of stupor frequently takes place; but the mental faculties are always somewhat impaired, and the senses weakened. The state of these functions, according to Cromwell, closely resembles that which succeeds intoxication. The disease is always attended with great apathy, and patients are very often quite indifferent as to the issue of their disorder. They mostly retain their consciousness to the last, and often feel themselves relieved

* Late accounts state that several of the French surgeons who had gone from Paris to Poland to study and relieve this pestilence, have fallen victims to their zeal. It is reported, that an English captain died at Riga after only three hours' illness; and added, we trust untruly, that after the cholera broke out at this port, many vessels called before orders were received from Petersburg to stop all communications.

at the approach of death, as the debilitating evacuations and cramps cease, and the warmth returns to individual parts, though the features of the face retain their characteristic ghastly or corpse-like expressions. In other cases, however, the most distressing symptoms continue till death. The recovery of the patient is indicated by the return of warmth over the whole surface of the skin, the elevation of the pulse, the cessation of the cramps, vomiting, and flux, the appearance of gall in the evacuations, the renewal of the urinary and salivary secretions, and a disposition to sleep. The re-appearance of the feces is also a very favourable sign. In other respects, the course of the disorder presented many deviations. It often happened that persons attacked by the disease fell to the ground, and in a short time expired, without the characteristic symptoms of the complaint being clearly developed, as had been previously observed in other epidemic diseases, for instance, in the plague, by Sydenham. In such cases the course is extremely rapid; they occur chiefly in the commencement of the epidemic. The fatal catastrophe usually happens from ten to twenty-four hours after the first appearance of the symptoms of the malady: the transition to recovery is often as rapid, though many convalescents suffer a long time from complaints in the stomach and abdomen. In many instances the cholera brings on a nervous fever, which not rarely proves fatal. Relapses frequently occur, and are more dangerous than the first attacks, on account of the prostration of strength induced by the latter."

To this statement we shall only subjoin a few detached facts.

The cholera made its first appearance on the swampy and very unhealthy banks of a river; and it keeps in preference to low damp countries, avoiding the dry and elevated parts. According to Ranken, camels and goats were attacked with violent diarrhoea where the cholera prevailed. In the tropical countries, the cholera regularly increased and abated with the rainy season. The appearance of the cholera seems to have some connexion with that of earthquakes: both were most violent in India in 1820, in Arabia in 1822, and in Syria in 1823. In the island of Ceylon and in Astracan, it was particularly remarked that very few women, and no children, were attacked by the disease; whereas, in the government of Orenburg, the women were more especially affected by it.

The Bramins attributed the origin of the disorder to the anger of the goddess Ulabebi, and to a quarrel between her and the god Kali; and asserted that the resentment of the goddess could only be appeased by a pilgrimage to her temple at Kalinghaut, by liberal offerings there, and by bathing in the sacred waters of the neighbouring Ganges. Thousands followed this injunction, and, during the pilgrimage, fell victims to the very disease which they hoped to escape by means of it.

The Russian director of the customs at Kiachta applied to the dzargutshy, the chief civil officer on the Chinese frontier, to establish quarantine institutions against the cholera. The latter replied, that police precautions would be useless for his country, on account of its very numerous population; adding, with the greatest *sans froid*, that this disease would give their empire so much the more room, the more people it carried off. This notion he supported by the remark, that a sickness of this kind knew its victims, and left others untouched; that it selected such as live in filth and intemperance; and that, on the contrary,

a person of undaunted mind, with cleanliness and moderation, was safe from its attack. On this subject he referred to the present emperor of China, declaring that Pekin owed its exemption from the disease solely to the firmness of his imperial majesty, who was pleased to say to those about him: "Do not suppose that the disorder is more powerful than yourselves; the pusillanimous alone die of it." From that moment they all took courage, and nothing was left for the disease but to quit the capital. "But that is nothing," he proceeded: "I will relate to you another case, which occurred in the year 1070. A disease broke out at Pekin of a peculiar character, for it affected the tails of those who quitted their houses and abode in the open air. In a short time it consumed half the tail, and the immediate death of the owner was the consequence. When this was reported to the then reigning emperor, Tschang-Lung, he declared emphatically that he would not hear any thing of such a disorder. This his supreme will expressed with firmness, and thereupon made public, had such an effect on the malady that it left Pekin forthwith." While the dzargutshy was detailing these circumstances, he fixed his eyes intently on the director, and perceiving in his looks a certain distrust of his statements, he added, with a smile: "You must believe, at any rate, that fear enervates the mind, and that the latter has a decisive influence upon the body. Whether you believe my story or not, we must listen without terror to the report of the disease at Kukuchoton, and then it will positively not visit us." This was in the summer of 1827: the disease actually proceeded no further in that direction.

The question, whether the cholera is infectious or not? is still involved in great obscurity. Upon the whole, the English physicians in the south are rather in favour of the opinion that it is not infectious; while the Russian, in the north, believe that it is. In support of both assertions there are facts, many of which are cited by the author. In Ceylon not a physician or attendant on the sick was affected; while in Persia a lying-in woman, who had not stirred a step out of the house, was attacked by cholera. The Bengal Board of Health, and that of Madras, unreservedly declare their conviction of the non-contagious nature of the disease, in their reports founded on the testimony of a hundred medical men. It is true that an earlier report of the Bombay Board leaves the point doubtful. The Russian physicians, on the other hand, adduce several striking instances of real infection; and the Russian medical commission formally declared last autumn, the malady to be "not only epidemic, but also contagious."

The cholera is not a new phenomenon. It was long ago observed in India, and described before the middle of the seventeenth century by Bontius, in his work *De Medicina Indorum* (Leyden, 1642). The disease is named in Sanscrit *vandie*, and *ennérum vandis*; in Maharratta *morschi*; in Hindustanee *morghi* (death), out of which the Europeans made *mordeschie*, or *mort de chien*. In the Transactions of the Board of Health of Madras, so far back as 1787, there is a complete

description of it as it prevailed in 1770 at Arcot, in 1783 in the valley of Ambore, and in 1771 at Ganjam. In 1775 it broke out in the Mauritius. It has since been frequently observed among the British troops in India, especially when encamped in certain districts, and more particularly in Travancore; but its ravages have rarely been extended over large tracts of country. According to Deguignes, it spread in the year 1031 as far as Syria; and according to an Arabian tradition, a similar malady penetrated about 500 years since from India to Egypt, Nubia, and Abyssinia. The last epidemic broke out, after considerable anomalies of weather, in the year 1817 in Bengal. The next article will shew how far its ravages have extended.

Die Cholera Morbus; ihre Verbreitung, ihre Zufälle, die versuchten Heilmethoden, ihre Eigenthümlichkeiten, und Die im Grossen dagegen auszuwendenden Mittel.—The Cholera Morbus; its Diffusion, its Accidents, the Curative Methods attempted, its Peculiarities, and the Means to be employed on a large Scale against it; with a Map of its Progress. By Frederick Schnurrer, M.D. Physician to the Duke of Nassau.

THE author first compares the cholera with other great phenomena of a similar kind—the yellow fever, and the plague properly so called. "One great difference between the yellow fever and the plague is, that the former disease confines itself to a margin of coast only a few miles in breadth; so that whoever can remove from this tract, need not travel a little distance in order to feel perfectly secure. The plague, on the contrary, though it now appears to have contracted itself within narrower limits, still continues to spread itself over a space, which, northward from the tropic of Cancer, and westward from the Caspian Sea and the Gulf of Persia, occupies 70° of longitude, and in some places 31½° of latitude, and in which the disease appears in the valleys and more elevated situations. The case is totally different with the cholera. With the exception of particular spots, the mortality occasioned by it is far from being so great as that caused by the plague or the yellow fever. Even those who compute the number swept away by it in India at two and a half millions out of a population of forty millions, pre-suppose that every part of the country was visited by the disorder, which was not the fact: but among the troops, who, as adults and persons of the male sex were chiefly attacked, experienced the greatest relative mortality, and whose loss can be stated with the greatest accuracy, the deaths varied in the first years from one in five to one in a hundred, and from 1818 to 1821 it no where exceeded the latter proportion. Neither will any one believe, where the disease has prevailed, that it is infectious. The space over which it has spread itself is prodigious—from the Spice Islands to Nishnei Novogorod, and from the Mauritius at the southernmost extremity of Africa to the steppes of the Kirgises. From the mysterious nature of the phenomenon, from the sudden appearance and rapid course of the disease, it is impossible to guess when and at what points it will break out; you imagine, wherever you go, that you discover it under your feet; and as, in its diffusion, it has so little resemblance to other infectious disorders—for instance, the small-pox, the plague, and the like—that preventives are totally out of the question."

In the first section the author gives the history of the breaking out and extension of the cholera.

* Our own government has referred the subject to the College of Physicians, who have favoured it and the public with a most vague report, the gist of which seems to be a mere assertion,—that the disease is likely to be imported by persons, and not by goods! Other doctors have been scribbling in the newspapers; but so meagre, and disconnected, and contradictory, are their opinions, that they serve rather to perplex than to throw a light on this very serious and threatening phenomenon.—Ed. L. G.

and this part of the subject is admirably illustrated by the map attached to the work. It began on the 19th of August, 1817, at Zilla Jessore, one hundred English miles to the north of Calcutta. It soon spread over the whole country bordering on the Ganges, ascending that river; and in the years 1818 and 1819, it penetrated to the southernmost extremities of both the Indian peninsulas, continuing its course in 1820 to the islands, and turning from Manilla, in a north-eastern direction, to China in 1821. Then taking a prodigious leap, it appeared in the Persian Gulf, ascending the Euphrates and Tigris, as it had previously done the Ganges, and ravaged Turkey in Asia and Persia till 1823. In the same year it attained the farthest points of its career both to the west and east, advancing to the coasts of the Mediterranean on the one side, and to the island of Amboyna on the other. Afterwards taking a northern direction, it appeared again in China in 1826, and last year still further north in Russia. In 1829, it reached its southernmost limit, the Isle of Bourbon; in 1823, at one and the same time its eastern and western, Amboyna and Antakia, on the Mediterranean; and in 1830 its northern, in the vicinity of Petersburg. Thus it appears that the space traversed by the cholera forms a cross, the northern end of which seems to have received its utmost extension not far from Petersburg, the eastern at Amboyna, and the southern at the Isle of Bourbon, while the western end is quite short, and ought to run out as far as Cadiz, in order to balance the eastern arm terminating at Amboyna.

The second section treats of the course of the disease, the description of which, coinciding with that given in the preceding article, we shall pass over. In the third are detailed the various methods of cure hitherto tried, whence it appears that the right, the infallible one, is not yet discovered; that those hitherto adopted are all contradictory to each other; and that none of them has produced a satisfactory result. On the other hand, the author's notion, that in all probability external remedies ought to be preferred to internal, is particularly interesting. "As it must be assumed that in the state of general collapse, internal remedies can scarcely operate, on account of the total absence of the capability of feeling their impressions, and, at any rate, there can be no question but of a chemical and mechanical action; it may be asked, whether there are not external remedies operating in that manner, by means of which, through a powerful impression on the solids, the circulation and the play of the secretions might be restored?"

The fourth section treats of the peculiarities of the cholera in its diffusion; and the author expressly declares this disease to be not infectious. In the last section he considers the means to be adopted on a large scale against it; and after shewing that it has always visited in preference those nations and classes which are naturally, or through poverty, disposed to filth, and confined to meagre fare, he comes to a conclusion, which, though sounding rather paradoxical, is not a little encouraging: "Wherever peace and the highest degree of liberty consistent with personal security prevail, together with their attendant blessings, industry and plenty, this scourge will probably assume a milder form: it is not the quarantine that it will respect, but the authority of the law and the fowl in the pot."

To these analyses we shall add the substance of a letter from Marin Darbal, a French physician at Moscow, read at a late meeting of the

Academy of Sciences in Paris, as tending to throw light on the question, whether the disease is contagious or not?

The cholera broke out at Moscow before any one ever thought of it. The belief in its contagious nature, and the panic consequent upon that notion, instantly became general. Before any precautions were deemed necessary, fifty thousand persons had fled from the city. It was not long before it was surrounded by a cordon, to prevent the disease from spreading into the country. This measure was rather too late—and then, how is it possible to enclose a city, the circumference of which is equal to that of Paris? Many of the fifty thousand fugitives had carried with them the seeds of the disorder from Moscow: they fell sick at the quarantines on the frontiers of the government, and there died; but they were not known to have infected any one. The number of the sick was not more considerable in the vicinity of the hospitals than elsewhere: people have slept in the same bed with diseased persons, and yet been exempted from the complaint; and very few of the attendants in the hospitals were attacked by it. It is now the general opinion in Moscow, that the cholera is not infectious, and even the common people are convinced of this from ocular demonstration. The contrary notion had gained currency, owing to the reports from distant provinces, but more particularly to the opinion of the Council of Health in 1824. Dr. Darbal has taken great pains to eradicate this error: his views have been completely confirmed by experience, and the government has actually abolished the quarantine, though the disease still continues (about twenty persons being attacked daily), and suspended the fumigations which have been found absolutely inefficacious throughout the whole empire. Minute investigation of the case of a patient has always led, not to an infection, but, on the contrary, to positive, immediate causes of disease. But, though the public in Moscow at present consider the malady as purely epidemic, the physicians do not hold it to be absolutely uninfected, but are of opinion that it confines itself to the forming of what are termed foci of infection, as is the case in certain fevers. The persons best acquainted with the subject agree in these points: 1. The germ of the cholera is developed in no other way than by some external cause, as taking cold, indigestion, intoxication, &c. 2. It is not so terrible as it has been represented: if properly treated on its first appearance, it is not difficult of cure. 3. The only remedy that has been found efficacious is heat in high degrees; all others are no better than nothing, and this is sufficiently proved by the fact, that though in twenty hospitals, different, nay, totally opposite, methods of cure were adopted, yet the mortality was nearly in the same proportion in all. Should the disease spread to western Europe, and there can scarcely be any doubt that it will, it may be predicted with tolerable certainty, from its regular progress hitherto, that it will not reach France before the year 1832.

Jaqueline of Holland, a Historical Tale. By Thomas Colley Grattan. 3 vols. 12mo. London, 1831. Colburn and Bentley.

BEAUTIFUL and unfortunate, yet bearing up against every reverse of fate with the spirit of a hero, Jacqueline of Holland is the very being in whom romance delights; and she has lost none of her interest in Mr. Grattan's hands. Besides being judicious in his choice of a heroine, he is equally so in his scene. Quite at home in Holland, he is able to give that

air of truth to his descriptions only to be acquired by actual knowledge; and we doubt not the kabblejaws and the hoeks will become familiar terms to a great body of readers. For the benefit of the uninitiated, we quote the origin of the terms.

"During the contests for power, about the year 1350, between Marguerite of Bavaria, countess of Holland, and her son William, grand-uncle to Jacqueline, some of their respective partisans, the most powerful men in the country, held a repast, at which a frivolous argument took place on the question, whether the hoek (fishing-hook) might be said to take the kabblejaw (cod-fish), or vice versa. A serious quarrel was the consequence of the dispute; the different parties affixed on each other the words which formed the matter of argument; distinctive badges were assumed; and the whole population, for full a century following, was divided into two desperate political sects."

As a more general selection, we take the first appearance of Jacqueline, and part of a scene which leads to the most important results.

"Standing near to him, and leaning on a bow of Spanish yew, a female of elegant form, and a face of melancholy beauty, listened, but with a pre-occupied air, to his discourse. Her features were more strongly marked than those of mere girls in early youth; yet they joined a bloom and freshness rarely found after the very spring-time of life, to a decided dignity that only belongs to womanhood; and her face displayed that harmonious brilliancy which can receive the imprint of suffering without being withered by it. She was dressed in the fashion of the wealthier females of Holland, in a robe of fine white kersey, over which was a light blue pourpoint of the same stuff, close fitting her bust and waist, but with loose flaps that reached the knees. Her hair, worn in great profusion, was fancifully garnished with side plates and rings of gold, studded with precious stones; and beneath her high cap of green velvet hung innumerable curls, of light brown, tinged with occasional streaks of a shade that was all but auburn. Her shoes of blue morocco were sharp pointed, and turned up almost to the instep; and a narrow belt of blue silk was fastened in front with a diamond aigrette, below which hung two points of gold flagree-work."

Two strangers, one a youth, the other a gigantic Frieslander, meet the countess and her party in the wood, where they are hunting, when the younger of the strangers warns her of danger.

"These gentlemen are little cognoscent of the forest, if they know not, that in this month of September, the straggling remnants of the Orox and Bonassus herds come down in this very track to the sea-side, raging and furious. 'Holy martyrs! it is too true. This must be the very district called the wild-bull chase.—Is it so?' exclaimed the prelate, perturbedly. 'It is,' said the young man; 'and hark! may St. Andrew be my hold, if I hear not the snorting of the monster even now! Oost, heard you that?' To this latter question in the dialect of Friesland the giant only answered by grasping the young man's waist, and forcibly lifting him behind a thick clump of twisted oak roots, which presented the appearance of a natural redoubt. He then loosened his knife in his belt, but without drawing it, and grasping his mace in both hands he stood prepared with that pale but stern anxiety which marks the face of the intrepid man, who knows his peril, but fears it not. At the same instant, the horses and

dogs, every one, startled and trembled, in the instinct of brute alarm. The very deer that lay on the ground in the last gasp of death, made a struggling effort to rise, and expired with a shudder of fear. In the next moment a roar of terrible depth resounded through the forest, and the monster which sent it forth appeared close to the group, crashing through branch and briar, with an air of savage majesty at once appalling and sublime. His height and bulk were enormous, double that of an ordinary-sized bull; he was jet black, with the exception of a broad stripe of white running along his back, as was visible while he stooped his huge head to the earth, butting against it, and tearing it up furiously with his short thick horns; while his eyes gleamed like fire-balls under the tuft of hair, curling garland-like on his front; and he lashed his long tail and shook his mane, that hung full six feet from his neck and swept the ground. 'Fly, fly!' cried the young stranger, as he drew his sword, and stood in the shelter of the trees; but his warning was not wanting to most of the party, and came too late to the rest. The huntsmen, acquainted with the terrible voice of the orox, ran in every direction, or climbed the nearest trees, even before he appeared; the dogs dispersed, yelping from fright, with the exception of that belonging to the dyke-digger, which stood close to its master, with trembling joints, but bristling hair, displaying, nearly as he did, a mixture of terror, subdued by resolution. The horses, one and all, reared up, bounded, wheeled, and attempted to gallop off; several of them succeeded in the attempt. That which was mounted by Benina, received ample aid from its terrified rider, who gave a loose rein, and urged it to its utmost speed. Gloucester's pony, and Fitz-walter's stout, sturdy, and hard-mouthed beasts, completely mastered their riders, and carried them in different directions into the thicket. The hardy Van Monfoort, who was on foot, at the first alarm abandoned his horse, stepped up beside Jacqueline, and aided her in holding in her restive palfrey, but not with sufficient steadiness to enable her to dismount. The bishop, at the first curvet of his agitated garron, was flung sprawling into a tuft of blackberries, and his face and hands soon streamed with the mingled juice of the crushed fruit and his own blood, which the thorns profusely shed as he rolled himself deeper and deeper in the covering of the briars. The first victim to the fury of the orox was an unlucky pricker, who, slipping from the branch which he grasped, in an effort to mount an oak, fell to the earth, and was in a moment lifted on the fierce animal's horns, and tossed bleeding and breathless to a distance of several yards; the prostrate ecclesiastic was the next object of attack. The monster bounded towards him with roars of increasing fury, mingled with which were the shouts of the observers, who thus hoped to distract his attention from the shrieking priest. As he sprang forward, a tree of full fifty years' growth met his career; he struck it with his broad front, and shivered it like a splintered lance; it fell right over the bishop's otherwise imperfect shelter, and by its shadowing branches saved him from destruction. Jacqueline was now on the ground, and while Van Monfoort held the curb of the almost frantic horse with both hands, as a final means of turning the wild bull's rage, she placed an arrow in her bow, and (with a courage, which on many a great trial proved her one of the bravest of women) she scorned, or perhaps saw the hopelessness of flight, and discharged the weapon

with a steady hand; it struck the animal close to one eye, and broke against the bone. Irritated by the obstacles which kept him from the bishop, and inflamed by the smart of the wound, his long beard was now white with foam, and he darted with a tiger-spring full against the spot where the countess and Van Monfoort stood. The horse, which the latter still held, now burst from his grasp, and in a desperate plunge for escape, fell on his knees over the branches of the broken tree. The orox almost instantly transfixed him to the earth, and then gored him in a shocking manner, as he lay groaning and snorting with agony and fright. At this moment the young stranger, who, during the brief space occupied by the appalling scene had been held in his giant companion's grasp, succeeded in breaking from it, and sprang to Jacqueline's side. Spurning all false delicacy or forced reserve, he caught her in one arm, and made an attempt to bear her away towards the clump whence Oost had followed him; while Van Monfoort, with more respect, but equal valour, covered their retreat, and stepped backwards after them, his huge two-handed sword pointed towards the pursuing orox. The young stranger, whose keen eye looked around at every step, saw now there was more danger in an attempted retreat than a desperate defence. He, therefore, turned again, and placed himself beside Van Monfoort, calling out to him to stand firm. The intrepid Ludwick stopped short, and answered by a cheering word. Oost stepped up a little, inclining in front of his companion, the dog flanking both. Jacqueline might have now fled with a fair chance of safety from behind this living rampart; but, from what occult sentiment or sympathy, we pretend not to decide, she stood still, encircled by the young stranger's arm, and seemed satisfied to share the peril which he had rushed into for her sake. As the orox plunged towards them, with horns and visage streaming in the gore of the torn horse, Van Monfoort and the stranger opposed their swords' points to his broad front, and in the same instant Oost dealt him a terrific blow on the head with his mace. He might as well have struck against a rock; the iron points pierced, and perhaps splintered the bone, but the monster never swerved. He, however, raised his neck and head for one instant to its utmost height, either from the effects of the stroke, or to gain a better aim for the fatal plunge which immediately followed directly at the stranger and Jacqueline, for they formed but one mark. Oost stepped another step forward, and threw himself before them; there was but one blow between him and death. Stooping almost to the earth, against which the heavy head of his mace rested, he raised the weapon up with a fierce jerk in both hands, to the elevation of his own head, as he sprang erect to his full height. The descending muzzle of the brute, as it came down with an equal speed and tenfold force, caught the uprising blow. It was the vulnerable part, the spot held by Mother Nature, as she plunged this monster and its kind in the exempting mould of its terrible strength. It reared up and tottered back; in an instant the swords of Van Monfoort and the young stranger were in its breast, and the more effective knife of the dyke-digger was deeply plunged into its throat; his dog at the same time sprang at its lip, and, with the sagacious tenacity of its breed, held down the animal to the earth, on which it sunk in a flood of gore. A shout of triumph burst from the victors, echoed by a scream from the bi-

shop, who had just forced himself from his place of safety, and began to fly, why or where he knew not. But at this new sound, which he could not imagine aught but the monster's roar, he flung himself prostrate again, and would willingly, like the ostrich, have plunged his head into the earth. The busy group of combatants saw that the business was over. Jacqueline, too, knew that the danger was escaped. Compassion was her first feeling. 'Fly, fly, Van Monfoort, and succour the huntsman, if he yet live!' said she. Her next impulse was gratitude. She hastily untied the girdle from her waist, and turning to the young stranger, who left the completion of the butcher's work to his companion, she said, with brimming eyes and a trembling voice, 'Take this, wear it for the sake of her whom you have saved. Ask not who I am, but if the day ever comes when you discover it, remember that I shall value this as one of the brightest in a whole life of misfortune!' 'Beautiful and generous woman,' cried the stranger, 'I do not merit this; nor dare I accept a gift, lavished on one who may not venture to declare even his name.' 'Keep it, keep it—my heart vouches for your nobility—quick, put it up! they come!' The young man hastily tore open his vest and thrust into his bosom the girdle, much more precious from the manner of the donor, than from the intrinsic value of the embroidered silk and the diamond aigrette by which it was adorned. But Jacqueline, whose eyes followed the movement, felt a thrill of disappointment and regret, at discovering on the breast of the stranger's inner doublet, the broad red cross of St. Andrew—the badge of the followers of Burgundy! She would have given worlds to have recalled her gift. It was too late."

We have now to offer a few words of advice, rather than of discontent. Mr. Grattan's knowledge overburdens his imagination; he too often allows the story to flag, in his desire that none of the accumulated stores of his memory should be wasted: he describes too much. Indeed, we must say, many of our historic romancers are over-minute in their small details. It would be thought very absurd in a novelist of modern life, if he described the dress of every person who figured in his pages; and we do not see why "distance should lend such enchantment to the view," and that so much space should be given to costume, merely because it happens to be some two hundred years old. To shew the absurdity of the thing, let every individual in a novel of the present day be ushered in with a minute account of his or her garb. "The countess had a white crêpe hat, on whose white ostrich feathers Maradan had exhausted her skill. She had a white Swiss cambric pélerine, exquisitely worked, whose collar had three small frills, the two outside ones small-plaited, the other done in French plaits: it was fastened round the throat with a blue gauze riband, figured. The gown was of figured gros de Varna, colour *bleu céleste*; the corsage was drapé, the sleeves with *bouffans à l'Amadis*, the skirt full, and the ceinture of figured satin," &c. &c.—for verily we have exhausted our stock of knowledge on the subject, and much more, had we not had a *île-à-île* with a pretty girl of our acquaintance. How would a modern novelist be assailed with reproaches for his frivolity! In this lies one of Sir Walter Scott's great merits: the style of dress, when introduced, usually illustrates the character, and

never seems merely brought forward for the purpose of shewing the writer's extensive reading. We have another observation to make, which may equally apply to Mr. James, whose *Philip Augustus* we noticed last week: do not these writers perceive how much the tide of sympathy sets against chivalry? Our interest in it is exhausted; and, in the present day, we are rather inclined to undervalue the merits of the warriors of old, and demand of knights and knighthood *cui bono?* on the grounds of utility, than at all to enter into their feelings or their prejudices. Mr. Grattan was more judicious in the *Heiress of Bruges*; all his readers' present sympathies were in favour of a bold and free people struggling for their rights, against tyranny as oppressive as it was unjust. And therefore we must say, we do not consider the present work equal to its predecessor, though very much above the average run of historical romances.

Gems of Modern Sculpture. No. I. 4to. pp. 8. (Also 8vo. and folio.) Engravings, with Illustrative Lines by T. K. Hervey, Esq. London, 1831, Relfe; Cork, Edwards and Savage.

FOUR very sweet chalk engravings after drawings by clever draughtsmen, are the staple, as far as the fine arts go, of this first No. of a very promising monthly publication. The poetical illustrations are from the pen of Mr. Hervey; and whoever may follow his footsteps in the ensuing Nos., will have no slight effort to make in order to sustain a comparison with what he has so charmingly begun. The publication, except in form, bears a strong resemblance to Dagley's exquisite little volume of *Gems from the Antique*, illustrated by Croyly: the subjects are Canova's *Hebe*, *Cupid and Psyche*, and *Dancing Girl*, and Westmacott's *Psyche*. We select the verses on the latter, as a fair specimen of the author's musical tenderness and beauty.

"They wove bright fables in the days of old!
When reason borrowed fancy's painted wings;
When truth's clear river flowed o'er sands of gold,
And told, in song, its high and mystic things!
And such the sweet and solemn tale of her,
The pilgrim-heart, to whom a dream was given
That led her through the world—Love's worshipper—
To seek, on earth, for him whose home was heaven!
As some lone angel, through night's scattered host,
Might seek a star which she had loved—and lost!
Is the full city—by the haunted fount—
Through the dim grotto's tracery of spars—
Mid the pine temples, on the moonlit mount,
Where silence sits, to listen to the stars—
In the deep glade, where dwells the brooding dove—
The painted valley—and the scented air—
She heard far echoes of the voice of Love,
And found his footsteps' traces everywhere!
But never more they met!—since doubts and fears,
Those phantom-shapes that haunt and light the earth,
Had come 'twixt her, a child of sin and tears,
And that bright spirit of immortal birth;—
Until her pining soul and weeping eyes
Had learnt to seek him only in the skies,—
Till wings unto the weary heart were given,
And she became Love's angel-bride—in heaven!"

This little poem is worthy of Mr. Hervey, whose nature and pathos we have so often had occasion to admire—whose best productions, indeed, always induce us to regret that he does not write more. With such wings, there is no fear of these lovely figures being wafted to the author's, or at any rate to the publisher's heaven—popularity.

Spain in 1830. By Henry D. Inglis, author of "Solitary Walks," &c. London, 1831. Whittaker and Co.

MODERN travellers in many instances contrive to see every thing not worth seeing, and to be most particular in informing us of what we

care not to know. The numerous publications of late years on the subject of Spain induce us to this remark; for after reading them, we are almost as profoundly ignorant of the present state of the Peninsula as we were previously to undergoing the labour of their perusal. We have waded *ad nauseam* through the speculations of the meddling politician, the learned pedantry of the professor, and the cold-blooded narrative of the tactician; we have yawned over the finely wove and delicately impressed pages of the flippant traveller, who describes from his moving prison the *diligence*; and who, the slave of habit, grounds his estimate of a people on the basis of his personal gratification and convenience. We willingly admit that much talent and learning have occasionally been applied to the illustration of the early poetry, and the elucidation of the history of Spain; but as members of a commercial community, we have looked in vain for notices of her manufactures, and details of their processes; for the condition of her agriculture, and the products of her mines: as devoted to the arts and sciences, we have been anxious to be informed of their present state and application, and the nature of the encouragement for their advancement and protection; as lovers of constitutional liberty, we expected to have the result of shrewd and impartial observation on the sources of those springs of action in the people, and their ruler, which cause Spain to be an anomaly in this age of improvement and civilisation.

Another fault common to such travellers, is their enthusiasm for the past, to the total disregard of the present state of things: whole chapters are wasted on mutilated and unimportant vestiges of antiquity, on a cathedral, a mausoleum, or the precious labours of the painter and sculptor of the 15th century, until we really know more of the ancient times and manners of our neighbouring nations, than of their actual and existing situation; so that great events take us by surprise, and excite our special wonder, from being uninformed of the causes of which they are often but a simple and natural consequence. It is much more satisfactory to us to be enabled to make these animadversions generally, than to apply them to the author of a particular volume. When a fit of ill humour has come over us (and critical ill humour is not always causeless), and when about to draw an inky and inextricable labyrinth round some offensive literary insect, our purpose has been averted by the recurrence to our mind of the following golden passage from one of Locke's letters, which we quote for the benefit of all our professional brethren:—"I am always for the builders who bring some addition to our knowledge, or at least some new thing to our thoughts. The finders of faults, the confuters and pullers down, do but only erect a barren and useless triumph upon human ignorance, but advance us nothing in the acquisition of truth. Of all the mottos I ever met with, this, writ over a water-work at Cleve, best pleased me,—*Natura omnes fecit judices, paucos artifices.*"

Having now vented our critical ducts at the expense of modern travellers, we have great pleasure in announcing to our readers a very considerable improvement on the Spanish line of road. It was our expressed intention to have entered more at large into the merits of Lieut. Slidell and Sir A. de Brooke, in their respective works upon Spain; but we are now precluded, by another having stepped in and obtained the vantage ground, with much credit to himself, and we trust with no disadvantage to our readers.

Spain in 1830, by H. D. Inglis, is the unpretending title of two volumes, which we pronounce to be the best English work on Spain that has appeared since the Rev. Mr. Townshend's travels, published some forty years ago. Mr. Inglis enters the country from Bayonne, and follows the track of former travellers: we will not, however, by any present remarks, detain our readers from the passages we purpose quoting from his book, merely adding, that the unaffectedness of his narrative, so conspicuous throughout, is evidence of a clear eye and a sound head, and tends very much to stamp the valuable information it contains with the authenticity of truth. The capitals of countries are not in all cases the best schools for acquiring a knowledge of the peculiarities of national character; and, under this impression, we halt with our traveller at Bilbao, in Biscay, and let him speak of that city and its industrious population.

"As the road approaches Bilbao, the mountains that enclose the valley increase in height, make a curve, and run directly into the Bay of Biscay; and Bilbao is situated in their bosom: it is this that gives to Bilbao its peculiar character. Mountains generally diminish in height as they approach the sea; but here this rule is reversed, and Bilbao possesses the singularity of being a sea-port, and of yet being all but surrounded by lofty mountains. Owing to this, nothing can be more striking and novel than the view of the city where it is first seen from the bridge that crosses the small river about a mile before entering it. I was obliged to leave the carriage at the entrance to the town, and walk to the posada; for it is the rule that no wheeled carriages of any kind are allowed to drive through the streets of Bilbao. This regulation has arisen from a praiseworthy desire to preserve the purity of the water, which is conveyed in a stone tunnel under the streets; all goods are therefore carried through the town either in panniers, on mules, or in sledges, which are provided with a contrivance by which they constantly moisten their path with water. * * * I remained in Bilbao a fortnight, which I found amply sufficient to see all that merited attention, and to inform myself respecting some of the peculiarities of the province of Biscay. I have already spoken of the situation of Bilbao, as striking and beautiful, but the town itself is not remarkable for its beauty or cleanliness; the smells are most offensive; and lying as it does in so deep a basin among the mountains, which even shut it out from the sea, I can scarcely think Bilbao a healthy city. But by the side of the river there is a fine promenade all the way to the port, which lies about two miles from the city, and here the inhabitants may catch some of the sea-breeze which generally comes up with the tide; a part of this promenade is allotted to the fruit and vegetable market, which I strolled through the morning after my arrival: there was a most abundant display of every sort of which the season admitted, including an extraordinary quantity of *tomata*; this is known in the south of France by the name of *pomme d'amour*, and is an important ingredient in Spanish cookery. The bread market is held along with the fruit market, and I found the bread of Bilbao quite equal to that of the other parts of Spain. When I looked from my window in the hotel, I found that I was well situated for observing the inhabitants of all classes: opposite, stood the church of St. Nicholas; at one side was a public fountain, and on the other a brass basin (reminding me of Membrino's helmet) indicated a barber's shop. At

all hours, therefore, I might see some going to mass, and others filling their pitchers at the fountain. The Biscayan deserves the character of strength that has been given to him; and the contrast between the Biscayan and the Andalusian peasant, who inhabit the two extremes of Spain, is remarkable: the latter, dark, tall, upright, slim, with something of elegance in his appearance, and the look of pride generally visible in his air and countenance, seeming to have some reference to his personal attractions; the Biscayan, broad, athletic, lounging, with something of peculiar roughness in his look and manner, and his expression of blunt independence, having no reference to himself individually, but arising from the knowledge that he is a Biscayan, and, as such, the hereditary possessor of peculiar and exclusive rights. Such seemed to me the Biscayan peasant, whether he filled his pitcher at the fountain, or entered St. Nicholas to mass. As for the women, I do not feel myself obliged to use the same reserve in speaking of them as of the women of Vittoria; because the inhabitants of Biscay being a distinct race, my opinion of them does not compromise the character and claims of Spanish women generally. I saw little beauty in Bilbao, and less elegance; and in the manner of the women I remarked the same bluntness as that which characterises the men. But along with Biscayan bluntness, there is much good-heartedness and honesty, and a great deal of intelligence; and even the pride of a Biscayan has given rise to much of the industry and enterprise which in the province of Biscay are so conspicuous in the cultivation of the soil, in the construction of useful works, and in the establishment of praiseworthy institutions. Many of the inhabitants of Biscay in the upper classes have made voyages into other countries, and have returned with diminished prejudices, and increased liberality of sentiment; and the consequence of this has been, that among the educated, and better classes of society, there is little narrowness in political sentiment, and little bigotry in religion. I heard several of the most respectable inhabitants of Bilbao express openly much dissatisfaction at the political debasement of Spain, and breathe ardent wishes for the diffusion of intellectual and religious light; but they added, what my own knowledge has since fully confirmed, that I should not find in any other part of Spain, the same enlightened views as I had found in Biscay. Among the lower orders in Bilbao, and in Biscay generally, there is still much bigotry both in politics and religion, but more especially in the latter: during the existence of the constitution, the prejudices of the lower ranks made it necessary to affix in large letters over the doors of all the churches, and attested by the existing authorities, these important words,—‘The Roman Catholic is the only true religion.’ In Biscay there are not many poor, nor many rich. Formerly Bilbao contained many wealthy citizens; but the export trade in wool was then flourishing. At that time the clearances were more than double their present number; but ever since the preference of Saxon wool has begun to be shewn in the foreign markets, the trade of Bilbao has declined, and now, not more than between thirty and forty British vessels visit Bilbao in the course of a year. Some few houses in Bilbao have still considerable returns from the fish trade, and one or two from the iron export trade; but this has also fallen off, since the demand for Swedish iron has increased. Biscayan iron would still command a preference in the foreign markets, from its superior quali-

ties for finer purposes, if it could enter them at the same price as Swedish iron; but this is impossible, both on account of the expense of fuel for furnaces, and the want of inland navigation. Timber is not scarce in the province of Biscay; but there is an old Biscayan law which tends to keep up its price, enacting that for every tree cut down, six must be planted in its stead; this is often felt to be an inconvenience, and produces scarcity in the midst of plenty. I was informed that two or three houses in Bilbao realise from 2 to 3000*l.* a year; but I believe I may assert that no one spends 300*l.* It is difficult to spend money in Bilbao: in no part of Spain, least of all in Biscay, is it the custom to live extravagantly or luxuriously. The table of a Biscayan is remarkable for its simplicity and sameness: of whatever rank he may be, he takes his cup of chocolate and bread, followed by a glass of sugar and water, about eight o'clock; he dines about one, and six days out of seven, his dinner consists of broth, and a *puchero*, which is boiled beef, with a small bit of pork, surrounded either by cabbage, or Spanish peas (*garbanzos*), and varied occasionally with a sausage; a cup of chocolate again in the afternoon, and for supper boiled lettuce prepared with vinegar, oil, and pepper, finish the repasts of the day. The *ménage* at home, therefore, costs but a trifling sum; and neither does the Biscayan spend any thing upon entertaining his friends: not that he is unsocial; he is social according to the custom of his country. During the winter, a circle of six, eight, or ten families form themselves into a society, and agree to visit each other; each chooses a week, and during each week the circle assembles every evening at the same house; they take chocolate before going out, and sup when they return; the entertainment is entirely intellectual; music, cards, and dancing, fill up the evening. Upon one occasion only does the circle eat together: all the money lost and won at cards is made a purse, and is confided to one of the party; and during the summer it is converted into a dinner in the country, of which all the members of the circle partake. There are no public amusements in Bilbao, excepting occasional bull-fights. Two attempts to establish a theatre have failed; a handsome stone theatre, erected some years ago, was burnt down not long after it was erected; and there was strong reason to believe that the conflagration was wilful, and that the friars were at the bottom of it: another theatre, constructed of wood, was subsequently opened; but after a very short time it was pulled down by order of the public authorities; and this was also generally believed to have been owing to the interference of the friars. . . . Among the first days of my residence in Bilbao, I visited the new cemetery, the model of which is worthy of being adopted in other places. This *Campo Santo* has been enclosed in consequence of a quarrel between the Franciscan Convent and the Chapter of Bilbao, respecting the dues of burial, in a place to which both claimed right; and the corporation completed the new cemetery, at an expense of not less than 30,000*l.* The gateway is beautiful and chaste, with this appropriate inscription over it:

“Cada Paso, que vais dando
Por la senda de la vida
Mas y mas os va acercando
Mortales, á la partida,
Que en vano estais evitando.”

The design of the *Campo Santo* is this: a square area of about six acres is surrounded by a covered arcade, supported by Doric columns;

the back of the arcade is an immense wall of brickwork, in which there are four rows of spaces for coffins, the opening one yard square, and six feet and a half long; into this the coffin is deposited; the spaces which are not occupied are slightly closed up; and a ring in the centre shows that they are vacant. When a coffin is deposited, the opening is built up with brick and lime, and a stone, or marble slab, fitted into it, records the name of the buried. The cemetery is fitted to receive 3000 dead,—a great number for so small a space; and the area beyond the arcade is tastefully laid out as a garden and shrubbery. Besides the inscription I have noted down, there are several others that struck me as being beautiful and well chosen. The following particularly, over the inner-gate, is striking:—

“Deten sus pasos inciertos,
O caminante! repasa,
En que esta puerta separa
A los vivos de los muertos.”

Which may be freely translated:—‘Stop, thoughtless wanderer! and reflect,—this gate separates the dead from the living.’ In returning from the cemetery to the town, I made a long circuit, visiting in my way the *Iglesia de Bigona*, a church which takes its name from a miraculous image of our Lady of Bigonia, deposited in it, and looked upon with extraordinary veneration by the lower orders in Bilbao.

“Before the service began, the officiating priest shewed me the sacristy, and a head of John the Baptist in wood—a very clever performance, by a native artist; and I afterwards waited in the church long enough to see the curtain withdrawn, and the prostrations of three or four hundred devotees. There is a small foundation left to this church, for a curious purpose. The curate must go to the gate of the church at the commencement of every thunder-storm,—say a certain prayer,—and sprinkle the sky with holy water. It appears, however, that the virtue of the water, as well as the water itself, has been sometimes dissipated before reaching the clouds; for the church tower has been twice struck by lightning. In the course of my walk, I learned a curious fact, illustrating strongly the mixture of pride and generosity which is often found in the Spanish character. The corporation being desirous of conducting an aqueduct and a road to Bilbao from a mountain about a league distant, applied to the proprietor (a grandee of Spain) to purchase the land through which these were to be carried. He refused to sell it; but said, that if the corporation would petition him for a grant of the land, he would make them a present of it: they, however, wanted no favour, and would not condescend to this; but supposing that the proprietor would be prevailed upon to sell, they commenced, and at length nearly finished the work. The grandee, offended at this insolence, applied to the king for an order to demolish the work, and obtained it; but just in time to prevent this, the corporation petitioned the grandee, and the order was not only rescinded, but the grant of the land was completed. The water conveyed in this aqueduct forms a reservoir at the entrance of the town for a useful and rather a novel purpose: by opening a sluice, seven of the lowest streets in the town are inundated; this is done every week during the summer heats, and is doubtless very useful in carrying away impurities. I walked through one of the lowest of the streets an hour before, and an hour after the purification; and the difference in smell, freshness, and coolness, was most striking.”

We purpose continuing our remarks on this excellent publication.

Collier's Annals of the Stage. 3 vols. Murray.
[Second notice.]

IN our last Number we briefly announced and characterised this work, with which, on farther acquaintance, we are not less disposed to be exceedingly well pleased. The mass of antiquarian research and lore which it contains, may not, it is true, come under the denomination of light reading; on the contrary, solid information is the best term to apply to those portions; and for more general amusement we must content to seek in the anecdotes and stories which increase in frequency as the narrative descends the stream of time. But our promise was to illustrate it from its own resources, and not to dissertate upon Mr. Collier's very interesting production; and, though we can do so only faintly, where the mass of matter is so great, we now proceed to acquit ourselves of the pledge:—

"It seemed to me (says the author, unfolding his plan), that the dramatic poetry of this country formed of itself a department so important and interesting, as to demand to be separately and systematically examined. For England to possess the greatest dramatic poets of the world, and to be without a history of her dramatic poetry, seemed an extraordinary solecism in letters.

"When I commenced my researches, nearly twenty years ago, I was discouraged on all hands by those who imagined that Malone, Stevens, Reed, and Chalmers, had exhausted the subject, and that, in the harvest they had reaped, they had not left even gleanings behind them. Nevertheless, seeing how many deficiencies remained to be supplied, I persevered in the collection of materials. I obtained admission into the State Paper Department, the Privy Council Office, and into the Chapter-House, Westminster, and I soon discovered in those depositories many valuable original documents, throwing a fresh, clear, and strong light upon some of the most obscure parts of the history of our stage and drama. Among these were unopened patents to different companies of players, and original accounts of the royal revels from the early part of the reign of Henry VIII.; while the unexamined books of the domestic expenses of our kings and nobility, from the reign of Edward IV. downwards, provided me with a great variety of novel and interesting details. These sources of information had not been open to general search, and I was therefore not much surprised to find that a great deal had escaped discovery; but when I came to examine the manuscripts in that great national receptacle, the British Museum, to which every body could easily obtain access, I was astonished at the quantity of substantial materials which had remained there undetected. From the Burghley Papers scarcely a single fact had been procured, although nearly every volume contained matters of importance; and the Harleian, Cottonian, and Royal MSS. had been only cursorily and hastily inspected.* In these I met with letters from, and concerning, our most notorious poets, the predecessors and contemporaries of Shakespeare; and in a diary, kept by an intelligent barrister, who lived while our great dramatist was in the zenith of his popularity, I found original and authentic

* "To shew how little attention they had attracted, I need only mention, that among the Royal MSS. I found two of Ben Jonson's *Masks*, in his own hand-writing, no where noticed but in the catalogue, which is itself very imperfect."

notices and anecdotes of him, Spenser, Jonson, Marston, and other distinguished authors of the time. It occupied me some years to go through the voluminous collections in the Museum, but I never had occasion to regret the mispending of a single hour so employed."

Of our national drama itself, after all his investigation, Mr. Collier says:—

"It was, in truth, created by no one man, and in no one age; and whatever improvements Shakespeare introduced, it will be seen that when he began to write for the theatre, our romantic drama was completely formed and firmly established."

Mr. Collier commences with the miracle plays, enacted so early as the beginning of the 12th century; and quotes very many curious documents relating to them, with which, however, we shall not attempt to interest our readers. These strange representations continued for ages; and "one of the earliest indications of the existence of any thing like a classical taste, in matters connected with the stage in England, is to be noticed under the date of 1520, when four French hostages had been left in this country, for the performance of the treaty relating to the surrender of Tournay. For their entertainment, the king 'prepared a disguising, and caused his great chamber at Greenwich to be staged,' for the purpose: according to Holinshed, among the performances on this occasion, 'there was a goodly comedy of Plautus played.' As it was for the amusement of foreigners, the representation was most probably in Latin, for we have no trace of an English version of any of the plays of Plautus of so early a date."

The interlude of *Jack Jugler* is our first extant dramatic production derived from Plautus; but, as far as we can judge from internal evidence, it seems not to have been performed until the reign of Edward VI. The *Andria* of Terence was printed under the title of 'Terens in English,' as may be concluded prior to 1630, and probably with the types of John Rastall, but no printer's name nor date are appended."

We are induced to our next extract by the remarkable matter in the programme or analysis of an interlude by Sir D. Lyndsay, and played in Scotland. Change the date only, and one might think it was a drama got up for the Reform Days in which we live, though it is just upon three hundred years old, viz. A.D. 1540. After the entry of a king with his courtiers, &c.:

"Therafter came a man armed in barnes with a sword drawn in his hande, a busshope, a burges man, and experience cladde like a doctor, whose sate thaym all down on the deis, under the king. After thayme come a poor man, whose did goe up and downe the scaffold, making a hevie complainte that he was heryed through the courtiours taking his fence in one place, and alsoe his tacks in an other place, where through he had stayled his house, his wif and childrenen beggyng thair brede, and soe of many thousand in Scotlande; which wolde make the kyngs grace losse of men if his grace stod neide, saying thair was no remedye to be gotten, for though he wolde suyte to the kyngs grace, he was naither acquaynted with controuller nor treasurer, and without thaym myght noe man gete noe goodnes of the king. And after he spered for the king, and whence he was shewed to the man that was king in the playe, he answered and said he was noe king, for there is but one king, whiche made all, and governethe all, whose is eternall, to whome he and all earthely kings ar but officers,

of the whiche, the whiche thay must make recknyng, and soe furthe much more to that effecte. And thense he loked to the king, and saide he was not the king of Scotland, that there was an other king in Scotlande, that hanged John Armstrong with his fellowes, and Sym the larde and many other moe, which had pacified the countrey and stanchyd thifte; but he had lefte one thing undon, which pertheyned aswell to his charge as thother. And whene he was asked what that was, he made a longe narracion of the oppression of the poor by the taking of the corse pressaunte beists, and of the heryng of poor men by concistorye lawe, and of many other abussons of the spiritualtie and churche, with many longe stories and auctorities. Thense the busshope roise, and rebuked hym, saying it offered not to hym to speake suche matiers, commanding hym science, or ells to suffer dethe for it by thair lawe. Therafter roise the man of armes, alledginge the contrarie, and commaunded the poor men to speake, saying thayr abusson had been over longe suffered without any lawe. Thense the poore man shewed the great abusson of busshopes, preletts, abbotts, reving menes wifes and daughters, and holding thaym; and of the maynteynyng of thair childer, and of thair over bying of lords and barrons eldeste sones to their daughters, wher thoroughe the nobillitie of the blode of the realme was degenerate. And of the greate superfluous rents that pertheyned to the churche by reason of over muche temporall lands geven to thaym, whiche thaye proved that the kinge might take booth by the canon lawe and civile lawe. And of the greate abomynable vices that reagne in cloustures, and of the common bordells that was keped in cloustures of nunnes. All this was provit by Experience; and alsoe was shewed thoffice of a busshope, and producit the New Testament with the auctorities to that effecte. And thense roise the man of armes, and the burges, and did saye that all was producit by the poor man, and Experience was reasonable, of veritie and of great effecte, and very expedient to be reformed with the consent of the parliament. And the busshope said he wolde not consent therunto. The man of armes and burges saide thay were twee and he bot one, wherfor thair voice shuld have mooste effecte. Therafter the king in the playe ratified, approved, and conferred all that was rehersed."

It would appear that this piece was distinctly countenanced by James V.; and it shews how deeply the reformation was then spreading its roots in Scotland.

We now pass, in conclusion for the present, to the Diary alluded to in a preceding column. "It is written in a small, fair, and tolerably legible hand. A 'song to the queene in a maske at court, 1602,' is the first entry in this diary; and it is inserted on the fly-leaf, in the following words:—

'Mighty princes of a fruitfull land,
In whose riche boosome stored bee
Widom and care, treasures that free
Us from all feare; thus with a bounteous hand
You serve the world wch yett you doe commaund.

Most gracious queene, we tender back
Our lives as tributes due,
Since all whereof we all partake
We freely take from you.

Blessed goddess of our hopes increase,
Att whose fayre right hand
Attend justice and grace,
Both which commend
True beauties face!

Thus doe you never cease
To make the death of war the rise of peace.
Victorious queene, soe shall you live
Till tyme it selfe must dye;
Since no tyme ever can deprive
You of such memory.

No name is appended to this song, and it would be idle to indulge in conjectures regarding its authorship: the mask in which it was inserted was probably exhibited at Christmas, for Queen Elizabeth died on the last day but one of 1602, as the year was then calculated, or on the 24th of March, 1603, as it is now reckoned. She continued to visit her nobility up to a very late period.

The Diary proceeds:

"December 1602.—On Monday last the queen dined at Sir Robert Cecil's new house in the Strand: shee was very royally entertained, and richly presented, and was marvellous well contented; but at her departure she strayed her foot. His hall was well furnished with choise weapons, which her majestie tooke especial notice of. Sundry devices at her entrance—three women, a maid, a widow, and a wife, each contending [for] their owne states, but the virgin preferred. Another—on [one] attired in habit of a Turke, desirous to see hir, enterd; but as a stranger without hope of such grace, in regard of the retired manner of hir court—complained—answers made and some gracious, her majestie in admitting to presence, and some able to discourse in anie language, which the Turke admired; and admitted, presents hir with a riche mantle, &c. The whole seems to have been a silly piece of masquerading to gratify the vanity of Elizabeth."

"Feb. 2, 1601[2].—At our feast we had a play, called *Twelve Night*, or *what you will*, much like the comedy of errors, or *Menechmi* in Plautus, but most like & neere to that in Italian called *Inganni*. A good practise in it to make the steward believe his lady widdowe was in love with him, by counterfaying a letter, as from his lady, in generall termes telling him what shee liked best in him, and prescribing his gestures, inscribing his apparalle, &c.; and then when he came to practise, making him believe they tooke him to be mad." At this date we may conclude with tolerable safety that Shakespeare's *Twelfth Night* had been recently brought out at the Blackfriars Theatre, and that its excellence and success had induced the managers of the Reader's Feast to select it for performance, as part of the entertainments on that occasion.

"November 21, 1602.—Jo. Marston, the last Christmas, when he daunted Alderman Mores wives daughter, a Spaniard borne, fell into a stange commendation of hir witt and beauty. When he had done, she thought to pay him home, and told him she thought he was a poet. 'Tis true, said he: for poets feigne and lye; and so did I, when I commended your beauty, for you are exceeding foule.' No other dramatic poets, or circumstances connected with the drama, are mentioned in this very curious collection of scraps: some matters that relate to other poets, I have subjoined in a note."

"The following anecdote respecting Spenser has never before been told on such good authority, although it has been long known by tradition. It is disbelieved by Mr. Todd in his *Spenser*, i. 67, edit. 1805.

"May 4, 1602.—When her majestie had given order that Spenser should have a reward for his poems, but Spenser could have nothing, he presented her with these verses—

'It pleased your grace, upon a tyme,
To graunt me reason for my ryme;
But from that tyme until this season,
I heard of neither ryme nor reason.'

The barrister's informant, in this instance, was a person of the name of Touse, to whom he often refers as his voucher.

An epitaph upon Spenser is thus given—

In *Spenserum*.

Famous alive, & dead, here is the ods,
Then god of poets, now poet of the gods.'

The following does more credit to his adversary than to Sir W. Raleigh, but not much to either—

Alcock's Travels in Russia, Persia, &c.

WE resume, but to conclude, our extracts from this volume, which is, as we stated, confined to private distribution. Our first illustrations are of Persia.

"If the reader happen to have seen the famous monastery of Megaspelia in the Morea, which is built under the side of a mountain, in somewhat a similar manner, he is in a condition to judge of Makoo, by imagining something ten times more curious and more appalling: nor is it competent for me otherwise to illustrate that which has no parallel, and which seems to defy all description. Makoo lies about midway between Erivan and Hoey: we had left the road to Tabreez to the east, and having passed along the foot of a line of mountain for some miles, we at length came to a narrow defile, which seemed as if intended to display to the best effect the wonderful *coup d'œil* that is presented on entering the valley at the base of the great cavern. This singular place is the residence of an independent chief, who is so jealous of Russia and all his neighbours, that no European, excepting the English officer through whose kindness we were introduced, had ever been received by him. We had the advantage of being invited to pass two days there, and at the same time that we had an opportunity of seeing one of the most curious towns perhaps in the world, by reason of its position, we were not a little glad to observe the mode of life of Persians, however much we might despise its sickening insipidity. For the want of a better amusement, for it was in the middle of winter, and the ground being covered with snow, there was no temptation to go out hawking, (a common sport in those countries), we fired from the top of the khan's palace at the icicles hanging from the projecting cliff, though somewhat to the detriment of the buildings on which they fell from their terrific height. The place is prepared for defence as much as people entirely ignorant of the art of war can render it. There are considerable galleries cut into the side of the mountain, which can only be approached by rope ladders, of which they speak with an air of mystery, insinuating that they consider them a sure defence against Paskevitch and his hardy Cossacks. Soon after we arrived, the prince sent a message that he would be happy to see us in his apartment. The servants, who always remain in waiting at the entrance, begged us to take off our boots; my companions were unwilling to comply with this request, and my inclination to conform to the customs of the country was overruled; the khan's eyes were very evidently directed to our feet as we entered, and he appeared displeased. He, however, soon began the usual compliments, saying, in the figurative language of Persia, that his house, his servants, all his property, were ours; and began to ask a variety of questions, in the course of which he discovered that one of our party was a physician: he immediately felt various ailments, for some of which our friend prescribed. Two of the brothers of the prince, jealous of each other,

begged the doctor to feel their pulses, and believed that he could inform them which of them was most courageous, and would fight the best. Every individual in the establishment, even the servants, had complaints, and wished for medicine, which, however, they were afraid to take when prepared. The wives and children fancied themselves ill, and the harem was opened to our fortunate companion; he took the interpreter with him, who was desired to shut his eyes, but the husband gave the doctor permission to peep if he liked."

"After a long conversation with the prince, we visited the stud of horses, greatly renowned in these parts as being of a very superior breed. They are derived from two celebrated Arab horses deposited here by Jafer Kouli Khan, once governor of Hoey, who fled to Russia about twenty years ago; but this is the only district in the north of Persia where this race has not degenerated. Shortly afterwards we were informed dinner was ready, and we were again summoned to the state rooms. Lest the reader should fancy such a state room contains much handsome furniture, it may be well to explain, that a very pretty carpet, which is most studiously kept clean, serves as a substitute for the tables, the sofas, and the chairs of Europe. The prince, his brothers, and friends, sat on one side of the room, and our Frank party opposite to them. The dinner consisted of a pillaw, with partridge, some balls of forced meat wrapped in vine leaves, called *giaprakia*, and little bits of mutton roasted on a skewer of wood, called *kibob*, tolerably good, and several basins of sherbet, (an oriental name for lemonade), and the most delicately carved wooden spoons were used, as silver utensils coming under the class of innovations, are forbidden. The Persians use their right hand only to feed themselves with, and the dexterity with which they take rice between their thumb and forefinger, form it into a sort of little ball, and toss it into their mouth without touching any part of their beard, is most astonishing; one of my companions was inclined to try the same experiment, but scattered the rice all over his face, and down his neck-cloth, and was forced to recur to the more civilised practice of employing a spoon. Nothing can be more painful, as well as disagreeable, than sitting cross-legged on the floor, and being obliged to bend over in order to eat one's dinner. Not less singular than the mode of eating were the arrangements for sleeping: the floor of the bed-room was laid for about thirty persons; consisting of ourselves, our Frank servants, and the other visitors of the Khan. Very little preparation is required by the Persian to lie down to rest; he throws off his large loose robe, the shoes are always left outside the room, his nightcap is the black lamb-skin, which on no occasion leaves the head, and he reposes without further ceremony, having first smoked his hookah. Among the visitors at the prince's was an unfortunate man who had held some appointment under the government, and had had his eyes put out as a punishment, for this is not uncommon among them. There is a story, almost too horrible to relate, that the town of Kermanshah having rebelled, three pounds weight of eyes were ordered to be sent to the late king, Aga Mahomed Khan. We left Makoo particularly gratified by our visit, and by a civility and kindness on the part of the prince and his brothers, which we could hardly have expected. He is necessarily suspicious of all strangers, and but that we were introduced to him under very favourable auspices, it would have been more

'Dec. 30, 1602.—Sir W. Rawly made this rime upon the name of a gallant, one Mr. Noel—

'Noe L.

The word of denall & the letter of fifty
Makes the gent's name, that will never be thrifty.'

'And Noel's answer.

'Raw Ly.

The foe to the stomacke, & the word of disgrace
Shews the gent's name with the bold face.'

There are several very coarse anecdotes regarding Sir John Davies: the following may be quoted:

'April 10, 1603. Io Davis reporteth that he is sworne the king's man, that the K. shewed him great favours: Iepte, he slanders while he prayses.'

probable that we had been confined in a dungeon than received with hospitality and attention.

"According to the doctrine inculcated by Mahomet, the women in Persia are not only excluded from all society, but go about so little that a traveller might pass through the whole country and not see a female face; as the Persians are, perhaps, even more jealous than the Turks. The Armenian and other Christian women living amongst them, are obliged to conform to Mahometan law in this respect, and cover their faces, and wrap up their figures in a large sort of domino or *feradgee*, in the same manner as the native women, or they would be insulted. So naturalised are the Christians to this custom, that it was the cause of a great disappointment to us upon one occasion. An Italian doctor, who had been lately married to an Armenian, was polite enough to endeavour to induce his bride to uncover her face for our curiosity and amusement; but his best efforts to persuade her it would not be improper were in vain: the lady even smoked a *kakian* (the Persian hookah) whilst we were in company with her, but kept it under her veil; it was altogether a most ludicrous scene: in vain we told her that it was unfair she should have the opportunity of seeing us through the little holes of her dress, and that we could not be permitted the advantage of seeing her, even with her husband's consent. She felt it would be extremely indecent to shew her face; and we were obliged to satisfy ourselves with the assurance of her husband, that she was not worth seeing, and the great probability that she would accidentally have dropped aside her veil, if she had had any hopes of exciting our admiration.

"The singular state of society among these people will be illustrated, perhaps, by another trifling anecdote; for we were not a little amused during a sumptuous entertainment given us by a rich Persian, near Hamudan, having in the course of conversation asked our host how many children he had, to perceive him turn round to his servant for the necessary information."

Of the state of English trade at Constantinople a very unfavourable account is given.

"I was sorry (says Mr. A.) to find that our principal export from England to the Turkish market (manufactured cotton) was of very inferior description to that of Switzerland and of France, and was only able to procure demand at all from the inferiority of its price: we are so completely surpassed by the Swiss in the beauty and texture of cotton prints, and by the French in the finest specimens of the manufacture, that English has become another word for inferior; and the avidity with which our goods were formerly sought after, is sunk to the ignominious supply of those whose tastes are rather governed by frugality than by superior beauty and excellence. In cloth, an article of great demand in Turkey, we have never had any pretension to vie with Germany; and so long as corn is sixty-five or seventy shillings in England, and from twenty to thirty shillings in Saxony, the reason of our inability to compete with them must be obvious. In hardware we are supplanted by the Prussians, and Belgium has had the principal supply of arms; some American merchants, too, are making large fortunes by the opium trade to China, whilst our less favoured countrymen are prevented sharing any of the profits, by the impetive restrictions of our East India charter.

"Having crossed the Sea of Marmara in a

Greek boat, we landed within six hours' distance of Brussa, a very pretty place, famous for its silks, which bear its name; for its natural hot-water baths, perhaps the best in Turkey; and as the place of exile of many noble Greek families of the Fanar; and from having been once the residence of the sultans, it contains many of their tombs. The view from the top of the Olympus, at the foot of which Brusselles, is most extensive; the Sea of Marmara, the Bosphorus, the Black Sea, Scutari, and Constantinople, were at once presented to our sight, and formed a grand and enchanting spectacle. When we were nearly at the summit, we were much amused by the ridiculous manner in which an immense black bear, on being frightened, ran down from the top of a mountain at a desperate rate; making a *traineau* of his hind legs, he slid down most commodiously, and although passing quite near, shewed no disposition to attack us. At another moment we had doubts as to the safety of one of our party, who had quitted us in order to satisfy his ambition to attain the very point of the mountain: we were sitting patiently awaiting his return, when he hallooed lustily to us, and we immediately perceived him running as if for his life, and another huge bear close to him, whom he had roused by approaching his den; the fear, however, was perfectly reciprocal, for the frightened animal took to his heels; and, indeed, we regarded it a fortunate circumstance—for we were entirely unprepared for any combat, and had no weapon with us of any description. The fascination of the evil eye is a superstition well known to exist among the Greeks: when we applied to see the silkworms, which are kept on an immense scale, we were told they would die if we were allowed to look on them. Such is the infatuation on this subject, that every crop in the field, every animal, the bread, the meat, all are provided with charms to avert the evil eye, lest they should attract envy, and perish."

We ought to have quoted some of the valuable information respecting Greece, but our limits forbid; and we now take our leave of a volume, which, from the pleasure it has afforded us, we cordially wish were in general circulation.

An Essay on the Origin and Prospects of Man.

By Thomas Hope. 3 vols. 8vo. London, 1831. J. Murray.

ALTOGETHER one of the most extraordinary productions of the age in which we live, this posthumous work of the author of Anastasius is destined to excite the deepest interest in the philosophical world. Limited this week to a few words concerning it, we hardly know how to give even a faint idea of its nature. It treats in a perfectly new and original manner of the metaphysical abstractions least examinable by human sense or reason:—of eternity, time, space, matter, force, movement, mind, soul, God. The views of the creation of the world; of the origin of man literally from the dust of the earth (or a congregation of entities); of evil being deduced from good arrived at a certain point, as death follows life; of the progress of the inorganic and organic world; of vitality; of society in all its advanced and civilised relations; and of the future:—these views, we repeat, and many others of the greatest importance, are presented in a way to merit the closest study and examination which intellect can bestow upon topics of so elevated a character. These, indeed, are pages to "give us pause;" and will, we cannot doubt, engage the pens of the ablest philosophers of the present

and subsequent times. For ourselves, we shall only be competent to point out some of the more curious phenomena—some of the things calculated to inspire general reflection; and now we have but to add, that the whole scope of these volumes, offering an entirely New and very striking System of Philosophy, is such as to enforce the advantages of virtue and righteousness in our present state, and offer a bright hope of the blissful enjoyment of soul (no longer individualised) in the world to come.

We regret to say, that a very limited number of this work has been printed; and that not a copy is to be obtained by the public.

The Modern Hudibras. In two Cantos. 12mo. pp. 51. London, 1831. Murray.

A POLITICAL squib, for which we are, we believe, indebted to Mr. Bankes, chiefly applying to the reform question and its advocates and friends. We have seen more happy efforts at wit, but there are some fair anti-reform touches in these pages.

The following displays the author's unfavourable opinion of the "gentlemen of the press."

"The other party to that bargain,
On which the Israelite was arguing,
Was a lank youth with aspect pallid,
One of a trio lean and squallid,
With hands dyed half a shade less deep,
Yet more in grain, than chimney-sweep,
Whom men call 'gentlemen of the press,'
And they proclaim themselves no less,
Though printers and the gods, we're told,
Still style them devils, as of old:
These three were of the last edition,
And scarce inferior to Parisian,
Those hotpressed patriots who have earned
Such glory, when their hands they turned
From setting types to breaking bones,
And lithographed with paving stones.
From their out-sides, you'd scarce believe it
That these are gentlemen by brevet,
Nor from their in, that they've dominion,
Without appeal, on all opinion,
Be't speculative, or be't critical,
Or theologic, or political,
All, all—a sort of fourth estate,
That seems, like the lean kine, of late
To swallow up and to digest
Whatever is left of all the rest.
Whether domestic or exotic,
No dynasty is so despotic.

These Incas, or pronouncers it Inkens,
Are both free-writers and free-thinkers,
Their very daily bread is libel,
Their manual the *Reformer's Bible*.
All the night long they have worked hard
To bring to light a choice placard
Which dawn exhibits in large letters
Upon dead walls and rotten shutters,
Addressed to all the labouring classes,
(There proved worse used than dogs or asses),
And very pointedly indeed
To such as neither write nor read."

The Annals of my Village; being a Calendar of Nature for every Month in the Year.

By the Author of "Select Female Biography," "Conchologist's Companion," &c. 8vo. pp. 362. London, 1831. Hatchard and Son.

THIS is a delightful little volume, and excellently calculated to give the young reader an interest in the objects which surround him; humanising the feelings, and pointing out a thousand sources of delight in the infinite variety of nature, whose history is equally instructive and pleasurable. But while we would wish to inculcate on the mind a love of nature, and humanity towards the meanest object in creation, we must enter our protest against the sickly sensibility, the false cant of sympathy, which mar these otherwise well-written pages. How absurd are the following passages, to say nothing of their truth! Speaking of worms—"Without their useful ministry, maternal earth would remain cold, hard bound, and con-

"The exploits of the Parisian printers have been since recorded, like Caesar's, in their own Commentaries."

sequently sterile. Where, then, should we look for fields of waving corn, and green meadows, the support of men and cattle?" We doubt whether the farmer will quite agree with this. Again, of birds, our author states that their language is limited, because "they are strangers to those numerous refinements that spring from society, leisure, and ennui; their language, however modulated, is necessarily concise." The rabbit:—"Poor rabbit, how many are thy grievances! Perhaps, too, the plainness of thy coat, and thy familiarity, so proverbially said to produce contempt, may contribute to the prejudice against thee. But with the lovers of nature and of rural charms, the innocent playfulness of thy manners, moonlight gambols, and early boundings over the dewy lawn, more than compensate for all the little stolen morsels thou makest free with." After giving an account of a species of trap to catch field-mice, the ejaculation is—"Poor hapless little mouse! how many are thy enemies! how many begrudge thee thy acorn and hollow tree!"

Our author most justly defends the goat-sucker against the popular prejudice, that it milks the herds; but we do think the defence would have been more efficacious had it been less pathetic. "Poor innocent little bird of night! how sadly hast thou suffered, and how foul a stain has inattention to facts put on thy character! * * * I once saw this strange nocturnal bird in a solitary glen near the village. He was perched on a stem, with the head lower than the tail; and so intent was he in uttering his strange song, that a sensible vibration was perceptible in the bough. He seemed as if disquieted by gloomy apprehensions; and while he looked full in my face, and the clear cold moon shone upon him, his cries and gestures alike conspired to entreat me to do him no wrong. I could almost fancy that he said—'Have pity on me—I am in pain, and sorrowful; cast not a stone at me, nor chase me from my favourite haunt. I have never hurt one living creature.'" Does not our fair writer perceive that the fancy of this account contradicts the reality?—had the bird been so disquieted by "gloomy apprehensions," he would not have staid to look her "full in the face." We do not think the first title to this work a judicious one—it resembles Miss Mitford's *Our Village* too much: the second one, a *Calendar of Nature*, is far more appropriate. There are some very pretty woodcuts.

The Gorleston and Southtown Magazine; or, the Pantheon of Literature, Science, and the Arts. No. XX. 8vo. circ. pp. 50. Yarmouth, Crisp; London, Steill.

THE existence of a local periodical such as this (a No. of which has been sent for our notice), is a pleasing proof of the general diffusion of good taste and knowledge throughout the country. The contents are of the usual miscellaneous magazine character; and there is prefixed (the price being only sixpence) a very fair engraving of Gorleston church.

Montgomery's Oxford; illustrated by T. Skelton and other Artists. 2d edition. London, 1831, Whittaker and Co.: Edinburgh, Blackwood.

It has been questioned by authors and publishers, whether the praise or the abuse of a book is the most likely to promote its sale; and here is an example to confirm the doubt—for, in spite of the plentiful censure that has been lavished upon it, *Montgomery's Oxford*

has reached a second edition. It has been revised by the poet; and Skelton's beautiful illustrations are well calculated to give it a permanent interest with Oxonians and lovers of the arts.

Alphabetical Index of all the Names contained in Sidney Hall's New General Atlas. pp. 360. London, 1831. Longman and Co.

OF this excellent Atlas we spoke during its progressive publication, in those terms of commendation which its distinct style and accurate and ample intelligence merited. It required only an index such as the present to render it complete as a work of reference; and we are glad to see it so ably supplied. The names are printed in three columns on each page; and, on a rough estimate, amount to the prodigious number of about seventy-five thousand!

The History of Poland, from the earliest period to the present time: with a Narrative of Recent Events, obtained from a Polish Patriot Nobleman. By James Fletcher, Esq. of Trinity College, Cambridge. 8vo. pp. 428. London, 1831. Cochran and Pickersgill.

WHEN Poland engages so much of the attention of Europe, this *résumé* of her past history and view of her present condition is particularly well-timed; and though the more immediate statements may, from their avowed source, be suspected of some partiality, yet the reader unacquainted with the more elaborate (and we believe untranslated) work from which this is chiefly compiled, will add to his knowledge of the country, and also to a part of the causes which have led to the revolution, and its means of resistance, by their perusal. The issue is in the hand of Providence; but looking at the scene of struggle, the level nature of the country, so indefensible with regard to military occupation, and entirely relying on the spirit of the people, it must be allowed that the conduct and bravery already displayed have been most heroic. Yet, whether it is probable that the Poles, so animated, can ultimately withstand the prodigious power of Russia, seems to depend less upon their own efforts than upon the chance of stirring up a co-operation in other parts of Europe, where two great principles of action are now vibrating with such tremendous and appalling force. The adjoining, we might say the surrounding, governments of Austria and Prussia must be decidedly hostile to a popular insurrection; and more distant nations are perhaps too seriously engaged with their own concerns to interfere materially in the affairs of Poland. Thus it appears that the prospect of a favourable result is dark and cloudy; but still there are chances in the womb of time which not only forbid the friends of Poland to despair, but bid them bind up their loins, and hope for her triumph.

The annals of her earlier period are too familiar to every one to require repetition. We need not tell that the Piast dynasty reigned some 500 years, and ended in 1386; that it was succeeded by the dynasty of Jagellon, which lasted till 1572; and that after this the monarchy became elective, and has ever since afforded a striking example of the danger attendant upon that species of constitution, by unceasing and sanguinary competitions, civil wars, and final partition. Yet there were glorious glimpses between; and the history of this gallant and high-minded people, living in a land of plenty, and uniting almost an excess of

civilisation with the qualities of feudal barbarism, is full of curious and interesting speculation. It is not, however, within our province to trace these events. The first and second partitions were followed by patriotic conspiracies—Stanias after the former, and with him Kosciusko after the latter, were subdued—the French revolution led to new attempts; and the treaty of Tilsit, following many changes, gave another aspect to the duchy of Warsaw, erected in 1807, instead of the restoration of Poland, a hope of which had been thrown out as a tub to the whale. Mighty changes again ensued—Bonaparte was conquered, and the kingdom of Poland, with a population of four millions of souls, was annexed to Russia by the Congress of Vienna, but with a constitutional diet, which sat for the first time in 1818; the other portions of the old kingdom, Polish Prussia, Lithuania, Galicia, and the Republic of Cracow, being in appearance less fortunate in preserving even a shew of independence.

The author before us complains that the constitution has been infringed by the Russians, and that Constantine was guilty of the grossest oppression and cruelty. He justifies the rising of the Poles on these grounds, but does not throw much light either upon their actual resources or future prospects. A map, and portraits of Kosciusko and the President, Prince Czartoryski, are appropriate embellishments of the volume, the literary matter of which is well enough put together for a temporary purpose, being intelligible, without pretension to elegance. The work is, therefore, altogether well calculated to be generally read at this time.

The Lives of the Players. By John Galt, Esq. 2 vols. 12mo. London, 1831. Colburn and Bentley.

AT the same time that Mr. Collier is illuminating our ancient drama, Mr. Galt professes to give us "one of the most amusing books in the language," though merely a compilation from the most striking and entertaining materials connected with the lives of players; and we all know how competent the writer is to fulfil such a profession. His selection has been made from a hundred volumes relating to the stage, and to "the best actors in the world, either for tragedy, comedy, history, pastoral, pastoral-comical, or historical-pastoral;" beginning with Charles Hart, Kynaston, Nell Gwynn, &c., and ending, though chronological order is not observed, with J. Kemble, Emery, and Siddons—in all, thirty-seven memoirs. It is, indeed, a capital parlour work, and full of pleasant theatrical recollections and anecdotes. One of the most whimsical biographies is that of Mrs. Charlotte Charke, the eccentric daughter of Colley Cibber; but as even this does not tempt us to offer any extracts, we shall simply recommend Mr. Galt's "most amusing" production to readers of every class to whom a gay and laughing hour is agreeable. There is neither too much nor too little of it; it is so marked by propriety throughout, as to be utterly free from offence to fastidiousness itself (an excellent quality in a composition of the kind); and either to kill ennui, or relieve the mind fatigued with cares or business, we cordially prescribe Galt's *Lives of the Players*.

ARTS AND SCIENCES. ROYAL INSTITUTION.

MR. FARADAY "on the peculiar arrangements assumed by particles lying upon vibrating elastic bodies." This was the subject

of a paper read before the Royal Society a few weeks ago, of which Mr. Faraday was the author. He stated, that his reasons for bringing it forward on the present occasion arose from a desire to illustrate the difference between the Royal Society and the Royal Institution in their modes of putting forth scientific truths; and his conviction, that every thing, whether small or great, originating with the officers of the latter establishment, should be placed as soon as possible in the possession of the members at large. When a plate or pane of glass is held horizontally by a pair of tongs fixed steadily on the centre, and a violin-bow drawn over the edge of the glass, it is made to vibrate. Sand having been previously sprinkled upon the surface of the plate, the particles arrange themselves into regular forms, figuring forth the quiescent parts of the plate. These are called by Mr. Ohladríc, their discoverer, *nodal lines*. When light particles, such as scrapings from the hairs of the bow used, dust or powder of the lycopodium, happen to be on the plate, instead of proceeding to the same quiescent lines as the sand, they accumulate at the parts in most violent agitation, forming a cloud, and at last settling down into little hemispherical heaps, having a peculiar revolving motion. This direction of light powders has always puzzled philosophers: Mr. Savart has founded a theory of some peculiar modes of vibration upon it. Mr. Faraday's object was to shew that the effect is a very simple and natural one, and consists of nothing more than currents formed in the air surrounding the plate, which proceeding from the quiescent to the most agitated parts of the plate, then pass upwards into the air, and in their course carried the light particles with them. Mr. Faraday explained, by numerous experiments, how such a current would necessarily result from the manner in which the mechanical forces of the plate are transmitted to the air. He shewed how this current could be interrupted by walls of card, when the light particles took new courses. He stated that the heavy particles went to the lines of rest, because the air had not force enough to carry them in its course, but that light particles being governable by it were taken in the opposite direction. He confirmed this view by substituting water for air, making the plate vibrate in the former fluid, and shewing that the sand was carried from the quiescent to the agitated parts, exactly as the lighter particles were in air; and further, on vibrating plates *in vacuo*, he found that even then the lightest particles went to the lines of rest, because there was no current of air of sufficient force to carry them. Want of time prevented Mr. Faraday from entering upon the explanation of the involving heaps: this point, however, is given in his paper read before the Royal Society, and to which we have already alluded. He announced that further consideration of the subject induced him to believe he should be able to account, by the same principles, combined with the cohesive power of fluids, for the peculiar and hitherto unexplained crispations which occur on water lying upon a vibrating plate. In the course of Mr. Faraday's illustrative experiments a variety of exceedingly beautiful and uniform lines were produced on the glass. This being the last evening meeting of the season, Mr. Faraday, on the part of the committee, took leave of the members, after earnestly exhorting them to use both individual and conjoined exertions to aid the prosperity of future seasons. A great number of objects of high interest were in the library, the members and friends of the

Institution having vied with each other in adding to the enjoyments of the evening. We cannot omit to notice a beautiful portrait of Sir Humphry Davy, of the full size, copied by Pickersgill, jun. from the portrait by Sir Thomas Lawrence. It was much and justly admired.

GEOLOGICAL SOCIETY.

WEDNESDAY, June 8th. — Mr. Murchison, president, in the chair. Several gentlemen were elected fellows. A letter was read from Joshua Trimmer, Esq. to the Rev. Dr. Buckland, "On the diluvial deposits of Carnarvonshire, between the Snowdon chain of hills and the Menai Strait, and on the discovery of marine shells in the diluvial gravel on the summit of Moel Tryfan, near Carnarvon, one thousand feet above the level of the sea."

Among the donations to the museum announced, were a collection, consisting of five hundred specimens, illustrative of the mines in the parishes of St. Just, Paul, and Galval, presented by W. J. Henwood, Esq.; a suite of fossils, from the transition formations of the county of Kerry, the gift of Thomas Weaver, Esq.; a series of the fossil seed-vessels and shells found in the Isle of Sheppey, presented by the Rev. Henry Engleheart; and a collection of geological specimens from Van Dieman's Land and Ems, presented by Leonard Horner, Esq. Many valuable donations were also made to the library.

At the close of this meeting, which terminated the session, the Society adjourned till November.

ROYAL GEOGRAPHICAL SOCIETY.

MONDAY, J. Barrow, Esq., in the chair. There were read, first, an account of the province of Arracan, lately ceded to the East India Company by the Burmese, transmitted by Captain Dawes, of H.M.S. Satellite, and communicated by Capt. Beaufort, R.N.;—2. Some particulars of a tour among the Himalaya mountains, communicated by the Rev. Professor Milman, being extracts from private letters from friends in India. But the great attraction of the evening was a short notice, from the chair, of the Messrs. Landers' recent journey in the interior of Africa. Mr. Barrow began by saying, that, at one time, he had hoped to be able to lay a short paper on this subject before the Society at its present meeting, with a sketch of the route followed; but having only obtained the original documents that very day at four o'clock, this was necessarily deferred. In the mean time, referring to the map in Captain Clapperton's last journey, he could state, generally, that Mr. Lander and his brother had landed at Badagry, and proceeded, nearly in the track formerly followed, to Bousa on the Niger, and afterwards to Youri, which they found to lie considerably farther north than is laid down in the map, and nearly west, as they were told, of Soccatoo. They had thence proceeded up as far as the river Cubbie, a considerable tributary which passes Soccatoo, and another town to the eastward called Cubbie, and falls into the Quorra, or Niger, a little way above Youri; and on this they had embarked on their downward voyage. Shortly after reaching Funda, the last point laid down in Captain Clapperton's map, they found the river make a bold sweep to the east, being here from five to six miles wide, and in other places it was even broader; it thence turned south-east, and circled round to south, receiving in its course another accession in the Shary, as it was called, a river from

three to four miles wide, coming from the east; but which must not be confounded with the river of the same name visited by Major Denham, and which falls into Lake Tchad. (It is likely that the word Shary, or some similar word, is a generic term for river, water, or something of this kind, and that both these streams have their origin in high land interposed between them.) After receiving the Shary, the Niger is still further deflected, running to the south and west, till at length it expands into a considerable lake, from which the river Nun, which Mr. Lander descended, and probably several other rivers that enter the great bay of Benin in its neighbourhood, issue at different points. In descending the Nun, which is not above three hundred yards wide, the travellers were attacked by a furious party of natives; and, being taken prisoners, lost all their effects, with some portion also of their respective notes; but, providentially, what one was deprived of, the other was enabled, to a considerable extent, to preserve; so that, between the two, the joint narrative is nearly complete. From the point, then, where Mr. Park first embarked, in 1805, this noble river has now been traced above two thousand miles, in the very heart of Africa; and, in Mr. Lander's opinion, it is navigable for a great portion of the distance by small steam-boats. The natives, also, in the interior are eager to see more of us; and they are even already so far advanced in civilisation as to make a trade with them worthy of pursuit. The greatest obstacles are the still existing slave-trade near the mouth of the river, and the hostile feelings which our attempts to put an end to it have excited in the deluded population there. Palm oil is, as yet, the only other equivalent for their supplies which they have been able to produce; and they naturally look forward with extreme dislike to the prospect of the market for their other and more valuable object of barter being still further curtailed. They are, in a word, the anti-machinists of the African world, and do not like to see the demand contract for manual labour. *Mutato nomine, de nobis ipais fabula narratur.**

LITERARY AND LEARNED.

SOCIETY OF ANTIQUARIES.

On Thursday the Society held their last meeting for the season; Mr. Hamilton in the chair. Mr. Hazon exhibited a lithographic sketch of a Roman pavement discovered in Somersetshire. Mr. Grover's communication on ancient history was concluded. Mr. Kempe exhibited drawings by himself, Miss Kempe, and Mrs. Bray, of amphore, patera, and other Roman antiquities, found in excavating below the Roman level, in forming a sewer between East Cheap and the New London Bridge, accompanied by a very interesting communication of discoveries made during a close attendance on the spot from the 21st of April to the 21st of May. The meetings of the Society were then adjourned to the 17th of November.

ROYAL SOCIETY OF LITERATURE.

On Wednesday, the last assembly for the season of the council and general meeting, took place in Parliament Street. We are permitted to notice, that, at the former, Mr. Sotheby, who, with the President, the Lord

* The book belonging to Mr. Anderson, which we mentioned as having been found by the Landers, was not a prayer-book, but a thick volume of Watts' and other hymns. It is curious that it was made fetid, or sacred, and was carefully hung up in the abode of one of the chiefs.—Ed. L. G.

Bishop of Salisbury, and Lord Bexley, had had an interview with Earl Grey on the part of the Council, respecting the royal bounty and other affairs connected with the Institution, made a verbal report of what had passed on that occasion. We are, of course, restrained from particulars, but may say that the noble premier had given every attention to the documents laid before him, that he listened to the statements of the learned President and his coadjutors with marked interest, and that he pledged himself to afford the subject his most mature consideration. We are aware that these are not times to press for grants of public money from any quarter, and that the royal income is not only far below what it has been, but heavily burdened with other claims; yet we cannot but think this sole and single Institution in England, founded for the encouragement of literature and literary men, is pre-eminently worthy of patronage and favour. Its formation is one of the brightest gems in the crown of George the Fourth; and we shall be sorry indeed if the celebrated scholars and poets who were taught to expect the duration of the royal endowment during their lives, should now be deprived of that comfort and distinction. We will not enter into a comparison as to who among them could best bear this loss; but we cannot help thinking it a little thing that our great and wealthy empire should fall so far below even petty continental states in matters of this kind. We regret, while such vast sums are annually expended on incomparably less deserving objects, so small a bounty towards promoting the general cause of literature should ever become a doubtful question. We trust it will not be so long.

The Royal Society of Literature, however, it should be observed, does not depend upon the munificence with which it was at its origin so royally endowed: The number of its members, their high rank, intelligence, and love of letters, are sufficient to ensure it a high and standard place among the patriotic establishments of our enlightened era; and the spirit with which they have seconded the intention of their august founder cannot be better exemplified than by their having erected by voluntary subscription among themselves (of about £3600*) the handsome edifice which is now completed for their reception in the wide street made by the improvements on the King's Mews and St. Martin's Lane. Here their first meeting after the recess will be held; and with a local habitation so suited to their station and wants, and a name which must call up all the best sympathies of the great, the intellectual, and the learned world, we have no doubt but that their career will be both useful and brilliant, under whatever circumstances they may resume their labours.

OXFORD COMMEMORATION.

THE Oxford grand commemoration was celebrated during Tuesday, Wednesday, and Thursday last. On the first day a concert, comprising a grand selection of sacred music, was performed in the theatre; and in the evening there was a ball at the Town Hall. Lord Norreys, Lord de Tabley, and others, acted as stewards. On Wednesday, being the principal day, when the prize essays and poems were read and recited, the theatre was opened at ten o'clock in the morning, and was rapidly filled, the galleries being occupied by the bachelors and under-graduates, the pit by the masters in their academic costumes, and the boxes by a

vast number of ladies, whose elegant persons were adorned by the most tasteful dresses, from which every colour of the rainbow might be selected. The splendid circle, illumined by the bright rays of a summer sun, presented a *coup-d'œil* scarcely to be equalled, and certainly not to be surpassed, in London, or any metropolis of Europe. The business of the day commenced by the admission of some distinguished characters to the degree of doctor of civil laws; among whom were Mr. Stourges Bourne, Sir Thomas Acland, Sir Harford Jones Bryden, Captain Basil Hall, and Washington Irving, whose claims to the honour were stated in Latin addresses. The announcement of their names was received with great applause from the galleries, the gownsmen being the resistless arbiters on such occasions. The reception must have been extremely gratifying to the two latter gentlemen, particularly to Washington Irving, as a foreigner. After the recital of a Latin poem, the subject "Numantia," and the reading of a clever essay on the "Use and abuse of theory,"—followed the great object of attraction, the English poem for Sir Roger Newdigate's prize—"The Sutees." The author, Percy Ashworth, of Wadham College, delivered it extremely well. The effect of the description of an interesting widow sacrificing herself on a funeral pyre, from a sense of conjugal duty, was powerfully assisted by the presence of so many beautiful specimens of the sex. The following lines at the close of the poem, were received with enthusiastic applause:—

"And such is woman's love! whose magic power
Can change the gloomiest to the brightest hour,
Can smooth the deep lines on his forehead to plow,
And chase the cloud of anguish from the brow,
It drops not, parts not with the parting breath,
But smiles a proud defiance unto death!"

The miscellaneous concert in the evening was fully attended. The performers, Messrs. Brahm, E. Taylor, Knuyett, and De Begnis, and Mesdames Pasta, Caradori Allen, and Mrs. Knuyett, exerted themselves, and gave great satisfaction to a very numerous and select audience. The commemoration finished with a ball on Thursday evening.

FINE ARTS.

NEW PUBLICATIONS.

Portraits of the Royal Family, in Penmanship.
By J. P. Hemm. Harding.

ALTHOUGH, as good and loyal subjects, we certainly rejoice to see the royal family in a *flourishing* condition, yet we own, that we do not think this is a judicious or tasteful application of the art of penmanship. We say so with the less reluctance, because we have more than once expressed our admiration of Mr. Hemm's skill as a calligrapher, when that skill has been employed in an appropriate manner.

A Progressive Drawing-Book of the Human Figure. Drawn on stone from the works of Raphael, Titian, Rubens, &c., by Signor L. Joffroy. Engelmann and Co.

As a drawing-book we are unable to speak in terms of high commendation of this publication; but the lithographic execution of the various subjects is singularly powerful and mellow.

Pugin's Gothic Ornaments, selected from various Buildings in England and France. Drawn on stone by J. D. Harding. No. V.

THE admirers of ancient architecture must be delighted with Mr. Pugin's work; and to the professional architect it will be invaluable. The

present Number contains a rich and curious assemblage of bosses, arms, crockets, figures, pateras, string-courses, finials, weepers, stalls, cusps, traceries, panels, capitals, spandrels, &c. It is certainly impossible to examine them and not feel shame at the comparative poverty and meanness of invention in our own times. Some of the most beautiful specimens are from Beauchamp chapel, in Warwickshire. We are especially charmed with three brass figures from the tomb of Richard Beauchamp, Earl of Warwick.

The Watering Places of Great Britain, and Fashionable Directory. Illustrated with Views of all the Places of Resort in the United Kingdom. Parts I. and II. 4to. Hinton.

THIS is a work which has long been wanted, and which at the present season will be exceedingly acceptable to a number of persons. "The primary object contemplated in the present undertaking," say the proprietors in their address, "is the collection into one work of all the information desirable for gentlemen to possess, respecting each of the watering and sea-bathing places in the kingdom; and, by the combined aid of the artist, to convey a more correct idea of the peculiar beauties of each spot than either the pen or the pencil could separately effect. Each town or village will be visited by one of the artists engaged for this work, and also by the editor, who, in order to prevent those discrepancies which occur from trusting to correspondents only, has undertaken the laborious task of visiting each spot personally."

Laborious task! We cannot conceive any thing more delightful and amusing. Will the editor exchange duties with us for the next three months?

The Devil's Walk. Illustrated by Thomas Landseer. Ten Etchings, folio. London, 1831. G. F. Harding.

MR. LANDSEER claims to have originated the idea of illustrating this biting satire; though others, it seems, caught at the whisper, and occupied the field before him. Though last, however, he is not least: on the contrary, for spirit in design and character he has no competition to fear. The etchings are admirable; the earlier ones wild and satanic,—the later more earthly, and home to what is passing around us. The Devil and the Puritan, Brothers, recognising each other, is capital, both for art and expression; the Lawyer killing his brother—a Viper, is also excellent; and so is the Apothecary on his White Horse, like Death in the Revelation. The Bookseller's Shop, with the corpulent publisher and the starving author, is another superb hit; while the poor prisoner in a cell in Cold Bath Fields' prison, debt 10s., expenses 50k., is a melancholy lesson of wrong, prevailing to an extent most injurious to the community, hardly exaggerated by caricature. We do not approve of the introduction of Gen. Gascoigne in the last plate, though he is famously drawn as an incarnation of borough-mongering. It is too much *ad opestandum*, and has nothing to do with the verses which have obtained so much celebrity. Satan is shewn to be terrified by the gallant general, and hastening to retreat to his own close borough, where there is not even the shadow of freedom of election.

The merits of this performance altogether entitle it to very extensive favour.

* This is the expense of the building: the amount of subscriptions paid in is about £3000.

MUSIC.

PAGANINI.

WE have heard this wonderful musician again, and our delight has not been diminished; but rather, in consequence of a more favourable situation in the theatre, it was much augmented. The sensation altogether is as if a new element of music were discovered, and poured upon the ear, or rather upon the soul, from a combination which unites the sweetest of sounds with an abstract perception of melody unperceived before. Paganini's playing partakes of that rare quality of oratory which communicates itself from the speaker to the hearer with greater intensity in proportion as the former is deeply impressed with his own matter. His whole being seems to be in the tones he is producing—the man and the instrument cannot be separated—like a magician, he appears to persuade or compel it to do what to others would be impossible. The gratification must be felt,—it cannot be described.

BUCHER.

M. BUCHER, whose performances on the flute have obtained for him on the continent the name of the Paganini of the flute, has, we see, just arrived in this city, where he intends giving public concerts. At the theatre of San Carlo, in Naples, of which he was the first flauto, the purity and vigour of his style, and the lightness and expression which shewed themselves in his performances, excited the highest admiration and astonishment; and in a tour lately made on the continent, he was every where received with the same rapture and enthusiastic applause.

A Rouen paper says, it is impossible to surpass his sweetness of sound or method of execution, or to give more spirit to an instrument always cold and dull. He is said infinitely to surpass Toulon and Drouet. Like Paganini, he plays tricks with his instrument, more especially in his variations, on Malbrong. It is a *duo* on one flute—a base and a medium. In other variations his instrument sings the soprano of the *Marriage of Figaro*. Our statement is not at all exaggerated, and we are sure that the visit of this extraordinary performer to the capital will be a treat to the patrons of musical merit.

DRAMA.

DRURY LANE.

DRURY LANE terminated a strong, and we were about to say unfortunate season, on Monday last; but "unfortunate" is not the proper epithet, for the loss is so obviously to be attributed to the incompetency of the management, that nothing but great good fortune could have limited it to the sum reported—between four and five thousand pounds. With all the little miserable bickerings and intrigues of the green-room we have nothing to do; and though perfectly aware of the lamentable extent to which they were carried during the past season, our business is only with the broad facts of the case, and which are of themselves, alas! sufficiently instructive. For example, the nightly expenses of Drury Lane theatre have amounted to the enormous sum of two hundred and sixty odd pounds. Now, as an average nightly receipt of that sum would, in former seasons, and with an infinitely superior company, have been considered excellent business, it surely needed no great knowledge of arithmetic to perceive that the best luck to be looked for was, not to get one penny by the speculation, and that total ruin was a very probable circumstance. Con-

fining the proof of mismanagement to this financial error only, let us observe the good fortune by which the worst alternative has been avoided. The *School for Scandal*, with by no means a perfect cast, attracted several crowded audiences. Stanfield's diorama rendered a mediocre pantomime more than usually attractive; and the melodrama of the *Brigand*, which had run upwards of forty nights in the previous season, ran forty more, bringing frequently, in conjunction with the *Illustrious Stranger*, and the *Pantomime*, or *Masaniello*, from three to four hundred pound houses. These were chances on which the management had no right to calculate; and to them, and the absence of any extraordinary success at Covent Garden, have the lessees of Drury been indebted for keeping open their doors to the end of the season. A dissolution of the partnership between Captain Polhill and Mr. A. Lee has taken place; and the former gentleman is making arrangements for the conducting of the concern for the next two seasons; but we have so often been disappointed in the hope of seeing some one at the head of a national theatre who would discover that his own interests could only be forwarded by upholding those of the drama, that we are cured of indulging sanguine expectations. Nothing but an entirely new system of management can retrieve the fallen fortunes of the patent theatres. *Nous verrons*.

The following is a list of the novelties produced during the past season at this house, with "the names of the horses and the colours of the riders":—

- November 11th, 1830. Turning the Tables, a Farce, 1 act: Poole. 35 nights.
- Nov. 17th. Conscript, or the Veteran and his Dog, a Melodrama, 2 acts: Raymond and Barrymore. 3 nights.
- Dec. 8th. The Jenkinnes, a Farce, 2 acts: Planché. 14 nights.
- Dec. 16th. Werner, a Tragedy, 5 acts: altered by Macready from Lord Byron. 17 nights.
- Dec. 17th. King's Fireside, Historical Anecdote, 1 act: Morton. 6 nights.
- Dec. 27th. Davy Jones, Christmas Pantomime: Barrymore. 45 nights.
- Feb. 1st, 1831. Devil's Brother, an Opera, 2 acts: Shannon. 8 nights.
- March 5th. Decorum, a Farce, 2 acts: T. H. Bayly. Withdrawn.
- March 18th. Highways and Byways, a Farce, 2 acts: Webster.
- April 4th. Ice Witch, Easter Spectacle, 2 acts: Buckstone. 14 nights.
- April 7th. Nettlewig Hall, a Farce, 2 acts: C. M. Westmacott. 6 nights.
- April 8th. The Pledge, or Castilian Honour, a Tragedy, 5 acts: Kenney. 8 nights.
- April 16th. Legion of Honour, Operatic Drama, 2 acts: Planché. 18 nights.
- April 28th. Alfred the Great, Historical Play, 5 acts: S. Knowles. 15 nights.
- May 13th. The Emissary, an Opera, 3 acts: Barham Livius. 3 nights.
- May 30th. The Little Corporal, Petite Historical Drama, 1 act: Buckstone. 3 nights.

HAYMARKET.

THIS favourite theatre opened on Wednesday last, and, as usual, presented us with a new one-act piece as a taste of its quality. The sample is an inoffensive one; but that is the utmost praise we can bestow on it. *A Widow Bewitched* is, in fact, little more than a compressed and slightly modified version of the old farce of the *Devos is in him*. The return of a husband, affecting to have lost a leg and eye, in order to try the affections of his wife, and her discovery and punishment of his imposture, forms the ground-work of both. A similar incident was also worked by Dimond into one of his recent operas at Covent Garden. The present trifle, however, introduced our fair Olympic friend, Miss Sydney, to a Haymarket audience; and her acting secured both for herself and the piece a most favourable reception. Farren played as he always does—admirably;

and Mr. F. Vining bustled in his usual pleasant way through a very trifling part. Report attributes the piece to the pen of Mr. Percy Farren, the stage manager, and author of the drama of the *Field of Forty Footsteps*, played with success at the Queen's (then the Tottenham Street) Theatre.

BAZAR IN REGENT'S PARK.

ON Thursday we had the pleasure of perambulating Mr. Jenkins's beautiful garden in the Regent's Park, which was opened (and so to be continued during three days) by way of Bazar, for the disposal of articles in aid of the benevolent Establishment for the Relief and Cure of Deafness, in Soho Square. The humane ladies, and some of them very pretty, who acted as shopkeepers on the occasion, seemed to be very successful in their operations, and we trust the produce will be commensurate with their humane exertions. Bands of music, and refreshments (at once bad and dear—for Mrs. Jarrin took from us two shillings for a nasty ice), were to be heard and taken in various parts. A handsome tent was fitted up for the reception of the Queen—who, however, did not visit the garden on Thursday, even "clane and dacent like another lady,"—and there were tents, marquees, &c. &c. for the company, in case of rain, or too much sun. There were several thousand persons present; and the general aspect of the grounds was very like the Horticultural fetes at Chiswick—those galas of starvation one year, and drowning the next.

Apres, next week is to witness another of these exhibitions, so inappropriate to the spirit of a scientific and useful institution; and the means taken to puff it, the trade in raising the prices of tickets, (a thing abhorrent in a Paganini!!!) and all the little manœuvres of petty chandlery which have been resorted to, are, in our opinion, quite disgraceful. There has been an ordinary sign-board put up over the door of the Society's house, in Regent Street—the King and Queen are gratuitously announced to be present—and we believe an assurance of fine weather has been certified from the moon!!! Such tricks are unworthy in private speculations—they would even reflect on the dramatic charity of Vauxhall Gardens or Bagnigge Wells: in a public body, with noble and distinguished names on its lists, they are, to say the least, very unbecoming. Cannot they trample down and spoil the gardens in a more quiet and less offensive manner?

VARIETIES.

Geographical distribution of the Anatifa.—Mr. Rennell Coates, in the Journal of the Academy of Natural Sciences of Philadelphia, asserts, that the southern ocean is the native place of the *anatifa vitrea*, and that if it is found any where else, it is because it is carried away on the vessels, fish, or plants, to which it attaches itself. The same author describes two new species of otium, under the names of *O. depressa* and *O. sacculifera*,—both from the southern seas.

Captain Woodfall.—We regret to announce the death of another African traveller. Captain Woodfall, sent out by the African Society to penetrate into the interior by way of Abyssinia, only reached Kourdefan, where he fell sick and perished.

Royal Navy School.—A noble subscription has been begun for the erection and maintenance of a school to educate the children of our gallant tars. It is to be hoped that a fund will be raised equal to the completion of so truly

beneficent an undertaking, on a scale of sufficient magnitude, and with large endowments.

Sir Walter Scott.—Though we have not joined in spreading the rumours, which have found their way to the press on very slight grounds, respecting the health of Sir Walter Scott, yet as every reader must feel the subject to be one of universal concern, we are well disposed to make known any certain and authentic intelligence which may reach us respecting it. We therefore refer with pleasure to the letter of a friend, who has enjoyed the opportunity of associating with the Wizzard of the North during his indisposition and to the present moment. He writes us: "I have seen him frequently during the last five months, so as to enable me to observe his state of health. He has been ill, severely ill; but I can assure you that illness has left no trace, except a degree of corporeal weakness, which prudence in diet and exercise may speedily remove. He rides out on horseback; he drives out in his poney phaeton: he is indeed in high health and spirits, at Abbotsford, and looking far better than at any period during the winter."

Mr. Jones.—We have been somewhat amused lately by a paragraph in some of the papers, assigning overstrained religious principles as the cause of this accomplished comedian, and no less accomplished gentleman, having retired from the stage. Now, all who know anything of Mr. Jones know him to be both a moral and a religious man, but not under the influence of fanaticism. The fact is, his method of teaching elocution has met with such success, in giving power to the voice, in strengthening weak lungs, in removing hesitation of speech, and every other impediment to a happy delivery—that his house is continually frequented by clergymen, in a sufficient degree, we confess, to create some alarm in the neighbourhood. The secret, then, of Mr. Jones transferring his talents from the stage, is, that he now dedicates them to the formation of the clerical and political orator. We will take upon ourselves to deny there being any other ground for the charge of his having turned Puritan. We cannot let this opportunity pass without assuring our friends, that the similar report which has gone forth concerning ourselves is altogether without foundation.

Prince Talleyrand related to the Family of Stanley, Earls of Derby.—The maternal grandmother of Prince Talleyrand was the Princess Orsini (la Princesse des Ursins, as the French style her), who acted so distinguished a part in the court of Philip V. of Spain, and whose first husband, as appears from Archdeacon Coxe's History of the Bourbon Kings of Spain, was Adrian Blaise de Talleyrand, Prince of Chalais. She was of the illustrious family of La Tremouille, from which sprung the heroic Countess of Derby, who, in her husband's absence, defended Latham House against the parliamentary forces under General Fairfax, in 1644. That the talents of the Princess Orsini have descended to her grandson, few will doubt; and it must also be allowed, that he has inherited her courtly and insinuating manners, if not all her high spirit, her frankness, and her disinterested attachments.

Progress of Literature.—By command of the Pasha of Egypt, a periodical Journal either has been published in the Isle of Candia, or is about to appear there. It is to be written in Turkish and Greek.

Geology of Algiers.—M. Elie Beaumont, in a letter addressed to the Academy of Paris on the subject of M. Rozet's researches, which

we noticed in a late number of the *Gazette*, asserts that he never supposed that the mountains of the north of Africa formed, like the Pyrenees, a single chain of contemporaneous elevation. The most modern charts exhibit a variety of chains, crossing in various directions, as M. de Humboldt has just proved to exist with regard to the central plains of Asia; and there is no doubt but that in the north of Africa, as in Europe, there has been several upraising of mountain chains in different directions, and at different epochs.

Mineralogical Survey of Scotland.—In a former *Gazette* we mentioned that an inquiry had been instituted by a committee of the House of Commons on the application of certain sums of money voted for a mineralogical survey of Scotland. Professor Jameson has laid before the Wernerian Society a copy of a return to an address of the House of Commons, from which it appears, that no part of the money had been granted to that Society, nor to the Edinburgh Museum; but that the whole sum, amounting to upwards of 7000*l.*, had been paid to Dr. John Macculloch, of Woolwich, for the mineralogical survey of Scotland—never until now, it is said, heard of by men of science in that country. It was remarked, that it would be desirable for government to cause to be published forthwith the results of this expensive, and it seems only partial, survey of Scotland.

Earthquake.—Several earthquakes have lately been felt at Smyrna. *Le Globe* says, that on the 28th of March a violent shock had very nearly destroyed that city.

Flour for Sheep.—M. Maitre, a great agriculturist and breeder of sheep near Chatillon-sur-Seine, about a year ago conceived the idea that not only the straw of corn, but the dried stalks of clover, lucerne, &c. might be ground into flour. His experiments have been crowned with complete success; and he has obtained a kind of flour, the quality of which is similar to that of bruised fodder. This aliment is a substitute for bran, and is an agreeable and substantial food for sheep and lambs, who seek it with avidity.

To the Editor of the *Literary Gazette*.

SIR,—In your Number for May 28, a correspondent G. D. furnishes for your pages a remarkable specimen of the affinity between the Latin and Portuguese tongues, by eleven verses in praise of St. Ursula, which are both Latin and Portuguese. He acknowledges himself not aware of "any other living language between which and the Latin so strong an affinity could be traced and exemplified." I should suppose that Italian might afford instances of the kind in greater abundance than Portuguese. I send you at least one such which I have met with, and which appears sufficiently remarkable.

"In mare frato, in subita procella,
Invoco te, nostra benigna stella,
Vivo in aeterna peris, in mesto orrore,
Quando te non Imploro, in te non spero,
Purissima Maria, et in sincero
Te non adoro, et in divino ardore.
Et, O vita beata, et anni, et ore (home)
Quando, contra me armato odio severo,
Te, Maria, ano, et in gaudio vero
Vivere spero ardendo in vivo amore.
Non amo te, regina augusta, quando
Non vivo in pace et in silenzio fido;
Non amo te, quando non vivo amando.
In te sola, O Maria, in te confido,
In tua materna cura resperando,
Quasi columba in suo beato nido."

Who was the curious author of these lines I know not: they are quoted in that elegant work of M. Pierre de Joux, *Lettres sur l'Italie, considérées sous le rapport de la Religion*.

F. C. H.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XXV. June 12.]

T. Campbell.—Mr. Campbell is engaged upon a poem on the subject of Poland—a stimulating theme for his patriotic muse. We observe that the Philomathic Society of Warsaw have done him the honour to elect him a corresponding member, as "Campbell Thomas Poeta Angliæ."

An authentic Life of Sir Thomas Lawrence, with numerous facts and private papers hitherto unpublished, is announced.—Full-length Portraits of their Majesties the King and Queen, engraved after Lawrence and Beechey, in mezzotint by Mr. T. Hodgetts, are about to appear.

LIST OF NEW BOOKS.

Bloom's Pulpit Oratory, 8vo. 10*s.* bds.—Marshall's Naval Biography, Supplement, Vol. III. Part I. 8vo. 12*s.* bds.—Dr. A. Thomson's Sermons and Sacramental Exhortations, 8vo. 12*s.* bds.—Lardner's Cabinet Library, Vol. V., George IV. Vol. II. 8*s.* bds.—Patrick's Indigenous Plants of Lanarkshire, 18mo. 6*s.* bds.—Sherwood's Milner, Part III. 6*s.* bds.—R. Fletcher's Medico-Chirurgical Notes and Illustrations, Part I. 4to. 1*l.*—The whole Proceedings in the Case of J. M. Campbell, 18mo. 6*s.* bds.—Ingis's Spain in 1830, 2 vols. 8vo. 1*l.* 6*s.* bds.—Fletcher's History of Poland, 8vo. 14*s.* bds.—The Garden, with 21 illustrations, square 18mo. plain, 3*s.* 6*d.* hf.-bd.; coloured, 4*s.* 6*d.* hf.-bd.—Family Library, Dramatic Series, Vols. Wednesday 15	49. — 73.	29.65 — 29.64

Wind S.W., except during the afternoon of the 13th, when it was N.W.

Weather variable, with frequent rain. From six to eight of the evening of the 14th, the upper part of a halo, and a very distinct parhelson east of the sun formed, both strongly exhibiting the prismatic colours.

Rain fallen, 4 of an inch.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 33" N.

Longitude.... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. May 1831.

Thermometer.—Highest..... 69.25°
Lowest..... 35°
Mean..... 49.758
Barometer.—Highest..... 30.66
Lowest..... 29.17
Mean..... 29.6235

Number of days of rain, 8.

Quantity of rain, in inches and decimals, 2.58576.

Winds.—1 East—1 West—5 North—3 South—10 North-east—1 South-east—1 South-west—9 North-west.

General Observations.—The quantity of rain nearly one inch and a quarter less than in May last year, but more than usually falls in the month; the extremes of temperature lower than in the last eight years, and the mean below any since 1826—the month was consequently cold: on the sixth the thermometer fell seven degrees below the freezing point, and for five days never reached above 5*2*° at any time of the day—the barometer higher than last year. Thunder and lightning on the 2d, 6th, 20th, and 24th: the storm on the 2d the heaviest experienced here for some time, and nearly an inch of rain fell. On the 4th a shower of very large hail about 1 p.m.: an indistinct lunar halo observed on the 23d: for twenty-four days the wind blew from the northward—that is, between the N.E. and N.W. The evaporation 0.6125 of an inch.

TO CORRESPONDENTS.

C. will do: it is the very exaggeration of the amative to be content with nothing else than the mutual ennoblement of souls,

So firmly intertwined,
That through all time, eternity
No power shall e'er unwind!!!

R. O.'s letter is taken in very good part. The observations on the personalities and bitterness of the press are just; we trust, however, that they cannot apply to the *Literary Gazette*.

Notices of the Pantechuscon—of Captain Norton's Rifle—of the machine for plating iron surfaces, &c.—are intended for our next No.; and we also hope to publish a paper of great historical novelty and interest on Burleigh MSS., hitherto unexplored.

ERRATA.—In our last No., p. 379, col. 3, two notices were headed "British Gallery" and "British Institution," from having been written at different times; being identical, they ought to have been but one notice, and under either title—380, col. 2, "Mr. Baring's Pictures," should have been "Engravings."

ADVERTISEMENT,

now open daily.

Admission, 1s.—Catalogue, 1s.

T. S. TULL, Secretary.

TO the CLERGY, PATRONS OF INSTI-

TUTIONS, LIBRARIANS, &c.

J. GANDAR, of Theobald's Road, Holborn, having devoted great attention to that Branch of the Bookbinding Art which is principally connected with Gentlemen of research in Ancient Literature, &c.—that of repairing Libraries, even in the most dilapidated state. Gentlemen will find J. G.'s Method to give a face of respectability to old Books, combining strength and economy, at a Saving of 75 per cent.

The most respectable References given.

A LADY who has resided Fourteen Years

at Governors in Gentlemen's Family, and who is a Member of the Established Church, wishes to meet with a similar Situation, in a genteel private Family, where there are Two or Three Young Ladies under Ten Years of age. A Situation either in the Country or in a Country Town will be preferred. Salary not an Object.

The most respectable Reference will be given and required.

Letters, post-paid, addressed to A. B., at Mr. Noddy's, Stationer, East Street, Chichester, Sussex, will be answered immediately.

TO PRINTERS, BOOKSELLERS, &c.

To be disposed of, a Bookselling, Printing, Stationery, and Bookbinding Business, in a busy commercial Town, situate in a beautiful and healthy Part of one of the Midland Counties, which commands great advantages for improving and extending an already established business. Twenty-four Years' standing. Apply, if by letter post-paid, to Messrs. Baldwin and Cradock, 7, Paternoster Row; or Messrs. Thery and Burch, 5, Jewry Street, Aldgate, London.

None need apply who cannot command a Capital of 1000*l.* or 1500*l.*

The Devil's Walk.

Just published, price, proofs, colombeau etc. 1*l.* 1*s.* Prints, Imperial 2*l.* 1*s.*

A SERIES of SATANIC SKETCHES,

consisting of Ten Designs, illustrative of some of the more pointed and whimsical Stanzas of Coleridge's celebrated Poem, the Devil's Walk. These sketches are intended to embody, as far as possible, the humorous, satirical, and imaginative spirit of a Poem, which has been long and universally popular. They are drawn and engraved by Mr. Thomas Landseer.

London: Published by F. G. Harding, 24, Cornhill.

GERMAN SPA, BRIGHTON.—The

Efficiency of the Mineral Waters of this Establishment, in obviating Disorders of the Digestion, in Diseases of the Liver and the Urinary Organs, in Derangements of the Female Constitution, in Nervous Complaints, and many other inveterate Disorders, has been fully established under the Observation of several eminent Physicians. Satisfactory Testimonials will be found in the Prospectus.

The Pump-room is now open for the Season. Hot Mineral Waters—Carlsbad, Bona. Cold ditto—Spa, Pyrmont, Eger, Marienbad, Pulna, Seitz, &c. &c. London Agents for the sale of the Gold Staters.—Messrs. THE MOORISH QUEEN, a Record of

Pompeii; and other Poems.

By ELEANOR SNOWDEN.

Author of "The Maid of Seio."

"The descriptive beauties of Miss Snowden's poems afford assurance that she has that within which will in time prompt to greater things than she has yet achieved."—*Monthly Repository.*

—Miss Snowden is no stranger to the public,—her Maid of Seio has already appeared in print, and evinced much poetic feeling. The present volume does her no discredit, and will afford pleasure in the perusal.—*Metropolitan.*

—The first poem is a metrical legend of considerable length, which shows that she is fond of incident narrated in smooth verse may read with pleasure. It is a history of tourney, jealousy, love, fighting, treachery, and triumph.—*Advertiser.*

NOTICES OF BRAZIL IN 1829-30.

By the Rev. R. W. L. L. D. M. R. L. A.

Author of "Narrative of a Journey from Constantinople to England."

"Dr. Walsh accompanied the extraordinary embassy of Lord Strangford to Rio Janeiro, and his work is full of the most interesting details with regard to Brazil, more especially as to its political changes and the character of the people."

London: Frederick Westley and A. H. Davis, 10, Stationers' Hall Court, and Ave Maria Lane.

Also, by the same Author,

In a few days, a new edition, being the 4th, in 1 vol. 12mo. price 6*s.* 6*d.*

Narrative of a Journey from Constantinople to England.

This work, which has received so extensively the seal of public approbation, is now printed in a small volume, and is particularly interesting in the present circumstances of the Turkish empire.

In 1 handsome 8vo. vol. price 1*l.* extra cloth boards.

PULPIT ORATORY in the TIME of

JAMES the FIRST, considered and principally illustrated by original Examples A.D. 1600, 21, 22.

By the Rev. J. H. BLOOM, A.B.

To the clerical reader and the antiquary, the present work will prove equally interesting and curious. It considers and exemplifies the remarkable nature of the discourses that emanated from the pulpits of small towns and villages remote from the metropolis, more than two centuries ago, during a period replete with interest to the religious and political world. It is believed that very few, if any, similar examples exist at this day.

London: Longman, Rees, Orme, Brown, and Green; and John Stacy, Norwich.

In 3 vols. small 8vo. embellished with numerous Maps and Plates, price 1*l.* 1*s.* boards.

I T A L Y.

By JOSIAH CONDER,

Editor of the "Modern Traveller."

The Modern Traveller; a Description, Geographical, Historical, and Topographical, of the various Countries of the Globe. In 20 vols. price 6*l.* 5*s.* cloth boards.

New editions of the different Countries may be had separate, price 5*s.* 6*d.* per vol. cloth boards, as under:—Palestine, 1 vol.—Greece, 1 vol.—Asia Minor, 2 vols.—Egypt, 2 vols.—India, 4 vols.—Burmah, 1 vol.—Persia and China, 4 vols.—Turkey, 1 vol.—Russia, 1 vol.—Spain and Portugal, 3 vols.—Africa, 1 vol.—United States and Canada, 2 vols.—Mexico and Guatemala, 2 vols.—Colombia, 1 vol.—Peru, 1 vol.—Brazil and Buenos Ayres, 2 vols.

Conder's Italy will in future be the travelling companion of every man bent upon a thorough investigation of that interesting land. He is the best compiler of the day, and this is no small praise. Such compilation as Mr. Conder's requires industry of a laborious nature, considerable knowledge, a methodical head, judgment, taste. Are these qualities to be met with every where? Look at the manner in which compilations are usually performed, and the question is answered.—Mr. Conder is the compiler of the "Modern Traveller," the best and completest geographical and descriptive work in any language.—*Spectator*, April 28, 1831.

"We sincerely congratulate the public upon the appearance of a work, which is in an accurate and complete account of modern Italy."—*Asiatic Journal*, May 1831.

Printed for James Duncan, 37, Paternoster Row.

In 2 vols. 8vo. price 3*l.*

NO. 1.
In 1 vol. small 8vo. price 6s. the 2nd edition of
NOTIFICATION.
By ANDREW REED.
The extensive circulation of this popular work has induced the Publishers to reprint it in a smaller form.
London: Frederick Wentley and A. H. Davis, Stationers' Hall Court and Ave Maria Lane.

London's Works on Gardening, Agriculture, Botany, &c.
In 1 large vol. 8vo. price 2l. 10s. extra boards, with upwards of Eleven Hundred Engravings on Wood, a new edition of
AN ENCYCLOPEDIA OF AGRICULTURE, comprising the Theory and Practice of the Valuation, Transfer, Laying-out, Improvement, and Management of Landed Property; and the Cultivation and Economy of the Animal and Vegetable Productions of Agriculture, including the latest Improvements; a general History of Agriculture in all Countries; and a Statistical View of the present State, with Suggestions for its future Progress in the British Isles.
By J. C. LOUDON, F.L.S. H. G. Z.S. &c. &c.

No palas have been spared on the part of either the Author or the Publishers to render this second edition of the Encyclopedia of Agriculture as perfect as possible. The author undertook a journey into France and Germany in 1829, on purpose to procure information respecting the present state of agriculture on the continent; and the Publishers have gone to the expense of nearly 500 new engravings, nearly half of which are new subjects. The co-operation of upwards of forty individuals, (a list of whom is appended,) has also been procured, or voluntarily given; and their suggestions or additions have embraced almost every department of the work. On the whole, the author thinks himself warranted in asserting that the work is now as perfect as its nature and the present state of agricultural science and practice will admit.

An Encyclopedia of Gardening, comprising the Theory and Practice of Horticulture, Floriculture, Arboriculture, and Landscape Gardening, including all the latest Improvements, a General History of Gardening in all Countries, and a Statistical View of its present State, with Suggestions for its future Progress in the British Isles. Illustrated with upwards of 700 Engravings on Wood. Complete in 1 large vol. 8vo. price 2l. extra boards.

Hortus Britannicus; a Catalogue of all the Plants Indigenous, Cultivated in, or Introduced to Britain.
In 8vo. price 1l. 1s. cloth boards.

Part I.—The Linnean Arrangement, in which nearly Thirty Thousand Species are enumerated, with the Systematic Name and Authority, Accentuation, Derivation of Generic Names, Literal English and Specific Names, Synonyms Systematic and English of both Genera and Species, Habit, Habitation in the Garden, Indigenous Habitation, Popular Character, Height, Time of Flowering, Colour of the Flower, Mode of Propagation, Soil, Native Country, Year of Introduction, and Reference to Figures. Preceded by an Introduction to the Linnean System.

Part II.—The Linnean Arrangement of nearly Four Thousand named Genera, with an Introduction to the Natural System, and a general Description and History of each Order.
The Linnean Arrangement and its Supplement are entirely the Work of Mr. George Don; the Natural Arrangement is founded on that of Professor Lindley, with some Additions and Alterations recommended by the Editor of the Catalogue, and Dr. Greville, the profound Cryptogamist, assisted in arranging the Cryptogams.

An Encyclopedia of Plants, comprising the Description, Specific Character, Culture, History, Application in the Arts, and every other desirable Particular, respecting all the Plants Indigenous, Cultivated in, or Introduced to Britain. Complete in 1 large vol. 8vo. with nearly Ten Thousand Engravings on Wood, price 2l. 10s. extra boards. The Specific Character, &c. by John Lindley, F.R.S. &c. &c.; the Drawings, &c. by J. D. G. Sowerby, F.R.S. &c. &c.; and the Engravings by R. Branton.

The Gardener's Magazine, and Register of Rural and Domestic Improvement. Conducted by J. C. Loudon, F.L.S. H.S. &c. In 8vo. No. 1 to 25, (published every Two Months, alternately with the Magazine of Natural History), price 2s. 6d.

Also,
Vols. I. to VI. price 6l. 1s. 6d. boards.
The Magazine of Natural History, and Journal of Zoology, Botany, Mineralogy, Geology, and Meteorology. Conducted by J. C. Loudon, F.L.S. H.S. &c. In 8vo. No. 1 to 19, (published every Two Months, alternately with the Gardener's Magazine), price 2s. 6d.

Also,
Vols. I. to III. price 2l. 17s. boards.
Printed for Longman, Rees, Orme, Brown, and Green.

To Travellers in Italy.
In 2 vols. small 8vo. 14th Plates, price 15s. boards, the 2d edition, with numerous Additions, of

A DESCRIPTION OF THE ANTIQUITIES
and other Curiosities of Rome, from Personal Observations made during its Visit in the Years 1812-19. With Illustrations from Ancient and Modern Writers.
By the Rev. EDWARD BURTON, D.D.
Regius Professor of Divinity, and Canon of Christ Church, Oxford.

FLETCHER'S HISTORY of POLAND,
written by being inseparably the best Work on Polish History that has ever appeared in our Language, will be read with particular interest at this time, when the gallant Poles are so nobly devoting themselves for the emancipation of their Country from the yoke of barbarian despotism. The work is brought down to the latest moment of time, by a narrative of the recent events, obtained from a Polish Patriot Nobleman.
It has a great Map, and well-executed Portraits of Prince Czartoriski and Kosciuszko.

BOOKS IN THE PRESS.

No. 105.
Longman and Co. London; and A. Black, Edinburgh.

On July 1st will be published, in 1 vol. small 8vo. price 6s. in cloth.

THE HISTORY of POLAND; being the 20th Volume of Dr. Lardner's Cabinet Cyclopaedia. Printed for Longman and Co.; and John Taylor.

New Magazine of Gardening, &c.
No. 1. price 1s. to be continued monthly, of the

HORTICULTURAL REGISTER, and General Magazine of all useful and interesting Discoveries connected with Natural History and Rural Economy, conducted by JOSEPH PAXTON and JOSEPH HARRISON.

This work, a Number of which will be published on the 1st of every month, and comprises 48 pages, clearly printed in 8vo. is intended as a popular compendium of criticism on Horticulture, Natural History, and Rural Subjects, with Engravings wherever any article requires such illustration. The Horticultural Register is distinguished with a view to bring before the public a periodical work, more varied and comprehensive, and at the same time less voluminous and expensive, than any at present extant. To obtain an adequate knowledge of horticulture, and the recent Discoveries in Natural History, it is now necessary to incur a monthly expense beyond the services of most persons—whose work is less varied and comprehensive, and at the same time less voluminous and expensive, than any at present extant. To obtain an adequate knowledge of horticulture, and the recent Discoveries in Natural History, it is now necessary to incur a monthly expense beyond the services of most persons—whose work is less varied and comprehensive, and at the same time less voluminous and expensive, than any at present extant. Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

Library of Entertaining Knowledge.
On the 10th of June will be published, Part II. of the First Volume of

PARIS and its HISTORICAL SCENES.
The object of this book is to describe the more remarkable edifices and situations of the French capital, in association with the great events of which that city has been the theatre. Paris has, unquestionably, many other features of commanding interest—its arts, its luxuries, its municipal arrangements. But these are incessantly varying in their expression. As the historical scenes are permanent and indelible. They are to be traced, not in monuments and inscriptions, but in the multifarious narratives of chronicles and memoirs, in the obscure records of the middle ages, and in the pamphlets of yesterday. The Barrier of the Louvre, and the three Days of 1793, are equally within the range of this subject.—Extract from Introduction.
The Volume may be had bound in cloth, price 4s. 6d.
London: Charles Knight, Pall Mall East.

HER MAJESTY'S DRAWING ROOMS

REVIEW OF NEW BOOKS.

Catalogue of the Manuscripts and State Papers in the Library of the most Noble the Marquess of Salisbury, at Hatfield House. 2 vols. Vol. I. Miscellaneous Manuscripts, and State Papers.

Vol. II. Letters, Privy Seals:

In Manuscript; arranged and analysed by C. J. Stewart, of the late Firm of Howell and Stewart, Booksellers, London.

AMONG the extraordinary monuments of human talent and industry there is hardly one which has filled our mind with greater admiration than that collection of documents made by the celebrated minister of Queen Elizabeth, and known by the name of the Burleigh Papers. How laborious must have been the life of that statesman under whose eye and for whose consideration so vast a mass of important matters were passed in array! the *vita brevis est* seems to be inapplicable to such an individual. And our wonder will be increased when we observe that Lord Burleigh gave the most minute attention to every subject so brought before him. He was a man of method, and of indefatigable application. Hence not only the arrangement of the multitudinous and extensive matters upon which he was called to exercise his judgment; but their careful analysis, and the final conclusions upon them—for it is one of the very remarkable circumstances shewn by their inspection, that Lord Burleigh was in the habit of discussing all the projects, plans, propositions, &c. upon which he had to decide, *in writing!* Whether a state affair of national consequence, or a business of minor interest, his practice was to examine it in all its bearings, to write down the *pros* and *cons* with his own hand, and in the end to record the determination to which he had come respecting it.

This practice has added extremely to the value of these papers, which have descended to our time, and which throw so curious a light upon the anterior history of our country. It is, therefore, with much gratification that we are enabled to render some account of them to our readers; and especially as many of the facts they disclose are equally new and important.

The well-known Burleigh Papers in the British Museum* have been frequently ransacked by historians and other authors. Those in the possession of the descendants of that great man have also been occasionally consulted and quoted. To render it more explicit, we should notice that this continuous portion (mingled with the Burleigh Papers which are at Hatfield House, and which may be distinguished as the Cecil or Salisbury papers), extends from 1596 to 1608, when Sir Robert Cecil (the second son of

* These, it is well known, are entirely derived from Lord Burleigh; one portion, the Lansdowne collection, being copies of the minister's state correspondence, in the handwriting of his secretary, Sir Michael Hicks; the other the Hatfield, being original papers somehow or other removed from the great collection of documents which had descended in the present noble house of Salisbury.

Lord Burleigh, and his coadjutor and successor as a minister) became Lord Treasurer—and the whole mass has, till now, remained without arrangement.

At length, however, the Marquess of Salisbury engaged Mr. Stewart to make the Catalogue, the title of which we have placed at the head of this article; and a more skilful, judicious, and intelligent production of the kind we have never seen. With a perseverance and zeal worthy of Lord Burleigh himself, Mr. Stewart has read and classed the whole of this prodigious collection, in which there are no fewer than thirteen thousand letters, from the time of Henry VIII. to that of James I.—comparatively few of which have yet been published. But Mr. Stewart has not only made himself master of their nature, as well as of the larger state papers, &c.—he has prepared a perfect *résumé* of the whole,* and by placing the particulars in a clear tabular form, put it in the power of any one, at a glance, to refer to whatever may be desired in this treasury of historical information.

Where there is such an amount to attract our regard, we feel quite at a loss how to communicate to the public a fair portion of the pleasure we have ourselves derived from the perusal of these manuscript volumes—these keys which will open so much of truth and utility to future writers. We can only offer a brief selection of such things as have struck us most forcibly, either as bearing upon controverted points, or having some relation to the present period.

And first, among matters of this kind, we think it will surprise the parties who have of late waged so fierce a paper war on the question of breaking the line in naval tactics, to learn from the following clear and particular passage, in instructions given to Vice-admiral Sir John Clere, on proceeding to the North Sea in com-

* The collection of manuscripts in the library at Hatfield House appears to have been formed principally by the first Earl of Salisbury. It consists, as we have stated, but as is yet more distinctly in Mr. Stewart's excellent preliminary remarks, of many that are both valuable and curious, from the twelfth to the fifteenth centuries; of historical, political, financial, and other documents; of the reigns of Henry VIII., Edward VI., and Mary; of plans, charts, &c. from Henry VIII. to Elizabeth, inclusive; of the general state papers of Elizabeth's reign, and of those of the first years of her successor.

Of the MSS. mentioned above, the state papers form the largest and most interesting portion; in connexion with which, those originally a part of it in the Harley and Lansdowne collections, and now in the British Museum, and what were deposited in the State Paper Office after its establishment by Sir Robert Cecil, will most fully illustrate the public, and even private, transactions of those times. They extend from the commencement of Elizabeth's reign to the tenth year of James's, and are particularly copious, as we have mentioned, from 1596 to 1608, during which Sir Robert held the office of secretary of state. Their value may be estimated not only from the importance attached to these periods, but by the materials for historical illustration already developed in the selections published from them, and made use of by Hume, Robertson, and later writers. They also exhibit the unparalleled occurrence of a father and son continuing to fill the office of prime minister in this country for the long and unbroken term of forty-six years—and these among the most momentous and glorious which our history affords. Mr. Lodge, in his *Illustrations of British History*, justly terms them "the vast treasure of state relics at Hatfield House."

mand of a fleet, in the reign of Henry VIII., that the manoeuvre, so far from being a recent invention, was distinctly ordered at that early time!! "The fyrate ranke shall make saile straight towards the frounte of the battell, and shall passe through them (the enemy) if they can, and shall make as shorte a turne to the wyndwardes as they may, and then shall have a speciall regard to the secours of the seconde ranke; which seconde is to laye on board the principall shyppes of th' enemies, every man choyng his matche as nere as he maye, restynge ther admyrrall for the lo. admirall."

This very singular extract settles the controversy, and shews that neither Lord Rodney, Admiral Douglas, nor Mr. Clerk, have a right to claim being the originators of this manoeuvre. And, as if to shew that in naval and mercantile speculations, as well as in all others, there is nothing new under the sun, we find Polar voyages of discovery thus specified and recommended (temp. Hen. VIII.) in an address to his majesty on Polar routes to Cathay, the East Indies, &c. The author, Robert Thorne, of Seville,* states that his "father, in conjunction with a merchant of Bristol, namyd Hugh Elyot, war ye dyscoverers of ye *New-found landes*, of the whych ther ys no doubt, as nowe playnlye apperyth, yf our maryners wold then have ben rewled and folowyd thyr pylot's mynd, the lands of th' Indyas, from whyche all the gold comyth, had bin owers, for alle ys oone coaste." This curious passage confirms our opinion, that maritime discoveries, of which the memory has perished, were much more extensively pursued in the time of Henry VII. than is recorded in our annals; and that colonies claimed by Spain and Portugal, as the first who had taken possession of them, were in fact discovered, as in this case of Newfoundland, by English navigators.

Our next reference is to a mass of papers which contains a good deal of information relative to the claims upon Scotland, and to the condition of that country from an early period. From this we ascertain the remarkable fact, that the Pope's temporal authority was rejected in Scotland in the time of Edward I. The following is also of much historical interest:—"Informacione presentede unto my lorde's grace (the Duke of Somerset), 3rd Feb. 1547," regarding the means of accomplishing the marriage between Edward VI. and Mary of Scotland. Among other matters advised is "to sende one army in Scotland, in deu tyme afore ye Frenche menyis cumyng, and of ye grete good sall follow yereby, and of ye grete evil and unspeakabil damage sall followe, yf ye Frenche men cum into Scotland before your grace's army. Of ye having of ye quene's grace of Scotland in ye kinges maiesties kepinge, wiche may be yf the said army cum into Scotland afore ye Frenchemen, or als never as it

* Robert Thorne appears to have been an English merchant settled at Seville. His Address is to the English Ambassador at Madrid, Dr. Robert Ley, ambassador from Henry VIII. to Charles V., at whose desire the Memorial is forwarded to Henry.

appeareth." The date of this is a few days after the coronation of Edward, and is previous to the protector's letter on the subject to the Scottish nobility. It may shew the true cause of the invasion which so quickly followed, but which was ascribed to Henry's dying request so to accomplish this match.

By way of variety, we now introduce the transcript of a French poem, in imitation of typography, which seems, from the following extract, to be the work of Queen Catherine Parr.

"Tu poeux icy voir un creature
Et al le sexe inspirer peut nature,
C'est une femme, et d'aucun haut degré
Te poeut mauvoir; que tu l'ayes a gré:
Elle est de Dieu en hault estat meriée
Par un mariage encor plus ennoblé;
Par sapience en ses faits dieu n'oublie,
Et par un roy tres pulesant elle est faite
Royne excellent en vertus tres-parfaite.
Par un Henry qui est de hault renom
A Katherine eu de royaume le nom."

Our next extract unfolds a very odd project, which we might call an *Old Clothes Bank*—it is docketed, "Fitzherbert for the best garments of every person deceased to be gyven to the poore." Perhaps this was Sir Anthony Fitzherbert, then in high repute; and we may remark, that the best clothes were, at the period alluded to, of very considerable value. The paper is of the reign of Mary, and it suggests the establishment of a bank for the purpose of lending money to the poor, or to the prince, "if he request it," at 6 per cent.—The capital is proposed to be raised by the sale of the best garment of every person dying; which is to be delivered to the churchwardens of the parish, and by them to be transmitted to proper authorities. The annual amount calculated to be raised from this source is 30,000*l*.

We hear much of pluralities in the church in our day; what will be thought of the annexed, so soon after the reformation too?

"A Booke of Pluralities of dyvers persons. Anno 1575."—The number of livings thus held was at this time 655, of incumbents 239, and the greatest number held by one person is 7, of which there are 3. The total value, deducting the tenths, is 16,519*l*. 16*s*. 9*d*.

Turning back for a few years in date, we consider the following, relative to the murder of Rizzio, to be very interesting.

"Copy of the Communication made by the Earl of Bedford, and Mr. Randolph, from Edinburgh, to the Council of England, March 27, 1566, touching the death of Rizzio."—By this it appears that the fugitive nobles were forced to join in this transaction as the condition of the king's (Darnley) befriending them—that Rizzio was not killed in the presence of the queen, but in going down stairs after leaving her chamber—and that no violence was offered to the queen, or intended. It also details a curious conversation between the Lord Ruthven, Mary, and Darnley, after Rizzio's removal, in which the latter complains of the queen's giving "David more companie of her bodie" than him; the conclusion of which is, that she "was content that he should lie with her that night." Some account is also given of David's wealth, which was considerable.

It is but fair to add another version of this transaction, which may possibly be partial, though entitled "A trewe relation of the course Syr Anthony Standen hath held, from the year 1565, the tyme in whych he fyrst left the Court of England and entered into the service of those Princes of worthy memory, Henry and Mary, Kinge and Queene of Scotlande, father and mother of the present most gracious Sovereigne Lord the K.'s Majestie, until the 22*d*

of Jan. 1603-4, the day of his comytment to the Tower."—This contains another account of the death of Rizzio, the loving behaviour of Darnley and Mary at that time, and the attempt of the former to prevent it, and the escape of their majesties to Dunbar. It also narrates an interview Mary desired to have with the elder Standen shortly after the birth of James, when, among other things, she is represented to have said, "that the prince would be a liberale giver and an easie forgyver; her reason was, for that as soone as he came into this world he cast hys handes open."

Subsequent to 1600 there is a paper called "Considerations touching ye Queen's service in Ireland."

Among other things, this recommends a temporary toleration of Romanism—the sending over of clergymen, "who are vehement and zealous persuaders, and not scholasticall, to be resident in the principall townes—the continuing and replenishing of the college begonne at Dublin—the placing of good men as byshops in the seas there—the taking care that versions of Bibles, catechisms, and other bookes of instruction be made into the Irish language, and the encouragement of an interchange of settlers between England and Ireland." [Was this really 230 years ago? or may we not adopt much of the advice now?]

"Advertisement of the Overthrow of the Spaniards and the Surrender of Kinsall. Jan. 2, 1602."—An anecdote is here given of the Spanish general's opinion of Ireland, in which he says, "that he remembered a passage of Scripture, where the devil took Christ to a pinnacle of the temple, to shew him the whole world; but that he believed he kept that country out of sight, as being fit for none but himself."

Considering that his present Majesty, third son of George III., was Lord High Admiral of England, the annexed may be esteemed a curiosity.

"Ye Juge of ye Admyraltie his Declaration touching ye Jurisdiction of ye Admirall's Corte."—The indorsation of this is apparently in the Earl of Lincoln's hand, and the paper itself is in that of Dr. D. Lewis; and it is here stated, "that the Prince of the lands 3 sonne, if there were any suche, is alwaies lord admirall."

As preceding the Marquess of Worcester's famous Century of Inventions, the subjoined is remarkable enough.

Memoranda found in Mr. Arundel's house, (afterwards Lo. A. of Wardour), touching warlike inventions, such as "on preventing a ship being struck by a shot between wind and water. Plan for light brass pieces being mounted on carts, so high as to fire over our soldiers' heads, and to be made so as to turn with the muzzle backwards, &c. To poison the air of a whole camp. A devise to make a ship go by itself for a mile or two, loaded with combustibles to fire other ships."

"Description of an Engine for Battery," the purposes of which are to throw such shot into a town "as shall fall into the houses, and the fyre breake out and blowe up in terrible sort," and to throw shot, every one of which will discharge 2000 musket bullets.

It is obvious that some of these contrivances have since been matured, in the forms of field pieces, grape-shot, &c. &c., and that others are among the inventions recommended at the moment we are writing, and on which experiments are trying!

The following was no doubt communicated to Lord Burleigh from France: such repre-

sentations must have had a powerful effect in leading the government of Elizabeth to become the head of the Protestant cause, and to cherish the hatred of all good men against such perversion of ecclesiastical power.

"Abrégé dung Discours secret entre sa Sainteté et Auteurs de ses confidants apres la depart de M. le frere du Roi de la Cour, trouvé entre les Papiers de David, avocat de Parlement de Paris, pour la Confirmation duquel il alla a Rome apres la Paix de Mai 1576, auquel voyage il est mort."

Among other curious matters this paper explains the formation of the famous league in France, which it shews was planned by his holiness, who recommends that the king shall deliver secretly to the Duke of Guise powers to form leagues between the nobility and others, whom he is directed to bind by the most solemn oaths, to give orders to the curies to furnish all the information which can be obtained, in confession, of what arms the people have under pretext of defence.

Bref Discours sur la Ligue.

This contains the measures of the Guise faction, in name of the Pope, and in conjunction with the King of Spain, to prevent the crown of France on the death of Henry III. falling into the hands of the King of Navarre or the Prince of Condé, who are denounced as heretics; and for this purpose all the devils in hell are actually invoked to second them, if God will not.

We have no farther extracts to make: were we to extend our purpose to all that struck us as interesting, there would be no end to our detail; but speaking generally of the collection in hand, we may state, that the letters have been arranged in a chronological series, except the following:—*Those of royal personages*, among which are, of course, many addressed by James to Elizabeth, and by the former after his accession to the English throne to the first Earl of Salisbury. There are also a number of Elizabeth's in her own hand, addressed to the Duke of Anjou. The much-talked-of secret correspondence between Sir R. Cecil and King James, from 1601-3, in the hands of these individuals, is also contained in this collection; and it may not be improper to remark on it, that the volume published under that title by Lord Hailes, in 1767, from originals in the Advocates' Library, Edinburgh, has no reference to this, being, in fact, but the correspondence between Lord B. Howard, afterwards Earl of Northampton, and the Earl of Mar, and the Abbot of Kinloss, who were sent ambassadors from James to Elizabeth, after Essex's death. Unfortunately, too, by this mistake committed by Lord Hailes, the public have been led to judge of Sir R. Cecil's principles, by those of one, namely, Lord Northampton, who held religion and politics equally easy, rendering both only subservient to his own aggrandisement. There is also apparently the whole of a curious correspondence between the Lady Arabella Stuart and others, relative to her attempt to marry Mr. W. Seymour, so early as 1602; and a number of letters, partly in cipher, from the Duc de Bouillon to the Earl of Essex.

Among the general series of letters, which extends from Henry VIII. to Charles, but particularly illustrates the latter part of Elizabeth's and the early part of James's reign, may be mentioned, as illustrating our military and naval expeditions, and the then state of the continent—those of the English commanders and ambassadors in France and the Low Countries, and of Sir W. Raleigh, Sir John Haw-

kins, the Earl of Cumberland, Sir W. Monson, and other naval commanders of that time: as illustrating the state of Scotland and the Scottish court, the letters of the English ambassadors, and of Mr. Nicholson, an agent of Elizabeth's there; and particularly those of Mr. Richard Douglas, nephew of Archibald Douglas, James's resident at the English court, (some of which are published in Lodge's Illustrations), the Master of Gray, &c. There are also letters of one Guicciardini, besides what are termed advertisements, from the Italian courts; and similar communications by various individuals, from the courts of Spain and Portugal.

The *Plans*, &c. in this collection, extend from the time of Henry VIII. to that of Elizabeth, and principally illustrate the fortifications then being constructed or enlarged, on the coasts and borders, a number of which regard the preparations made for the reception of the Spanish Armada.

The original documents relative to the divorce of Anne of Cleves are another principal feature in this important collection.

We cannot take our leave of this subject without offering the tribute of our cordial gratitude (in common with every literary and patriotic man in the kingdom) to the Marquess of Salisbury, for having caused a deposit so truly national to be set in order. It is an example which we trust will be universally followed by those who are, by family inheritance or other means, the possessors and curators of their country's annals. Where or how arranged are the Walsingham, the Buckhurst (Dorset), the Egerton (Bridgewater), the Conway (Hertford), and many, many other most interesting collections? Would it not be an admirable plan to establish a public museum for their analysis and preservation. The papers might still remain the private property of those to whom they have descended, though *bonâ fide* they originally belonged to the state, and it was a bad practice (though it existed till the time of George III.) to remove them, when any minister, in whose department they were, retired, carrying them with him into individual custody.

Such an institution would be worthy of our popular King; and the documents now separated and in oblivion, no one knows where, if thus congregated together, and even a catalogue *raisonné* made of them (if nothing more) would throw invaluable lights on our National History.

The Life of Samuel Johnson, LL.D., including a Journal of a Tour to the Hebrides. By James Boswell, Esq. A new edition, with Additions and Notes by J. W. Croker, LL.D. F.R.S. 5 vols. 8vo. London, 1831. Murray. THIS long-expected work, under the supervision of one of the ablest and most delightful annotators of our time, is now before us. Who has not read Boswell's unique *Life of Johnson* with pleasure? and who can avoid being gratified by the appearance of a book, by which they know that pleasure must be largely increased? If any such there be, we are not of the number; and we hail these five volumes with fivefold welcome.

The universal fame of the original production renders any observation upon it quite supererogatory; and indeed it is well for us that we are not at present called upon to do more than introduce some of the new matter—for our day is short.

To specify the most obvious merits of this edition as briefly as may be, we shall only say

that it throws a light upon many persons and things left obscure by Boswell himself; that it freshens and revives the memory of all he has stated; and that it incorporates all other authentic particulars relative to Johnson,* from other sources, of which he has taken no notice. We shall pass over Mr. Croker's preface, and select such notes, &c. as best carry their own meaning along with them, in illustrating matters connected with Dr. Johnson.

"Johnson, in his Dictionary, defines 'EXCISE, a hateful tax, levied upon commodities, and adjudged not by the common judges of property, but by wretches hired by those to whom excise is paid;' and in the *Idler* (No. 65), he calls a *commissioner of excise*, 'one of the lowest of all human beings.' This violence of language seems so little reasonable, that the editor was induced to suspect some cause of personal animosity; this mention of the trade in parchment (an *exciseable* article) afforded a clue, which has led to the confirmation of that suspicion. In the records of the excise board is to be found the following letter, addressed to the supervisor of excise at Lichfield: 'July 27, 1725.—The commissioners received yours of the 22d instant, and since the justices would not give judgment against Mr. Michael Johnson, the tanner, notwithstanding the facts were fairly against him, the board direct that the next time he offends, you do not lay an information against him, but send an affidavit of the fact, that he may be prosecuted in the Exchequer.' It does not appear whether he offended again, but here is a sufficient cause of his son's animosity against commissioners of excise, and of the allusion in the Dictionary to the special jurisdiction under which that revenue is administered. The reluctance of the justices to convict will appear not unnatural, when it is recollected that Mr. Johnson was, *this very year*, chief magistrate of the city."

"It will be observed, that Mr. Boswell slurs over the years 1729, 1730, and 1731, under the general inference that they were all spent at Oxford; but Dr. Hall's accurate statement of dates from the college books, proves that Johnson personally left college 12th Dec. 1729, though his name remained on the books near two years longer, viz. till 8th Oct. 1731. Here then are two important years, the 21st and 22d of his age, to be accounted for; and Mr. Boswell's assertion (a little farther on), that he could not have been assistant to Anthony Blackwell, because Blackwell died in 1730, before Johnson had left college, falls to the ground. That these two years were not pleasantly or profitably spent, may be inferred from the silence of Johnson and all his friends about them. It is due to Pembroke to note particularly this absence, because that institution possesses (on the foundation of Sir J. Bennett, Lord Ossulston), two scholarships, to one of which Johnson would have been eligible, and probably (considering his claims) elected in 1730, had he been a candidate."

"Mr. Malone, in a note on this passage,† states that he had read a letter of Johnson's to a friend, dated 27th July, 1732, saying that

* From Sir J. Hawkins, Mrs. Plozzi, Dr. Strahan, Messrs. Duppa, Murphy, Tyers, the *Gentleman's Magazine*, and about a hundred original letters, besides other manuscripts.—*Ed. L. G.*

† "His general aversion to this painful drudgery was greatly enhanced by a disagreement between him and Sir Wolstan Dixie, the patron of the school, in whose house, I have been told, he officiated as a kind of domestic chaplain, so far, at least, as to say grace at table, but was treated with what he represented as intolerable harshness; and, after suffering for a few months such complicated misery, he relinquished a situation which all his life afterwards he recollected with the strongest aversion, and even a degree of horror."

he had then recently left Sir Wolstan Dixie's house, and that he had some hopes of succeeding, either as master or usher, in the school of Ashbourn. If Mr. Malone be correct in the date of this letter, and Mr. Boswell be also right in placing the extract from the diary under the year 1732, Johnson's sojourn at Bosworth could have been not more than *ten* days, a time too short to be characterised as 'a period of complicated misery,' and to be remembered during a long life 'with the strongest aversion and horror.' It must also be observed, that, according to the statements of Messrs. Boswell and Malone, compared with the college books, Johnson's life, from December, 1729, to the beginning of 1733, is wholly unaccounted for, except the ten days supposed to have been so lamentably spent at Bosworth. The only probable solution of these difficulties is, that the walk to Bosworth on the 16th July, 1732, was not his first appearance there; but that having been called to Lichfield, to receive his share of his father's property, which, we have seen, p. 48, that he did on the 15th July, he returned to Bosworth on the 16th, perhaps for the purpose of making arrangements for finally leaving it, which he did within ten days. It seems very extraordinary, that the laborious diligence and the lively curiosity of Hawkins, Boswell, Murphy, and Malone, were able to discover so little of the history of Johnson's life from December, 1729, to his marriage in July, 1736, and that what they have told should be liable to so much doubt. It may be inferred, that it was a period to which Johnson looked back with little satisfaction, and of which he did not love to talk; though it cannot be doubted that, during these five or six important years, he must have collected a large portion of that vast stock of information, with which he afterwards surprised and delighted the world.

"In the year 1735, Mr. Walmesley's kindness endeavoured to procure him the mastership of the grammar school at Solihull in Warwickshire: this and the cause of failure appear by the following curious and characteristic letter, addressed to Mr. Walmesley, and preserved in the records of Pembroke College:

"Solihull ye 30 August, 1735.
"Sir,—I was favoured with yours of y^e 13th inst. in due time, but deferred answering it till now, it taking up some time to inform the *fratres* [of the school] of the contents thereof; and before they would return an answer, desired some time to make inquiry of y^e character of Mr. Johnson, who all agree that he is an excellent scholar, and upon that account deserves much better than to be schoolmaster of Solihull. But then he has the character of being a very haughty ill-natured gent, and y^e he has such a way of distorting his face (w^h though he can't help) y^e gent. think it may affect some young lads; for these two reasons he is not approved on, y^e late master Mr. Compton's huffing the *fratres* being still in their memory. However we are all extremely obliged to you for thinking of us, and for proposing so good a scholar; but more especially is, dear sir, your very humble servant, HENRY GRESWOLD."

"It was probably prior to this that a more humble attempt to obtain the situation of assistant in Mr. Budworth's school, at Brewood, had also failed, and for the same reasons. Mr. Budworth was certainly no stranger to the learning and abilities of Johnson, as he more than once lamented his having been under the necessity of declining the engagement, from an apprehension that the paralytic affection under which Johnson laboured through life might be

come the object of imitation or ridicule amongst his pupils."

When Johnson engaged to write for the Gentleman's Magazine, Mr. Croker quotes from Hawkins:—

"This drew Johnson into a close intimacy with Cave: he was much at St. John's Gate, and taught Garrick the way thither. Cave had no great relish for mirth, but he could bear it; and having been told by Johnson, that his friend had talents for the theatre, and was come to London with a view to the profession of an actor, expressed a wish to see him in some comic character. Garrick readily complied; and, as Cave himself told me, with a little preparation of the room over the great arch of St. John's Gate, and, with the assistance of a few journeyman printers, who were called together for the purpose of reading the other parts, represented, with all the graces of comic humour, the principal character in Fielding's farce of the Mock-Doctor. Cave's temper was phlegmatic: and though he assumed, as the publisher of the magazine, the name of Sylvanus Urban, he had few of those qualities that constitute the character of urbanity. Judge of his want of them by this question, which he once put to an author: 'Mr. —, I hear you have just published a pamphlet, and am told there is a very good paragraph in it upon the subject of music: did you write that yourself?' His discernment was also slow; and as he had already at his command some writers of prose and verse, who, in the language of booksellers, are called *good hands*, he was the backwarer in making advances, or courting an intimacy with Johnson. Upon the first approach of a stranger, his practice was to continue sitting, a posture in which he was ever to be found, and, for a few minutes, to continue silent; if at any time he was inclined to begin the discourse, it was generally by putting a leaf of the magazine, then in the press, into the hand of his visitor, and asking his opinion of it. Sir John Hawkins remembered that, calling in on him once, he gave him to read the beautiful poem of Collins, written for Shakspeare's Cymbeline, 'To fair Fidele's grassy tomb,' which, though adapted to a particular circumstance in the play, Cave was for inserting in his magazine, without any reference to the subject. Hawkins told him it would lose of its beauty if it were so published: this he could not see; nor could he be convinced of the propriety of the name *Fidele*: he thought *Pastora* a better, and so printed it. He was so incompetent a judge of Johnson's abilities, that, meaning at one time to dazzle him with the splendour of some of those luminaries in literature who favoured him with their correspondence, he told him that, if he would, in the evening, be at a certain ale-house in the neighbourhood of Clerkenwell, he might have a chance of seeing Mr. Browne, and one or two other of the persons employed in the magazine. Johnson accepted the invitation; and was introduced by Cave, dressed in a loose horseman's coat, and such a great bushy uncombed wig as he constantly wore, to the sight of Mr. Browne, whom he found sitting at the upper end of a long table, in a cloud of tobacco-smoke, had his curiosity gratified. Johnson saw very clearly those offensive particulars that made a part of Cave's character; but, as he was one of the most quick-sighted men in discovering the good and amiable qualities of others, a faculty which he has displayed, as well in the life of Cave, as in that of Savage, printed among his works, so was he ever inclined to palliate their defects; and though he was above courting the patron-

age of a man, whom, for many reasons, he could not but hold cheap, he disdained not to accept it, when tendered with any degree of complacency."

"Sir J. Hawkins seems (as well as the other biographers) to have overrated the value, to Cave and the public, of Johnson's Parliamentary Debates. It is shewn in the preface to the Parliamentary History for 1738 (ed. 1812), that one of Cave's rivals, the London Magazine, often excelled the Gentleman's Magazine in the priority and accuracy of its parliamentary reports, which were contributed by Gordon, the translator of Tacitus."

Pursuing the stream of time, according to dates, in 1744 it is said:—"In this and the two next years Mr. Boswell has not assigned to Johnson any contributions to the Gentleman's Magazine; yet there seems little doubt that from his connexion with that work he derived for some years the chief, and almost the only, means of subsistence for himself and his wife: perhaps he may have acted as general editor, with an annual allowance; and he no doubt employed himself on more literary works than have been acknowledged. In this point the public loss is perhaps not great. What he was unwilling to avow, we need not be very solicitous to discover. Indeed his personal history is about this period a blank—hidden, it is to be feared, in the obscurity of indigence; and we cannot but think with a tender commiseration of the 'distress' of such a man, rendered more poignant by being shared with a woman whom he so tenderly loved."

Of the Life of Savage, Mr. C. says:—"Johnson has spread over Savage's character the varnish, or rather the veil, of stately diction and extenuatory phrases, but cannot prevent the observant reader from seeing that the subject of this biographical essay was, as Mr. Boswell calls him, 'an ungrateful and insolent profligate;' and so little do his works shew of that poetical talent for which he has been celebrated, that if it had not been for Johnson's embalming partiality, his works would probably be now as unheard of as they are unread."

Of Irene we are informed:—"Mr. Murphy (Life, p. 53) says, 'the amount of the three benefit nights for the tragedy of Irene, it is to be feared, were not very considerable, as the profit, that stimulating motive, never invited the author to another dramatic attempt.' But Mr. Isaac Reed discovered that the author's three nights, after deducting about 190*l.* for the expenses of the house, amounted together to near 200*l.*, besides the 100*l.* for the copy. These were, at the time, large sums to Dr. Johnson."

Of the Rambler, the following is very interesting:—"Richardson, the author of Clarissa, to whom Cave had sent the first five numbers of the Rambler, became, as they proceeded, 'so inexpressibly pleased with them,' that he wrote to Cave in strong commendation, and intimated his conviction (the name of the author being still a secret) that Johnson was the only man who could write them. Cave's answer seems worth inserting, as giving a higher idea of his own station in society than has been hitherto entertained, as well as more clearly explaining some points of Dr. Johnson's life."

These are parts:—

"I return to answer, that Mr. Johnson is the great Rambler, being, as you observe, the only man who can furnish two such papers in a week, besides his other great business, and has not been assisted with above three. I may discover to you, that the world is not so kind to itself as you wish it. The encouragement as

to sale is not in proportion to the high character given to the work by the judicious, not to say the raptures expressed by the few that do read it; but its being thus relished in numbers, gives hope that the sets must go off, as it is a fine paper, and, considering the late hour of having the copy, tolerably printed. When the author was to be kept private (which was the first scheme), two gentlemen, belonging to the prince's court, came to me to inquire his name, in order to do him service; and also brought a list of seven gentlemen to be served with the Rambler. As I was not at liberty, an inference was drawn, that I was desirous to keep to myself so excellent a writer. Soon after, Mr. Doddington sent a letter directed to the Rambler, inviting him to his house, when he should be disposed to enlarge his acquaintance. In a subsequent number a kind of excuse was made, with a hint that a good writer might not appear to advantage in conversation. Since that time, several circumstances, and Mr. Garrick and others, who knew the author's powers and style from the first, unadvisedly asserting their (but) suspicions, overturned the scheme of secrecy. (About which there is also one paper.) I have had letters of approbation from Dr. Young, Dr. Hartley, Dr. Sharpe, Miss Carter, &c. &c., most of them, like you, setting them in a rank equal, and some superior, to the Spectators (of which I have not read many, for the reasons which you assign); but, notwithstanding such recommendation, whether the price of *twopence*, or the unfavourable season of their first publication, hinders the demand, no boast can be made of it. The author (who thinks highly of your writings) is obliged to you for contributing your endeavours; and so is, for several marks of your friendship, good air, your admirer, and very humble servant,

E. CAVE."

These miscellaneous quotations are from the first 200 pages of the first volume. They will slightly shew the character of Mr. Croker's researches; and we have not an opportunity of doing more this week.

The Dwelling of Fancy; a fragmentary Canto: with other Poems. By J. A. Wade, author of "Songs of the Flowers," "the Prophecy, an Oratorio," &c. &c. 8vo. pp. 104. London, 1831. Cochrane and Pickersgill.

PERHAPS the first poem, the Dwelling of Fancy, will be found somewhat dreamy and abstracted for general readers, but it has much beauty; while among the minor pieces are some full of that tender and natural feeling, that graceful imagery, which most can appreciate and all enjoy: it is poetry passing over the human heart, and referring the music it has awakened to the source whence it was drawn:

"I was but as the wind passing carelessly over,
And all the wild sweetness it woke was thine own."

The Hymn of Memnon's Lyre is, with all its fanciful imagery, a most exquisite poem.

"Fountain of living light to all,
Of melody to me,
Soon as thy morning lustre-fall
Is sparkling in the East-land hall,
My song begins to thee!

Sun! thou great glory of the sky!
Full as thine ears may ring
With the loud orbal minstrelsy,
Oh! list to the sweet melody
That here for thee I sing!

It is Earth's music, but it thrills
For nothing earthly, Sun!
Thou'rt scarcely on the orient hills,
But gentle song my fancy fills—
Alas! that e'er 'tis done!

I am all thine—the perfumed sighs
Of morning, mountain heath,
Seek not more fondly the soft skies
That warm them, than my melodies
Send unto thee their breath!

Oh! it is sweet to hear them wake
And rouse each sleepy string;
At first, low murmuring tones they make,
But bolder, deeper thrills they take—
At thy full rise they sing!

There are some tears upon my wires,
They are not the night-dews;
They are a melancholy lyre's,
Jealous of those revolving fires
That hymn the spherul rouse!

Sun! do they love thee well as I?
When thou art down the west,
They gaily sparkle o'er the sky,
Not when thy glorious face is nigh
Are they in beauty drear!

How different here!—when thou art gone,
Cold tears and sighs are mine;
With thy last look my joy is done—
With thy first smile my song's begun,
Its theme and music thine!

The night-wind oft with tender sigh
Breathes on my heedless strings;
But not a single melody
Forgets its faithfulness to thee,
Not one softer answer sings!

Sometimes with jealous rage he sweeps
Across my dreaming breast;
But, hopeless lover! fondness keeps
Her truth enshrined there, and weeps,
And leaves him all unblest!

My Sun-god! love!—my hope! my dream!
Why dost thou let the Moon
Flaunt through thy path in golden beam?
Why does she there so proudly seem
Usurping thy bright noon?

From my fond thoughts I often start,
And think her light is thine:
How melancholy to the heart,
From a sweet fantasy to part,
And dreams for truth resign!

Oh! that I had the power to climb
O'er the high clouds to thee—
To have thy love through all sweet time—
Not sing thee one cold morning chime,
But endless melody!

To bring soft shadows round thy soul
With music's spell at even,
When thou hadst reach'd thy western goal,
And thou wert weary of thy roll
O'er the wide arch of heaven!

But no! 'tis vain—Aurora's child,
With his cold senseless grasp,
Enslaves me in this ruin'd wild,
A weeping thing that should have smiled
In thy more gentle clasp!

Farewell!—thou passest quickly on
To give dark regions light:
Their rosy smiles have just begun—
Farewell! my Morning Hymn is done—
Come to me, Tears and Night!"

The following sonnet has all the rich passion
of our olden poetry.

"*Apelles to Campaspe.*"

I cannot paint thee while those heavenly eyes
Wear that fond languishment, that tender mien;
For, sooth, I would not have their witcheries
By prouder gazers than myself be seen.

Oh! look less lovely—look as cold as snow,
That none may, pausing on thy beauty's line,
Writ on my canvas, sigh, and wish to know
The fair original of my design!

Why should I mimic for the common stare
The love-lit lightning of an angel smile,
That, in my heart's fond hopefulness, I dare
To think he meant my sorrows to beguile?
Campaspe! look as beautiful as day,
But from thy beauty take thy love away!"

We must find space for three verses from
the Bride's Choice: the thought in the last
of them is as beautiful as it is original.

"So lay me in that pleasant grave,
All cover'd o'er with green;
Though wrong'd through lifetime, I would have
My tomb as if I'd been

A happy thing, and sweets were strewn
Upon my sleep, to shew
That I had never sorrow known,
Had never tasted woe!

I like the mockery that flowers
Exhibit on the mound,
Beneath which lie the happy hours
Hearts dreamt, but never found!"

The following is also a sweet specimen of
Mr. Wade's taste and feeling:

"To a Robin."

November's chilling breeze
Sighs through the leafless trees,
And brings the winter's gloom;
And yet though cold and drear,
I find thee, Robin, here,
As if it all were bloom!

But say, how canst thou bring
Thy little heart to sing
Amid these wither'd bowers?
Thy breath, too, is more sweet
Than when thy trembling feet
Play'd through the summer flowers!

Say, hast thou learn'd, when all
Thy rosy dwellings fall,
To hide in music's strain
Thy blighted hopes, thy fears,
And (if thou hast them) tears
Wept in thy memory's pain?

Sing on, sweet bird!—like thee,
When with the gay, the free,
If sorrow should be mine,
I'll sigh not o'er the hours
Gone, faded like these bowers—
My song shall be like thine!"

We will close our remarks on one poet in
the language of another, and assure our readers
that this slight volume is full of

"Tender fancies, melancholy thoughts,
And words that move to music."

The author, with some peculiarities both in
thought and language, is quite capable to take
his place in the foremost rank of our lyric
bards; and we are convinced that the present
small volume will not only tend to locate him
there, but recall attention to several of his pre-
ceding productions, which we fear have at-
tracted less notice and praise than they justly
merited.

Paris and London. By the Author of "the
Castilian," "the Exquisites," &c. &c. 3 vols.
12mo. London, 1831. Colburn and Bentley.

THE author of this book has been made the
object of some unjust misrepresentations by
writers of theatrical and literary criticisms.
A Spaniard by birth, and having spent more
than half his life in his native country and on
the continent, in all our remarks upon his pro-
ductions we have referred to the singular cir-
cumstance of a foreigner's writing so well in
English, and upon English topics. As a stranger,
he was entitled to our courtesy; and we cannot
but censure the spirit which has endeavoured
to negative that claim by untruly stating him
to have lost it by the long period he has so-
journed amongst us.

And we are the more induced to press this
fact now, because having on former occasions
bestowed due praise upon M. de Trueba's
works, and estimated the talents he displayed
with the liberality they had a right to com-
mand, we are inclined to look to the same
cause as some excuse for the errors and offences
of the volumes which it is our present duty to
notice. Nothing but a greater intimacy with
continental manners than with, if not the more
moral and virtuous, at any rate the more de-
corous habits of England; could have led him
into the error of supposing that such a per-
formance could be acceptable, and especially to
the numerous body of female readers to whom
this class of writing is principally addressed.
A continual succession of profligate intrigues
may be an accurate picture of a certain set in
society—but they are most unfit for descrip-
tion. Sentimental and highly wrought scenes
of vice may equally pollute and corrupt the
mind; but this is no apology for the coarser
delineation of sensuality, in language which
would not be tolerated in any decent company.
We are sorry that a gentleman, as Don Tele-
foro de Trueba certainly is, should have been
betrayed into so gross a mistake, in the belief
that he was portraying characters, &c. in a

manner similar to those of former times by the
pens of a Fielding, Smollett, or Le Sage; for-
getting that even Fielding and Smollett, if they
had written now, must have conformed to the
more refined taste of the age. The plea of
exposing crime in all its disgusting reality, in
order to make its lesson exemplary, cannot be
received—common consent and common feeling
have decided against it; and the author who
aims at popularity must not fancy he can run
his *muck* against the general sense of delicacy
and propriety.

Having stated our utter objection to the
principle on which this novel is founded, and
expressed our unmitigated condemnation of
some of the dissolute affairs which it paints,
and in terms equally reprehensible, we shall
only allot a short space to farther observation.

Story there is none; the only attempt at
narrative being an account of the hero's mar-
riage with a girl who, he supposes, has 30,000*l.*,
—which, however, he never obtains. He runs
away from her—hears she is dead—she is re-
suscitated just as he is going to marry another—
no explanation of this mystery given; then he
shoots her—is going to be tried and executed—
she re-appears alive and well; and this is equally
left unexplained: the third volume closes ab-
ruptly. The first portion, excepting one or
two licentious adventures and some personalities,
is principally made up of the *matériel* of the
comedy of the *Exquisites*; omitting the love
affair, and letting the fashionable career of the
city merchant and his wife end in her elope-
ment. The most entertaining parts are rather
flippant: the aphorisms common-place imita-
tions of those in *Pelham*. The most amusing
we can find are English compliments.

"The day I paid my visit to the Tower I
was accompanied by a young French noble-
man, the son of the Comte d'H—, and he
was highly amused at the pompous gravity of
the men who exhibited the curiosities. Every
time that a thumb-screw, toe-screw, leg-screw,
nose-screw, or any other article, was pointed
out to our inspection, with the unavoidable
comment, the Frenchman turned to me, and
exclaimed—'*Eh voilà encore les Espagnols!*'"
This was repeated a great number of times,
and I was really put to the blush when I con-
sidered how very flagitious my countrymen
had been. At last we came to a room where
something taken from the French was de-
scanted upon, and I of course turned to my
companion and returned the compliment, by—
'*A votre tour maintenant.*' We had already
given several shillings, and were coming away,
when I perceived a board stuck up at the door,
on which some words were written, to the fol-
lowing purpose, or something like it: 'It is
expected that visitors will compliment the
warden.' This was the cause of a very ludi-
crous mistake. My French companion was
not very conversant with the English language
at the time, and having read the above inscrip-
tion, most innocently took the thing in a literal
sense. Accordingly, while the plump and grave
warden was, in becoming silence, expecting
the *compliment*, the Frenchman, remarkable
for politeness, could not be neglectful of com-
plying with what he conceived was enjoined
by the inscription. He made, therefore, a
graceful bow to the formal warden, and in
broken English began to express his obliga-
tions to him for his kindness, &c. &c. The
man addressed in this novel way, stared for
some time in astonishment. Stanley burst out
into laughter—I did little less, and this tended
to heighten the effect of the scene. The warden
conceiving that it was a joke, and probably not

being partial to such things, put on a most demure aspect; indeed, he so far increased his natural stock of dull gravity, that he looked formidable. The Frenchman perceiving that his most elegant and well-bred compliments were received not merely with indifference, but had evidently offended, began to stare in turn, and ended, no doubt, by attributing the affair to his inexperience of the English tongue. But his understanding was soon enlightened. I slipped half-a-crown into the hand of the warden, which made him unbend from his rigidity, whilst a few words from Stanley set our companion to rights concerning his strange mistake. '*Diablo!*' cried the young nobleman, smiling, '*voilà donc ce que les Anglais appellent des compliments—c'est bon! c'est bon!*' As we retraced our steps, this scene afforded ample matter for comment and mirth. The Frenchman now and then brought out—*ces compliments à l'Anglaise*—as he called them; and I make no doubt that upon his return to Paris, he informed his countrymen that the greatest proof of politeness one can possibly shew an Englishman is to give him money."

We also copy some remarks about literature.

"My much-esteemed friend,—Pursuant to your request that I should inform you of the state of letters in England, I now take up my pen, in order to answer your wishes as far as it lies in my power. The literature of this great nation has closely followed the march of the age, and it is vigorous, rich, and varied; but it has certainly lost in dignity—for it has become an article of trade like any other. The boasted patronage of the English to letters, is a very idle word—there is no branch of human ability that receives less encouragement than literature; and this assertion I make boldly, unhesitatingly. This is a country where a man may obtain wealth so vast by the most degrading offices, as to enable the successors of the industrious being to aspire to any thing they like—for money is paramount to all. A person here may make millions by spinning cotton, or manufacturing blacking for the shoes; and yet people wonder if a literary gentleman should make a few hundreds a-year by his labours. It is at once ludicrous and disgusting to hear a pin-maker or a tallow-chandler speak in a repining tone of the *fortunes* which men devoted to science and letters make; considering, no doubt, that it is almost a sinful waste of money to lay out in food for the mind what ought to be spent in grocery or any other article of consumption. The fact is, that the profession of letters—I speak of it regarded as a *profession*—is the lowest in the scale of human industry, as far as regards profit. Sir Walter Scott, Southey, and two or three others, now at the head of literature, have indeed realised considerable sums; but in no manner sufficient recompense for genius, learning, and a very laborious life spent in their pursuit. That a mighty genius, a man who has so largely contributed to the improvement and amusement of his species—a man who devotes his life to most laborious study, in the acquisition of science and learning, should, by dint of incessant working, industry, and proper conduct, amass a fortune of forty or fifty thousand pounds, is a matter of astonishment; and people will cry, 'How lucky! what a fortunate man he is!' But how many are the numskulls who make twice the money by measuring tape or selling treacle!—and yet no one is either surprised, or repines at their gains. The number of literary men almost starving is very great; and, indeed, with three or four exceptions, no man has obtained an in-

dependence by his literary productions. Again I say, that to follow literature as a profession, is an act of madness in the individual; and it argues either insanity or vast presumption, unless, indeed, the said individual wishes merely to *vegetate*. Amateur authors fare much better; for, being already independent of their works, they can afford to take their time—make their bargains—wait, or not publish, just as they think proper: besides, the very fact of their not being in absolute want of money, gives them an importance with booksellers, that their poorer and humbler brethren can by no means obtain."

Ivan Vejeeghen; or, Life in Russia. By Thaddeus Bulgarin. 2 vols. 12mo. London, 1831, Whittaker and Co.; Edinburgh, Constable.

THIS is a most curious work, and gives a more accurate notion of Russian habits, customs, &c. than some dozen of travels. It is a literary curiosity in every respect; first, for its actual contents, which are quite new; and secondly, as being the first Russian novel. Its accidental are greater than its actual merits. The story is involved, not very interesting, and overlaid with episodes; but the great attraction of the book is in its novelty, and we think we may venture to add, its truth. We are inclined to believe the scenes on the page are one and all actual transcripts from life. The barbarous state of society is vividly depicted; the common vice of bribery in the disposal of justice; the advantage of even slight knowledge, as shewn in the superiority of the Jews, who manage almost all the business and engross all the property; the feudal state of the great land-owners; the ignorance, and the prejudices, seem to throw us back some centuries in our own history, and the progress of civilisation seems wonderful: how many and how gradual are the steps which it has to take! But we must now proceed to extracts, endeavouring to make them as miscellaneous as possible.

"At last the day of the fête arrived. A number of guests came in the morning. Carriages, calashes, breetchkas and koleemashkas, occupied all the space between the stables and farm-yard. Almost every family brought along with it a score of horses; six in their own carriage; four in the breetchka, containing the male and female servants, trunks, and band-boxes; and a pair in the koleemashka, which contained the bedding packed up in large square chests, and the cooking utensils for the road stowed among hay. Single persons came with six horses, and very few with four. Some families came with a still greater number of these animals, as a badge of the importance of their owners; and I really do not think it amiss that Mr. Gologordofsky should have contrived to feed them with bulrushes, husks, and weeds. This custom of going a visiting with a whole stud at the expense of another, has the same consequence to the entertainer as the inroad of a Tartar horde; and if the landholders did not prepare this forage for guests, which is nothing but the shadow for the substance, two country balls would eat up their whole yearly stock of hay and oats. But as no assembly can come together without cattle, the main point is to know how to get them decently off their hands. After morning prayers, breakfast was served up, or, properly speaking, dram-drinking, as the ladies ate but little, and the gentlemen drank more than they ate. Spirits

of different colours and tastes were unceasingly circulated, till the decanters were emptied. Then the gentlemen walked into the garden to join the ladies. In the mean time the cloth was laid in the dining-room, and, as fresh guests were continually arriving, four lackies continued to serve up spirits and whets in the garden. At two o'clock in the afternoon, when dinner was on the table, the musicians, led by the kapel-meister, stationed themselves on the flight of steps leading to the garden, and played a Polish air. This was a signal for dinner, and all the guests assembled in the principal alley. Mr. Gologordofsky offered his arm to his most distinguished guest, the wife of the government marshal. The marshal himself led up Mrs. Gologordofsky, and in this way, two couples in a row, they moved into the dining-room. The other guests also followed in couples, that is to say, the ladies alongside of the gentlemen. It is true that Mr. Gologordofsky managed to place the most respectable guests higher, notwithstanding they came into the hall later. Before they were seated, he called them out of the crowd according to their rank, and begged them to occupy the place nearest to the landlady, arranging these movements with various jokes and proverbs. The dinner was luxurious, and, although more than a hundred sat down at table, there was abundance of provisions. With regard to wine, the following arrangement was adopted. The common table-wine, that is to say French wine, was placed in decanters before the guests. The best wines of different qualities were carried about and poured out under the direction of the marshalek and stud-master. The first with three footmen on the right side of the table, the other with the same number of assistants on the left. On each side, the first lackey held bottles of the very best wine, the second with a middle quality, and the third with the most common, appertaining to the class of best wines with only one name. The marshalek and stud-master, by a previous understanding, took their cue from Mr. Gologordofsky's style of address, what sort of wine to pour out for each guest: for instance, when he said to a guest, 'I beg you will drink, sir; do honour to my wine, I assure you it is worth trying,' then they poured out the first sort. 'Drink a little wine; it really is not bad,' denoted the second sort. 'You don't drink any: hey, pour out wine to the gentleman,' marked the third sort. It appears that Mr. Gologordofsky knew perfectly the tastes of his guests, for they all drank a decent portion, and regularly complied with the landlord's invitation. Besides, I reckon Mr. Gologordofsky's behaviour very commendable: why treat a guest with what he is not acquainted, and when he is as well satisfied with the name as with the quality of his wine? Some drink Champagne and Tokay, because they find that these wines please their taste: others merely in order to have it to say, 'We have drunk champagne and tokay!' Who does not know the proverb, 'Do not throw your pearls before swine?' At the end of the dinner a huge goblet was brought in, adorned with coats of arms and inscriptions. Mr. Gologordofsky poured wine into it, drank to the health of his spouse, and with loud cries of 'Vivat!' with peals of music and flourishing of trumpets emptied it, and bowing to his next neighbour, added, 'Into your hands.' Exactly with the same ceremonial the cup went round from hand to hand. At last, when all the party refused to drink more, with the significant observation, 'that the day was not over yet,' the landlord rose, all the guests following his example,

and each of them taking one or two ladies by the arm, walked away tottering into the garden, where coffee and sweetmeats awaited them. Hardly had the gentry left the dining-room, when the lackeys belonging to the house and to the guests, the musicians and maid-servants, rushed in like harpies upon the remains of the feast, and without listening to the hoarse voices of the marshalek and stud-master, tore every thing to pieces, and emptied the bottles to the very lees. In the kitchen the greatest confusion reigned while the servants got their dinner. Without the least ceremony they helped themselves, took possession of the pots and pans, and satisfied their appetite which had been sharpened by the journey.

"After dinner some of the old gentlemen went to repose, the greater part of the guests seated themselves around card-tables, where some experienced hands with mere amateurs sat down to faro. All those gentlemen who during dinner had made loud complaints of bad times, and on the ruin of the corn trade, produced at the table gold, silver, and heaps of assignats. Some of them having lost their last kopeck, in the height of their frenzy sold their horses, equipages, cattle, and the copper kettles of their distilleries, and hoping to regain these, lost still more.

"Almost all the guests made themselves beastly drunk. They sent away the musicians into another room, and began with declarations of friendship among the gentlemen, embracing and kissing one another, and promising to forget all quarrels and mutual differences. The ladies were called as witnesses to these reconciliations, and were obliged to become sureties for the fulfilment of the promises on both sides. On the well-known toast, 'Let us love one another,' (Kochaymy sic) being given, the guests drank a full bumper, falling on their knees before one another, or embracing. At last they returned to the ladies, and began to drink every one of their healths from their respective shoes. A gentleman falling on his knees before a lady, pulled off her shoe, and, after that, respectfully kissed her foot and her hands, placed his glass in the shoe, and in some cases poured his wine into it, drank it out, and handed it to another."

The mischief of the constant use of ardent spirits, and the inevitable fraud to which temptation and opportunity lead, are strongly shewn in the following scene:

"Moses traded in the house, in wines, porter, and provisions for the table, groceries, Dutch herrings, cheese, and, in fine, all articles pertaining to gastronomy. But as a Jew cannot go on without dealing in spirits, in addition to his other business he kept a tap for peasants and the lower sorts of people. The retailing of spirits is a most indispensable thing for a Jew in the Polish provinces. By this means he procures for the tenth part of their real value all sorts of provisions, and keeps his house for almost nothing. Besides that, by means of the *vodky*, he picks out of the peasants and servants all the secrets, all the wants, all the connexions and relations of their masters, which makes the Jews the real rulers of the actual landholders, and subjects to Jewish control all affairs and objects in which the precious metals and assignats act a part. In real fact, the landholders are merely gratified with the clink of the cash and the look of the notes, while the Jew is the real owner. In Moses' writing there lay three huge books or registers of debts. The first contained the debts of the fair sex, contracted in Reefka's shop; the second held the debts of the landholders, or of

such men in general as were called *pans*,* for eatables and drinkables: the third book contained the debts of unfortunate peasants, who, coming into town to sell the produce of their land from necessity, kept only as much money as would pay their master's dues, and drank the balance, besides running into debt. In order to make the reader understand in what manner the Jews go to work with the peasants, I shall mention how Moses balanced one of his accounts, of which I was an eye-witness. The peasant alluded to came into town the night before market-day with two loads, the one of rye, the other of wheat, and brought two cows with him for sale. He put up for the night at Moses' house. The wily Jew, seeing that the farmer was sitting down to supper with three of his companions, treated him with a glass of his best and strongest vodky. The peasant was uncommonly pleased with this beverage, and the Jew gave him another glass for nothing. When the peasant's head grew light, he ordered a *kvart*† of the same spirits to be given him, for which he would pay. The Jew only waited for this—he knew his guest's free and open temper; and hardly had the peasant drank this, when he sent to acquaint some of his other companions, and invited some well-known town-drunkards who had a particular knack at insinuating themselves into the confidence of strangers. In proportion as the senses of his guests grew stupefied, the Jew added water to the spirits; and, though the people at table perceived this, and gave vent to their dissatisfaction in gross abuse, the Jew patiently bore their upbraidings, and continued his operations till the greater part of his visitors fell asleep on the spot, and the rest managed to stagger into the street. Next day, when the peasant, tormented with a headache, went into the stable-yard where his horses and cows stood, the Jew demanded payment for the debts which he had accumulated in the course of some months. The peasant earnestly begged him to defer a settlement till another time; but the Jew, being a good psychologist, knew the rule—"in corpore sano mens sana"—as well as its converse, and would not agree to a postponement, wishing to take advantage of the stupefaction of his guest's senses with the fumes of drink, in consequence of his yesterday's intemperance and the weak state of his mental faculties. The Jew produced his book of debts written in Hebrew character, took a piece of chalk, placed the peasant on the opposite side of the table, and turning over the leaves of the book, began the settlement: 'Do you recollect,' said the Jew, 'how you lived here three days when you came in with loads before the summer St. Nicholas?' 'How should not I recollect it?' answered the peasant. 'The first day you took in the morning a half-kvart of vodky—is not that correct?' 'It is so.' 'Now, here I shall note it;' and he made a mark with the chalk on the table. 'Afterwards when your brother-in-law came with Nicetas, you took another *kvart*;' and, at this word the Jew drew two marks. 'At dinner you took again two *kvarterkas*,‡ and the Jew again drew two marks, without regarding the difference of the measure. 'After dinner,'—but the peasant, who was all this time scratching his head and rubbing his forehead, interrupted the Jew, 'Paney Arendaryoo!' (an honorary appellation given by the

Lithuanian peasants to the Jews), 'I really have not strength to go on; give me some vodky, for I have an insufferable headache.' This was just what the Jew wanted. 'Hey, Sorka! Reefka!' cried out the Jew, 'give the Hospodar a dram.' (Hospodar is a title which the Jews, in return, give the peasants when they want to cheat them.) The peasant drank the fill of a large tumbler, making wry faces and shrugging his shoulders, and the business took another turn. 'After dinner,' continued the Jew, 'you took half a *kvart*.' 'Right.' The Jew made another mark. 'But when Ivan came in, you again took half a *kvart*.' 'No, I did not take it, but Ivan got it,' answered the peasant. 'Very well, you did not take it,' added the Jew, but in the meantime added another mark. 'In the evening you took half a *kvart*.' 'Right.' The Jew drew another mark. 'And in the morning you got one.' 'No, I did not,' answered the peasant. 'You did not get it,' said the Jew, but nevertheless drew another score. 'At dinner, next day, you took half a *kvart*.' 'No, only a *kvarterka*,' answered the peasant. 'Very well, let it be only a *kvarterka*,' returned the Jew, but drew a mark denoting the measure of half a *kvart*, which contains in itself four *kvarterkas*. In this way was the reckoning continued: during all the time, Moses' daughters, Sorka and Reefka, kept plying the peasant with vodky, and the Jew went on scoring; it mattered not whether the peasant agreed or disagreed with the items marked against him, and making no distinction of measures when they were less than half a *kvart*, but adding scores when the measure was more. At last, when the peasant's head grew giddy and his eyes dizzy, the Jew pulled out of his bosom a piece of chalk with a split in it, like two blades of a knife, and with this double instrument proceeded to draw two scores, in place of one, at a time. When the table was all marked over, the Jew called in, as witnesses to the settlement, some of the peasant's neighbours, and they, after summing up the scores, reduced them into money; the unfortunate man had to give up to the Jew his best cow and all his wheat, although he was actually due, perhaps, only the tenth part of what he paid. Almost in the same manner Moses behaved to the landholders; only more artfully, and, in some measure, more delicately. However, the double chalk, over-measure in wines, &c., were also made use of in his reckonings with the gentry, as well as with the peasants. The Jew, knowing that Polish *pans* and Russian officers do not like to keep account-books, and are quite disgusted with long reckonings, used to fix upon a favourable time for his views, and pounce upon his debtors at the precise moment when they were either in a very merry or in an extremely low mood. Moses' wife, Reefka, who also sold goods upon credit, and in place of interest received from the landholders' wives whole tubs of butter and coopfuls of domestic fowls, chose such a time for settling with her debtors, when they were in the greatest want of credit; for instance, before balls, elections, and marriages. In this sort of trade it was impossible to cheat by the same means as in the sale of wines and spirits: but the wily Reefka, taking advantage of the necessities and vanity of her customers, gave them short measure and short weight, charged a double price for every thing, and, besides that contrived to squeeze presents from them, under the pretence that she herself got the goods upon credit, and was obliged to pay interest. Besides that, her trade brought her this advantage, that, by means of their wives, Moses

* A term synonymous with what *gentlemen* was formerly in English, or *miles* in the Latin of the middle ages.

† A Polish *kvart* is about a pint, English measure.

‡ A *kvarterka* is the eighth-part of a *kvart*.

had a claim upon the husbands, that is, on the pecuniary speculations of the landholders. They were even glad that, for silk-stuffs, and laces, for wine, rum, porter, sugar, and coffee, they could pay according to their pleasure, in wheat, flax, hemp, or other agricultural produce; seeing that the Jew, on these occasions, would purchase the remainder of their stock for ready money, at a valuation also fixed by the Jews, and commonly for the half of what the articles would bring at the regular markets and shipping ports. The landlords in these provinces have, in general, no idea of business, and receive their commercial information solely from the Jews. Throughout a whole government, there are only a few persons who take in newspapers, and they merely for notices of law-suits, and for the convenience of reference, if the conversation should turn upon politics."

[To be concluded in our next.]

HOPE'S ESSAY ON MAN.

[Second Notice.]

HAVING, in few words, described the general nature of this work, and stated the impossibility of affording it a complete analysis in a journal like ours, it behoves us to do as much justice as we can to its extraordinary character, by the only other means in our power—that of extracting such portions as are best calculated to exhibit the author's views upon interesting points, and the ability with which he has treated them, to the public. The following passages present such a cluster of striking facts, and place matters of popular curiosity in so strong a light, that we are induced to copy them. The text of the first is, that "*although every organ has its definite prior causes, every organ seems not yet to have its definite later purposes.*" Mr. Hope says—

"Notwithstanding we generally find in most animals, for the peculiar purposes wanted, the peculiar definite means also provided, we often find the means not sufficiently developed to produce the purposes seemingly intended. Thus there are many brutes which with the rudiments of legs and wings never have those abortive organs sufficiently developed to walk or fly. Cetacea never acquire anterior extremities sufficiently elongated to move on dry land; and in pinguins the pinions do not develop sufficiently to buoy them up in air. We must, however, suppose that even in these animals those parts already answer certain purposes of utility and benefit, unknown to us, though they cannot yet answer those ultimate more evident purposes for which, according to our ideas, they alone seem destined. Nor is in animals each peculiar organ yet so pointedly destined to a peculiar purpose, but what in different species of entities the same sort of organs serve for different purposes, and different species of organs serve for the same purposes. Acidia, for instance, through their gills take in both air and solid food: fishes only through their gills take in air, and leave to the mouth the task of taking in the more substantial liquids and more solid food. Reptiles, beasts, and birds, on the contrary, take in not only solid and liquid food, but even air through the mouth, and only leave the contraction of the gills, which form the eustachian tube and ear, to take in the vibrations of sound. In many molluscs of the rete mucosum the elongation forms sails which, puffed up by the wind, assist the animal to cleave the waves. In many insects this rete mucosum forms wings able to buoy them up in air. In fishes this rete mucosum again forms the fins, and in cer-

tain of the quadrupeds called bats, it equally forms the wings. In fishes and in birds the nether extremity or tail elongates in a rudder to steer their course through water or air. In the beaver it becomes a mason's trowel; and in the monkey a fifth hand, with which to grasp branches and boughs. These are shifts of nature, originating in the imperfections of this world, which probably in a higher and more perfect globe will no longer be necessary."

This is very consistent with the author's hypothesis of the creation and the gradual perfecting of substances from fluid and inorganic into bodies organised, vegetable, and animal: what he adds respecting organs of sense in brutes more acute than in human beings, is a forcible illustration of natural history, and some of it particularly applicable to the orang outangs, or whatever they may be, now shewn in Piccadilly.

"From the peculiar construction of brutes those of each species seem to have the organs of some peculiar sense more developed and more acute in its faculties than are the corresponding organs and faculties of man, precisely because each species of brute still has the organs of the peculiar sense it excels in, less interfered with by the organs of other different senses, and by the later organs of the mind, the formation of which draws off materials from the formation and finish of those of the external sense,—because the brute not yet having the materials of organs of sense and mind so much divided and diffused between different sorts of organs, those of each sort which they possess seem susceptible of receiving impressions more forcible and more lasting. External modifications which glide over the sense and mind of man unperceived, penetrate deeply into those of brutes, and make on them a profound impression. Thus the inferior brutes seem more acutely to feel the impressions of electricity: most of the higher animals seem more acutely to feel certain impressions of smell, proceeding from the elements that enter greatly in their first composition, and that are most necessary for their further support: many birds have organs of hearing more delicate: and certain of the higher beasts and birds have organs of sight more acute and more quick. The hawk sees in the daytime objects more minute and more distant than man sees; the owl and the cat see better at night; and the monkey seems to possess organs of sight at all times susceptible of impressions more intense and more rapid. It is through these only that he is led to perform those movements, which we take for intentional mimicry. In general, of all brutes the higher classes of monkeys seem in internal organs of intellect, and in external organs of voluntary action, to approach nearest to human beings. The baboon already can stand and walk erect, and resembles man most in his gait and actions. Still as his mind within develops not yet in organs and faculties of reason, his body without develops not yet in those organs and faculties of voluntary action, which only grow out of organs and faculties of abstraction. His body still is disfigured by an enormous belly: his face, whether seen in front or in profile, still has features little marked, little distinct, little expressive. His extremities are still deprived of divaricating muscles. He cannot bend his arms separately either backward or forward. Able only with his limbs to hug, he cannot embrace or encircle an object. In his hand he cannot oppose the thumb to the fingers. Allowed, consequently, only to grasp firmly a cylindrical body, a stick, he can nei-

ther point to a distant object with a single finger, hold a ball, inflict a pinch, nor play on the piano or harp. His legs and feet labour under corresponding inabilities. Able to crouch, to fold his nether limbs together, he cannot divaricate, expand, or cross them, so as to bestride a horse or cut a caper. His feet have no instep, no heel, not even a sole capable of resting fully on level ground. He is more fit for clambering on trees than for walking on a plane surface. Thence only when secure and at age, he assumes the erect posture of man, as an occasional indulgence. As soon as pursued, he forsakes his more imposing attitude, drops the man, falls on all fours, and scampers away the brute. Of powers of voice he has none. As if afraid to render the resemblance to man too great, and too liable to confusion, by giving him what the parrot already possesses, nature has denied him that boon. He can only bustle, grin, and chatter: in vain does he move, act, dress, and eat like man. If he attempts even to cry: the air driven out from his lungs is again lost in his larynx—he remains mute. Not so well proportioned, or so handsome as man, he labours under the additional disadvantage that other brutes are only in their forms and faculties compared with lower brutes, to which they appear superior; while he, from his near approach to man, is compared with man only, and therefore appears inferior, deficient, and positively ugly."

The ensuing chapters are most interesting; and we proceed to quote them without comment.

"*Gradations in the superiority of the natural organisation of human beings over that of brutes.* I have already early in this work stated that even Genesis, so far from opposing, favours the belief that besides the human race, of which the Bible gives the history, as having been the most favoured by Providence, there arose other inferior human races, wholly distinct from the same; that peculiar regions had, like their peculiar vegetable and brute races, their peculiar races also of human beings, particularly suited to them; and, in proportion as they were more particularly suited to them, in the same proportion also less suited to other regions, again very different from the former in climate, in temperature, in soil, and in situation. In fact, we cannot help supposing that, if in every climate and region the first component elements of human beings have been diffused through the atmosphere, and spread over the earth in sufficient quantities, as they seem to have been, afterwards to support the number of human beings which we actually have seen covering this earth, these elements must at first, and while yet unappropriated to such beings, have spontaneously, and without miracle, been made in different regions to combine into the first embryos, and into the later successive developments of more than one pair; and that it only was after of human beings, as of vegetables and of brutes, a certain number had been thus spontaneously combined into primary human individuals, that the elements of such beings became in their unappropriated state sufficiently rare and distant, no longer to be combinable into new individuals except through the attraction, medium, and suction, more forcible and more distantly acting, of prior human beings already existing. This is, in fact, the only natural, and thus rational, way of accounting for existence of the number of races of human beings, wholly different from each other, and each peculiarly adapted to the peculiar regions and climates in which they seem indigenous, which

still propagate on this globe. These races, so different from each other, and each so peculiarly suited to the peculiar regions and climates in which they are found—so peculiarly ill adapted to other regions very different from those former ones—cannot have originated in a single couple, cannot have had their primitive nature, physical as well as moral, only subsequently altered by the later difference of temperature, soil, and mode of living which they experienced. Of this single couple the various descendants cannot well have acquired the peculiarities, internal as well as external, some of woolly-haired negroes, others of lank-haired Calmoucks and Malays, others again of copper-coloured Americans, as different from each other in their inmost organisation as in their outermost hue—in their mental capabilities and disposition as in their bodily frame and constitution; for if the subsequent deviations from their original abode and mode of living had alone been capable of producing in them such subsequent deviations from the original type, other still later returns to the original situation and climate, would also alone again have been able by degrees to bring them back to their original type; and of this occurrence we have no example; this event never happens. No race of negroes has ever in any of the regions which seem peculiarly appropriate to the production of whites, by any number of intervening gradations been, through the mere influence of the climate, the temperature, the mode of life, the diet, or any other cause short of the repeated crossing of breeds—the repeated combinations of elements of the black with elements of the white species—been made to pass over into a white race. Without that condition, even in Lapland negroes still only propagate negroes, and on the coast of Guinea Samoyedes still only propagate Samoyedes, as long as the current of propagation is not entirely stopped; for a race transported so far from its natural home, to a region so very different in climate and in soil, after a time no longer propagates at all, except by mixing with a race more suited to the country; becomes entirely extinct in the first or second generation. For many centuries African blacks have constantly been imported in Turkey and in Greece, and still new importations are in those regions as much needed as ever to keep up the breed: no negroes have taken root in the soil and been able to continue the succession of domestic slaves; and it is only the races indigenous in latitudes between the opposite extremes of heat and of cold, that, less distant from either, can by degrees accustom themselves to both. Moreover, if all the various races of men now existing had originated in a single couple, there would have remained only a single original artificial and conventional language, at least wherever that language had not, by a miraculous confusion of tongues, been subsequently made to ramify into different dialects. As races remained in their modes and manners more in a state of mere nature, and less remodified by art, they would have retained the artificial and conventional language of the primitive couple with least alteration; they would to the last have understood each other better. But the reverse of this is precisely what takes place. In the widest regions, the races most savage, least emerging from a state of mere nature, are precisely those of which the smallest tribes, different from each other, each have their artificial and conventional language, however poor and restricted, most different in its very roots from that of each of the others; most unintelligible to each

of the others; most strongly proving that in its origin it was different from that of each of the others, and that of course the origin of each tribe itself was different and distinct from that of each of the others. It is only as races, by spreading more, and becoming more civilised, approach and blend more with each other, and more interchange inventions, that with these inventions they also more borrow from each other more of the representative signs or words by which their ideas, notions, and possessions, are represented—that their languages, different in their first roots, in their later superstructures become more assimilated. Some savans that have yielded to the necessity of recognising a number of human races, distinct and different from each other, have yet limited the number of these: Linnaeus to five, Dumenil to six, Cuvier to three, Desmoulins to eleven, Bory de St. Vincent to fifteen. But it is clear that these limitations cannot be founded on just grounds; that as soon as from the consideration that every region would, as well as of vegetable and brute productions, of human races also have its appropriate sorts, produced by the very indigenous elements of the region, and consequently peculiarly adapted to the same, and as soon as we prove by experience that such must have in reality arisen, we must also believe that in every region these have arisen in proportion to the richness of the atmosphere and soil; that thus, while in soils and atmospheres very poor and sterile, primary individuals arising spontaneously out of the elements of the soil would only have arisen at such great distances from each other, out of elements so differently modified, and in such small numbers, as to render it possible of their later descendants to pronounce which could and which could not have arisen out of the same primeval couple, in other soils and atmospheres very rich and fertile, primary individuals arising spontaneously out of the elements of the soil, would have arisen so near each other, out of elements so resembling each other in their modifications, and in such great numbers, as to render it impossible of their later descendants to pronounce which must have arisen out of the same identical primeval couple, and which need only have arisen out of some other primeval couple resembling that first. We may thus suppose, that on this globe every nook and corner containing a sufficiency of the elements necessary to combine into the first embryos of human beings, has, where these were approximated, produced out of them the sort of beings suited to the soil and climate; that if there were not elements sufficient to support and increase all those individuals first formed, some have again subsequently been for want of support condemned to perish, and that others have been enabled to increase and to propagate. As of monkeys the higher sorts seem only the last and highest of brutes, produced prior to human beings, so of human beings themselves some species seem only the rude sketch of that ideal which nature has reached in others; but what may at first sight seem extraordinary is, that precisely in the latitudes in which naturally arise the highest of brutes—the ourang-outang, or wild man of the mountains—namely, the regions of Austral Asia—seem precisely to have been those in which the human race itself remained lowest and least perfect in body and in mind: as if in those regions nature had wasted so much of its richest elements on the brute creation as to have had but little left to expend on the still higher human race. Of the different human races once spontaneously produced,

many have since probably again been entirely destroyed, whether in their first infancy or at later subsequent periods, by the fury of the elements, the ravenousness of wild beasts, or the rage of other human beings themselves, of which the higher races, as they more extend and want more room and substance, generally end by destroying the lower tribes, and ultimately leave no trace of these. Of the latter, however, there still are enough left to justify my hypothesis, and of these I shall describe a few by way of example.”

But these we must defer till another week.

Few Words on many Subjects, grave and light, in Law, Politics, Religion, Language, and Miscellanies. By a Recluse. 12mo. pp. 294. London, 1831. Longman and Co.

Our elderly gentleman, for such he must be, is rather an alarmist;—we are all going to rack and ruin, and every thing now-a-days is wrong. One thing, we own, is very wrong indeed—the publication of a volume like this, whose opinions consist of obsolete prejudices, and whose discoveries are matters of general knowledge. We think our Recluse might have spared his gloomy predictions respecting his native language: with regard to right and wrong pronunciation, there can be only one rule, that of general use. On what else was the language originally formed? Custom may be “the law of fools,” yet we all know that the law has a strong influence, and that the fools are many in number. If all our Recluse’s discoveries are on a par with the one he makes regarding Hebrew names, they can be considered as no better than mares’ nests. The meaning of the names surmised about, is plainly given in the English Concordance; for instance, the name of Efflah is obviously God (is) my Jehovah. The discovery, therefore, of the name of God being part of such of the prophets’ names as end in *jah*, will be new only to those who are utterly ignorant of the subject.

ARTS AND SCIENCES.

MESSRS. LANDERS: THE NIGER.

PREPARATIONS are making for the publication of Messrs. Landers’ interesting journey, which we trust, therefore, to see speedily in print. It will, as we have already mentioned, be a perfect route; for John Landers’s notes, happily preserved, supply the lacunæ in his brother’s journal, which was lost. In all the interior the travellers were treated with kindness, and it was only within twelve or fifteen days of the coast that they experienced the hostility of the natives; no doubt originating in their being all engaged in the slave-trade, and dreading the interference of Europeans for the prevention of that detestable traffic.

After penetrating overland to Bousa, from Badagry, they remained there some time; and then ascended the river, during the dry season, (for they left Bousa on the 23d of June), to Youri, which took them five days. Here they stayed about a month, and might readily have gone to Saccatoo and Timbuctoo, had their instructions permitted. But as their object was to ascertain the débouchement of the Niger into the sea, they only waited for its flow on the setting in of the rains, and again descended to Youri in four days, and arrived, we believe, on the 2d of August. The river, previously crowded, rather than studded, with islands, and with its channel so dried up that it might be crossed without a boat at several places, was now a wide sheet of current, uninterrupted by islands, ledges, or other obstacles, and admit-

ring of free navigation. From Youri our countrymen embarked on their downward way in a boat and a canoe; hiring the inhabitants on the banks, as occasion required, to row them. They thus passed in safety to Kirree, a very considerable town, and, as it would seem, the centre mart of the slave-trade. Below this, it appears, there is no general government: every town has its own independent king; and the natives above Kirree were so well aware of the predatory and ferocious habits of these chieftains, that it was with some difficulty they could be prevailed upon to man the boats. Nor were their fears unfounded. John Lander had dropped down in the canoe, when he was assailed by a squadron of Eboe (not, as printed in our first accounts, Hibbo) boats, several of which ran against his small vessel, which the third shock sent to the bottom, with its stores, instruments, and journals. The native boats in these parts are large and powerful; some of them rowing forty or fifty oars. Richard Lander, following his brother, found him a prisoner to these savages; and was himself also taken, and both together carried back to Kirree. Fortunately for them, the King of Brassé, a territory lying almost at the mouth of the river, persuaded their captors to commit them to him, to be conveyed to the coast, and such price or ransom obtained for them as he could negotiate.

After the loss of their chronometers, &c. the observations were of necessity not so correct as before. We understand, however, that from Bousa to the sea the course of the river is almost due south. At Kirree, or Eboe, which is two days lower down, it was apparently six miles in breadth from bank to bank, within which it was hardly confined: the flood was higher than any year remembered by the natives. But it is an important fact, that the height of the waters during the ordinary wet season would enable a steam-boat to ascend to Bousa! a prospect of prodigious consequence to the future commerce and civilisation of Africa.

Funda, it seems, instead of being on the right bank of the river as you descend, and inland, as laid down in our maps, is on the left bank, and situated on the Shary, a considerable way above its junction with the Niger. The new map to be constructed on the Landers' observations has, we hear, been intrusted to the very able direction of Captain Becher, to whose talents and ability we naturally look for a great accession to our geographical knowledge in this respect.

The sides of the river are often clothed with thick jungle; other parts and the islands, when habitable, are rather populous. There can be little doubt that the streams which flow into the Bight of Benin, and also the old Calabar river, are portions of the delta formed by the Niger, as well as the branch to Biafra descended by our travellers. The tide flows up a good way.

LINNEAN SOCIETY.

A. B. LAMBERT, Esq. V. P. in the chair. The first paper read was a description of the *Polygala amara*, now first added to the British Flora, by Mr. David Don, the Society's librarian. This species, which has been hitherto considered in this country as a variety of *Polygala vulgaris*, Mr. Don has ascertained to be the *amara* of Linneus: it abounds at Cuxton and Cobham in Kent, and has also been observed in Surrey and Wilts: as it appears to be peculiar to the chalk districts, it is perhaps not uncommon in England. The plant is only to be recognised at first sight by the great

size of its lower leaves, which very much resemble those of the box. The second paper was, observations on *Naticina* and *Dentalium*, two genera of molluscous animals, by the Rev. Lansdown Guilding; and the third was a Supplement to the Synopsis of British *Pneumonobranchs Mollusca*, published in the last volume of the Society's Transactions, by J. G. Jeffreys. The paper includes several new species. The meetings were then adjourned for the vacation.

LITERARY AND LEARNED.

ROYAL SOCIETY.

J. W. LUBBOCK, Esq. in the chair, succeeded by his Royal Highness the Duke of Sussex, who entered the room in the course of the evening. This was the last meeting of the session; and certainly the variety and value of the communications which were read, formed a strong negative to the opinions of those philosophers who argue for the "decline of science in England." The first paper was on the tides in the port of London, by Mr. Lubbock. The author remarks, that the tides in the River Thames are remarkably regular: whether the moon's declination be N. or S., no change takes place in tides generally; and it appears that there is high water at the same instant on the coast of Portugal and the northern shores of America. The attention of the meeting was directed to a communication from Sir James South, on the extensive atmosphere of Mars. This paper was not read, as several of Sir James's calculations were unfinished. Two papers by Snow Harris, Esq. were read; the first was on the efficacy of screens in arresting the progress of magnetic influence. The author shews that every substance susceptible of magnetic change can operate as a screen; the screening power being directly as the mass and susceptibility of magnetic change. The second paper was on the effects of masses of iron in controlling the attracting force of a magnet: the author here endeavours to shew, that in the attracting phenomena observed between a magnet and a mass of iron, the former is to be considered rather as the *patient* than as the *agent*. The following are the titles of the other papers read. On re-crossed vision, by John Fearn, Esq. On the sources and nature of the powers on which the circulation of the blood depends, by Dr. Philip. Experiments on the length of the second's pendulum, at the Royal Observatory, Greenwich, by Captain Sabine. On the friction and resistance of fluids, by J. Rennie, Esq. On a new register pyrometer, for measuring the expansion of solids, by W. Daniels, Esq. On the determination of the thickness of solid substances not otherwise measurable by magnetic deviation, by the Rev. W. Scoresby. On the influence of light, by John Burton, Esq. A critical and experimental inquiry into the relation subsisting between nerve and muscle, by Dr. W. C. Henry. And on the thermostat, or heat-governor, a self-acting physical apparatus for regulating temperature, constructed by Dr. Ure, the author of the paper: great practical utility promises to result from this invention.

At the close of the meeting, his Royal Highness, in a neat valedictory address, took leave of the fellows until next session; he trusted he had done every thing in his power to promote the ends of the Society, and acknowledged how much he had been assisted by the co-operation of the fellows in general. A variety of works of interest were presented.

ROYAL ASIATIC SOCIETY.

THE Right Hon. C. W. W. Wynn, president, in the chair. There were presented to the Society, a curious model of the Rath or car used in the procession of Juggernaut; a Burmese title, or patent of nobility, consisting of a few words stamped on a leaf of gold: the title, when it is granted, is read in open court, and the leaf is bound on the forehead of the person upon whom the dignity has been conferred. Other donations in literature and the arts were made to the Society. W. H. C. Plowden, Esq., late president of the select committee at Canton, was admitted as a resident member of the Society. The paper read was a translation, by G. Knox, Esq., of a narrative of the ceremonial used at the introduction of a Burmese priest, with notes by the author and Dr. Morrison. The Society's annual dinner was appointed for this day three weeks, under the auspices of H. R. H. the Duke of Sussex.

LITERARY FUND; GREENWICH.

THE attendance at the Literary Fund Greenwich dinner on Wednesday was less numerous than usual—the Court, Horticultural *&c.*, and other circumstances, having prevented many of the friends of the charity from being present. After the business of the day, however, which consisted in the grant of relief to several literary men, whose works rank high with the public, but who had nevertheless been reduced to poverty and distress, the committee and company sat down to the dinner provided by Mr. Lovegrove—one of those dinners which can only be partaken of at Greenwich, and at a particular season. On the removal of the cloth, grace was sung by Messrs. Hawes, Goulden, * * * and two of the pupils of the first-mentioned musician, in an admirable style; and the same vocal party continued throughout the evening to delight us with glees and songs of the most beautiful kind. The usual loyal and benevolent toasts were drank: among them the memory of Lord Torrington, who of late years so frequently presided at these anniversaries, was not forgotten.

FINE ARTS.

BRITISH GALLERY.

A VIEW of this splendid collection has more than justified the high expectations we formed and expressed concerning it, as we heard of particular pictures being contributed by their liberal owners. It is indeed a noble and gratifying sight; containing 172 of the finest productions of art in the world. Our native school may well rejoice in such an exhibition—it is full of lessons of the deepest interest, and of a value never to be forgotten. The majority of the works belong to the highest class of paintings, though there are a sufficient number of the Dutch and Flemish masters to display the *ne plus ultra* of technical execution. But, with all our admiration for Teniers, Metz, Frank Hals, Ostade, Jan Steen, &c. &c., we are glad to see that examples of superior minds predominate; for it cannot have escaped observation, that our young artists have shewn an almost general disposition to follow the former rather than the latter. Let them repair to the British Gallery, and gaze upon G. Poussin, Paul Veronese, Raphael, Titian, Guido, Luca Giordano, Salvator, Guercino, Claude, Carlo Maratti, Murillo, &c. till they feel the inspiration their glorious performances must excite in every breast alive to the art. These will elevate them; and from Cuyt, Berghem,

Rubens, Rembrandt, our own Reynolds, Guardi, Hobbima, Egdon Vanderneer, Greuze, Vander Meulen, Watteau, Both, of all of whom there are superb specimens, they may see almost every possible variety of what the painter's talents can accomplish.

To this Gallery his Majesty has graciously sent no fewer than thirty-five *chefs-d'œuvre* of the first masters; and the royal example has been most patriotically followed by many noblemen and gentlemen distinguished for their love and patronage of the fine arts.

Among the works which particularly struck us, either for their great merit, or for some peculiar qualities unexpected in their authors, we can now only mention—9. Lady with a fan, and 55. Moonlight, with Shipping, Cuypp; 12. Landscape, Hobbima; 14. the Rialto, and other pieces, by Guardi; 18. Landscape—Setting Sun, 46. Landscape—Market People, 47. Triumph of Silenus, 136. Christ triumphant, Rubens; 48. the Marriage Feast, 165. Immaculate Conception, Murillo; 53. a Woman, Rembrandt; 63. a Lady at her Toilette, E. Vanderneer; 66. Portrait, Frank Hals; 69. a Girl, Greuze; 81. Moonlight, 112. View on a River, Vanderneer; 83. Salvator Mundi, Carlo Maratti; 90. an Army on march, Vander Meulen; 93. Virgin and Child, Guido; 102. Fête, Watteau; 113. Figures shooting at a Target, Teniers; 6. Snake in the Grass, 133. Portrait of Sir W. Hamilton, &c. Reynolds, and also a Caricature; 119. Landscape, Both; 141. Dædalus, &c., D. Fetti; 145. Head of a Cow, Berghem; 154. a Cabinet, Hentz, which, with the Guercinos, Giordanos, &c., are remarkable either for their extraordinary worth, or for their curiosity. But the whole exhibition is so admirable, that to select even the highest is an invidious task.

THE HOLY FAMILY AND ANGELS: BY RAPHAEL.

A CABINET gem by this "divine" master has been brought to this country from France, and is now to be seen in Piccadilly. It is 22½ inches by 16; and was, it is stated, in Bonaparte's time valued at £40,000 sterling!! It differs in some particulars from the great picture in the Museum, which tends, besides its intrinsic and exquisite qualities, to confirm its authenticity. As this group has been engraved, we need not enter upon any description of it; but we earnestly advise the admirers of the highest emanations of art to visit so remarkable a production.

NEW PUBLICATIONS.

The National Games of Scotland. H. Andrews pinx. et lithog.

A REPRESENTATION, on a large sheet, dedicated to the members of the Highland Societies, of the annual meeting at St. Fillan's, Perthshire, for the encouragement of the national games of Scotland. There are few things better calculated to cherish the fine manly spirit of a people than assemblages for such purposes as these. We wish they were more frequent in the southern parts of the island: but we have for some years witnessed, with a feeling stronger than regret, the unwise and oppressive attempts of the magistracy, in many districts of England, to put down rather than to encourage all popular athletic sports. It would appear that these gentlemen fancy that the poorer classes were created for nothing but incessant labour; and that any relaxation or enjoyment on their part is absolutely criminal. We trust that the time is approaching when this, among many other mistakes of authority, will be cor-

rected. Mr. Andrews has produced a print almost extraordinary for the multitude of figures introduced, and the faithful representation of the sports, and which, if it has no high pretensions as a work of lithographic art, is, nevertheless, very pleasingly executed.

St. Cecilia. The Head by the late Sir T. Lawrence, completed by W. Hilton, Esq. R.A. Drawn on stone by R. J. Lane, A.R.A. Dickinson.

For several years previous to Sir Thomas Lawrence's death, this portrait of the beautiful Mrs. Williams, begun on a whole-length canvass, was the admiration of the visitors in the president's exhibition-room; and it was always a matter of regret to them that the head alone was finished. The cause of that regret has been considerably diminished, if not entirely removed, by the sympathetic feeling and power with which Mr. Hilton has supplied the deficiency. The angelic expression of the countenance has been most happily preserved by Mr. Lane; whose drawing is full of breadth, vigour, and taste.

The Cavern of Makoo, near Mount Ararat. Drawn and engraved by W. Daniell, R.A. from a sketch by Col. Monteith.

An interesting view of this stupendous excavation.

Athens. Drawn by J. D. Harding, from an original sketch by R. Greg, Esq. of Manchester, for Blaquiere's Second Visit to Greece.

ALTHOUGH small, yet conveying a very distinct general idea of the classic scene.

ORIGINAL POETRY.

THE HALL OF STATUES.

RICH the crimson curtains fell,
Coloured with the hues that dwell
In the Tyrian's purple shell—
That bright secret which is known
To the mighty past alone.
Forty pillars rose between,
In that fine Corinthian mould
When a life's whole task has been
How to work the burning gold—
Gold which some young conqueror's hand
Brought from many a vanquish'd land;
Then bade genius raise a shrine—
Thus profaning the divine—
Till his rapine and his crime
Grew in that false light sublime.
Azure was the roof, and light
Pour'd down from the crystal dome;
Clear the crystal was and bright
As in its own ocean home.
Polish'd like a warrior's shield,
Black (for such the quarries yield
Where the sun hath never shone,
Which night only rests upon,)
Was the marble floor, which gave
Mirror like some clear dark wave.
Silent was that hall around,
Moved no step and stirr'd no sound;
Yet the shapes of life were there,
Spiritual, calm, and fair—
Statues to whose rest seem'd given
Not the life of earth but heaven;
For each statue here enshrined
What in the immortal mind
Makes its beauty and its power—
Genius's eternal dower:
Those embodyings of thought
Which within the spirit wrought
In its most ethereal time,
Of its own and earlier clime

Ere the shade and soil of earth
Tainted an immortal birth.

Thankful should we be to those
Who disdain a dull repose—
Who have head and heart on fire
With unquenchable desire
Of those higher hopes which spring
Heavenward on an eager wing—
Those wide aims which seek to bind
Man the closer with his kind—
By earth's most unearthly ties,
Praises, hopes, and sympathies;
And call beauty, like a dream,
Up from life's most troubled stream.

From that mighty crystal dome,
Clear and cold the sunbeams roam
Over th' ethereal band
Which beside the column stand.

God of the West Wind, awake!
See who fain thy sleep would break*—
She, the morning's gracious power,
Born in its most lovely hour,
When the stars retire in night
For the mighty fates to write
On their rays the word and sign
Only prophets may divine;
When the blushing clouds are breaking,
As if Love himself were waking—
When the sun first turns the mist
Into melted amethyst—
She hath bade the north wind keep
In his caverns dark and deep—
Told the south wind, that his breath
Fades too soon the morning wreath—
Sent the east wind where the sands
Sweep around the pilgrim bands—
Her sweet hand is on thy brow—
Wake thee, gentle West Wind, now.
She doth want thy wings to bear
Morning's messages through air,
Where the dewy grass is keeping
Watch above the skylark's sleeping;
Stir the clover with thy wing,
Send him 'mid the clouds to sing.
Thou must go and kiss the rose,
Crimson with the night's repose;
She will sigh for coming day,
Bear thou that sweet sigh away;
On the violet's sleepy eyes
Pour the azure of the skies;
From the rich and purple wreath
Steal the fragrance of its breath;
Wake the bees to the sweet spoil
Which rewards their summer toil;
Shake the bough, and rouse the bird,
Till one general song is heard;
Fling aside the glittering leaves,
Till the darkest nook receives
Somewhat of the morning beam;
Stir the ripples of the stream,
Till it flash like silver back
In the white swan's radiant track.
Rouse thee for Aurora's sake—
God of the West Wind, awake!

Close beside 's a child, † whose hand
O'er a lute holds sweet command:
Like a spirit is that child—
For his gentle lip is mild,
And his smile like those which trace
Sunshine on an angel's face:
But upon that brow is wrought
Evidence of deeper thought,
Higher hopes, and keener fears,
Than should mark such infant years.
Childhood should have laughing eye,
Where tears pass like showers by—

* Mr. Hollins' Aurora waking Zephyrus.
† Mr. Lough's Child playing a Lyre.

When the sky becomes more bright,
For a moment's shadowed light.
Childhood's step should be as gay
As the sunbeam on its way:
There will come another hour,
When fate rules with harsher power—
When the weary mind is worn
By the sorrow it hath borne—
When desire sits down to weep
Over hope's unbroken sleep—
When we know our care and toil
Cultures an ungrateful soil—
When in our extremest need
Only grows the thorn and weed—
Well the face may be o'ercast
By the troubles it has past.
Ah, fair child! I read it now
By the meaning on thy brow—
By thy deep and thoughtful eyes,
Where the soul of genius lies;
Even now the shade is o'er thee
Of the path which lies before thee;
For thy hand is on the lyre,
And thy lip is living fire,
And before thee is the wreath
Which the poet wins by death.
Brief and weary life is thine—
But thy future is divine.

Near it kneels a maid in prayer,*
Fair as the white rose is fair—
With a sad and chastened look,
As the spirit early took
Bitter lessons, how on earth
Flowers perish in their birth,
Blossoms fall before they bloom,
And the bud is its own tomb.
Once she dreamed a gentle dream—
Such, alas! love's ever seem—
Whence she only wanted to know
Every thing is false below.
Soon the warm heart has to learn
Lessons of despair, and turn
From a world whose charm is o'er
When its hope deceives no more.
Maiden, thy young brow is cold—
'Tis because thy heart is old;
And thine eyes are raised above,
For earth hath betrayed thy love.

Dark the shades of evening fall—
Night is gathering o'er that hall;
All seems indistinct and pale—
Thick falls the shadowy veil;
All the shapes I gazed upon,
Like the dream that raised them, gone.

L. E. L.

MUSIC.

OPERA CONCERT ROOM.

THE pupils of the Royal Academy of Music are already beginning to take upon themselves all the rights, privileges, and immunities belonging to the profession; and they seem well entitled to do so. Mr. Charles Packer, a young musician who has already accomplished much, and bids fair to do more, gave a concert at this room on Monday, which we notice on account of the singular exhibition of juvenile talent that it presented. The leader of the orchestra, who executed his duty admirably, was a mere stripling, and so were the performers of the violoncellos, trombones, oboes, flutes, and trumpets; nay, some of the fiddlers seemed only just breeched, little fellows perched on stools; and yet they contrived to give a good effect, and even to accompany boldly the Polyphernus voice of Lablache.

Mr. Packer himself played capitally a con-

* Mr. Macdonald's Supplicating Virgin.

certo of Hummel, and part of a duet with Mr. Potter, in both of which the young professor proved himself to be a master of the instrument. Some of his own vocal compositions were performed by Lablache and others; and we were particularly struck by a trio called *Di Luna*, which was encored. The room was well filled.

DRAMA.

COVENT GARDEN.

WE have great pleasure in recording the success of a young aspirant to histrionic honours, in the person of Mr. John Mason, a scion of that famous stock to which the British stage is already so deeply indebted. Mr. Mason is the nephew of Mr. John Philip Kemble, and, in voice and manner, frequently reminded us of his glorious uncle, notwithstanding the severe illness under which he (the *débutant*) manifestly laboured. An apology was judiciously made for him between the second and third acts, by Mr. Egerton; and this circumstance would have disarmed criticism, had Mr. Mason's *Romeo* deserved its severest notice. Happily, however, there is much more to praise than to censure; and we shall content ourselves, for the present, with expressing our trust, that the favourable impression Mr. Mason produced upon us, under peculiar disadvantages, will be confirmed and increased upon future and more fortunate occasions. Without any extraordinary pretensions to personal appearance, he is sufficiently good-looking for the stage, taller than his brother Mr. Charles Mason, who played here some seasons ago, and infinitely more animated. In the present dearth of young tragedians we are not inclined to be fastidious, and we should have welcomed even a respectable *Romeo* with joy. Mr. Mason, we hope, will prove a still more valuable acquisition.

Benefits are critical exceptions; but the rich display of vocal talent at the benefit of Miss Inverarity induces us to deviate from our general rule, and say a few words in favour of our native singers. Miss Inverarity, as we prognosticated, has taken a high grade as a vocalist, and, with a little more precision and firmness, which a few years will give, wants but continued devotedness to study, to arrive at the head of her profession. The house was in a state of evaporation, from being crowded to excess. Miss Inverarity exerted her powers to the utmost: the style in which she gave "Young I am, and sore afraid," was original, and not only was it sung delightfully, but afforded a smart specimen of acting. This, together with the duet, "When thy bosom," was warmly secured. The house, in this respect, was very considerate towards Miss Inverarity, from the quantity of labour marked out for her during the evening;—not so towards Braham, for but one determination seemed to pervade the audience, namely that of making the most of him, now they had once more got him before them; and they gave him a benefit as well as Miss Inverarity. His voice is yet powerful beyond belief, and his acting better than ever. Wilson did himself justice as *Young Meadows*; and we have seldom seen *Love in a Village* more effectively cast.

HAYMARKET.

NOVELTIES are crowding upon our notice at this theatre. "A lady" has made her appearance as the *Widow Belmour*, and deserved her favourable reception. She possesses a handsome person and easy manners, and will

certainly prove an acquisition to the company. Two younger ladies, Miss Wells and Miss Land, have appeared as *Susannah* and the *Countess* in the *Marriage of Figaro*. Miss Wells is a pupil of Mr. Watson's, and already established as a favourite at Dublin. She is what the Scotch would call a *sonsie* lass, and acts with great spirit. Miss Land is altogether new to the stage. Both received considerable applause throughout their performances, and would, no doubt, have been very different, had they been part and parcel of an operatic company. At the Haymarket, however, we fear they have little chance of distinguishing themselves in this way. Season after season, it has been our disagreeable duty to protest against the marring of the *chef-d'œuvres* of Mozart and Rosini at this theatre. Surely the management must perceive the folly of attempting such an opera as *Figaro*, even in its English shape, with a meagre band and half-a-dozen chorus-singers. The *Follies of a Day* is the only version of the story adapted to the resources of the establishment; and why, with a very respectable comic company, quite equal to the performance of the pleasant comedies and farces indigenous to the Haymarket, the manager should persevere in forcing exotics into his summer-house, that must inevitably languish and die there, is a mystery we have never been able to fathom.

VARIETIES.

Silk-worms.—By some recent experiments which have been made in France, it appears that silk-worms may be entirely fed upon the leaf of the scorzonera, or vipers' grass.

Bottoms of Ships.—The Spaniards cover the bottoms of their ships with a cement composed of lime, recently slaked, and fish-oil; made into a paste, and laid on with a trowel. This cement hardens when in contact with salt water, and acquires great solidity. It is advisable, however, before putting on this cement, to apply the usual coat of pitch, and to wait until the latter becomes quite cold.

Agricultural Home Colonies.—A meeting at the King's Head, in the Poultry, at which Sir John Sinclair and Mr. Montagu Burgoyne presided; the benevolent object of which is to provide for a superfluous portion of the poor of London, by transplanting them to lands in the neighbourhood, and teaching them to cultivate them for their own support. As this plan becomes further developed, we shall give it our best attention: as a means of doing much good, it certainly appears to be not only practicable but easy.

New Street.—The new street from the Strand opposite Waterloo Bridge to Bow Street is now likely to be carried into immediate execution. The bill is before Parliament: the improvement will be one of the most marked in the metropolis; and we trust the design will be prolonged far to the north.

Horticultural Fête.—At last an auspicious day crowned the perseverance of our Horticultural *fetists*. The gardens on Wednesday were brilliantly attended, though most persons of high rank were kept away by the court. The scene was consequently gay and splendid; the refreshments, *i. e.* the eating department, ample, and the company consequently happy. The fruits exhibited were perhaps not so fine as we have seen; but what with walking, talking, dancing, and champagne, the joyous meeting was kept up with spirit till ten o'clock, when the visitors departed, all apparently perfectly satisfied with their entertainments.

Board of Health.—Besides the rigorous observation of quarantine, our Government has established a Board of Health to instruct and direct the public, should the cholera be unhappily introduced to this country. Since writing this, we have to state with much satisfaction that our Government has received a very ample and most intelligent report from Sir A. Creighton, giving an account of the progress and decline of the cholera in Russia. It does not, however, appear, that any mode of treatment has been discovered as a cure for this dreadful malady. The learned writer describes the pains attendant upon it to be excruciating beyond belief.

On the Origin of the Action of the Voltaic Pile.—A highly important discussion is at present in progress relative to the original source of electricity in the Voltaic pile, not originating with, but to a considerable extent renewed by, the endeavours of M. A. de la Rève, to prove that chemical action is the sole cause, contact of dissimilar metals having no effect. This has been vigorously controverted by M. Pfaff, Marianini, &c. M. Matteucci has made some further experiments on frogs, in which he first assured himself that there was no chemical action between distilled water perfectly free from air and zinc, either alone or in contact with copper. Being sure upon this point, a prepared frog was then suspended from a rod of zinc, which was fixed at the bottom of a gas jar, and connected with a long copper wire, so that nothing more was required to produce the well-known contraction, than to touch the muscles of the legs with the copper wire. The same effect was produced when the jar was filled with distilled water and with pure hydrogen, and when the animal was washed in distilled water, freed of air, and all animal fluid removed. The experiment was also repeated in vacuo, and in various gases. M. Matteucci is convinced that the mere contact of different metals is able to develop electricity, although he admits, with most philosophers, that chemical action exerts an influence over this force, just as heat does in thermo-electric experiments.

Magarodes; new Insects found in the neighbourhood of Ant-hills.—These insects present phenomena of a very peculiar character: at once apterous and hexapods, that is to say, with six or without any legs, they are enclosed during their state of nymph in a scaly cocoon, which has the form and consistence of a pearl. These kind of pearls are found in great abundance in the earth in several of the West Indian islands. The natives give them the name of ground pearls, and consider them as ant-eggs, using them as ornaments in necklaces, purses, &c. There was only Dr. Nugent who had mentioned these singular beings in the Transactions of the Geological Society, and who, having observed an orifice in these pretended pearls, suspected that it might give issue to an insect; until Mr. Guilding, in the last volume of the Linnæan Transactions, supposes the whole to belong to an insect which he calls *magarodes formicærum*. M. Latreille, however, is inclined to consider some of the figures given by Mr. Guilding as being nearly related to the larvæ of grasshoppers, or similar hemiptera. M. Goudot, a young French naturalist, just returned from Madagascar, has brought with him a little coleopterous insect of the family of Lamellicornes, and allied to the *acanthoceros* of M'Leay, which lives in society in the nests of the termites, and which, by contracting its feet, also resembles a little pearl, or a shining and almost globular grain.

Oikopleura; a new Molluscan Animal.—Mertens describes, in a 4to. work of sixteen pages, a new molluscan animal, by the name of *oikopleura*. It forms an order apart, and places itself near the pteropoda. Nearly related to the *olio borealis*, it abounds in the north of the Pacific ocean, as the latter does in the north of the Atlantic. It is caught with difficulty, and has the faculty of reproducing its membranous shell several times in a day.

French Patents.—In a list of no fewer than 130 *brevets d'invention* taken out at Paris in the course of three months, are a number of the titles and descriptions of which are rather curious. For instance—"An apparatus to keep the guitar in its proper position;" "Fabrication of stuff with twisted feathers;" "Shirt-buttons;" "A chocolate called 'a dish for the gods,' (*meats des dieux*);" "A block for ladies' bonnets;" "An apparatus for drawing and engraving, by a continual movement, without any knowledge of drawing;" "A pnyrometer, or instrument to ascertain the frequency, elevation, and regularity of the pulse;" "An apparatus by which a lady may in a single instant lace or unlace her corset;" "An instrument to extirpate corns without the assistance of any cutting instrument;" "A machine for making hooks and eyes;" "Vocotypography, or the art of printing French with forty movable characters;" "An instrument to put all stringed musical instruments in unison;" &c. &c.

Hay.—In Russia it is usual to preserve the natural verdure of hay. As soon as the grass is cut, it is, without having been spread, formed into a rick, in the centre of which has been previously placed a kind of chimney, made of four rough planks. It seems that the heat of the fermentation evaporates by this chimney; and that the hay thus retains all its leaves, its colour, and its primitive flavour.

Ples.—As the season of the year has now arrived when these insects are very troublesome, it may not be useless to state, that the butchers of Geneva have, from time immemorial, prevented flies from approaching the meat which they expose to sale, by the use of laurel oil. This oil, the smell of which, although a little strong, is not insupportable, drives away flies; and they dare not come near the walls or the wainscots which have been rubbed with it.

A New Species of Pheasant.—Amongst the numerous interesting natural productions recently brought from China by Mr. Reeves, it was with pleasure we observed a magnificent new species of pheasant, which will be a most interesting addition to the aviaries of Europe; and as it comes from the same part of the world as the gold and silver kind, there is scarcely a doubt but that, with a little care, it may be induced to breed in this country. It is about three times the size of the common pheasant, and has a tail from five to six feet long; it is of a pale bay colour, ornamented with black moons, and the head, wing, and under part of the body, black varied with white; the tail feathers are black and brown banded. Mr. Reeves brought with him from Canton two living specimens; but one of them unfortunately died in the channel; the other is now in the gardens of the Zoological Society, where it will most probably soon recover its fine tail. A beautiful specimen, in nearly perfect plumage, brought by Mr. Reeves for General Hardwicke, has been presented by that gentleman to the collection of the British Museum. The tail feathers of this bird have been long known, two having been exhibited in the Museum for many years; but the bird which bore

them was first described in Gen. Hardwicke's illustrations of Indian Zoology, from a drawing sent by Mr. Reeves, where it is called the Reeves' Pheasant (*Phasianus Reevesi*).

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXVI. June 25.]

A Key to Bernays' Familiar German Exercises.—A series of Tales, describing some of the principal Events that have taken place at Paris, Brussels, and Warsaw, during the late Revolution, by F. W. N. Bayley, Esq.—Biblia Sacra Polyglotta, textus archetypus versioneque præcipuas ab ecclesiâ antiquitatis receptas, necnon versiones recentiores Anglicanam, Germanicam, Italianam, Gallicam, et Hispanicam, compenditæ, &c.; auctore Samuelæ Lee, S. T. B. Also, a Translation of the New Testament into Hebrew, printed with the English. Other editions of the same: Hebrew and English, Hebrew and Greek, Hebrew and German, and Hebrew and French.

LIST OF NEW BOOKS.

Little on Logarithms, 8vo. 8s. cloth.—Ivan Vejeeghen, or Life in Russia, 2 vols. 18mo. 8s. bds.—Carson on Baptism, 8vo. 7s. bds.—Garloch's Sermons, 8vo. 10s. 6d. bds.—Rev. E. I. Tournour's Trinitarian and Unitarian Sermons, according to the Scripture Doctrine of the Church of England, 2 vols. 8vo. 16s. bds.—Hill's Family Offerings, 12mo. 4s. bds.—Vindication of the Religious Opinions of the High Classes in this Country, 8vo. 3s. 6d. bds.—Rev. H. Clissold's Selections from Hooker, 12mo. 3s. bds.—Paris and London, by the Author of "the Castilian," 11. 11s. 6d. bds.—National Library, No. XI. Lives of Celebrated Travellers, by J. A. St. John, 1 vol. fcp. 6s. bds.—Rev. W. L. Bowles' Life of Bishop Ken, Vol. II. 8vo. 15s. bds.—Devarris on Statutes, Part II. 8vo. 10s. 6d. bds.—Valpy's Classical Library, No. XIX. Juvenal and Persius, 18mo. 4s. 6d. cloth.—Hughes' Divines, No. XIV. Jeremy Taylor, Vol. II. 8vo. 7s. 6d. bds.

TO CORRESPONDENTS.

We were aware of the fact stated by E. P. Thompson, and it was merely an oversight that we did not mention it. The author is not to blame.

We do not know when Dr. Southey's third volume of Spain is to be expected.

The name of the gentleman who presented to the Society of Antiquaries a lithograph of some Roman pavements discovered at Pitney in Somersetshire, was given in our list as *Hoson*, instead of *Hasell*. We shall probably advert hereafter to these remarkable remains of antiquity, ENARATA.—Page 327, Drury Lane, line 1, for "strong," read "stormy;" and in list of pieces: under Webster's *Highways and Byways*, add, acted "8 nights."

Maspeffe, near Melrose, Roxburghshire, 15th June, 1831.

SIR,—I cannot suppose for a moment that you have read the Advertisement which I have affixed to *Philip Augustus*, when in reviewing that work you say, "The materials for these pages are drawn from those of M. Capequique." When *Philip Augustus* was written, I did not know that such a person as M. Capequique existed. The historical materials were derived from the writings of Rigord, William the Briton, and other chroniclers either contemporary or very nearly so, which I have now in my possession, marked throughout with the margin notes, in my own hand-writing, from which the novel was composed. I should imagine that you must know my habits of study better than to suppose, upon reflection, that I would condescend to borrow my materials from any modern work, whether romance or not; and I have only farther to state the fact, that the whole of *Philip Augustus* has been written and in the publishers' hands now twelve months; and that the first two volumes were in England several months before. Of this circumstance sufficient evidence could be derived, if necessary, from the publishers themselves. In regard to the work of M. Capequique, whatever may be my opinion of it, I have only to pledge my honour as a gentleman that I never saw it till my Parisian bookseller, M. Verdier, sent it to me, on hearing that I had written a book on the same subject.†

I purposely keep this letter within as small a space as possible, hoping that you will give it immediate insertion in your *Gazette*; as the imputation of my making clandestine use of the labours of any other man, is what I cannot suffer to remain unrefuted for a moment. Believe me, dear sir, your faithful servant, G. P. R. JAMES.

* In announcing these most elaborate and learned works, it affords us great pleasure to observe that their distinguished author has just been appointed to a prebendal stall in Bristol Cathedral. This was conferred upon him by the Lord Chancellor, and purely on account of his merit, which is well known throughout Europe. Such appointments reflect equal honour on the giver, the receiver, and the church of which he is an ornament.—Ed. L. G.

† We certainly did not feel that it was a reproach to quote from a very interesting modern writer. The work to which we alluded having embraced the whole period of Mr. James's excellent romance, it was very natural to suppose that he had profited by pages which placed the times so vividly before him. It would have been doing exactly what Sir Walter Scott has done with *Comines* and others.—Ed. L. G.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of the Italian, Spanish, Flemish, Dutch, French, and English schools, is open daily, from Ten in the Morning till Six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SOCIÉTÉ DES PROFESSEURS de LANGUE FRANÇAISE.

A Meeting having been held to-day, in consequence of a Circular addressed, in May last, to the Professors of the French language in England, to propose that they should form themselves into a Society, the purposes of which are—the strength and respectability resulting from union among the now-established masters—the sanction of all new masters, in future, by a Certificate of Admission, stating their proper qualifications—and the gradual formation of a Society, and the assistance of masters who have become old and infirm without having had it in their power to make any provision for their support.

And the masters present at the Meeting, viewing the proposed Institution as very advantageous to the profession in general, having assented to the principal basis on which it is proposed to be established, and proceeded to the nomination of a Comité Provisoire, with directions to prepare the Regulations of the Society, to take the preliminary measures for its establishment, and to fix a day for a General Meeting—the Comité Provisoire, conformably to their instructions, beg to announce, that a General Meeting will take place on Saturday, July 9th, at Six o'clock in the evening, at No. 8, Carlton Chambers, Regent Street, for the purpose of considering the Articles of the Regulations, and of appointing a Permanent Committee.

Those masters who wish to become Members are requested to make it known, by letter (post-paid), to the Secretary, No. 8, High Street, Manchester Square, Purse Office, and to annex to their demand of admission a statement of the time and place of their birth, and testimonials from the heads of schools or families where they attend.

Dr. B. Granel, Durham House, Vice-President.
De Grouvel, Clerg of England School, Hackney.
A. Lacuigne, Wood Cottage, Highgate.
N. Lambert, Manchester Square, Secretary.

HAILEYBURY and ADDISCOMBE.

VACATIONS.—The Students have now an opportunity of continuing their studies while in Town, in Oriental, Classics, and Mathematics, at the London Oriental Institution, No. 9, South Crescent, Bedford Square, the Conductors of which acquired the Oriental Languages, and drew the Pronunciation, from learned Natives of India, and have prepared several hundred of Candidates for the Hon. East India Company's Civil and Military Service with distinguished success.

Instruction in Classes or by Private Tuition daily.

ARGYLL ROOMS.—The Nobility and

Gentry are most respectfully informed, that J. Turill has at his fashionable Repository, 250, Regent Street (on the site of the late Argyle Rooms), a very large and choice Assortment of Stationery, Albums and Scrap-Books, Ladies and Gentlemen's Travelling Cases, Writing Paper, and Drawing Cases, Deapatch Boxes and Portfolios, Bibles and Prayer Books, Account Books, Bronze and Ebony Instandards, Fancy Stationery, &c. J. T. begs to observe, that the whole of his Stock is entirely new, and warranted of the best manufacture; and particularly invites the Nobility and Gentry at least to try his very cheap and superior Writing Papers, which he offers at the following low prices: for cash; viz. Dine Bath 6d. per quire, 6s. per quire; ditto, 8d. per quire, 18s. per ream; ditto, 10d. per quire, 15s. per ream—superfine large blue worsted, hot-pressed, 10d. per quire, 15s. per ream—best thick Blue Paper, 16s. per ream, with the true Pronunciation, ing-wat 5s. per pound—good pens, 6s. per 100—Hudson's Bay and Swan Pens 12s. per 100—best Blacklead Pencils 4s. per dozen; ditto, prepared lead, 6s. per dozen—Travelling Cases, 18 inches square, with patent instandards, 15s. 14 inch ditto, 11s. 14 inch rusta ditto, 21s. 2s.—a very great variety equally as low. All orders by post will meet with immediate attention.

Manufacture, 331, Oxford Street.

THE "UNITED KINGDOM," in speak-

ing of the Patent Ferryman Pen, says—"The strong terms in which these new pens are recommended from every quarter are worth the perusal of most readers. Testimony so forcible and full has completely satisfied us that the pretensions of the patentee are real, and that the article is of great national utility."

The Ferryman Pens are sold wholesale and retail by James Perry (the Patentee), 87, Red Lion Square, London; and, by only one serving that they are in a Sealed Packet, having on it the Patentee's Signature, the pens may be had genuine of all Booksellers, Stationers, Silversmiths, Jewellers, Toy and Hardwaremen, Writing-case Manufacturers, and Dealers in Stationery, &c. throughout the whole of the British Empire, and in every place abroad. Each packet of pens contains Nine, price 3s. 6d.

DULAU and CO.'S FOREIGN CIRCULATING LIBRARY.

Subscribers to which have at their command the most valuable and interesting Library of the Age. Cards of Terms to be had on application, at 37, Soho Square.

MR. BROSTER has commenced a "Course

of Instructions" in his System for "Restoring the Organ of Speech, under slight or the most distressing Impediments in Colloquial and Public Speaking, No. 3, Lower Helig Street, Belgrave Square. After the Season he receives Pupils at his Residence, Brook Lodge, near Chester.

* Discovered by him, vide Blackwood's Magazine, Jan. 1830.

PANTECHNICON, Motcomb Street, Belgrave Square, London.

The Proprietor respectfully solicits the attention of the Nobility, Gentry, Artists, Coachmakers, Musical Instrument Makers, and the Public in general, to this extensive Establishment, now opened for the reception of Carriages, Wines, Musical Instruments, Paintings, &c. either for Sale on Commission, or for safe Preservation. No expense has been spared in order to erect a Building that should be proof against the destructive ravages of Fire, and in which will be found complete accommodation for warehousing the Valuables of Noblemen and Gentlemen in their absence from London.

The Pantechnicon contains dry Cellarage for 1500 Pipes of Wine in Bottles, and Fifty Iron-Built Rooms, which are to be let on very moderate Terms.

Printed Particulars and Regulations may be had at the Offices in the Pantechnicon; or at Mr. Goodhugh's, House Agent, 22, South Audley Street.

London: Published by Jones and Son, 17, Ave Maria Lane.

Selections from Pliny's Natural History, for Schools.
In 18mo. price 4s. 6d. bound.

EXCERPTA ex Cæli Plinii Secundi Historia Naturali, in Usum Scholæ. Notæ adjectæ.

GULIELMUS TUCKER.
In nova Institutione Novocæsariensi Professor.

"I have not seen for a long time a more elegant and pleasing addition to the list of higher school books than Mr. Turner's extracts from Pliny. The whole work of Pliny, speaking of it in an historical point of view, is invaluable; it exhibits for the age in which he lived, the encyclopædia of the arts and sciences then known; and without the aid of Pliny, we should have been quite in the dark on a thousand occasions as to matters of great curiosity in the correct knowledge or superstitious belief of the ancients." *Edinburgh Magazine*, Feb. 1831.
Printed for Baldwin and Cradock, Paternoster Row.

IVAN VEJECHEN; or, Life in Russia.

In 2 vols. 12mo. price 8s.

By H. FLETCHER, Esq.
Surgeon to the General Infirmary at Gloucester, and Consulting Surgeon to the Asylum for the reception of Lunatics, near Gloucester.
London: Longman and Co.; Simpkin and Marshall; T. Jew, Gloucester; and all other Booksellers.

Summer Excursions, &c. &c.
In 1 thick 12mo. vol. illustrated by 94 Views and Maps, price 15s. bound.

THE GUIDE to all the WATERING and SEA-BATHING PLACES, including the Scotch Watering Places; containing full and accurate descriptions of each Place, and of the Curiosities and striking Objects in the Environs; and forming an agreeable and useful Companion during a Residence at any of the Places, or during a Summer Tour in quest of Health or Pleasure. With a Description of the Lakes, and a Tour through Wales.

A Description of the Scenery of the Lakes in the North of England. By W. WORDSWORTH, Esq. A new edition, with Additions, and a Map. Price 5s. 6d.

The Original Picture of London, corrected to the present time; with a Description of the Environs. Re-edited, and mostly written, by J. Britton, F.S.A. &c. In 18mo. with upwards of 100 Views of Public Buildings in, and Maps, Plans, &c. of the Metropolis and Suburbs, including a Map of the Country Twenty Miles round London, &c. with the Maps only, &c. neatly bound.
Printed for Longman, Rees, Orme, Brown, and Green.

A French Grammar for Self-Teaching.
In 8vo. price 18s. a new edition, thoroughly revised, and corrected,
A GUIDE to the FRENCH LANGUAGE, especially devised for Persons who wish to study the Elements of that Language without the Assistance of a Teacher.
By J. J. BRETHERTON.
London: Printed for Baldwin and Cradock.

Also, in 8vo. price 8s. canvas boards,
A Key to the Exercises in the above Work; by means of which any person of a mature understanding may acquire the elements of the French Language practically, as surely as if a professed teacher was sitting by his side; and with a very superficial knowledge of it, may teach it to others. Directions are given in the Key to Parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed.

Second Edition of Riddle's Navigation.
In 8vo. the 3d edition, with numerous additions and improvements, and adapted to the Nautical Almanac both in its present state and the greatly improved form in which it will appear in 1834, price 12s. bound.

A TREATISE on NAVIGATION and NAUTICAL ASTRONOMY, adapted to Practice and to the Purpose of Elementary Instruction, with an Extensive Series of Examples for Exercise, and all the Tables requisite in Nautical Computations.
By EDWARD RIDDLE, F.R.A.S.

Master of the Mathematical School, Royal Hospital, Greenwich.
Among many important additions in this revision may be noticed, the method of finding the longitude from the difference of the observed times of transit of the moon's limb and moon culminating stars, which is reduced to the addition of two logarithms—a new and simple method of computing the longitude from an observation of a fixed star by the moon's Workman's improvement in middle latitude sailing—an easy method of correcting the Greenwich time, as obtained in the usual way from lunar—improved methods of rating chronometers on land, and the method of finding the errors and rates of chronometers at sea.
London: Printed for Baldwin and Cradock, Paternoster Row.

Price 2s. 6d.
Sold by Whittaker, Treacher, and Co. Ave Maria Lane; Bosange, Berthe, and Lowell, 14, Great Marlborough Street; Duns and Co. Soho Square.

THE DURHAM HOUSE FRENCH GRAMMAR, 2d edition, greatly increased and improved.
By Dr. H. GRANET,
Of the University of Paris.
Dedicated to Her Royal Highness the Duchess of Kent.
This book, about the size of the Eton Latin Grammar, is more particularly adapted to the Use of Schools.

No. 754.

SATURDAY, JULY 2, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

History of Scotland. By Patrick Fraser Tytler, Esq. Vol. IV. 8vo. pp. 426. Edinburgh, 1831. W. Tait.

WHEN we say that this work proceeds as it commenced, we give it at once the highest and the justest praise. The most minute research, the most laborious investigation, the most dispassionate comparison, and the most enlightened conclusions—such are only some of the merits of this great and valuable undertaking. In philosophy, in poetry, in romance, the literature of Scotland has abounded; but in history she has been deficient; not in historical efforts, witness Hume and Robertson; but a history of Scotland has long been a desideratum. Buchanan allowed himself to be blinded by his fierce republican prejudices; and Pinkerton, though acute in his conclusions, was excluded from many sources of information laid open to his more fortunate successor. Mr. Tytler has happily united (a most uncommon merit, by the by) the patient and investigating spirit of the antiquary with the enlarged and liberal views of the historian. Let any reader compare Buchanan's account of James III. with the present author's; or the minority of the same monarch by Pinkerton; and for a just and unprejudiced summary in the one case, and for accuracy founded on careful comparison of documents in the other, he will soon find the immeasurable superiority of Mr. Tytler. To instance one case among many, Pinkerton erroneously states the Livingstones to have owed their fall and destruction to Lord Douglas; Mr. Tytler shews in the clearest manner that it was the act of the king himself. He also rectifies another very important blunder of Buchanan, who was quite mistaken in supposing that the custody of the young monarch was in the hands of Crighton, the charge having, in reality, been intrusted to Livingstone, as documents preserved in the Auchinleck Chronicle testify. Or, to mention one more instance, let the reader observe the difference between Buchanan's inaccurate and often confused account of the conspiracy of the Boyds, and Mr. Tytler's luminous statements, authenticated by curious and careful investigation. We are aware, that in our limits it is not possible to do Mr. Tytler justice; but at least we can point the reader's attention to the labour that must have been often employed to smooth away the difficulties of a single page. The view taken of James III.'s character is so admirable an historical summary, that we must find room for it entire.

“ Thus perished in the prime of life, and the victim of a conspiracy headed by his own son, James III. of Scotland; a prince whose character appears to have been misrepresented and mistaken by writers of two very different parties, and whose real disposition is to be sought for neither in the mistaken aspersions of Buchanan, nor in the vague and indiscriminate panegyric of some later authors. Buchanan, misled by the attacks of a faction,

whose interest it was to paint the monarch whom they had deposed and murdered, as weak, unjust, and abandoned to low pleasures, has exaggerated the picture by his own prejudices and antipathies; other writers, amongst whom Abercromby is the most conspicuous, have, with an equal aberration from the truth, represented him as almost faultless. That James had any design, similar to that of his able and energetic grandfather, of raising the kingly power upon the ruins of the nobility, is an assertion not only unsupported by any authentic testimony, but contradicted by the facts which are already before the reader. That he was cruel, or tyrannical is an unfounded aspersion, ungraciously proceeding from those who had experienced his repeated lenity, and who, in the last fatal scenes of his life, abused his ready forgiveness to compass his ruin. That he murdered his brother is an untruth, emanating from the same source, contradicted by the highest contemporary evidence, and abandoned by his worst enemies as too ridiculous to be stated at a time when they were anxiously collecting every possible accusation against him. Yet it figures in the classical pages of Buchanan; a very convincing proof of the slight examination which that great man was accustomed to bestow upon any story which coincided with his preconceived opinions, and flattered his prejudices against monarchy. Equally unfounded was that imputation, so strongly urged against this prince by his insurgent nobles, that he had attempted to accomplish the perpetual subjection of the realm to England. His brother Albany had truly done so; and the original records of his negotiations, and of his homage sworn to Edward, remain to this day, although we in vain look for an account of this extraordinary intrigue in the pages of the popular historians. In this attempt to destroy the independence of the kingdom, it is equally certain that Albany was supported by a great proportion of the nobility, who now rose against the king, and whose names appear in the contemporary muniments of the period; but we in vain look in the pages of the *Fœdera*, or in the rolls of Westminster and the Tower, for an atom of evidence to shew that James, in his natural anxiety for assistance against a rebellion of his own subjects, had ceased for a moment to treat with Henry the Seventh as an independent sovereign. So far, indeed, from this being the case, we know that, at a time when conciliation was necessary, he refused to benefit himself by sacrificing any portion of his kingdom, and insisted on the re-delivery of Berwick with an obstinacy which in all probability disgusted the English monarch, and rendered him lukewarm in his support. James's misfortunes, in truth, are to be attributed more to the extraordinary circumstances of the times in which he lived, than to any very marked defects in the character or conduct of the monarch himself, although both were certainly far from blameless. At this period, in almost every kingdom in Europe with which Scotland was connected, the power of the great feudal

nobles and that of the sovereign had been arrayed in jealous and mortal hostility against each other. The time appeared to have arrived in which both parties seemed convinced that they were on the very confines of a great change, and that the sovereignty of the throne must either sink under the superior strength of the greater nobles, or the tyranny and independence of these feudal tyrants receive a blow from which it would not be easy for them to recover. In this struggle another remarkable feature is to be discerned. The nobles, anxious for a leader, and eager to procure some counterpoise to the weight of the king's name and authority, generally attempted to seduce the heir-apparent, or some one of the royal family, to favour their designs, bribing him to dethrone his parent or relation by the promise of placing him immediately upon the vacant throne. The principles of loyalty, and the respect for hereditary succession, as established by the laws of the country, were thus diluted in their strength, and weakened in their conservative effects; and from the constant intercourse, both commercial and political, which existed between Scotland and the other countries of Europe, the examples of kings, resisted or deposed by their nobles, and monarchs imprisoned by their children, were not lost upon the fervid and restless genius of the Scottish aristocracy. In France, indeed, the struggle had terminated under Louis the Eleventh in favour of the crown; but the lesson to be derived from it was not the less instructive to the Scottish nobility. In Flanders and the states of Holland, they had before them the spectacle of an independent prince deposed and imprisoned by his son; and in Germany, the reign of Frederic the Third, which was contemporaneous with our James the Third, presented one constant scene of struggle and discontent between the emperor and his nobility, in which this weak and capricious potentate was uniformly defeated. In the struggle in Scotland, which ended by the death of the unfortunate monarch, it is important to observe, that although the pretext used by the barons was the resistance to royal oppression, and the establishment of liberty, the middle classes and the great body of the people took no share. They did not side with the nobles, whose efforts on this occasion were entirely selfish and exclusive. On the contrary, so far as they were represented by the commissaries of the burghs who sat in parliament, they joined the party of the king and the clergy, by whom very frequent efforts were made to introduce a more effectual administration of justice, and a more constant respect for the rights of individuals, and the protection of property. With this object, laws were promulgated; and alternate threats and exhortations upon these subjects are to be found in the record of each successive parliament; but the offenders continued refractory, and these offenders, it was notorious to the whole country, were the nobility and their dependants. The very men whose important offices ought, if conscientiously administered,

to have secured the rights of the great body of the people—the justiciars, chancellors, chamberlains, sheriffs, and others—were often their worst oppressors; partial and venal in their administration of justice; severe in their exactions of obedience; and decided in their opposition to every right which interfered with their own power. Their interest and their privileges, as feudal nobles, came into collision with their duties as servants and officers of the government; and the consequence was apparent in the remarkable fact, that, in the struggle between the crown and the aristocracy, wherever the greater offices were in the hands of the clergy, they generally supported the sovereign; but wherever they were intrusted to the nobility, they almost uniformly combined against him. When we find the popular historians departing so widely from the truth, in the false and partial colouring which they have thrown over the history of this reign, we may be permitted to receive their personal character of the monarch with considerable suspicion. James's great fault seems to have been a devotion to studies and accomplishments which, in this rude and warlike age, were deemed unworthy of his rank and dignity. He was an enthusiast in music, and took great delight in architecture, and the construction of splendid and noble palaces and buildings; he was fond of rich and gorgeous dresses, and ready to spend large sums in the encouragement of the most skilful and curious workers in gold and steel; and the productions of these artists, their inlaid armour, massive gold chains, and jewelled-hilted daggers, were purchased by him at high prices; whilst they themselves were admitted, if we believe the same writers, to an intimacy and friendship with the sovereign which disgusted the nobility. The true account of this was, probably, that James received these ingenious artisans into his palace, where he gave them employment and took pleasure in superintending their labours—an amusement for which he might have pleaded the example of some of the wisest and most popular sovereigns. But the barons, for whose rude and unintellectual society the monarch shewed little predilection, returned the neglect with which they were unwisely treated, by pouring contempt and ridicule upon the pursuits to which he was devoted. Cochrane, the architect, whose genius in an art which, in its higher branches, is eminently intellectual, had raised him to favour with the king, was stigmatised as a low mason. Rogers, whose musical compositions were fitted to refine and improve the barbarous taste of the age, and whose works were long after highly esteemed in Scotland, was ridiculed as a common fiddler or buffoon; and other artists, whose talents had been warmly encouraged by the sovereign, were treated with the same indignity. It would be absurd, however, from the evidence of such interested witnesses, to form our opinion of the true character of his favourites, as they have been termed, or of the encouragement which they received from the sovereign. To the Scottish barons of this age, Phidias would have been but a marble-cutter, and Apelles no better than the artisan who stained their oaken wainscot. The error of the king lay, not so much in the encouragement of ingenuity and excellence, as in the indolent neglect of those duties and cares of government which were in no degree incompatible with his patronage of the fine arts. Had he possessed the energy and powerful intellect of his grandfather—had he devoted the greater portion of his time to the administra-

tion of justice, to a friendly intercourse with his feudal nobles, and a strict and watchful superintendence of their conduct in the offices intrusted to them, he might safely have employed his leisure in any way most agreeable to him; but it happened to the monarch, as it has to many a devotee of taste and sensibility, that a too exquisite perception of excellence in the fine arts, and an enthusiastic addictedness to the studies intimately connected with them, in exclusion of the performance of ordinary duties, produced an indolent refinement, and fastidious delicacy of mind, which shrunk from common exertion, and transformed a character originally full of intellectual and moral promise, into that of a secluded, but not unamiable misanthropist. Nothing can justify the king's inattention to the cares of government, and the recklessness with which he shut his ears to the complaints and remonstrances of his nobility; but that he was cruel, unjust, or unforgiving—that he was a selfish and avaricious voluptuary—or that he drew down upon himself, by these dark portions of his character, the merited execration and vengeance of his nobles, is a representation founded on no authentic evidence, and contradicted by the uniform history of his reign and of his misfortunes."

We subjoin one or two miscellaneous extracts: "An anecdote preserved by the historian of Brittany, acquaints us with the character of the princess, and the opinions of John, surnamed the Good and Wise, as to the qualifications of a wife. On requiring from his ambassadors, immediately after their return from Scotland, their opinion regarding the lady, he received for answer, that she was beautiful, elegantly formed, and in the bloom and vigour of health; but remarkably silent—not so much, as it appeared to them, from discretion as from extreme simplicity. 'Dear friends,' said John the Good and Wise, 'return speedily and bring her to me. She is the very woman I have been long in search of. By St. Nicholas! a wife seems to my mind sufficiently acute, if she can tell the difference between her husband's shirt and his shirt-ruffe.'"

One of the parliamentary decrees was very curious: "It relates to that description of persons who, disdaining all regular labour, have ever been, in the eyes of the civil magistrate, a perverse and hateful generation, 'sornars, outlyars, masterful beggars, fools, bards, and runners about.' For the putting away of all such vexatious and rude persons, who travel through the country with their horses, hounds, and other property, all sheriffs, barons, aldermen, and bailies, either without or within burgh, are strictly directed to make inquiry into this matter at every court which they hold; and, in the event of any such individuals being discovered, their horses, hounds, and other property, are to be immediately confiscated to the crown, and they themselves put in prison till such time as the king 'have his will of them.' And it is also commanded by the parliament, that the same officers, when they hold their courts, shall make inquiry whether there be any persons that follow the profession of 'fools,' or such-like runners about, who do not belong to the class of bards; and if such be discovered, they are to be put in prison or in irons for such trespass, as long as they have any goods or substance of their own to live upon. If they have nothing to live upon, it is directed that 'their ears are to be nailed to the Tron, or to any other tree, and then cut off, and they themselves banished the country, to which if they return again, they are upon their first apprehension to be hanged.'"

Sumptuary law:—"In a parliament of James the First, held in the year 1429, this subject had attracted the attention of the legislature; and the present necessity of a revision of the laws against immoderate costliness in apparel, indicates an increasing wealth and prosperity in the country. 'Seeing,' it declares, 'that each estate has been greatly impoverished through the sumptuous clothing of men and women, especially within the burghs, and amongst the commonalty 'to landward,' the lords think it speedful that restriction of such vanity should be made in this manner:—first, no man within burgh that lives by merchandise, except he be a person of dignity, as one of the aldermen or bailies, or other good worthy men that are of the council of the town, shall either himself wear, or allow his wife to wear, clothes of silk, or costly scarlet gowns, or furring of mertricks;' and they are directed to take especial care 'to make their wives and daughters to be habited in a manner correspondent to their estate; that is to say, on their heads short curches, with little hoods, such as are used in Flanders, England, and other countries; and as to the gowns, no woman should wear mertricks or letvris, or tails of unbefitting length, nor trimmed with fur, except on holydays.' In like manner, it was ordered, 'that poor gentlemen living in the country, whose property was within forty pounds, of old extent, should regulate their dress according to the same standard; whilst amongst the lower classes, no labourers or husbandmen were to wear on their work-days any other stuff than gray or white cloth, and on holydays, light blue, green, or red—their wives dressing correspondently, and using curches of their own making: and the stuff they wore was not to exceed the price of forty pence the ell. No woman was to come to the kirk or market with her face 'mussalit,' or covered, so that she might not be known, under the penalty of forfeiting the curch. And as to the clerks, no one was to wear gowns of scarlet, or furring of mertricks, unless he were a dignified officer in a cathedral or college-church, or a nobleman or doctor, or a person having an income of two hundred marks. And these orders touching the dresses of the community were to be immediately published throughout the country, and carried into peremptory and rigorous execution.'"

The following anecdote is very illustrative of the spirit of the age.

"Ross immediately assembled his army, and proclaimed himself King of the Hebrides. He then invaded the country of Athole, published a proclamation, that no one should dare to obey the officers of King James—commanded all taxes to be henceforth paid to him—and, after a cruel and wasteful progress, concluded the expedition by storming the castle of Blair, and dragging the Earl and Countess of Athole from the chapel and sanctuary of St. Bridget, to a distant prison in Isla. Thrice did he attempt, if we may believe the Catholic historian, to fire the holy pile which he had plundered—thrice the destructive element refused its office—and a storm of thunder and lightning, in which the greater part of his war-galleys were sunk, and the rich booty with which they were loaded consigned to the deep, was universally ascribed to the wrath of Heaven, which had armed the elements against the abettor of sacrilege and murder. It is certain, at least, that this idea had fixed itself with all the strength of remorse and superstition in the mind of the bold and savage leader himself; and such was the strength of the feeling, that

he became moody and almost distracted. Commanding his principal leaders and soldiers to strip themselves to their shirt and drawers, and assuming himself the same ignominious garb, he collected the relics of his plunder, and, proceeding with bare feet and a dejected and haggard aspect to the chapel which he had so lately stained with blood, he and his attendants performed before the altar an ignominious penance. The Earl and Countess of Athole were immediately set free from their prison; and Ross, abandoned as it was supposed by Heaven, was not long after assassinated in the castle of Inverness, by an Irish harper whose resentment he had provoked."

We now close the present volume; and Mr. Tytler cannot do better than let us have its successor as soon as possible. This history is a most valuable addition to literature; for it displays that laborious research upon which we have elsewhere, in this sheet, and in former *Gazettes*, insisted as essential to genuine, in opposition to philosophical history, ascribing motives and fancying causes.

A Memoir of Sebastian Cabot; with a Review of the History of Maritime Discovery. Illustrated by Documents from the Rolls, now first published. 8vo. pp. 333. London, 1831. Hurst, Chance, and Co.

In our summary last week of Mr. Stewart's admirable Catalogue of the Papers in Hatfield House, we noticed, among the remarkable points which it set in a new light, an address of Robert Thorne to Henry VIII. respecting discoveries of America, (see p. 401, col. 3), and a north-west passage to Cathay. We were then little aware how soon we should find that quotation connected with a very interesting work;—such is the volume before us.

Put forth in the most unpretending manner, and without a name, the *Memoir of Sebastian Cabot* is of paramount importance to the subject of which it treats, and a striking contribution to our very early naval history. Confined to an individual and a specific period by his own choice, the author has thoroughly sifted and investigated both. In doing so, he has corrected many grave errors, and, in general, given us a clearer insight into transactions of considerable national interest. That his tone in reprehending the carelessness and the mistakes of his predecessors, is more ill-tempered than their offences seem to demand, will appear to every reader. He should have remembered, that the same minute diligence and pains which a man may bestow upon a particular inquiry,—upon the life of one person, and the events belonging to it,—it would be utterly impossible for any human being to bestow in the same proportion upon a whole series of biographies, and the annals of a thousand years. The author, whoever he is, certainly found out, from authentic documents, never yet consulted, that many misrepresentations disfigured the received accounts of the matters he sought to examine; but a knowledge of this fact, as applicable to every other period, has long been notorious to all observant minds; and he had no occasion to be so angry therewith, and call names thereupon. After the fall of Sir Robert Walpole, his son Horace, wishing to amuse him one evening, offered to read him some historical work. "Anything," exclaimed the old statesman, "but history, that must be false!" And Gibbon says, "Malheureux sort de l'histoire! Les spectateurs sont trop peu instruits, et les auteurs trop intéressés pour que nous puissions compter sur les récits de nos auteurs." Without seal, however, an antiquary is not

worth a brass farthing; and we readily excuse the writer's irascibility, in honour of his just principles and indefatigable exertions.

Cabot is his hero; and Cabot, defrauded of much of his honest fame, deserves to be his hero. Him he defends à l'outrance, and has no mercy on those who have been accessory to the least infringement of his maritime glory,—from Hakluyt, Fabyan, and Purchas, to Harris, Pinkerton, and Barrow, not forgetting Lardner's Cyclopædia, nor Lesslie and Murray's Edinburgh Cabinet Library:—he smites the infidels on the hip whenever they stumble. But it is, after all, not a little amusing to trace the errors from their origin, through all the filtrations of succeeding copyists and compilers, who rarely (as we have more than once remarked), take the trouble to do more than apothecaries do with their bottles,—jumble them together, or pour from one into another, till the compound looks quite another thing, and of another colour: yet it contains only the same ingredients.

On the contrary, our anonymous author has compared, and analysed, and added, till the result has been a closer approximation to truth than hitherto attained. His great sources are, Richard Eden's *Decades of the New World*,* a work which deserves to have been more referred to than the writers on maritime discovery have been aware of; and the invaluable documents in the Rolls Chapel, especially the second royal patent to Cabot, of the 3d Feb. 1498.

Where a work is so essentially controversial as this is, it is difficult to review its leading arguments without going at greater length than we can go into the statements made, repeated, questioned, and refuted. We fear, therefore, that we shall be able to do little more than direct public attention to the *Memoir of Cabot*.

The first patent extant was granted by Henry VII. in the 11th year of his reign (March 5, 1496), to John Cabot† and his three sons, Lewis, Sebastian, and Sancius, and "authorises them, their heirs, or deputies, to 'sail to all parts, countries, and seas of the east, of the west, and of the north, under our banners and ensigns, with five ships of what burthen or quantity soever they be, and as many mariners or men as they will have with them in the said ships, upon their own proper costs and charges, to seek out, discover, and find whatsoever isles, countries, regions, or provinces of the heathen and infidels, whatsoever they be, and in what part of the world soever they be, which before this time have been unknown to all Christians.' It is plain, that a previous discovery, so far from being assigned as the ground for the patent, as Harris, Pinkerton, &c. assert, is negatived by its very terms. The patent would be inapplicable to any region previously visited by either of the Cabots, and confer no right.

"The second patent is dated the third of February, in the thirteenth year of the reign of

* Published in 1555,—a black-letter volume, and apparently well worth republication. "It consists of a translation of the three first books of Peter Martyr d'Angleria, to which he has subjoined extracts from various other works, of an early date, on kindred subjects; and amongst the rest, this passage of Ramusio" (a passage much discussed, as having been falsified by subsequent authors) "is given (fol. 251) as found in the 'Italian Histories of Navigations.' Eden was, as appears from his book, a personal friend of Cabot." The question at issue is, whether Cabot reached 67° or only about 56° N. lat.; our author maintaining the former opinion from Ramusio, and shewing the later variations to be erroneous.

† John Cabot was a Venetian invited to England; his son, Sebastian, told Eden that he, Sebastian, was born at Bristol.

Henry VII., corresponding with 3d February, 1498. The only evidence heretofore published on the subject, is contained in a brief memorandum found in Hakluyt (vol. iii. p. 6), who, we are persuaded, never saw the original. The person, also, who gave him the information of its existence, probably did not go beyond a list of the titles of instruments of that description kept for convenient reference. The memorandum of Hakluyt is as follows:—"The king, upon the third day of February, in the thirteenth year of his reign, gave license to John Caboto to take six English ships in any haven or havens of the realm of England, being of the burden of two hundred tons or under, with all necessary furniture, and to take also into the said ships all such masters, mariners, and subjects of the king as willingly would go with him," &c. Such being the whole of the information supplied, it is no wonder, that the most erroneous conjectures have been started. Dr. Robertson (*History of America*, book ix.) falls into the trap prepared by Hakluyt, as to the dates. "This commission [the first] was granted on March 6th, 1495, in less than two years after the return of Columbus from America. But Cabot (for that is the name he assumed in England, and by which he is best known) did not set out on his voyage for two years." Dr. Robertson makes no express reference to the second commission; and having adopted Hakluyt's perversion in referring that of the eleventh Henry VII. to 1495, he naturally fell into the other, and regarded the order of the thirteenth year of Henry VII. as merely a final permission for the departure of the expedition, made out on the eve of its sailing."

The author proceeds to shew, that Lediard, in his *Naval History of England*, Forster, Pinkerton, and their followers, continued utterly to misrepresent the real state of the case; and his view is confirmed by the important document thus introduced and subjoined.

"All this obscurity will now disappear. After a tedious search there has been found, at the Rolls Chapel, the original patent of 3d February, 1498. The following is an exact copy:—"Memorandum quod tertio die Februarii anno regni Regis Henrici Septimi xiii. ista Billa delibata fuit Domino Cancellario Anglie apud Westmonasterium exequenda.—To the King. Please it your highness of your most noble and habundaunt grace to graunte to John Kabotto, Venecian, your graciosus lettres patents in due forme to be made according to the tenor hereafter ensuying, and he shall continually praye to God for the preservation of your moste noble and roiall estate longe to endure.—H. R. Rex. To all men to whom thes presentels shall come send gretynge: Knowe ye that we of our grace especiall, and for dyvers causis us moving, we have geven and graunten, and by thes presentels geve and graunte to our welbelovyd John Kabotto, Venecian, sufficiente auctorite and power, that he, by him his depuie or deputies sufficient, may take at his pleasure VI Englishe shippes in any porte or portes or other place within this our realme of England or obeisance, so that and if the said shippes be of the bourdeyn of CC. tonnes or under, with their apparail requisite and necessarie for the safe conduct of the said shippes, and them convey and lede to the londe and isles of late founde by the seid John in oure name and by our commandeement. Paying for theym and every of theym as and if we should in or for our owne cause paye and noon otherwise. And that the said John, by hym his depuie or deputies sufficiente,

maye take and receyve into the said shippes, and every of theym all such maisters, maryners, pages, and other subjects as of their owen free wille woll goo and passe with him in the same shippes to the seid londe or iles, withoute anye impedymente, lett or perturbatione of any of our officers or ministres or subjects whatsoever they be by theym to the seyd John, his deputie, or deputies, and all other our seid subjects or any of theym passinge with the seyd John in the said shippes to the seid londe or iles to be doon, or suffer to be doon or attempted. Geving in commaundement to all and every our officers, ministres and subjects seying or heryng thies our lettres patents, without any further commaundement by us to theym or any of theym to be geven to perfourme and socour the said John, his deputie and all our said subjects so passyng with hym according to the tenor of theis our lettres patentis. Any statute, acte or ordennance to the contrarye made or to be made in any wise notwithstanding. * * *

"Will it not (inquires the writer with just astonishment) be deemed almost incredible that the very document in the records of England, which recites the great discovery, and plainly contemplates a scheme of colonisation, should, up to this moment, have been treated by her own writers as the one which first gave the permission to go forth and explore? Nay, this very instrument has been used as an argument against the pretensions of England; for it has been asked by foreigners who have made the computation, and seen through the mistake of Pinkerton and the rest, why the patent of 3d February, 1498, took no notice of discoveries pretended to have been made the year before. The question is now triumphantly answered. The importance of negativing a notion that the English discoveries were subsequent to the patent of the 13th Henry VII., will strikingly appear, on reference to the claim of Americus Vesputius. The truth as now established places beyond all question—even crediting the doubtful assertions of Vesputius—the priority of Cabot's discovery over that of the lucky Florentine. The map in Queen Elizabeth's gallery made no false boast in declaring that on the 24th June, 1497, the English expedition discovered that land *quam nullus prius adire ausus fuit*."

"One fact is too remarkable not to claim especial notice. Amerigo Vespucci accompanied Hojeda, and it is now agreed that this was the first occasion on which he crossed the Atlantic. Sebastian Cabot was found prosecuting his third voyage from England. Yet, while the name of one overspreads the new world, no bay, cape, or headland, recalls the memory of the other. While the falsehoods of one have been diffused with triumphant success, England has suffered to moulder in obscurity, in one of the lanes of the metropolis, the very record which establishes the discovery effected by her great seaman fourteen months before Columbus beheld the continent, and two years before the lucky Florentine had been west of the Canaries."

The distinction between the two voyages of 1497 and 1498, seems, indeed, to clear up all the obscurity and misapprehension which has been heaped upon this memorable event.

Sebastian Cabot's future adventures in the service of Spain, which he entered in 1512, and even in our own, though extremely interesting, (we allude to his famous voyage in 1517, in search of a north-west passage,) do not demand

so much of our consideration, and we shall therefore simply refer for the account of them to the volume before us; to which we find, however, we must return to investigate several collateral matters which we think deserving of more space than we can this week bestow. Meanwhile, we recommend the work as one of great value and interest.

History of the Northmen, or Danes and Normans, from the Earliest Times to the Conquest of England by William of Normandy. By Henry Wheaton, Hon. Member of the Scandinavian and Icelandic Literary Societies at Copenhagen. 8vo. pp. 367. London, 1831. Murray.

Our mixed descent gives us a national interest in the antiquities of those countries where the northern ancestry of at least a portion of the English people existed in days of yore; nor are we less connected with them by the ties of a common literature. Any work, therefore, calculated to illustrate the epoch of the sea-kings, and the origin of those wild tales and legends which under so many forms have been the study and delight of every succeeding age; to make us acquainted with the learning, the manners, and the deeds, of our remarkable progenitors,—must be most acceptable to the public. We have great pleasure in saying that the volume before us is not only rich in stores of this kind, but is executed in so popular a way, that it is equally adapted to entertain the general reader, and interest the more curious inquirer. Every page bears a reference to ancient customs, books, and traditions, which we are apt to consider peculiarly our own, or with which we are in some measure connected; and so far from being a foreign history, we could hardly point to a work that comes more home to our minds. For the present, we shall offer one continuous extract as a specimen of the ability with which it is written.

"The man to whom his country's history and literature are most indebted, is the celebrated Snorre Sturleson, whose great historical work has justly earned for him the title of the Northern Herodotus. He was born in the year 1178, at Hvamm, on the Hvamsfjord, a small bay on the western coast of Iceland. His father, Sturla, commonly called Hvamms-Sturla, from the place of his residence, was a distinguished chieftain in that part of Iceland, and, as well as his mother, was connected with the most illustrious families of the island. They traced their descent from the ancient kings of Norway and Sweden, of the Ynling race, and from the Jarls of Mere, from whom sprung Rollo and the other dukes of Normandy, with the English kings of the Norman line. They could also enumerate among their ancestors the famous Ragnar Lodbrok, whose romantic story is so conspicuous in the early annals of the North. Snorre was named after the pontiff, Snorre Godi, who figures so conspicuously in the Eyrbjargja Saga, and whom both he and his father, Hvamms-Sturla, seemed to have resembled in character. At the early age of three years, he was sent to Oddé, the former residence of Sæmund Sigfusson, and placed under the guardianship and direction of Jon Loftson, grandson of Sæmund, who inherited both the wealth and the learning of his ancestor. Here young Snorre remained until his twentieth year, and received a finished education both in the Greek and Roman literature, and in that of his native country. He had here access to all the manuscripts and other collections made both by Sæmund and by Ari Frode, relating to the poetry, history, and my-

thology of the heathen North. He was thus placed at what might be called, in their own poetical language, the fountain of Mimir—the source of inspiration, when he acquired that knowledge and cultivated those arts by which he was afterwards to be so much distinguished. 'Here,' he might say, in the words of the Hávamál, in allusion to 'the seat of eloquence, close by the fountain of wisdom:—'

'I sat and was silent,
I saw and reflected,
I listened to that which was told.'

On the death of his tutor, with whom he remained sixteen years, Snorre left Oddé in 1197, and married the daughter of a rich priest at Borg on the Borgafjord, by which he increased his small patrimonial inheritance with a fortune of 4,000 rix-dollars, a very considerable sum of money for that age and country. This property was augmented by the inheritance of Borg, to which he succeeded on the death of his father, and by the acquisition of Reykholt, and other estates in that fertile valley. He thus became, in a short time, by far the richest individual on the island, both in lands, and flocks and herds, arms, clothes, utensils, and books. This immense wealth, with his consummate talents, address, and eloquence, gave him proportional power and influence in the community. He sometimes appeared in the Althing, or general national assembly, with a retinue of several hundred armed followers. He removed his residence, in 1202, from Borg to the farm of Reykholt, situate in the Borgafjord, on the south-west coast of the island, in the midst of that wonderful volcanic region. This place he fortified so as to render it impregnable, whilst he improved and embellished it with various useful and ornamental works. These have all perished, except the celebrated *Snorra-laug*, or Snorre-bath, which still remains, after the lapse of six centuries, a proud monument of his ingenuity and munificence, almost rivalling the Heimskringla itself. The hot water for this bath is supplied from a natural fountain of boiling water, situated at the distance of 500 feet to the north, in a morass undermined by subterraneous fires, and where numerous boiling springs make their appearance. It is conveyed by means of an aqueduct of hewn stones, fitted to each other in the most exact manner, and joined together by a fine cement. The bath itself is circular in form, about fifteen feet in diameter, and built of hewn stones, cemented together in the same manner with the aqueduct. The floor is paved with the same kind of tophaceous stone which composes the aqueduct, and a circular stone bench, capable of holding upwards of thirty persons, surrounds the inside of the bath. These gifts of genius and fortune raised Snorre, in the year 1213, by the free choice of the people, to the honourable station of the supreme judge or chief magistrate of the island. In this post he was distinguished for his profound knowledge of the laws and civil institutions of his native country. In the same year he gave a proof of the prodigious variety of his talents, by writing an encomiastic lay upon Hakon Galin, a Jarl of Norway, famous in that day for his power and influence. This poem, which Snorre took care to send to the Jarl, procured, in return, besides other rich gifts, the present of a beautiful suit of armour from Hakon to the Skald, whom he invited to visit Norway. But the death of the Jarl, in the following year, prevented Snorre from accepting this invitation. There is reason, however, to believe that the favour which this successful effort of his muse gained for him in the parent country,

* The name of the vessel which first touched the shores of the American continent is not without interest. The *Matthew*, of Bristol, had that proud distinction.

ensured him, when he afterwards visited Norway in 1218, the most honourable reception among the connexions of Hakon, and by Skule, another Norwegian Jarl of great distinction. King Hakon IV. reigned at that time in Norway, and Snorre composed a lay in praise of that monarch, and two in honour of Skule Jarl. He also travelled into West Gothland, and wrote a poetic eulogy on Christina, the widow of Hakon Jarl, who had married Askell, the supreme judge or lagman of West Gothland, from whom Snorre received, among other gifts, the antique banner which Erik Knutson, king of Sweden, had borne in battle. Snorre returned to Norway, and spent the winter at the court of Skule Jarl, where he was hospitably entertained, and received from King Hakon the title of *Drotseti*, or court marshal, with the rank of *Leensmand*, or royal vassal, which last was conferred upon him in order to promote the designs which the Norwegians had conceived against the independence of Iceland. In 1220, Snorre returned to his native country in a ship which the Jarl had prepared, and laden with rich gifts, which Snorre did not omit to requite by another eulogium. After his return, he was involved in an inextricable labyrinth of deadly feuds, some of which he had inherited from his ancestors, and others had been kindled by his own turbulence, ambition, and avarice. These were prosecuted with the most ferocious violence on all sides. The public assembly and the national festival were often stained with kindred blood. The republic was rent with contending factions; but that of Snorre, through the zeal and fidelity of his partisans, frequently attained the ascendancy, and enabled him to gratify his high-reaching views of ambition. The hatred of his enemies at last rose to such a pitch that he was compelled in 1237 to take refuge in Norway. On his arrival in that country he found that his friend and patron, Skule Jarl, had assumed the title of Duke, and aimed at the Norwegian crown. Snorre lent himself to the purposes of Skule, and retired to his court at Drontheim, where he recited one of the lays which he had composed in praise of the Duke, and in vindication of his claims to the crown. But some intelligence which he afterwards received from Iceland induced him to return to his native country. Having obtained the king's permission for that purpose, with the title of Jarl, which was conferred upon him in addition to all the other honours and favours he had received, he prepared to set sail for Iceland. As he was on the point of embarking, he received letters from the king positively forbidding his departure. Snorre disregarded the prohibition, and arrived safely in Iceland in 1239. Here he was once more involved in fierce controversies with his numerous enemies, and shortly afterwards fell a victim to their deadly hatred. King Hakon had sent secret instructions to Gissur Thorvaldson, who was related to the king, and had formerly been Snorre's son-in-law and intimate friend, to seize on his person and bring him a prisoner to Norway; with orders, if he could not accomplish this purpose, to put him to death. The latter alternative was preferred by Thorvaldson, who had become the mortal foe of Snorre, and who was tempted by his great wealth, and the revenge he nourished against him, to become his assassin. It is remarkable that although Snorre was admonished of his danger by a letter from one of his friends, written in Runic characters, yet neither he, who was so deeply versed in this lore, nor any of the persons about him, could decipher the letter. Thorvaldson collected a

band of armed men from one of the clans which was hostile to Snorre, and taking him by surprise, basely murdered him at Reikholmt, in the night of the 22d September, 1241. Thus perished, at the age of sixty-three years, Snorre Sturleson, illustrious by his birth, his talents, and attainments, but, according to the concurrent testimony of his contemporaries, stained with unprincipled ambition, avarice, faithlessness, and every other vice that dishonours and degrades human nature. It must, however, be remembered, that those who have portrayed the character of this remarkable man in such dark and sombre colours, were his enemies, and some of them his relations, whose warm attachment had been turned to deadly hate by family dissensions. The partial judgments pronounced by party spirit are seldom ratified by posterity. Whatever reproaches the recklessness of Snorre's ambition may have incurred, it is difficult to believe that the man who was four times raised to the chief magistracy of his country by the free choice of his fellow-citizens, did not possess qualities to command, in a considerable degree, the general confidence, whilst, at the same time, they secured him the warm attachment of his friends and partisans. But the very qualities adapted to win this confidence and this attachment in a rude period of society, are not of that amiable and lofty cast which add lustre to human nature under more auspicious circumstances. Neither the Icelandic commonwealth, nor any other species of government which prevailed in Europe during the middle ages, yielded that tolerable degree of security for life and property which is now afforded under almost every form of rule prevailing among civilised and Christian nations. In the absence of a regular administration of justice enforced by adequate sanctions, cunning and violence must necessarily supply the place of wisdom and virtue in the conduct of public affairs. In such a state of things, private revenge will supersede the public arm, and the feuds thus engendered will be transmitted from generation to generation, and perpetuated by family rivalry. It must, however, be confessed, that after making all these deductions, the cultivation of letters does not here seem to have had that effect in tempering the sordid and violent passions of human nature which is commonly attributed to their humanising influence. Snorre pursued all those objects which are commonly supposed to minister to human happiness,—riches, power, honours, and pleasure,—with a selfish disregard to the means by which they were to be attained, and with no generous and enlarged desire to contribute to the general welfare of society. But, whatever might be the moral defects of his character, the thirst of knowledge and desire of fame was never extinct in the breast of Snorre. He aspired to the laurel crown as well as that bestowed by the historic muse; and finding the language of his country completely formed, independent of classic models, he gratified his taste and genius by cultivating his own native national literature. Had his mind been directed to those scholastic studies which then engrossed the exclusive attention of lettered Europe, he might perhaps have produced a work rivaling that of Saxo Grammaticus in rhetorical embellishments, but which, written in the dead language of Rome, would have failed to express the living thoughts and feelings to which his native tongue alone could give utterance. Although the mind of Snorre was imbued in early youth with a deep knowledge of the annals and literature of the north, it is difficult to conceive how, in the midst of

his active and stormy life, he could have found time and opportunity for their successful cultivation. But it is the faculty of genius to create the leisure necessary to accomplish its designs, even in the midst of the most distracting cares and occupations. Snorre is generally supposed to have had some share in collecting and arranging the songs of the elder Edda; and he certainly contributed mainly to the compilation of the prose Edda in the form in which it now exists. There is some diversity of opinions as to the manner in which he proceeded in the composition of his great historical work, *Heimskringla*, or the Annals of the Kings of Norway, and as to the degree of merit which may justly be attributed to him in respect to originality of style and thought. The learned Professor Müller, in his essay upon the sources from which Snorre derived his materials, expresses the opinion that this work is a mere compilation from the ancient Sagas, which Snorre arranged, corrected, and sometimes enlarged from other sources, causing the whole to be carefully transcribed in its present form. Snorre seems to give some countenance to this opinion, by the modest and unpretending manner in which he speaks in the commencement of the preface to *Heimskringla*. 'In this book,' says he, 'I have caused to be recorded, from the traditions of the wise men, the history of ancient events, and of the great deeds of the kings and heroes who have reigned over the countries of the North, where the Danish language (*danska tungu*) is spoken. I have also inserted their genealogies, so far as they were known to me, and that partly from the most ancient collection of this sort, called *Langfedgatal*, where the kings and other illustrious persons have caused to be transcribed their lineages. Part of the things herein contained are taken from the old songs or historical lays, which constituted the delight of our ancestors.' He then goes on to vindicate his course in this respect by the example of his predecessors, and refers to the songs and Sagas from which he had selected his materials. Among others was Thiodolf, who was Skald to Harald Hårfager, and composed a song upon King Ragnvald, called the *Ynglinga-lal*, in which his ancestors were traced back to a remote period, with a summary account of their lives, deaths, and burial-places. Fiolner was the son of *Yngvi-freys*, long adorned by the Sviar with sacrifices, from whom the Yngling race derive their origin and name. The lineage of Hakon Jarl is traced in an ancient lay, composed by Eyvind, one of his Skalds, and called *Háleyggjatal*. Therein is mentioned Sæmingr, Yngvitrey's son, with an account of their deaths and burial-places. From Thiodolf's tradition, the *Ynglinga-Saga* was first written, and afterwards enlarged by other learned men. The former age was called *bruna-öld*, from the prevailing custom of burning the bodies of the dead, and raising to their memory grave-stones, called *bauta-steinar*. But after Freyr was buried at Upsala, many princes raised not only grave-stones, but tumuli, to their predecessors. After which time also, Dan Mikillati, king of the Danes, built for himself a tumulus, in which he commanded his body to be interred with all the ensigns of his regal dignity, his armour, horse, and other wealth. His example was followed by many of his successors; and this was called in Denmark *haugs-öld*, 'the age of the tumuli;' but the Norwegians and the Swedes adhered for a long time to the more ancient custom of burning the dead. Iceland began to be settled when Harald Hårfager was king in Norway.

Both he and his successors entertained at their court Skalda, by whom their deeds were sung. And we have followed in our narrative those lays sung before the princes who were themselves the actors of these deeds, or their children, not doubting the truth of what they tell respecting the different expeditions of these princes and their warlike achievements. For though the lays of the Skalds sounded the praises of the heroes before whom they were sung, they would hardly have presumed to attribute to them or their ancestors the fame of actions which all present must have known to be false, and which would have reflected shame upon those they were meant to honour. Snorre then proceeds to mention with encomium his predecessor Ari Frode, who was the first that recorded in the language of the North its history, both ancient and more recent, leaving us to infer that he had used the works of Ari, which have nearly all since perished, in the composition of the *Heimskringla*."

To be concluded in our next.

Boswell's Johnson, by Croker. 5 vols. 8vo.
[Second Notice.]

WE return with avidity to our pleasant task of skimming these amusing volumes, and taking off some of the newest and richest cream which floats upon them, for the gratification of our readers. In doing so, we need pay attention to no order but the order of dates: the produce, it is true, is of a most miscellaneous description; yet to our taste it amalgamates so agreeably, as to make altogether a very delicious treat.

It would be impertinent in us at this time of day to enter into disquisitions respecting Johnson and his biographers. Subjects which have employed so many able as well as foolish pens, may well be considered to be exhausted; and as we have little room for the *desires repetita*, (which, by the by, we have never known to please in literature, whatever it may do in love-making), we shall come at once to the matter, with a single previous remark. That remark is inspired by the perusal of the work before us, and it applies to the character of the extraordinary man of whose life it treats. Never was human being so minutely exposed to public view as Dr. Johnson; his moral anatomy is prepared to the slightest fibre, and fixed up for ever for examination and study. From such an ordeal, who could pass without the detection of a multitude of imperfections and of faults? All his errors are laid bare; his acerbities, his little envies, his absurdities, his rudenesses, his overbearings;—but with all these in the one scale, what are they but feathers in comparison with the opposite balance of learning, and wisdom, and virtue? We feel that by reducing him more to our own sphere of humanity, they rather interest us in his favour and endear him to us, than detract from his lofty superiority. While living, perhaps, such drawbacks might annoy and offend those with whom he came into contact; but the grave has hallowed them; and we declare, for our own parts, that we could not regard and esteem Johnson as we do, were it not for these very blemishes. We venerate him for his wonderful abilities: he touches our warmer and more tender sympathies by his weaknesses. The former command the mind's noblest admiration—the latter ally him to nature and the common lot of mankind.

We now proceed to extract our promised cento; with only heads in *italics* where these are sufficient to point the sense; and elsewhere, as briefly as words can afford the necessary connexion and information.

The Descendants of Poets.—Speaking of Mrs. Elizabeth Foster, Milton's grand-daughter and only surviving representative, for whom a benefit was given at Drury Lane in 1750, Mr. Croker notices: "She survived this benefit but three years, and died without issue. It is remarkable that none of our great, and few of our second-rate poets, have left posterity."

In 1756, when Johnson was 47 years of age, we find the following afflicting picture of the condition to which even the greatest talents, united with the utmost worth and integrity, are too generally doomed by the mercenary dealings of (we had almost said) *literature*!!

"The two next letters (says the editor) are melancholy evidence of the pecuniary distress in which he was at this period involved. It is afflicting to contemplate the author of the *Rambler* and the *Dictionary* reduced to such precarious means of existence as the casual profits from magazines and reviews, and subjected to all the evils and affronts of a state of penury; but it, at the same time, raises our admiration and esteem to recollect that, even in this season of distress, he continued to share his mite with Miss Williams, Mr. Levett, and the other objects of his charitable regard:

"*Dr. Johnson to Mr. Richardson.*

"Tuesday, 19th Feb. 1756.

"Dear Sir,—I return you my sincerest thanks for the favour which you were pleased to do me two nights ago. Be pleased to accept of this little book, which is all that I have published this winter. The inflammation is come again into my eye, so that I can write very little. I am, sir, your most obliged and most humble servant,

SAM. JOHNSON.

"*To Mr. Richardson.*

"Gough Square, 16th March, 1756.

"Sir,—I am obliged to entreat your assistance; I am now under an arrest for five pounds eighteen shillings. Mr. Strahan, from whom I should have received the necessary help in this case, is not at home, and I am afraid of not finding Mr. Millar. If you will be so good as to send me this sum, I will very gratefully repay you, and add it to all former obligations. I am, sir, your most obedient and most humble servant,

SAM. JOHNSON."

"Sent six guineas"

Witness

"WILLIAM RICHARDSON."

As we have given in our adhesion to Johnson's foibles, we will not inquire with Mr. Croker whether he was ungrateful to Dr. Thomas Sheridan for any share that gentleman had in procuring his pension; nor whether he envied some of his contemporaries. In this portion of the book, Mr. Maxwell's narrative is very interesting, but we omit it, as familiar to most readers, and proceed with our shorter extracts.

Anecdotes of Goldsmith.—"Colonel O'Moore, of Cloghan Castle in Ireland, told the editor an amusing instance of the mingled vanity and simplicity of Goldsmith, which (though perhaps coloured a little, as *anecdotes* too often are) is characteristic at least of the opinion which his

"Upon this Mr. Murphy regrets, 'for the honour of an admired writer, not to find a more liberal entry to his friend in distress, he sent eight shillings more than was wanted! Had an incident of this kind occurred in one of his romances, Richardson would have known how to grace his hero; but in fictitious scenes generosity costs the writer nothing.'—*Life*, p. 87. This is very unjust. We have seen that Mr. Richardson had, just the month before, been called upon to do Johnson a similar service; and it has been stated that about this period Richardson was his constant resource in difficulties of this kind. Richardson, moreover, had numerous calls of the same nature from other quarters, which he answered with a ready and well-regulated charity. Instead, therefore, of censuring him for not giving more, Mr. Murphy might have praised him for having done all that was required on the particular occasion."

best friends entertained of Goldsmith. One afternoon, as Colonel O'Moore and Mr. Burke were going to dine with Sir Joshua Reynolds, they observed Goldsmith (also on his way to Sir Joshua's) standing near a crowd of people, who were staring and shouting at some foreign women in the windows of one of the houses in Leicester Square. "Observe Goldsmith," said Mr. Burke to O'Moore, "and mark what passes between him and me by-and-by at Sir Joshua's." They passed on, and arrived before Goldsmith, who came soon after, and Mr. Burke affected to receive him very coolly. This seemed to vex poor Goldsmith, who begged Mr. Burke would tell him how he had had the misfortune to offend him. Burke appeared very reluctant to speak, but, after a good deal of pressing, said, "that he was really ashamed to keep up an intimacy with one who could be guilty of such monstrous indiscretions as Goldsmith had just exhibited in the square." Goldsmith, with great earnestness, protested he was unconscious of what was meant: "Why," said Burke, "did you not exclaim, as you were looking up at those women, what stupid beasts the crowd must be for staring with such admiration at those painted jzebels; while a man of your talents passed by unnoticed?" Goldsmith was horror-struck, and said, "Surely, surely, my dear friend, I did not say so?" "Nay," replied Burke, "if you had not said so, how should I have known it?" "That's true," answered Goldsmith, with great humility: "I am very sorry—it was very foolish: I do recollect that something of the kind passed through my mind, but I did not think I had uttered it."

At the age of sixty-two, Johnson had an inclination to get into parliament: "I should like to try my hand now," he exclaimed. On which Mr. C. informs us, "Lord Stowell has told the editor, that it was understood amongst Johnson's friends, that 'Lord North was afraid that Johnson's *help* (as he himself said of Lord Chesterfield's) might have been sometimes embarrassing.' He perhaps thought, and not unreasonably," added Lord Stowell, "that, like the elephant in the battle, he was quite as likely to trample down his friends as his foes."

At page 150 of the second volume, the *Tear to the Hebrides* is commenced: thence we select the ensuing annotations.

Anecdote of a Presbyterian.—"Dr. Alexander Webster was remarkable for the talent with which he at once supported his place in convivial society, and a high character as a leader of the strict and rigid presbyterian party in the church of Scotland, which certainly seemed to require very different qualifications. He was ever gay amid the gayest. When it once occurred to some one present to ask what one of his elders would think, should he see his pastor in such a merry mood—"Think!" replied the doctor, "why he would not believe his own eyes."

Of Flora Macdonald.—"It is remarkable (says Sir Walter Scott) that this distinguished lady signed her name *Flory*, instead of the more classical orthography. Her marriage contract, which is in my possession, bears the name spelled *Flory*."

Of Buonaparte.—"When Buonaparte first surveyed his new sovereignty of Elba, he talked jocularly of taking the little island of Pianosa. So natural to mankind seems to be the desire of conquest, that it was the first thought of the speculative moralist, as well as of the dethroned usurper."

A Namesake.—"The eccentric author of *Harle Thrumbo* was named *Samuel Johnson*. He was originally a dancing-master, but went

on the stage, where his acting was as extravagant as his pieces. He died in this very year, 1773, and was probably one of the persons whose death is alluded to, *post*, 17th April, 1778."

Of Sir A. Maclean.—"Sir Allan Maclean, like many Highland chiefs, was embarrassed in his private affairs, and exposed to unpleasant solicitations from attorneys, called in Scotland *writers* (which, indeed, was the chief motive of his retiring to Inch Kenneth). Upon one occasion he made a visit to a friend, then residing at Carron lodge, on the banks of the Carron, where the banks of that river are studded with pretty villas: Sir Allan, admiring the landscape, asked his friend whom that handsome seat belonged to. 'M——, the writer to the signet,' was the reply. 'Umph!' said Sir Allan, but not with an accent of assent, 'I mean that other house.' 'Oh! that belongs to a very honest fellow, Jamie ——, also a writer to the signet.' 'Umph!' said the Highland chief of M'Lean, with more emphasis than before. 'And yon smaller house?' 'That belongs to a Stirling man; I forget his name, but I am sure he is a writer, too, for ——' Sir Allan, who had recoiled a quarter of a circle backward at every response, now wheeled the circle entire, and turned his back on the landscape, saying, 'My good friend, I must own you have a pretty situation here; but d—n your neighbourhood.'"

Of Adam Smith.—"Mr. Boswell has chosen to omit, for reasons which will be presently obvious, that Johnson and Adam Smith met at Glasgow; but I have been assured by Professor John Miller that they did so, and that Smith, leaving the party in which he had met Johnson, happened to come to another company where Miller was. Knowing that Smith had been in Johnson's society, they were anxious to know what had passed, and the more so as Dr. Smith's temper seemed much ruffled. At first Smith would only answer, 'He's a brute—he's a brute'; but on closer examination, it appeared that Johnson no sooner saw Smith than he attacked him for some point of his famous letter on the death of Hume. Smith vindicated the truth of his statement. 'What did Johnson say?' was the universal inquiry. 'Why, he said,' replied Smith, with the deepest impression of resentment, 'he said, *you lie!*' 'And what did you reply?' 'I said, you are a son of a ——!' On such terms did these two great moralists meet and part, and such was the classical dialogue between two great teachers of philosophy."

Of Lord Auchinleck.—"Old Lord Auchinleck was an able lawyer, a good scholar, after the manner of Scotland, and highly valued his own advantages as a man of good estate and ancient family, and, moreover, he was a strict presbyterian and whig of the old Scottish cast. This did not prevent his being a terribly proud aristocrat; and great was the contempt he entertained and expressed for his son James, for the nature of his friendships and the character of the personages of whom he was *engoué* one after another. 'There's nae hope for Jamie, mon,' he said to a friend. 'Jamie is gaen clean gyte. What do you think, mon? He's done wi' Paoli—he's off wi' the land-louping scoundrel of a Corsican; and whose tail do you think he has pinned himself to now, mon?' Here the old judge summoned up a sneer of most sovereign contempt. 'A dominie, mon—an auld dominie; he kept a schule, and caud it an academy.' Probably if this had been reported to Johnson, he would have felt

it more galling, for he never much liked to think of that period of his life: it would have aggravated his dislike of Lord Auchinleck's whiggery and presbyterianism. These the old lord carried to such an unusual height, that once when a countryman came in to state some justice business, and being required to make his oath, declined to do so before his lordship, because he was not a *covenanted* magistrate. 'Is that a' your objection, mon?' said the judge; 'come your ways in here, and we'll baith of us tak the solemn league and covenant together.' The oath was accordingly agreed and sworn to by both, and I dare say it was the last time it ever received such homage. It may be surmised how far Lord Auchinleck, such as he is here described, was likely to suit a high tory and episcopalian like Johnson. As they approached Auchinleck, Boswell conjured Johnson by all the ties of regard, and in requital of the services he had rendered him upon his tour, that he would spare two subjects in tenderness to his father's prejudices; the first related to Sir John Pringle, president of the Royal Society, about whom there was then some dispute current; the second concerned the general question of whig and tory. Sir John Pringle, as Boswell says, escaped; but the controversy between tory and covenantant raged with great fury, and ended in Johnson's pressing upon the old judge the question, what good Cromwell, of whom he had said something derogatory, had ever done to his country; when, after being much tortured, Lord Auchinleck at last spoke out, 'God, doctor! he gart kings ken that they had a *liht* in their neck.' He taught kings they had a *joint* in their necks. Jamie then set to mediating between his father and the philosopher, and availing himself of the judge's sense of hospitality, which was punctilious, reduced the debate to more order. — *Sir Walter Scott.*"

Of Lord Elibank.—"Lord Elibank made a happy retort on Dr. Johnson's definition of oats, as the food of horses in England, and of men in Scotland: 'Yes,' said he; 'and where else will you see *such horses* and *such men*?'"

Throughout these volumes there are interspersed a number of prayers, &c., in which Johnson was prone to manifest his religious aspirations, and seek to soothe his mind. They are remarkable mixtures; but yet breathe all of genuine piety. We shall, however, only instance two short passages, as specimens of the most curious.

"I was extremely perturbed in the night, but have had this day more ease than I expected. D[eo]gr[at]ia. Perhaps this may be such a sudden relief as I once had by a good night's rest in Fetter Lane."

"I fasted, though less rigorously than at other times. I, by negligence, poured milk into the tea, and, in the afternoon, drank one dish of coffee with Thrale; yet at night, after a fit of drowsiness, I felt myself very much disordered by emptiness, and called for tea, with peevish and impatient eagerness. My distress was very great."

We now conclude, having "skimmed" about half our skimming to the end of Vol. III., for, we trust, the entertainment of our readers. It appears that Johnson never called himself *doctor*, though that appellation has been given him by all the rest of the world.

Having taken so much from this publication, we cannot do better than finish, this week, with an original anecdote concerning it.

Sir John Malcolm once asked Warren Hastings, who was contemporary and a companion of

Dr. Johnson and Boswell, what was his real estimation of Boswell's *Life of Johnson*? "Sir," replied Hastings, "it is the *dirtiest* book in my library;" then, proceeding, he added, "I knew Boswell intimately; and I well remember, when his book first made its appearance, Boswell was so full of it, that he could neither think nor talk of any thing else; so much so, that meeting Lord Thurlow hurrying through Parliament Street to get to the House of Lords, where an important debate was expected, for which he was already too late, Boswell had the temerity to stop and accost him with — 'Have you read my book?' 'Yes! G—d d—n you!' replied Lord Thurlow, 'every word of it: I could not help myself.'"

HOPE'S ESSAY ON MAN.

[Third Paper.]

WE proceed, without comment, to the sequel of the very curious investigation unfolded in our last: any remark is unnecessary where an author so explicitly develops his own striking views.

"*Varieties of human races.*—In the inland fastnesses of Borneo and Sumatra, and over the islands of the Polynesia, still rove, perhaps soon entirely to disappear from the globe, tribes of which the resemblance to the baboon is most striking, the superiority over the brute, in mind and body, least perceptible. In them, of all human beings, the organs of vitality most early and fundamental—those named abdominal—still present the greatest expansion; those of reaction and movement, superstruced on the first, still display the least possible development and finish. The external seats of those lower senses which still remain most directly connected with the wants of the stomach—the tongue, the jaws, the lips, and the nostrils—still preserve the most disgusting amplitude, openness, and spread; the organs of the higher senses, still often exhibit an equally disagreeable and repulsive obliquity and want of room. The face, from a preposterous width above, terminates abruptly underneath in a sharp, cheekless, chinless point. The organs of intellect still appear in their narrow cramped receptacle wholly undeveloped. Of the rude ill-formed skull the anterior part—that which, in proportion as it is better arched, gives earnest of organs of thought more expanded—is still so low, so narrow, so depressed, that it can hardly be said to form a distinct forehead. The small deep-sunk eyes, like those of the baboon, still keep constantly vibrating in their narrow sockets. The flat, wide, staring nostrils, are scarce by any thing but their yawning orifices distinguishable from the pouches more prominent than the nose, over which they are spread. The skinny chasm of the enormous lipless mouth is armed with teeth, long, projecting, and wide apart, like the teeth of a saw. Of chin there is no sign. The face, hideous when viewed in front, is not less frightful when seen in profile; its greatest prominence is in the region of the mouth. The head, sunk between the raised shoulders, has not room over these to turn sideways. A trunk of enormous bulk supports arms meagre and deformed, of a finny shortness or uncouth elongation. That trunk moves on thighs and legs short, bowed, crooked, and callous. These supports, in their turn, are ill at rest on feet flat and square, deprived of instep and of heel, and more calculated, by their want of well-formed sole, to entwine themselves round branches than to walk on level ground. The utmost height of these misshapen mortals in general scarce reaches four feet nine. Their ill-marked muscle is hardly

discernible athwart their coarse dusky hide, as distant in its hue from a fine glossy black as it is from a clear transparent whiteness. The skin is frequently covered with irregular patches of wiry hair or bristles. Their limbs seem unhinged, their movements performed by abrupt jerks. They crouch rather than they sit; they climb better than they walk. Their features have not yet a finish sufficient to mark the distinction between youth and age. In childhood they already look decrepit. Nor do their countenances yet possess sufficient flexibility to mark the transition from calmness to irritation. Little sensible to emotions even of physical pleasure, they are less alive still to feelings of bodily pain. They undergo the greatest hardships without being by their sufferings stimulated to mend their lot; they feed without repugnance on the coarsest garbage; encounter without nausea the most disgusting smells; are inaccessible to any pleasures of the ear or eye; have little memory, and less imagination. They seem incapable of reflection on the past, or of foresight into the future. Unmoved by any prospect of distant benefit, undeterred by any threat of remote injury, they are never seen to express joy, or to denote grief—to laugh or cry. Only accessible to hunger, while that feeling pinches not their vitals past endurance, nothing ruffles their apathy. Like the brute, they are, while in a state of repletion, wholly incapable of providing for the hour of want. Unfeeling for themselves, they cannot be expected to sympathise with the feelings of others. None yet has a wife or a child he calls his own. The female, wooed with a club, when from a means of pleasure she becomes an encumbrance, is by that club despatched. The offspring is left to shift for itself. Cruel, cowardly, and credulous, they are void of curiosity, and inaccessible to wonder. Nothing occupying their thoughts sufficiently to become familiar to them, nothing can seem strange. They shew no mental faculty beyond that low cunning already by man attributed to monkeys. When inveigled in the trammels of civilisation, they only labour to effect their escape. Incapable of inventions of art with which to supply the deficiencies of nature, they possess neither utensils nor arms. Inland they feed on the grub that crawls forth from the earth: near the sea-side on the oyster left exposed by the surf. They go completely naked: they have no permanent abode. In the day-time they prowl about in perfect solitude, at night they creep under the sand. Their speech consists in a few hoarse croakings: but by men who have no ideas, no feelings to communicate to each other, even these are seldom uttered. If clothed by force, they tear off their apparel. If caught, they try to get loose. The best treatment cannot tame them. When detained, they soon, without apparent grief or pain, pine away and die. Of the New Zealander the skull presents a texture so coarse, a form so contracted, so similar to that of the orang-outang, that anatomists have considered him as the connecting link between the monkey and man. From the Andaman islands, in the Indian Archipelago, were once brought away, in an Indian junk, two middle-aged savages of a peculiar tribe, black and woolly-haired, the tallest of which scarcely reached four feet seven, and only weighed seventy-six pounds. Protuberant in the paunch, stunted in the extremities, of voracious appetite and cannibal propensities, climbing on trees as nimbly as quadrumana, diving under water as readily as ducks, heavy and dull in intellect, and, when by themselves, setting up a cackling like turkeys, they only appeared seldom even in their gut-

tural hiss to converse with each other. In the interior of Luconia, and throughout the Indian Archipelago, there are vestiges of a black woolly-haired race of pigmies, incapable of the least approach to civilisation, unpossessed of any permanent abode, and when caught, however well used, either soon effecting their escape, or pining to death. Of these the major part have, by a different race of a brown hue, with long lank hair, and endowed with superior mental capacities, found in the same regions, been hunted down, or forced to fly to inaccessible fastnesses, where gradually the race melts away. In New Holland and in New South Wales, almost every tribe of natives, however small, has an idiom of its own, different from that of the neighbouring tribes, and only consisting of a few sibilating sounds, unintelligible out of the tribe. Of these tribes some are hideously ugly. They have noses quite flat to the face like those of brutes, or only noseless nostrils very wide, which entirely want all distinct projection. Their eyes, very close to each other, and deep sunk in the head, constantly vibrate like those of the monkey. Their mouth is extravagantly wide and prominent, their body clumsy and ill-formed; their arms, almost fleshless, are of enormous length: their legs equally ungainly; and a rough wrinkled black skin seems ill to fit the ill-limbed body. They live upon ants' nests, wild honey, roots, and berries: at night they creep into some hollow tree. The males destroy the females, and the females their offspring, when tired of the encumbrance. Once from the interior of Africa was brought to the West Indies a whole cargo of captured negroes, so inferior in organisation to the general average of blacks, so hideous in face, so mishapen in figure, so short, so deficient in whatever distinguishes human beings from brutes, that they could not find any purchaser. They resembled the natives of Old Calabar, residing not far from the coast of Guinea, who have foreheads and chins almost obliterated; cheeks, or rather pouches, projecting beyond the nose; wide, prominent, lipless mouths, armed with long sharp tusks or teeth standing out; eyes almost in contact with each other; bellies that hang down over their thighs; a chest very narrow, arms of prodigious length, thighs extremely short, spider-legs void of calves, and splay feet as ill-fitted to stand firm on even ground as those of the neighbouring monkeys. Near the Cape, intermingled with the higher race of Hottentots, are the Bojes-men, of which the males scarce attain a height of four feet six inches, and the females of four feet. They become decrepit and wrinkled at what among whites would scarce be deemed a mature age. Their noses are flat to the face, their eyes in constant motion like those of monkeys: from their broad cheek-bones their faces taper down to a sharp point: their hair is woolly, their coarse brown skin usually besmeared with grease, and their body begirt with the decaying entrails of the animals they have devoured. The females in some parts of their frame are meagre and stunted, in others they exhibit an exuberance similar to that of the Caramanian sheep. Their posterior excrescence is often balanced by a natural apron before, similar to the pouch in which the kangaroo nurses its young. They sleep, seldom more than two nights running, in nests which they contrive in the bushes; are equally strangers to the use of fig-leaves and of fire. Apathetic but fearful, and not even possessed of the intelligence required in slaves, they spend their time either prowling about in perfect solitude like wild beasts, or crouched like monkeys

in a circle, exhibiting an unmeaning grin or an inarticulate chatter. But enough of the very lowest specimens of the human race, which every where exhibit a great sameness both in their physical draw-backs and moral deficiencies. Even in certain negro races of a very superior cast to these, while there still remains, as in certain brute races, of the olfactory, optic, and fifth pair of nerves, a development much greater, a power of conveying sensations of smell, sound, and sight, in certain respects much more acute than is found in higher human beings, there still remains to the monkey a nearer affinity in other organs and parts internal and external;—in the marked contraction and want of room in the brain, thickness of the skull, height and size of the flapping ear, yellow opacity of the eye-balls, incessant vibration of the eyes, and depressed expansion of the nasal cavities, over hollow, cheekless pouches; in the skinny projecting mouth, armed with wide rows of threatening teeth, under which dives away a chin almost obliterated; in the angularity of the shoulders, length of the fore-arm, square obtuseness of the hand, crookedness of the thigh-bone, gibbosity of the tibia, height and smallness of the calf, flatness of the heel and instep, uneven bearing of the sole both longways and broadways, sparseness of the muscle, duskiness of the skin, and tendency of all the parts to a leaning forward, in its turn producing a preference of a crouching to a sitting posture, and a superiority in the movements of diving and of climbing, over those of walking and running, greater than are possessed by higher races. Most negro tribes may still be said to display in their forms a want of fulness, in their movements a want of precision, in their joints a want of hinging, in their articulations a looseness very remarkable. Their arms swing, their legs shuffle along, and, as their bodies seem callous, their minds seem inert. They appear wholly incapable of deep abstraction. No where have they, through an innate force, and unassisted by the prior examples and precepts of white races, attained any degree of advancement in science, or of refinement in art. As in every thing the opposite extremes ever precede the just medium, negroes are in their own native regions still ever found either wholly unshackled by any social control, or smarting under the lash of the most unmodified despotism. They either recognise no bond of union, or obey with the most abject submission the most unbridled tyrants. They either live wholly unawakened to any sense of superhuman guidance, or they exhibit the most senseless superstition, and faith in the silly tricks of sorcery. Their worship is only a worship of fear: it is only addressed to spirits of evil, whose wrath they strive to avert merely by streams of blood. They have not yet a religion of love, a reverence for an author of good, whose favour is only to be gained by rooting out the ill propensities of the heart. Ages roll over their monotonous existence without producing in their mind the least cultivation, in their manners the least improvement. Even among black races, however, though all originally alike produced by, and all evidently only calculated for, climates where prevail the extreme of heat, there may already be discerned many degrees of excellence. The highest of negro tribes are in some respects not only equal but superior to the lowest of white races. There are in Africa, to the north of the line, certain Nubian nations, as there are to the south of the line certain Caffre tribes, whose figures, nay even whose features, might in point of form serve as models

for those of an Apollo. Their stature is lofty, their frame elegant and powerful. Their chest open and wide; their extremities muscular and yet delicate. They have foreheads arched and expanded, eyes full and conveying an expression of intelligence and feeling: high narrow noses, small mouths, and pouting lips. Their complexion indeed still is dark, but it is the glossy black of marble or of jet, conveying to the touch sensations more voluptuous even than those of the most resplendent white.

(To be concluded in our next.)

Ivan Vejeeghen; or, Life in Russia.

[Second notice.]

WE have nothing to do but continue our extracts from this characteristic and entertaining publication.

State of society in Moscow.—"Old mother Moscow is like a decrepit rich widow, who, after having lived in the great world, has retired to a country town in the interior of Russia, which lies in the centre of her property, in order to play the first rôle in her own neighbourhood, without breaking off however her connexions with the metropolis. Moscow, my dear friend, has out of all manner of exotic fancies and rarities, succeeded in weaving for her own shroud a really original article, in which foreigners may distinguish the yarn of their own spinning, but the body of the tissue and the patterns can be claimed by none but our own dearly beloved Moscow. The best Moscow society is composed in the first place of the old men, as they are called, who have overlived their time, and from ennui or other causes have settled in Moscow for a temporary rest, in expectation of an eternal. This respected rank constitutes a living chronicle for the last half century, or rather living quotations from the contemporary history of Russia. The members of this body form also an areopagus, or supreme court for judging of all contemporary occurrences. They hold their sittings at the English club, and at the houses of respectable elderly ladies of the first three classes. The distinction of ranks is observed by them with as great strictness as in a well-drilled regiment under arms. Politics, war, the internal administration of the empire, the appointment to public offices, the decisions of courts of law, and particularly the distribution of ranks and orders, are all subject to the review of this croaking areopagus. It is this class which gives balls, dinners, suppers, and soirées, to persons of distinction passing through Moscow, to public functionaries of the first class, and to the first-rate nobility. In the second place—gentlemen in actual service in the Moscow courts of law, who differ in this only from the public functionaries of Petersburg and other places, that they live more luxuriously, have more inclination for business, and do not take up their time with collateral objects, such as literature and the sciences, as some of our young civilians do in Petersburg. In the third place, sinecurists, or mothers' darlings; that is to say the rear-rank of the phalanx covered by blind fortune. Of these lucky people, the greater part cannot read the Psalter printed in the Slavonic character, although they are all included in the list of Russian antiquaries. They go under the name of 'the youth of the archives.' They form our *petites maitres*, fashionables, husbands of all brides, lovers of all women whose nose is not situated on their chin, and who know to pronounce *oui* and *non*. They are the law-givers of the *ton* amongst the Moscow

youth, on the promenades, in the theatres and drawing-rooms. This rank also furnishes Moscow with philosophers of the last hatch, who are full of every thing to the brim except wholesome thought—*cognoscenti* in rhyming, and desperate judges of rhetoric and the sciences. In the fourth place, an immense drove of all sorts of public men retired from the service, belonging to old families who have attained distinguished ranks, in hunting for which they have spent their property; some who, with little trouble, live upon cards and their shifts, and some who merely live from hand to mouth upon Moscow hospitality. In the fifth place, provincial landholders who come to spend the winter in Moscow, to eat up their farm-stock, and to have the pleasure of seeing their daughters dance at the assembly of the *noblesse*, or at evening parties, till some bridegroom, attracted by the dowry, (the scent of which talkative aunts know well how to spread,) demands their charming hand, which has known no sort of work from the day of its creation. In the sixth place, gentlemen travellers from Petersburg and the army, in quest of rich brides, for which Moscow has been famed from time immemorial. These gentry begin usually at the very top of the ladder, but alight upon *elèves*, or merchants' daughters, who are surer bargains.

"The most prominent feature of Moscow is hospitality, or the propensity for keeping open table. My dear Vejeeghen! if our planet by any particular misfortune should be subject to a ten year's scarcity, and supposing provisions were sold for their weight in gold, even then nobody would be starved in Moscow except the *dvorovay*-servants, who at other times, amidst the general abundance, are not over-well fed, probably that they may be the lighter for work. Although I am no statistical man, I may affirm without hesitation, that more is eaten and drunken in Moscow, during one year, than in the whole of Italy in twice the time. To make their guests eat and drink to excess is esteemed in Moscow the first characteristic of a good *accueil*."

"When her husband was in power, the secretary durst not engross a decision without asking Aquilina Semenovna, and the petitioners were obliged to address themselves to her before they appeared in court with their petitions. One day there came to her an old woman, with a handkerchief about her head and a strange-looking *shoob* (fur coat), to petition in favour of her grandson, whom the community had marked out for a recruit. After falling down at her feet, the old woman gave Aquilina Semenovna a little box, adding, 'Take this, ma'am; if it does not suit you, it will do for your daughter.' Aquilina Semenovna, thinking that the old woman was giving her a snuff-box, fell into a passion, screamed out with all her might, in order that the country gentlemen who were in the adjoining room might hear of her disinterestedness, and gave the old woman a box of another sort in return. The box fell on the ground, and the pearls were scattered on the floor. What a pucker she was in! There was Aquilina Semenovna sprawling on the floor, gathering up the pearls, and bawling out to her daughter Ashenka to come to her assistance. Ashenka flew to her from the other room, but forgot to shut the door, so that the gentleman saw the whole farce. One of them questioned the old woman on the street, and spread the news through all the government. 'Ha, ha, ha!' 'That was a lesson not to despise trifles. It is not for nought that Seedor Karpeetch always repeats—' What is good to

give is good to keep, and every gift is complete.'"

Of what, however, may be effected by individual exertion, an encouraging example is shewn in Mr. Rossiyaneeff, whose estate exhibits the good consequences of common sense reduced to practice. The remark its owner makes is too rational to be omitted.

"Following the advice of my father-in-law, I began the management of my estate, not after the English or German fashion, but after a fashion suitable to our climate, soil, and manners. No new devices were carried into execution by me on a great scale, till I had made repeated trials of their effects upon a small."

We conclude with an entertainment given by a rich merchant, desirous of getting into high society and marrying off his daughters splendidly.

"Arraying myself in the most foppish style, I went to the place appointed for meeting with the secretary, and from thence straight to Moshneen's house. Up to the moment at which I am writing, I cannot conceive what pleasure the master of a house can have in inviting to dinner people who differ as far as east from west, in their education, worldly circumstances, habits of life, and casts of thought. In the first place, he heaps up for himself a mass of trouble, and frequently of dissatisfaction; and, in the second place, he confers a disagreeable favour upon his guests. The landlord must screw his features into a different pitch towards each of them; and the guest, for his part, does not know what tone to assume, nor with what degree of communicativeness to carry on the conversation. All this I experienced that day at Moshneen's. I had scarcely entered the saloon, when I might fancy myself at the Makarieff fair. Officers civil and military, merchants of all nations, in different costumes, of all degrees, from the highest guild down to the lowest broker; females, some in the tiptop of Parisian fashion, others in blonde and lace caps, others with silk handkerchiefs about their heads, some in jackets—in a word, a confusion of tongues—a real *divertissement*! I ran my eye over a crowd of guests, whispering and bawling about the weather, and fortunately did not see one face which I knew: this gave me courage—I confess, I was afraid of meeting with some of my old card-table acquaintances. The secretary asked a footman where the landlord and landlady were: we were taken into a huge dining-room. There Pampheel Merkoooloveetch, with his better half, was hard at work, the sweat upon his brow. Footmen were taking wine out of baskets, the butler was giving his verdict upon the quality of each, the landlord was separating the one from the other, disposing the best wines in the places of honour, while the home-made madeira and port were put to the other end of the table for the use of the more common guests. The landlady, a healthy-looking fat woman, of about fifty years of age, dressed in the German fashion, with a silk *kosseanka* (head-dress) about her head, was arranging the dessert. They apologised to me for being found in the midst of household labours, and begged me to be without ceremony, as if I were at home. We returned to the company, and I begged the secretary to introduce me to the landlord's children. The two sons of Moshneen, dressed in the latest fashion, complimented me in French phrases, and endeavoured to shew themselves clever, and to sport an easy freedom; in a word, to act the part of people of *haut ton*. It was evident that they copied all the gestures

of the young dandies of the great world, not as they are exhibited in drawing rooms, but in the theatres, on the boulevards, at the public promenades, and the *corps de gardes*; owing to this, their demeanour at first sight appeared too familiar and even impudent. They had already left the mercantile denomination, and entered the career of the civil service, that is to say, the shopmen, clerks, and footmen, styled them 'your honour.' I endeavoured, from our first interview, to conciliate their good graces by accommodating myself to their ideas, and begged them, 'as is usual in the great world,' to present me to their sisters. The words 'great world' tickled their vanity; and taking me by the arm, they led me into the drawing-room, where there was a large assembly of young ladies, gaudily dressed. Some of them were seated on chairs and on a sofa, others were whispering to each other beside the windows, and some were walking up and down the room. The brothers led me up to their sisters, who fortunately happened to be all in the same place, and introduced me, muttering some words in French. The two oldest were arrayed in the latest, and at the same time the showiest fashion; the youngest was plainly dressed. They made me a curtsy in exact conformity to the rules of the dancing-school; and the oldest sister, in the name of the rest, answered me in French—'*Charmée de faire votre connaissance!*' If fatness and whiteness are to be taken as the standards for beauty, as in the east, and particularly in China, the oldest Miss Moshneen might have passed for the greatest beauty in Pekin, and the second for the next;—only it is a pity that the Chinese have such a predilection for small feet; with us in the north that is very uncommon, and was none of the peculiarities of the two oldest Misses Moshneen. But the youngest was charming, in every sense of the word. From the colour on the face of the oldest sister, and a certain involuntary agitation, I conjectured that the wily *svakha* had already broken the ice with her. It was observable at the same time that all the guests peeped at me through their eyelashes, and then stared in each others' faces, and whispered together. Considering it improper to continue the conversation with one young lady in the midst of a circle of silent observers, I made my bow, and withdrew with my new friends into the other room. We were forthwith summoned to dinner, and I was seated between the two young gentlemen, of course at the respectable end of the table. Any sort of general conversation was out of the question during dinner. Officers talked together about promotions and new evolutions; civilians, about new ukases and changes in the ministry and public offices; dabbles in law, about crimes and punishments; merchants, about the course of exchange, fresh bankruptcies, and the prices of the day. Some of the mercantile youth, and among the rest the young Moshneens, displayed their knowledge of horses, fashionable surtouts and vests, the theatre, female singers and dancers. However, amidst all this, none of the guests neglected the more serious part of the business; empty bottles were continually being changed for full ones, by a signal from the landlord, who, sitting at the end of the table, like a Jupiter, by the mere play of his eyebrows, put in motion the whole popular system. The voices of the ladies were not audible, except in giving brief answers to questions put now and then by gentlemen. My neighbours emptied bottles without ceasing, ordered the servants to hand us the best wine; and by the time that

the toasts began, the whole company was already *ree*. Half-tipsy footmen ran here and there with bottles, as if they were distracted, spilling the wine upon the guests, and making a prodigious fuss. The drinking of healths was commenced. In the first place the young lady's whose name's-day they were assembled to celebrate; after that, the health of the parents, children, relations, respectable guests individually, the whole company, &c. The fair sex in the mean time were quietly occupied with the dessert. The young ladies pecked the berries like as many little birds; and though they were already crammed to repletion, they continued to swallow fruits and confections, in small mouthfuls, with every appearance of satisfaction. Although quite disposed for merriment, I could not join in that of the young Moshneens, at the expense of their parents. At every awkwardness of papa and mamma, the dear little children laughed, concealing their faces with their table-napkins, and winking across the table to their oldest sisters. The sons called their father the scoopish old clerk, and their mother the counter; and even cracked their jokes aloud in French. The worthy parents, who did not understand a word of what they said, seemed quite pleased to hear their children speaking a foreign language. I was drawn, in spite of myself, to reflect upon the worthlessness of that system of education which, exclusively cultivating outward shew, and leaving moral principle out of sight, makes us look down upon the condition in which we were born; and, by implanting false notions of self-importance, stifles in the heart the feelings of nature."

Truly this picture brings us home. We now cordially recommend these volumes to our readers. If read as a mere romance, we doubt its obtaining that popularity in England with which it has been received in Russia—priority being an author's best security of success: here he has many rivals in amusement, and there he has none. But *Ivan Vejeeghen* is full of curious information and original and animated scenes. The translator has executed his task with much fidelity and spirit. We think, however, that a little more softening of some of the coarser scenes would have been desirable.

Aldine Poets, XIII. The Poetical Works of Alexander Pope, Vol. I. London, 1831. Pickering.

As elegant a volume as any of its predecessors, with a very interesting portrait of Pope. An accurate and industriously collected memoir of the poet, by the Rev. Alexander Dyce, is affixed, with, however, no striking novelty to call for extract.

Framlingham; a Narrative of the Castle. In Four Cantos. By James Bird. pp. 181. London, 1831. Baldwin and Cradock.

An interesting story, very poetically told, but depending too much on the attraction of narrative to admit of advantageous extract. A very beautiful view of the fine old castle, beset deep in woods, gives locality to some graceful description. There are also some amusing notes.

ARTS AND SCIENCES.

THE NIGER, &c.

WE are glad to hear that Mr. Murray has given Messrs. Landers a thousand guineas for their journal: this is some reward to cheer them after all the fatigues and dangers of their travel; and we know it is also the intention

of the noble and liberal Secretary for the colonies, within whose department their services have been performed, to mark by more than barren praise the sense which government entertains of their merit. While mentioning the subject, we may state, on the authority of a very intelligent friend who has just reached England from the coast of Africa, that the natives and merchants residing there agree in their representation, that "all the rivers from the Volta to the old Calabar (including a space of at least five hundred miles) communicate with each other; which inland communication, they told our informant, was frequently used in the intercourse between one nation and another, in preference to going in their canoes along the coast. The country, they assured him, is so intersected by swamps and rivers, and so thickly covered with wood, that it is almost impossible to get from place to place except by water." This accounts for the climate being so fatal to Europeans.

M. BONPLAND.

AT length tidings have been received of this eminent naturalist. The following is a copy of a letter published in the *Lucero* of the 29th March.

St. Borja, 23d February, 1831.

"My dear and old friend,—Convinced of the lively interest that you have always taken in my fate, I hasten to inform you of my departure from Paraguay. After twenty months' delay at Itapua, where I formed and left a second agricultural establishment, I at last set out for the Parana, by superior order of 2d of February. The 8th found me at the banks of this river, and on the 15th I arrived at San Borja. The bearer of this is Señor Araujo, a Portuguese merchant, whom I knew in Itapua. I entreat you to render him every service, should an opportunity offer. The excessive rise in the waters of this river has not permitted me to transport all my baggage: as soon as this is accomplished, I shall proceed to visit the towns of the Misiones, on the left of the Uruguay; after which I shall go to Corrientes, where I hope to find all that I left there, especially my books, which are extremely necessary to me, in consequence of the loss I have sustained of many works in the first months of my arrival at Paraguay. From Corrientes I shall return, probably, to San Borja, to arrange my affairs, and afterwards shall journey to Buenos Ayres, where I have so much desire and so much necessity to arrive. In order to put an end to the melancholy suppositions which you and all my friends must naturally have made relative to my existence during the nine years of my detention in Paraguay, I must tell you that I have passed as happy a life as could be expected by one deprived of all communication with his country, his family, and his friends. The practice of medicine has always afforded me the means of subsistence; but as this did not entirely occupy my time, I employed myself, from disposition and necessity, in agriculture, which has given me infinite enjoyments. At the same time I had established a manufactory of brandy and liquors, and likewise a carpenter's and a blacksmith's shop, which not only defrayed the expenses of my agricultural establishment, but yielded some profits from the work performed for private individuals. In this manner I had acquired the means of living with the greatest comfort. On the 12th May, 1829, without any preliminary, the authorities of Santiago communicated to me the order of the supreme director to leave the country. This intimation was a

mixture of justice and wrong, which I cannot yet account for in a positive manner. In short, driven about from 12th May, 1829, to 2d Feb. 1831, that is, during twenty months and twenty days, I at length passed the Parana with all the honours of war. This second epoch of my life in Paraguay has been real punishment to me. I had never given any one cause of complaint.—I had endeavoured to gain the esteem of all. Even the supreme dictator, from my arrival in the republic, until 12th May, 1829, had allowed me the greatest liberty, and the heads of the department in which I was domiciliated, treated me with kindness. At last, as every thing has an end, the director definitively decreed my departure from Paraguay, and has done it in the most generous manner. I am at liberty, and soon hope to embrace you.

"Please to give a thousand remembrances to all my friends who recollect me, as I have no time to write to them. During my detention I had not forgot any one; and without geographical maps I have still travelled a great deal. During nine successive years I have not once spoken French; I therefore hope you will excuse the defects and faults in this letter. Adieu, my dear M. Roguin; I am impatient to see you, and I am going to conclude, as fast as possible, the trifling affairs which detain me here. Your fellow-countryman and sincere friend, "AIME BONPLAND."

"To M. Dominique Roguin."

COLLEGE OF PHYSICIANS.

SIR HENRY HALFORD, Bart. in the chair.—This was the last assembly for the season. Dr. Francis Hawkins, the registrar, read a paper, in which Dr. Gregory, physician to the Small-pox Hospital, explained the grounds on which he had been led to form the conclusion, that the cause of the frequent failure of cow-pox to protect the constitution completely against the attacks of small-pox, is to be sought for, not so much in any imperfect performance of vaccination, nor in the nature of the variolous poison itself, as in the inability of cow-pox to render the constitution insensible to its own influence beyond a certain time. The shortest period in which Dr. Gregory has observed the immunity from cow-pox, in consequence of vaccination, to wear out, is ten years; and when the immunity ceases, it is reasonable to suppose that the constitution is left again obnoxious to small-pox; and Dr. Gregory is then in the habit of recommending re-vaccination. But in many instances the immunity, both from cow-pox and small-pox, lasts for a much longer period. And even when it ceases to exist in perfection, it generally has still sufficient power to mitigate the severity, and diminish the danger of small-pox occurring subsequently to vaccination.—A paper was then read, communicated by Dr. Wilson, which was drawn up by the late James Wilson, Esq., at the request of Sir Joseph Banks, for the information of the Royal Society. In this paper were related the particulars of a case, in which the veins that usually supply the liver with venous blood for the secretion of bile, were found to enter the vena cava without passing through the liver, and this organ received no other supply of blood than that furnished by the hepatic artery, although bile appeared to have been formed in quantity and quality the same as usual.

* From the *British Packet* of April 9, kindly forwarded to us from Buenos Ayres.—Ed. L. G.

CELESTIAL PHENOMENA FOR JULY.

3d 12h—the Earth in aphelion, and the diameter of the Sun at its minimum of 31' 31": the motion of the Earth is also slowest, the arc it describes being only 57' 11"·6 in a mean solar day. 23d 4h 28m—the Sun enters Leo, its place in the heavens being among the small stars in Cancer.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ Last Quarter in Pisces	2	11	40
☾ New Moon in Gemini	9	1	47
☾ First Quarter in Virgo	16	6	3
☾ Full Moon in Capricornus	24	9	5
☾ Last Quarter in Cetus	31	17	41

The Moon will be in conjunction with

	D.	H.	M.
Mercury in Gemini	8	3	40
Mars in Cancer	10	21	30
Saturn in Leo	12	1	45
Venus in Leo	12	10	45
Jupiter in Capricornus	25	20	0

8d—Mercury in his ascending node. 12d—in perihelion. 19d 12h—in superior conjunction.

5d 14h—Venus in conjunction with Regulus. 7d 13h—with Saturn: difference of latitude 12'. This will be an interesting phenomenon: though the closest approach will not be visible, yet, previously to the setting of these planets at 10h 15m, they may be seen in the same field of view of the telescope—Saturn shining with dimmed lustre, and Venus with sparkling brilliancy. The following will be the proportions of the illuminated and dark disc of Venus:

Illuminated disc	= 7·247 digits.
Dark part	= 4·753

and the proportion of the smaller to the greater axis of the ring of Saturn will be as 184 is to 1000. 24d 17h—Venus in her descending node. 28d 14h—in conjunction with Leonis. 30d—at her greatest elongation (45° 43'). The angular distance of Venus from the Sun is not a constant quantity, but varies according to the position of her elliptical orbit relative to that of the Earth: its maximum distance is attained when the planet is in its aphelion, and the Earth in its perihelion; it is then 47° 48'; its minimum when the planet is in its perihelion, and the Earth in its aphelion, in which situation the angle of elongation is 44° 57'. It now appears as a half-moon, and will be increasingly interesting as a telescopic object till the month of October, gradually waning away to a delicate crescent form.

Mars is too remote from the Earth and too near the Sun for satisfactory observation.

The Asteroids.

	D.	H.	M.	S.	N.D.	Δ	γ	°
Vesta .. 3 R.A.	5	36	0	21	20	0	0
11	5	51	0	21	30	0	0
19	6	6	0	21	39	0	0
27	6	20	0	21	38	0	0
Juno .. 3	5	53	0	14	38	0	0
11	6	11	0	14	34	0	0
19	6	30	0	14	21	0	0
27	6	48	0	14	0	0	0
Pallas .. 3	19	50	0	19	53	0	0
15	19	40	44	19	20	8	0
20	19	36	42	18	55	1	0
21	19	35	54	18	49	14	0
22	19	35	6	18	43	12	0
23	19	34	18	18	36	56	0
24	19	33	31	18	30	24	0
31	19	28	10	17	38	18	0
Ceres .. 3	21	34	0	S.D.	25	42	0	0
11	21	31	0	26	36	0	0
19	21	26	0	27	32	0	0
27	21	19	0	28	26	0	0

Two only of the Asteroids will this year be in opposition to the Sun, Pallas and Ceres; of these, Pallas only will be favourably situated, the other will be too far south for satisfactory observation in this hemisphere. Pallas may be seen, early in the month, in the Via Lactea, half a degree north of γ Sagittae; about the middle of the month it will pass close to ζ, and

the 22d be in opposition, between α and β. This small planet may be distinguished by its ruddy colour, which is, however, not so intense as that of Ceres: its light is very variable, sometimes appearing pale and enveloped with vapours, at other seasons shining forth distinctly, and exhibiting a defined disc. The constellation (Sagittae) in which this asteroid will be in opposition, though occupying but a small space in the heavens (15° by 4°), is remarkable for several interesting telescopic objects, among which are the following: ζ and α are double stars; near the former of these is a triple star; there are also two double stars near β and γ; δ and χ are triple stars; between γ and δ is a nebula; there are also richly compressed clusters of stars, and a nebula with a defined planetary disc, 30" or 40" in diameter; δ, it is supposed, has increased in magnitude since the time of Flamsteed—it is now larger than α and β. The origin of this constellation (Sagittae), according to the Greeks, may be traced to one of the arrows with which Hercules killed the vulture that gnawed the liver of Prometheus, whom Vulcan chained to Mount Caucasus, by order of Jupiter.

The planet Jupiter is rapidly gaining on the summer even, and towards the latter part of the month will divide the empire of the heavens with Venus, the former rising, pure and magnificent, to shine with splendour during the brief interval of night, and the latter following in the train of the glorious Sun, to send forth trembling floods of radiance over the western world. 27d—Jupiter in conjunction with Capricorni.

Eclipses of the Satellites.

	D.	H.	M.	S.
First Satellite, immersion ..	11	12	35	42
18	14	30	5	
27	10	53	12	
Second Satellite	1	11	25	52
8	14	0	44	
Third Satellite	11	13	29	48
Fourth Satellite	24	13	33	19

Saturn is gradually fading away in the bright glow of the setting Sun.

Uranus in Capricornus is advancing to a favourable situation for observation.

Deputy.

J. T. B.

LITERARY AND LEARNED.

FAMILY PAPERS.

OUR account of the Cecil Papers must render it gratifying news to the lovers of our native historical literature to hear that Mr. John Martin is similarly employed in arranging the papers of the Marquess of Downshire's ancestors—the Trumbulls. They extend from the period of James the First to Queen Anne. The first Mr. Trumbull, who was resident at the court of Brussels, we understand, collected during his political career a vast number of curious documents from his diplomatic brethren; among which are the original and curious negotiations for the marriage of Charles the First and the Infanta. The papers of the last Sir William Trumbull, our ambassador at Paris and Constantinople, and afterwards secretary of state during the reigns of James II. and William and Mary, are also reported to be very curious. It is probable that some of the most valuable may, with the noble owner's permission, be given to the public.

FINE ARTS.

PICTURE CLEANING, &c.

THERE are few arts the fair practice of which is of more interest to the lover of paintings than the art of picture cleaning. By man

the processes hitherto employed, we have seen the noblest works of the great masters altered or destroyed; and the modern hand so evident upon a multitude of pictures, is only a proof of the anxiety to restore that which unskilfulness and injurious agents have conspired to damage. We have of late had trial made upon several pictures, of a composition discovered by Signor L. Joffroy, Professor of Painting and Miniature Painter, in which we are assured the use of spirits is abandoned, and the effect of which has been perfectly satisfactory to us. The original features and colours of these works have been well and clearly brought out from the obscurity with which time and negligence had covered them; and they now look as fresh as if just from the easel. Having ourselves made such agreeable experience of Signor Joffroy's talent, we are sure we shall be obliging many of our friends by mentioning the circumstance.

NEW PUBLICATIONS.

The National Portrait Gallery, &c. With Memoirs by W. Jerdan, Esq., F.S.A., &c. Part XXVII. London, 1831. Fisher, Son, and Co.

THIS Part contains portraits of Lord Lyndoch, Sir Walter Scott, and the Earl of Albemarle; the first and last after Lawrence, and the second after a fine head by J. Graham, beautifully engraved by Woolnoth. Such a production is alone sufficient to make the fortune of a Number. The romantic military career of "the gallant Graham" is a good contrast to the literary life of the great poet.

Sketches in Italy. Drawn on stone by W. Linton. No. IV.

THE fourth Number of this interesting work contains views of "Turin," "Il Ponte Rotto," "Florence," "Mecenas's Villa at Tivoli," "Venice," "Ruined Palace, Bay of Naples," "Perugia," and "Temple of Vesta, Tivoli;" in all of which Mr. Linton has fully maintained the high character which he established in the preceding portions of the publication.

Picturesque Gleanings in the North. A Series of Lithographic Prints, from original Pictures by C. Terry; drawn on stone by H. O'Neil. No. I. Ackermann.
SLIGHT, but pretty.

Illustrations of Don Quixote. Designed by Henry Alken; engraved by John Zeitter. Part I. Tilt.

If ever name was auspicious to an undertaking, that of Tilt as the publisher of illustrations of knight-errantry is surely so. We regret, however, to add, that we have been disappointed in the expectations which that apparently happy coincidence excited. Repeated experience has, indeed, shewn that it requires great taste and skill to preserve the breadth of Cervantes' humour, and yet to avoid caricature. We cannot congratulate Mr. Alken on his success.

ORIGINAL POETRY.

INFANCY.

"The smile of childhood on the cheek of age."

A CHILD beside a mother kneels,
With eyes of holy love,
And fain would lisp the vow it feels
To Him enthron'd above.

That cherub gaze, that stainless brow
So exquisitely fair!—

Who would not be an infant now,
To breathe an infant's prayer?

No sin hath shaded its young heart,

The eye scarce knows a tear;—

'Tis bright enough from earth to part,

And grace another sphere!

And I was once a happy thing,

Like that which now I see;

No may-bird, on ecstatic wing,

More beautifully free:

The cloud that bask'd in noontide glow,

The flower that danced and shone—

All hues and sounds, above, below,

Were joys to feast upon!

Let wisdom smile—I oft forget

The colder haunts of men,

To hie where infant hearts are met,

And be a child again;

To look into the laughing eyes,

And see the wild thoughts play,

While o'er each cheek a thousand dies

Of mirth and meaning stray.

Oh! manhood, could thy spirit kneel

Beside that sunny child,

As fondly pray, and purely feel,

With soul as undefiled—

That moment would encircle thee

With light and love divine;

Thy gaze might dwell on Deity,

And heaven itself be thine!

SKETCHES OF SOCIETY.

THE STORMING OF ROME IN 1527.

By Giovanni Bonaparte.

UNDER the title of *Sac de Rome, écrit en 1527, par Jacques Bonaparte, témoin oculaire*—(traduit de l'Italien par N. L. B. pp. 91)—the translator, the Count de St. Leu, better known as Louis Bonaparte, has had printed at the grand ducal press at Florence a valuable document left by one of his ancestors, relative to the storming and plunder of Rome by the imperial troops under the Constable of Bourbon. In the introduction he has given some genealogical particulars concerning the Bonaparte family. The earliest mention of the Bonapartes occurs in Bonifazio's History of Treviso at the year 1178, when Giovanni Bonaparte was sent as envoy of the Trevisans to Padua, to learn the sentiments of that city. This Giovanni was one of the first knights of the Spanish order of San Jago, instituted in 1170, and founder of the hospital of that order in his native city. In a treaty of peace between the cities of Padua, Verona, Vicenza, and Treviso, in the year 1208, he appears as one of the witnesses. His son Bonisperio is mentioned among the nobles of the country in 1219. The knight Nordillo Bonaparte was one of the hostages whom Treviso was obliged to send in 1258 to Ezzelin de Romano. In 1268 he gave security, in some matter relating to the tolls, for Conradin of Swabia; and, as Syndic of Treviso, he concluded in 1271 a treaty of commerce between that city and Venice. In the following year he was Podesta of Parma. He afterwards founded an hospital at Treviso, and died on the 3d of April, 1290. His brother Pietro appears in 1312 in a league of the nobles against the tyrant of his native city. In 1313 he was, as one of the *quatuor viri sapientes*, ambassador to Gran Cane della Scala, Lord of Verona. In 1318 he was Podesta of Padua, and in the following year ambassador at the court of Frederic of Austria. Towards the end of the fourteenth century the family appears to have removed to San Miniato del

Tedesco, in Tuscany; and its name frequently occurs among the partisans of the Ghibellines there, in Florence, and in other places. In later times we find several scholars of the family, and among others Nicolo Bonaparte, who introduced the study of jurisprudence at the university of Pisa. Another of the same name was, about the middle of the fifteenth century, clerk of the papal chamber, as appears from a sepulchral inscription in the church of San Francesco, at San Miniato. Giovanni Jacobo lived at Rome in the Orsini Palace, and there described as an eye-witness the plunder of the city in 1527. Finally, in 1612, Ludovico Maria Fortuna Bonaparte, of Sarzana, settled at Ajaccio in Corsica, during the war with the Genoese.

The account of the sacking of Rome is an interesting contribution to the history of the sixteenth century: it is written in a spirit of equity and moderation, and is the more worthy of attention, inasmuch as we possess no well-authenticated historical narrative of this melancholy event; and all that we find on the subject in contemporaneous memoirs—for instance, in the autobiography of Benvenuto Cellini—is unconnected, and full of errors. The latter, it is well known, among other things, arrogates to himself the merit of having killed the Constable of Bourbon, which, considering the locality of the Castle of St. Angelo, is almost impossible.

The following passage may serve as a specimen of the author's manner:—

"The army, despairing of the reduction of the castle—the Castle of St. Angelo, in which Clement VII. and many prelates of the church had taken refuge] divided itself into several bodies, which proceeded to the different quarters of the city. As they passed along, they found the fathers and mothers of families sitting at the thresholds of the palaces, or at the entrances of the houses, inconsolable for the loss of their children slain in the struggle, and full of gloomy apprehension of the calamity that yet impended over the unfortunate city. These wretched creatures, dressed in mourning, offered to the enemy their houses and all they possessed, and with floods of tears supplicated for their lives. The hearts of the rude soldiers were not touched by their prayers: as if stimulated by the sound of drums and fifes to the massacre, they fell sword in hand upon the petitioners, and slaughtered all whom they could come at, without distinction of age or sex. Foreigners were not spared any more than the Romans themselves; for, from the mere thirst of blood, they, like furies, shot and cut in pieces the one as well as the other. Exasperated by the death of their leader, they disgraced themselves by cruelties to which history scarcely presents a parallel. As they found none to offer resistance, they were soon absolute masters of the ancient and noble city, which was as full of treasures as an army intent on plunder could desire. The Spaniards were first tired of the slaughter, and felt some sentiments of humanity and compassion revive within them towards men, who, though their enemies, were yet Christians. They ceased to slaughter, and made prisoners. When the Germans perceived that the Spaniards had discontinued to avail themselves of what was called the right of war, they began to suspect treachery. The Spanish officers represented to them that the city was taken; that being abandoned by those who should have defended it, so that they had themselves nothing more to fear; and that, as the inhabitants had concealed their most valuable

treasures, it would be wise to spare their lives, in order to make them reveal their hiding-places. The Germans yielded to these arguments. They now seized all passengers and those whom they found at the doors of their houses, and forced them to open their apartments, which they immediately stripped of every thing of value. But they were not content with this: the women were exposed to the most horrible outrages. No one durst so much as raise his voice against these atrocities; it was forbidden to weep over sufferings which would have softened hearts of stone, and moved the very damned. These barbarians paid no regard either to high rank, or to the prayers of beauty, or to the tears of mothers: their hearts were closed against every humane feeling. Daughters were seen throwing themselves into the arms of their wretched mothers, and mothers seizing soldiers by the beard and by the hair to pull them back—but to no purpose. Entreaties, resistance, only served to aggravate their fury. The fettered fathers and husbands, paralysed with horror, had no more tears, no voice for lamentation. They gazed vacantly on, inanimate as statues. Some mothers, unable longer to endure the sight, tore their own eyes out; others hurried into subterranean cellars, where they soon found relief in death. Amidst the general consternation, however, some traits of Roman firmness were displayed. Several fathers buried their daggers in the hearts of their daughters, rather than suffer them to fall into the hands of the barbarians."

But turn we from this scene of horror, which, a century later, was so hideously re-acted in the heart of Germany, at the destruction of Magdeberg.—*Desultory Foreign Reading.*

DRAMA.

KING'S THEATRE.

THE piece brought out at Lablache's benefit, *La Prova d'un Opera Seria*, has proved so attractive, that it has been repeated several times since. The music is by Gnecco, a composer who lived before the "new order of things;" and it thus gives us the rare satisfaction of hearing something that is not à la Rossini. The opera contains many amusing scenes. The subject is the getting up of a serious opera, parts of which are rehearsed at the house of the *prima donna*, and in the theatre. There is a plot arising from a love-affair between this lady and the principal tenor; but the drama is so mangled by compression into one act, that little or nothing can be made of the story. Pasta is delightful as the singing lady: the versatility of her talent seems wonderful. In the arch and whimsical creature before us, we could not discover a vestige of the haughty *Semiramide*, or the furious enchantress *Medea*. Every thing she did was playful and grotesque, yet as far as possible from vulgarity. There is a native elegance about Pasta that never leaves her; and even her burlesque singing, though ludicrous in the extreme, is enchantingly graceful. Lablache, in the part of the composer, displayed the richest humour. The quarrel scene between Pasta and him produced roars of laughter from every part of the house. We heartily wish we could see these great performers together in some other comic characters: we are wearied with the monotony of two or three serious operas, which become fatiguing when eternally repeated, even by Pasta. She plays *Zerlina* charmingly: why has she done it only once this season? and why has she not performed

some other comic parts? We are sure that her not doing so is neither for her own interest nor that of the manager.

HAYMARKET.

PREVIOUS to noticing the new two-act comedy produced here last Tuesday, we feel called upon to advert to some of the vices which have grown to so high a pitch at this house as to remove it almost wholly from the place it occupied in public opinion and degrade it below the standard of the least regular sub-urban minor. The boast of the Haymarket used to be, sterling pieces, represented (and consequently seen to advantage) on a small theatre, and by talents of the foremost class. It was, with these attractions, for many years the resort of many of the true lovers of the genuine drama. *Mais nous avons changé tout cela.* The alternations, now, are, in chief, from operas miserably performed by wretched musicians, to comedies enacted in a manner which would be hissed in a barn: for one or two good singers are only lost in an opera otherwise wretchedly sustained; and one or two excellent comedians can do but little for a play, where the rest of the cast is worse than "leather and prunella." On Tuesday, *As You Like It* was done in such a way as we never saw any thing like it on London boards; nor in the poorest provincial town, by the poorest strolling players, could this fine composition be more completely murdered. Cooper, as *Jaques*, alone was respectable; and simply because his part is principally soliloquising, and does not depend upon the association around him,—such association as rendered (we hope it was *that*) Miss Taylor's *Rosalind* very indifferent. Were the efficient representation of popular entertainments the real object pursued at the Haymarket, we should not have to arraign this system of mismanagement, which equally pervades the other departments. But there are different attractions in view, and the conduct of all concerned is squared accordingly. The vulgar insolence of the officials about the house is in perfect keeping with the rest; and until towards midnight, the system does not work well at all. Then it becomes apparent enough what is the principal intent and purpose of the Little Theatre; and why it contrives to keep open house till one, or half-past one o'clock. Five-act comedies, begun after eleven o'clock, no matter how acted, do as well as any thing else to congregate the drunk and the dissolute, whom these late hours find afloat upon the town,—the passages and the lobbies overflow, and, as there is no half-price, that amount which might be obtained by dramatic merit from respectability at seven, is at least partially supplied by resources from no respectability whatever, at and after twelve. We sincerely regret to see our once favourite theatre so deplorably perverted. But we turn to the novelty, a *Friend at Court*, adapted by Mr. Planché, in prose, from *La Fille d'Honneur*, in verse. Farren, as the rich, kind-hearted old pedler, was exquisite throughout. Miss Taylor played the principal female character, and played it beautifully. The scene between her and Farren was quite perfect; her acting and attitude on deciding not to become maid of honour to the electress, learning at the same time she is intended to be mistress to the young prince, was extremely graceful. The other parts were well played by Cooper, Mrs. Faucet, Brindall, and Vining. Altogether, this is one of Planché's hits, quite equal, in its way, to *Charles the Twelfth*; and we can bestow no higher panegyric upon any drama of its order.

MR. ARNOLD, we observe, is under the necessity of opening another season at the Adelphi Theatre; but this will be the last of the performances of the English Opera company in that establishment, as the building of the projected new theatre, for which 30,000*l.* is subscribed, will positively commence in September next, to be ready for opening in May 1832. For the present short summer season Mr. Arnold has added to his company Mr. John Reeve, whose comic capabilities, together with those of Wrench, Miss Kelly, and the usual excellent assortment of talent engaged in the English Opera's *corps dramatique*, will, without doubt, ensure good houses.

THIS has been, dramatically speaking, a conclusive week. Covent Garden closed on Monday, with Miss Kemble in *Juliet*; on Thursday Mathews and Yates ceased to be *At Home*, after having seen and entertained a great deal of company throughout the whole season; and last night the French Plays also finished at the Adelphi.

IL SIGNORE PAGANINI!

WE were among the first to spread the continental fame, and have been among the most cordial to hail the extraordinary talents exhibited by this performer in England. But, though we should rejoice in his combined success for months to come, we cannot but reprobate the impudent effrontery with which declared "last nights" are followed (if it can be called *followed*, where the advertisements are sent to the newspapers before these last nights occur) by the announcement of farther concerts. This is a most disreputable and offensive course. No one ought to begrudge to unequalled powers even lavish reward; but it is disagreeable to see trick and charlatanism added to the fair claim of merit and genius.

SIGNORE DE BEGNIS' CONCERT.

ON Wednesday one of the best and most crowded concerts of the season was given by this popular singer, at the rooms in the King's Theatre. The whole of the entertainments were admirably chosen and finely executed. The aria, "Bel raggio," was sweetly sung by Madame Meesi; and the aria, "Ah, se estino!" hardly less so by Madame Raimbaux. We also greatly admired the terzetto, "Pappatoci, che mai sento," by Signori Rubini, Lenox, and De Begnis; a Swiss air, by Madame Stockhausen (accompanied on the harp by M. Stockhausen); "Io! here the gentle lark," by Miss Bellchambers, with flute obligato by Mr. Nicholson; the terzetto, "Cruda sorte," by Mesdames Stockhausen and Raimbaux and Signor Torri; and the Gran Solo Violino by Signor Paganini. But indeed the entire concert was so effectual, that to do it justice, we should do nothing but praise every individual performance and performer. De Begnis has made himself particularly acceptable to the British public; and he merits the highest patronage both by his talents and conduct.

AMONG our other musical attractions of the day, we observe that the boy George Aspull, whom we noticed as an instance of extraordinary precocity so long ago as June 1824 (see *Lit. Gaz.* No. 386), has returned to London, after travelling over the kingdom, and is about to give a morning concert. His powers, we understand, are more fully developed by seven years of practice; and we shall be curious to ascertain how one of our young phenomena has justified the promise of his early genius.

VARIETIES.

Aquatic Excursion.—Our friends of the Printers' Pension Society have appointed Monday for their fourth annual aquatic excursion, and for the benefit of the fund of that excellent institution. The *Venus* steamer is the appointed vessel, and the excursion to the Nore, including a visit to the *Royal George*, of 120 guns, by permission of the Lords of the Admiralty. Wishing prosperity to the charity, we cannot also but wish a pleasant and a profitable trip to the *Venus*.

St. Mary-le-bone Institution.—We are glad to see, from a prospectus recently issued, that this rich and populous quarter of the town is about to establish an Institution for science, literature, and art. It is to consist of reading-rooms and a library; to have weekly meetings, where original papers will be read, and objects of virtue, &c. shown; lectures, a museum, &c. &c. Every one must wish well to such establishments for the diffusion of intelligence, and the better occupation of time than in frivolous pursuits or dissipation.

The Periodical Press.—From an incidental discussion in the House of Commons on Tuesday, it appears that the country is again teeming with low-priced publications of the most disgraceful and demoralising character. It is worthy of remark, that this most important of all subjects should have elicited only very limited, partial, and party opinions—that no one member should have risen to take a broad and enlightened view of it. The press, whether it operates for good or evil, deserves more attention, both from the executive power and the legislature, than has yet been bestowed upon it. It mingles with, fashions, controls, defeats, excites, or promotes every other measure; and yet this elemental principle is itself the least under wise direction of any component part of government. There are, and indeed there must be, laws to which it is amenable; but, for all general effects, parliament and the public may depend upon it, the *bad in the press* is only to be counteracted by the *good in the press*, and the encouragement of the latter is the only means of neutralising the poisons of the former.

Industry of Birds.—Dr. Steel, who lives near the mineral springs of Saratoga, in New York, has ascertained that the bank swallow (*hirundo riparia*) knows how to vary, according to necessity, the construction of its nest. If it finds sandy banks, it bores holes in them, and thus forms for its future family a commodious habitation, into which none of their enemies can enter. When this resource is wanting, it approaches the houses, and, although less accustomed to man than the swallow of the windows, it attaches its nest to granaries, farm-yard sheds, and similar edifices; and then, it being necessary to build instead of to dig, it selects materials, transports them, and puts them in their proper places. It thus appears that this species of swallow has not essentially the habits indicated by its specific name; but that it will live contentedly wherever it can find food, safety, and the charms of society; for isolated families, or solitary nests, are never seen. A little colony, which established itself in the neighbourhood of Saratoga in 1828, increased so rapidly, that in 1830 it consisted of several hundreds of nests.

Weeds.—The annoyance of grass or weeds springing up between the stones of pavement, and in gravel-walks, &c. may be got rid of for years by watering with a solution of lime and sulphur in boiling water.

Ladies' Bazar.—The proceeds of the Bazar lately held in the Regent's Park, for the benefit of the Dispensary for Diseases of the Ear, are intended more especially to be devoted towards erecting a spacious building for the reception of deaf and dumb children, for the purpose of whose cure a mode of treatment is proposed to be adopted, which, we are assured, has, when had recourse to early, been very successful in restoring hearing and speech. Such an object is certainly deserving of public encouragement.

New Peers.—A French publication, in giving a list of the vice-presidents of the Royal Humane Society, has made some whimsical mistakes. Among them we find—Comte de Stamford, Duc de Romney, Duc de Powis, Duc d'Eldon, Lord Prudhoe, &c. The college honours of some of the chaplains of the Society are also oddly enough printed as names, thus: D. D. R. Yates.—D. D. Rev. T. G. Akland.—M. A. Rev. Jackman, M.A.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXVII. July 2.]

The Holy City of Benares, illustrated in a series of plates, by James Prinsep, Esq.—The Rev. William Liddiard, author of the "Legend of Einsidlin," is about to publish a Tour in Switzerland.—Captain Head is preparing a Series of Views to illustrate the Scenery in an Overland Journey from Europe to India.

LIST OF NEW BOOKS.

Lardner's Cabinet Cyclopaedia, Vol. XX. History of Poland, in 1 vol. small 8vo. 6s. cloth.—Lardner's Cabinet Library, Vol. VI. Memoirs of the House of Bourbon, Vol. I. 12mo. 5s. cloth.—Blakey on Free Will, 8vo. 7s. 6d.—Dibdin's Sunday Library, Vol. IV. 12mo. 5s. cloth.—Tytler's History of Scotland, Vol. IV. 8vo. 12s. cloth.—Ronald's Catalogue of Apples, coloured plates, 4to. 5s. cloth.—Strickland's Enthusiasm, and other Poems, 12mo. 5s. 6d.—Van Diemen's Land Almanac for 1831, 12mo. 5s. 6d.—Boewell's Life of Dr. Johnson, by Croker, 5 vols. 8vo. 3s. 6d.—Life and Adventures of Nathaniel Pearce, 2 vols. post 8vo. 11s. 6d.—Standard Novels, No. V. Godwin's St. Leon, 12mo. 6s. cloth.—Philosophy in Sport, by Dr. Paris, 3 vols. 8vo. 15s. 6d.—Ritson's Fairy Tales, crown 8vo. 3s. 6d.—Aldine Poets, Vol. XIV. Pope, Vol. II. 12mo. 5s. cloth.—Roscoe's Novels's Library, Vol. III. Humphrey Clinker, 12mo. 5s. cloth.—Knowledge for the People, Zoological Series, 12mo. 4s. cloth.—Evans' Walk through Wales, 4th edit. by J. N. Brewer, 12mo. 8s. 6d.

TO CORRESPONDENTS.

We cannot have the pleasure of inserting "the Polish War Song;" nor Miss Mary Anne B.—'s poems from Hampstead Road; nor H.'s Minstrel.

The song, "If nature's beauties chain thee," cannot be inserted, because, in the *first* instance, the *second* line, "If aught have power to calm thee," is a shocking bad rhyme; and sundry other reasons.

To the Editor of the Literary Gazette.

10th June, 1831.

Sir,—In your valuable miscellany of the 4th inst. you have noticed in commendatory terms the improved billiard table now in the gallery of the National Repository; but from the account, it is clear that some erroneous notions on technical points have been conveyed to you, which, though they may pass unnoticed by the general reader, cannot fail to strike the mechanist. The peculiar work of this table, the planing of the cast-iron bed, is effected by an engine, now adopted in the establishments of the principal engineers in the manufacturing districts, for planing the surfaces of metal. The planing-engine is applied to a great variety of work, as it cuts flat, angular, and even curved forms, not only with an unprecedented facility, but with a precision that hand-work could never attain. In working, the cuts by the tool are, when repeated over a surface, not crossed, as you have understood, but made in the same direction—the adjustments of the engine enabling you to finish any surface without shifting the work from the position in which it was originally bolted on the bed of the machine. The metal bed of the improved billiard-table has been wrought on the largest of these engines which has been constructed, and its extent and power may in some measure be judged of by the specimen of work in this instance turned out; the surface thus mechanically brought to a true plane being 72 square feet, the full-sized billiard-table being 12 feet by 6. The same engine would cut with equal accuracy a surface of twice this length. The introduction of the planing-engine is perhaps the most important improvement which has been made in our time for facilitating and perfecting the construction of machinery, and other structures of metal demanding accuracy and finish.—I am, sir, &c.

CHARLES TOPLIS.

13, Frederic Place, Goswell Road.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of the Italian, Spanish, Flemish, Dutch, French, and English Schools, is open daily, from Ten in the Morning till Six in the Evening.

Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

THE GALLERY OF THE SOCIETY OF PAINTERS IN WATER COLOURS, Pall Mall East, WILL CLOSE for the present Season on Saturday, the 16th of the present Month.

Admission, 1s.—Catalogue, 6d.

Open from Nine till Dusk.

CHARLES WILD, Secretary.

THE WEST OF SCOTLAND FOURTH EXHIBITION OF LIVING ARTISTS, under the Patronage of the Glasgow Dilettante Society, will open this Season on the 8th of August.

Works of Art intended for this Exhibition will be received from the 11th to the 20th of July.

(Signed) JOHN CLOW, Secretary.

Exhibition Rooms, Argyll Arcade.

Note.—The Works of Art which the Directors hope to be favoured with from London, may be sent to Messrs. S. Reynolds and Co. Dundee Wharf, Lower Harrogate, on or before the 28th July, by whom they will be forwarded (carriage free) to Glasgow.

SOCIETE des PROFESSEURS de LANGUE FRANCAISE.

Preparatory to the Meeting which will be held on the 9th July, at Six o'clock, the Secretary and a Member of the Comité Prévisoire will be in attendance, at 8, Carlton Chambers, to receive the Names of the Persons wishing to become Members, and to give such information as may be required on the subject of the Society.

On Monday, 4th July, from 6 till 8.

On Thursday, 7th, ditto.

On Saturday, 9th, from 6 till 8.

8, Carlton Chambers, Regent Street.

ARGYLL ROOMS.—The Nobility and

Gentry are most respectfully informed, that J. Tarrill has at his fashionable Repository, 250, Regent Street (on the site of the late Argyll Rooms), a very large and choice Assortment of Stationery, Albums and Scrap-Books, Ladies and Gentlemen's Travelling Cases, Writing Desks, and Drawing Cases, Despatch Boxes and Portfolios, Bibles and Prayer Books, Account Books, Brousses and Ebony Inkstands, Fancy Stationery, &c. J. T. begs to observe, that the whole of his Stock is entirely new, and warranted of the best manufacture; and particularly invites the Nobility and Gentry at least to try his very cheap and superior Writing Papers, which he offers at the following low prices, for Cash: viz. fine Bath 6d. per quire, 9d. per ream; ditto 5d. per quire, 12s. per ream; ditto, 10d. per quire, 12s. per ream;—superfine large blue wove post, hot-pressed, 10d. per quire, 12s. per ream.—best thick Bath, 1s. per quire, 12s. per ream. Also, best Sealing-wax 5s. per pound—good pens 4s. per 100.—Hudson's Bay and Swan Pens 12s. per 100.—best Blacked Pencils 6s. per dozen; ditto, prepared lead, 6s. per dozen.—Travelling Cases, 18 inches square, with patent inkstands, 15s.; 14 inch ditto, 11s.; 14 inch round ditto, 8s. 6d.—a very great variety equally as low. All orders by post will meet with immediate attention.
Manufacture, 251, Oxford Street.

THE "ATHENEUM" in speaking of the

Patent Ferryman's Pen, says,—"His (Mr. Perry's) Pens are inimitable."

Sold wholesale and retail by James Perry, (the Patentee), 27, Red Lion Square, London; and, by every observing that they are a sealed Packet, having on it the Patentee's Signature, the Pens may be had genuine of all Booksellers, Stationers, Silversmiths, Jewellers, Toy and Hardwaremen, Writing-case Manufacturers, Perfumers, Druggists, &c. throughout the whole of the British Empire, and in every place abroad.
Each Packet of Pens contains Nine, price 3s. 6d.

MESSRS. LONGMAN AND CO. have a

Vacancy for a well-educated Youth as an Apprentice, to be bound for Seven Years, and be Boarded and Lodged in the House during that Period. A Premium will be required.

Nose need apply who are above Fifteen Years of Age.
No. 29, Paternoster Row.

TO BOOKSELLERS, Stationers, Dealers in Juvenile Publications, Schoolmasters, and others.

Books, &c. by Mr. F. J. MASON, on the Premises, No. 10, Newgate Street, on Wednesday, July 4th, and following Days, by direction of the Proprietor, Mr. S. Mander, removing to No. 10, Regent Street, with a view of devoting his attention more exclusively to certain publications now in Progress.

man, in a respectable Establishment, in a principal Town in the West of England, a respectable Young Man, who must be thoroughly conversant with the Business, of an active and industrious Disposition, genteel Address, and who can produce good Testimonials. He will board and lodge in the house.
Apply by letter only, post-paid, to E. N., care of Longman and Co. Paternoster Row, London.

NEWSPAPER PROPERTY.—Some

Shares are to be sold in a Weekly Newspaper, established as a Foundation which cannot fail, ere long, to render it one of the most profitable Properties in the Kingdom.

Letters, post-paid, to be addressed J. F. Z., care of Messrs. Owen and Dixon, Solicitors, 57, Mincing Lane.

THE Gallery of 140 Comicalities, price

Three-pence.—One Hundred and Forty hearty Laughs for Three-pence!—All the engraved Comicalities which have appeared from time to time in Bell's Life in London, One Hundred and Forty in Number, which cost the Proprietors Seven Hundred and Thirty-five Pounds designing and engraving, are now to be purchased for Three-pence! Printed on one sheet, containing Twenty-fine Colours. Among them may be recognised many old friends with new faces, and served up with a sauce so piquant that the most stoical cannot resist their comic effect. They comprise 30 "Studies from Lavater," 9 "Monkeyana, or the Gambler's Progress," 16 "Old Nick's Diversions," 11 "Dramatic Illustrations," and 31 "Fancy Sketches. Such a concentration of frolic, wit, and humour, was never before offered to the public at such a price, and, judging from the effect already produced, they are recommended as the best antidote for the threatened visitation of the Cholera Morbus. To be had at the Office of Bell's Life in London, 109, Strand; and of every Bookseller, Stationer, and News-Agent in the Kingdom, for Three-pence! They are sold to the Trade at Two Shillings for Twelve, and unsold copies will be taken back, and the full price given if returned before the end of the year. As material for the Scrap-Book and Portfolio, and amusement in every public and private house in Great Britain, as well as an infallible cure for the blue devil, they have been nothing equal to them, from the debarkation of Noah and his comical family, down to the present period. This mine of amusement is to be purchased for Three-pence!

"* The publication of the "Gallery of Comicalities" commenced Friday, June 1st, and has been continued without the least delay, at No. 109, Strand, where the Office is open from Six in the morning till Nine at Night.

Placards for Windows.

This day is published, No. 1. of

A SERIES OF LITHOGRAPHIC PRINTS,
called PICTURESCUE GLEANINGS in the NORTH.
The Work will be comprised in Six Numbers, each Number to contain Four Plates. Price 6s. plain; India Proof 10s.

Published by R. Ackermann, Strand.

The object of this work is to present to the public, in a cheap form, a few of those interesting Scenes which have hitherto escaped notice, or have appeared in a much more costly manner.

Views in the City of Benares.

 and improved, price 15s.

MODERN DOMESTIC MEDICINE; or,
 a Popular Treatise, exhibiting the Nature, Symptoms,
 Causes, and most efficacious Treatment of all Diseases, embracing
 all the modern Improvements in Medicine. Containing also a
 copious Collection of approved Medical Management of Children,
 Rules of Diet, Virtues and Doses of all Medi-
 cines, &c. The whole forming a clear and comprehensive Medi-
 cal Guide for the Use of the Clergy, Families, and Invalids.

By T. J. GRAHAM, M.D. &c.
 "We conscientiously recommend it. It is very far above the
 celebrated Buchan's; and we shall preserve the volume as the
 advice of an invaluable friend, to which we can refer in the hour
 of need, without any doubt of being benefited by its wisdom."
Literary Chronicle.

"In the opinion of a respectable physician, well known in our
 connection, it is enriched with much of all that modern practice
 has ascertained to be valuable, and is not only incomparably su-
 perior to Buchan's, but also to every similar work in our language."
Weston's Magazine.

"It is altogether deserving of permanent popularity."—*London*
Weekly Review.

"It is one of the very best and most useful books published in
 modern times."—*Monthly Olio.*

Published by Simpkin and Marshall, London; and sold by all
 Booksellers.

Also, by the same Author, 8d. edition, revised and enlarged,
 price 5s. 6d.

2. *A Treatise on Indigestion; illustrating*
 the Symptoms, Varieties, Causes, and correct Treatment of the
 prevailing Disorders of the Stomach and Liver; with Practical
 Observations on the Complaints originating in those
 disorders, as the Douleur, Gout, Fulness of Blood in the
 Head, &c.

"We sincerely recommend it, and have long been convinced
 that such a work was imperatively called for."—*London Medical*
Journal.

"It is very evidently the result of close attention to, and deep
 experience in the subject. Mr. Abernethy speaks of it in terms
 of high praise."—*British Magazine*, Jan. 1830.

Post 8vo. 3s. boards.
THE STORY of GINEVRA, from
ARIOSTO.

"If we once concede to the author the propriety of selecting
 this rather particular incident of Ariosto for translation, we can
 congratulate him on performing his delicate task with consider-
 able ingenuity and taste. The versification is flowing and easy,
 and the story clothed in a decent and becoming dress as may
 fit it,—making allowance for its Italian origin,—for the most fas-
 tidious company. If the muse be rather high-kilted, according
 to our stricter notions of decorum, we are well pleased to forgive
 the display, on account of the exceeding beauty of the ankle."—*Athenæum*

Printed for W. Marsh, 145, Oxford Street; and may be
 had of W. Wilson, 67, Skinner Street, Snow Hill.

CHANGE of AIR; or, the Pursuit of
Health. An Autumnal Excursion through France, Swit-
 zerland, and Italy, in the Year 1829, with Observations and Re-
 flections on the Moral, Physical, and Medical Influence of Trav-
 elling—Exercise, Change of Scene, Foreign Sties, and Voluntary
 Expiration, in Sickness and in Health. To which is prefixed,
 Wear and Tear of Modern Babylon.
 By JAMES JOHNSON, M.D.
 Physician Extraordinary to the King.
 Published by S. Highley, 174, Fleet Street.

Critical Notices.
 "Of all the popular tours, of which British literature has re-
 cently been so prolific, this is immeasurably the best. To attempt
 an analysis of a work embracing such a treasure of anecdote and
 instruction, would be an idle task. There is no class of general
 readers who may not derive pleasure and profit from the perusal
 of this volume."—*Bell's*
 "Dr. Johnson is a vigorous and independent thinker, while
 his opinions are slightly tinged with cynicism, which gives
 them an agreeable tincture. His style is clear, bold, and expres-
 sive, so that when he least aims at effect, he leaves a more vivid
 impression on us of the object of his reflections, than others would
 by an elaborate description."—*Morning Herald.*
 "This work is so applied to fall of sound moral reflection—
 correct and so impartial, that we scarcely know where to find its
 equal. It is a classical and philosophical treatise. It is impos-
 sible to dip into any part of it without having the attention riveted
 and the fancy pleased."—*London Med. and Surg. Journal.*

Pyrus Malus Drenfordensis.

PRICE 8d.

REVIEW OF NEW BOOKS.

Dates and Distances; shewing what may be done in a Tour of Sixteen Months: as performed in the Years 1829 and 1830. 12mo. pp. 358. London, 1831. J. Murray.

This volume will be a useful one to future travellers; and now that nobody stays at home, and every body goes wandering over the face of the earth, Cains of inclination, pages which point attention to the objects most attractive on the route they describe, must be very valuable to the innumerable sojourners our migratory country annually sends forth. The writer before us well observes:

"When the author was projecting the tour which he has attempted to describe in the following sheets, he experienced considerable difficulty in procuring a satisfactory route: for, though volumes of travels in most of the countries which he visited now abound, the writers of them have not stopped to specify particulars useful to strangers; and ordinary guide-books, however numerous, having to delineate on an extensive scale, seldom, if ever, distinguish those places which have been the subject of the compiler's personal inspection: hence a traveller, ignorant of details, is liable to pass over much which is worth seeing, and also to consume his time on what does not repay its expenditure." He was himself "relieved from the embarrassment of selection by the kindness of a friend, who furnished him with a sketch of his own tour in Holland and Germany, from which he derived so much advantage, that he has been induced to communicate the result in a public form for the accommodation of others, pursuing a middle course between a regular book of travels and a mere dry itinerary."

We shall now make a miscellaneous selection of what he picked up by the way. We cannot say much for the good taste of the following custom: "The Dutch are so excessively fond of paint, that in two or three villages they had bedadened to the height of eight feet the trunks of the trees which bordered the road, and sometimes to the distance of a mile. Possibly this might have been done to destroy insects, but the size of the trees seemed to render such precaution unnecessary."

Whence can the following odd sign have originated? "While on the subject of heads, I cannot help noticing the curious sign which in Holland and in parts of Germany is exhibited on the shops of the apothecaries, viz., a gigantic Turk's head with its mouth open, the upper teeth bare, and the whole countenance distorted with disgust, as if from having just swallowed the most nauseating drugs of the repository over which it grins."

The next is among the many instances of imposition practised at the inns, and of the rather too English mode of resisting them. "Here we had another unfavourable specimen of *Monsieur l'Anglais*. After a sorry meal, and indifferent lodging, we called to pay the account, the amount of which had been previously agreed on; but double that sum was demanded, on

the Dutch landlady's principle, that a bargain made over night does not hold good the following morning. Putting, however, the proper sum down upon the table, I left the house to prepare for our departure, and just as we were about to quit the shore, we observed that the maid-servant was not on board. Little suspecting what had happened, we sent the courier for her, who returned with a report that she was detained as a pledge, till the preposterous demand of the hostess should be liquidated. I immediately sought the police, where I could find but a single gendarme, who, of course, knew only his own language; and I confess myself, that I was so overcome with anger, that I could not muster up what little stock of German I possessed, distinctly to express my wishes. I brought him, however, to the inn, and having entered the room where the servant was imprisoned, one of the girls of the house relieved us from the dilemma by stating the case accurately enough, with the exception of the principal point in dispute. The gendarme for some time stood neuter, till, declaring I would pay no more, I offered to open the door, but one of the Maritorness forthwith placed herself before it, and opposed my passage. I soon dislodged her from her position, when her companion flew to her aid, and the policeman in silence assisted her to prevent my departure. It was fruitless to resist any further the combined forces of the *Moselle*, so I threw down the full reckoning demanded, declaring that I should denounce them to the superior powers at Coblenz. I was then permitted to leave the room; but on the stairs I met the reserved guard in the person of the old landlady, who pushed me back, and would not let me move till she was apprised by her allies of the capitulation."

In giving the ensuing anecdote, the best we can do is to subjoin the traveller's own remarks:

"The concert-room in the old townhouse is curiously adorned with pictures by Albert Durer, descriptive chiefly of the events of his own life. The little girl who pointed out the paintings, did not fail, when she arrived at that commemorating Durer's marriage, to notice the bad qualities of his wife, who must indeed have been a 'weariful' woman, a tremendous shrew; for I was never shewn her portrait without the guide accusing her of having shortened her husband's existence. 'Durer,' says a German writer, 'died of a disease which embittered the whole of his life, and which embitters that of thousands, even if they do not die of it—an *einem bösen weibe*.'"

He adds in a note: "If we are to trust to the silence of satirists, we must believe that there is no reverse of the picture, and that women never die of bad husbands. May not this partly account for the enhanced rate of policy lately demanded on the insurance of female lives? Especially as only one woman is recorded by the same class of writers as having died of pure constancy:

*Solo morio de constancia,
La que está bajo esta losa.*

*Acércate, caminante,
Pues no murió tal amante
De enfermedad contagiosa.*—*Cadalso.*

'She who lies beneath this stone
Died of constancy alone.
Stranger, approach with step courageous,
For this disease is not contagious.'

The point of the epigram, however, is general, and both sexes must bear the sting. Men may, indeed, write on constancy, but how truly can women act it! 'During the course of her illness (speaking of a woman who died of the plague) she uniformly refused all succour from her husband, nor would suffer him to approach her: and, carrying her cares for his safety even beyond the term of her life; when she found her last hour approach, she desired him to throw her the end of a long cord, which she fastened round her body, enjoining him, with her expiring breath, not to touch her corpse, but to drag her by means of this cord to her grave.'—*Bertrand's Plague of Marseilles.*"

The following legend is new to us.

"In the environs of Inspruck are many spots possessing legendary or romantic interest, to visit all of which would require a separate tour. Among these is Martinswand, an almost perpendicular wall of rock, about two miles from the city, near to the old castle of Fragenstein, on the road to Zirl, famous for a chamois chase of the Emperor Maximilian. Near the centre of the cliff is a grotto called after the emperor, in which is placed a large crucifix, looking upon the frightful precipices where he encountered his perilous adventure. The emperor, in the ardent pursuit of a chamois which he had wounded, ventured too far on the ledge of a rock, when suddenly the staff slipped from his hand. The tremendous depth made him tremble, and he sought by a violent effort to leap to a more secure position; but of his six iron crampons five were broken, and he found himself held only by a single one from being precipitated into the gulf below. Despairing of human aid, he recommended himself to God, and contemplated the alternative of being starved to death or dashed to pieces. His suite, having in the mean time discovered the emperor by his cries, used every effort to rescue him, but found it impossible to render him any succour. To preserve his mortal part from destruction being beyond their power, he was considered a dying man, and they prepared, in the mournful extremity, to afford him the last consolations of religion. Already the plaintive bell of the village church summoned the people to pray before the holy sacrament which was conveying to the foot of the rock, to be solemnised in the presence of the unfortunate monarch, when a chamois hunter, of the name of Zips, reached the spot where the emperor was suspended between life and death. Surprised to see a man where only the pressed chamois ventured his foot, he cried out, 'Holla, what are you doing there below?' And the emperor answered calmly, 'I am on the watch,' (*ich laure*); and pointed out to him the awful ceremonial which was performing. 'Well,' rejoined the hunter, 'must not I at-

tempt the descent? Come with me.' Then giving the emperor fresh crampons for his feet, he assisted him with his arm, and conducted him safely to the bottom. 'Henceforth,' said the emperor to his deliverer, 'you shall no longer be called Zipe, but Hollauer, in eternal commemoration of my deliverance, that this name may preserve for ever the remembrance of your *holla*, and of my answer (in German, *ich laure*); and as this high rock would have been my place of sepulture without your aid, the title of Lord Hohenfels (of the high rock), Hollauer de Hohenfels, with suitable arms, shall be granted to you in perpetuity.'

Of the late revolution at Brussels the writer says: "The king was not disliked; but his religion, different from that of almost all his subjects, was a constant source of dissatisfaction, and furnished another proof among many of the indispensability of the religion of the sovereign and of the people being the same. When we were at Brussels, a respectable Catholic declared to us that their king was an excellent monarch, and beloved by his subjects; but not loved in their hearts, because he was a Protestant."

The late Emperor Alexander.—"It was said that when Bonaparte arrived at Tilsit, he immediately sent for the landlord of the house, which was the same the Emperor Alexander had occupied, and desired him to describe minutely how the Russian emperor had employed his time, from his rising in the morning until he retired to rest at night. After learning the details of the day's occupation, which represented Alexander as being studiously attentive to the niceties of his dress, Napoleon dismissed the landlord, exclaiming, 'Alors je le connois.' At their subsequent meeting on the raft, Bonaparte, on advancing to Alexander, turned to his retinue, saying, loud enough to be heard by the Russian, 'Ah! qu'il est beau!' By this, it was asserted, he gained Alexander at once."

Gneisenau.—"On the death of General Schurnhorst during the six weeks armistice, General Gneisenau succeeded to his post, and directed all the affairs of the army. Indeed, it is well known in Prussia that Gneisenau was the real commander-in-chief,—a truth which Blicher used on all occasions frankly to acknowledge. For instance, at a public entertainment given to him at Berlin, on his health being drunk, he requested permission to propose a toast, and observed, that as the company had honoured him by drinking to the welfare of his body, he would now ask them to drink to that of his soul—Gneisenau!"

The ensuing scene quite confirms the account given in the novel *Ivan Vejeeghen*, of the universal prevalence of bribery in Russia.

"A friend of ours, who had made a long stay in Russia, and knew the nation well, had impressed upon me, in the strongest manner, that no point could be gained there without money. 'If,' said he, 'you are detained at a custom-house, or require horses or other facilities, go to the head man of the place, and, be he decorated with twenty orders, offer him twenty-five rubles, and your object is gained. Do not fear giving offence; the highest to the lowest expect and will take a bribe.' This advice I treasured up in my recollection, resolving to act upon it without reserve, for which an opportunity was soon offered. Having driven into the custom-house yard, which was filled with soldiers and Jews, a gentlemanly-looking man in uniform, who could only speak Russian, entered the carriage, and began to examine its contents. He appeared

to be soon satisfied; but having delayed unnecessarily, my companion now proposed to give the fee, which was ready prepared in her hand; but notwithstanding my friend's advice, and my own previous resolution, the genteel demeanour of the functionary, and the publicity of the place, deterred me from venturing upon what I thought would be considered an insult. After a while, he separated a small parcel containing books; and observed, through an interpreter, that he presumed they were only guide books. Still unprepared for a hint, I imprudently opened them, and omitted to avail myself of the last moment for the expected bribe. The time was passed, his manner changed, and he ordered the packet to be carried into the office, that it might be forwarded to the censor at Moscow. Several Jews then pressing round, said secretly in French, that I must give him money. A Polish gentleman, however, who was transacting some business at the custom-house, dissuaded me strongly from doing so; thus all was confusion and contradiction; but the carriage being released, we left the books to their fate, and drove to the inn to make arrangements for prosecuting our journey. Not being able to procure a German servant who could speak Russian, I had been advised to apply to the military officer in charge of the post-office to allow one of his public couriers to accompany us to Moscow. The postmaster-colonel agreed, (a Russian officer, standing by, observed, any thing might be had for money, of which I probably had plenty,) and a man was appointed to attend us, to whom I was to pay two hundred rubles and his return expenses. The *podmoshna* from the commandant being also secured, we set out in the evening with six horses to our *calèche*, our two attendants riding behind us in a *kabitzka*, a miserable two-wheeled vehicle without springs. How the difficulties of travelling in wild countries seemed exaggerated! Here we had made every arrangement at a distant Russian town in a few hours, and were starting with glee for the ancient capital! The character of the people had been so misrepresented! Where were the proofs of extortion and venality on the part of the functionaries, for the detention of the books might be a necessary compliance with forms? Full of these sentiments we were driving past the custom-house, when our cavalcade was suddenly interrupted by a soldier with a drawn sword. On alighting, it was intimated, through the Jews, that our arrest was on account of the books, which I forthwith begged might be confiscated, and I be allowed to depart; but this was refused, particular information was denied, and every thing wore an air of mystery. Now seemed the time to employ money, and it was freely offered, but it was also the time for the custom-master's revenge. I was told it was too late, I ought to have given it before; and as to the books, I must not depart without them, nor leave the town till I had furnished a surety in one hundred rubles for their safe conveyance to Moscow. I immediately said, 'Send them in charge of your own courier, who is going thither with me. How can I, a complete stranger, furnish a surety?' Still there was a demur. Evening was shutting in, and the office being closed, the business was now to be deferred till the next day. So, chewing the cud of vexation, I dismissed the horses, and endeavoured to ascertain, as far as the rascality of the persons about me would admit, what was to be done. At last a Jew offered to be my surety for fifty rubles, which the

custom-master accepted, on my sending him the present that he had declined the night before. I eagerly caught at this, not waiting to find out who was the greatest rogue, Christian or Jew, and deeming it an indulgence to be allowed to pay about seventy rubles for the conveyance of my own books, on my own carriage, to Moscow."

We conclude with the following anecdote:—"Matveef was the minister and friend of the Czar Alexis Mikhaelovitch, who not only confided to his administration the principal affairs of his kingdom, but intrusted him with the care and education of his children. So much was he valued by his sovereign, that on the occasion of his absence on some public business, the czar urged him to return as soon as possible, for without his presence himself and his children felt like melancholy orphans. Matveef being as generous and disinterested as he was honoured and beloved, lived in a ruinous house, which the czar often desired might be put into a state of repair suitable to his rank; but he constantly excused himself, on the ground of having neither leisure nor means. Upon this the czar declared he would take upon himself the charge of the work—an offer which the favourite declined, on the contradictory plea, that his munificence had already enabled him to incur the necessary expense. Orders were now given for the collection of materials; but it so happened that at the time there were no stones to be procured in Moscow fit for the purpose. This circumstance becoming known, a crowd of strelitz and inhabitants of the city proceeded to the residence of the minister, conducting numerous carriages loaded with stones, which they solicited him to accept as a free gift. Matveef refusing them on these terms, the assembly exclaimed, 'These stones are not for sale; we have torn them from the tombs of our fathers, as an offering to our benefactor.'"

These selections are sufficient to shew that the present is any thing but a dry itinerary; and we have only to add, that the tables at the end are excellent. We recommend the volume, therefore, to all travellers in Germany.

Specimens of Macaronic Poetry. 8vo. pp. 36. London, 1831. Beckley.

A VERY neatly printed little volume, with an amusing selection of pieces, more to be prized for their rarity and oddity than for their intrinsic literary value. Humorous and learned men have in all ages and in all languages thrown out their sportive fancies in compositions which may, mostly, be classed under the title of *Macaronic*: during the sixteenth and seventeenth centuries this species of learned trifling was greatly in vogue. Of these our editor has made a very clever selection; and whether they are fond of the alliterative, the lipogrammatic,* the rhopalic,† or the sotic dic *alias* palindromic,‡ or other kind§ of macaronic versifications, readers will find entertaining specimens of all of them here.

We shall not attempt to quote the whimsical illustrations of these various styles; but as the annexed is new to us, it may have the same quality for our friends. It is a "song founded on the peculiarity of the Newcastle *burr*, published in a provincial collection in December 1791, and purports to be an address from one of the rooks, which then built their nests on the vane of the Exchange, to the good people

* Who excluded some particular letter.

† From rhopalic, Hercules' club, beginning with short words and ending with long ones.

‡ Palin dromeo, reading backwards and forwards.

§ All the words beginning with the same letter, &c. &c.

of *Burcastle*." (The burr, we need hardly add, is that strong guttural pronunciation of the letter R, so common to the natives of our northern counties: these lines therefore must be a shibboleth to them.)

"Rough rol'd the roaring river's stream,
And rapid ran the rain,
When Robert Rutter dreamt a dream
Which rack'd his heart with pain:
He dreamt there was a raging bear
Rush'd from the rugged rocks,
And strutting round with horrid stare,
Breath'd terror to the brocks. [badgers.]
But Robert Rutter drew his sword,
And rushing forward right,
The horrid creature's thrapple gord,
And barr'd his rueful spite.
Then, stretching forth his brawny arm
To drag him to the stream,
He grappled grizzle, rough and warm,
Which rous'd him from his dream."

The following anecdotes belong to the sotadic.
"A lawyer once chose for his motto, 'Si nummi immunit.' And in the time of Queen Elizabeth, a noble lady, who had been forbidden to appear at court in consequence of some suspicions against her, took for the device on her seal, the moon, partly obscured by a cloud; and the motto, 'Ablata at alba.'"

"There is (the author tells us, and we repeat it for the exercise of our fair readers) an enigma, occasionally to be found in ladies' albums, in which the initials of five palindromic words are to be sought for, to form the required answer: they may be discovered with a little attention:—

First find out a word that doth silence proclaim,
And that backwards and forwards is always the same;
Then next you must find out a feminine name,
That backwards and forwards is always the same;
An act, or a writing on parchment, whose name
Both backwards and forwards is always the same:
A fruit that is rare, whose botanical name
Read backwards and forwards is always the same;
A note used in music, which time doth proclaim,
And backwards and forwards is always the same;
Their initials connected, a title will frame,
That is justly the due of the fair married dame,
Which backwards and forwards is all the same."

"Another invention is, that of verses, which may be read either forwards or backwards, and in the latter case generally containing a meaning quite the reverse of the former, and possessing sarcasm or satire. This is sometimes called *verse Lyon*, said to have been invented, or frequently made us of, by Sidonius. . . .

"A complete specimen appears in a line applicable either to Cain or Abel, being also hexameter one way, and pentameter the other. Abel says—

Sacrum pingue dabo, nec macrum sacrificabo;
to which Cain replies—

Sacrificabo macrum, nec dabo pingue sacrum.

The following line is of similar efficacy, applied by two persons disputing on religion. One says—

Patrum dicta proba, nec sacris belligerabo;
the other answers—

Belligerabo sacris, nec proba dicta Patrum."

With this slight notice we commend this volume to the curious in such matters.

The Life and Adventures of Nathaniel Pearce, written by Himself, during a Residence in Abyssinia, from the Years 1810 to 1819: together with Mr. Coffin's Account of his Visit to Gondar. Edited by J. J. Halls, Esq. 2 vols. 12mo. London, 1831. Colburn and Bentley.

Our curiosity respecting countries is in a ratio to our acquaintance with them; and the less we know, the more we desire to learn every minute particular of their condition. This trisism may serve as the key to the avidity with which we read all African travels, and

travels in Abyssinia in preference to almost any other. In the present instance the feeling is enhanced by the interest which we take in the extraordinary personal history and adventures of the writer. Nathaniel Pearce, of whom a biographical memoir is prefixed, was a seaman in the royal navy, and deserted from his ship, the *Antelope*, at Mocha. Always of a wild and unsettled character, he immediately embraced the Mahometan religion. On the journey of Mr. Salt to Abyssinia, he accompanied that gentleman, and was left with the Ras, or sovereign of Tigré, on the return of the expedition to Massowa. It was during his future residence of about nine years, that the memoranda which form these two volumes were penned. In 1819 he made his way to Cairo, where his old friend Mr. Salt intrusted him with the charge of his household, and where he arranged this work;—justly stated to be "a faithful, characteristic, and animated description of the customs, manners, and laws, of the Abyssinian people." The memoir thus concludes:—"The checkered life of this remarkable individual was now fast drawing to a close. In the early part of the year 1820, Mr. Salt having some articles of consequence which he wished to have safely conveyed to England, and having previously been informed that the R. prefixed to Pearce's name at the Admiralty had been erased, through the kind interference of the Earl of Mountnorris, Sir Joseph Banks, and the Right Honourable Charles Yorke,—thought the opportunity a favourable one for the return of the wanderer to his native land.

A passage was accordingly secured for him in a ship that was about to sail in a few days, and every accommodation provided; when he caught a violent cold, which, being greatly aggravated by the mistaken and somewhat intemperate use of brandy, quickly turned to a raging fever, with which his constitution, long debilitated by hardship and disease, was wholly unequal to struggle, and which carried him off at Alexandria, early in June 1820, at the age of about forty-one years. A short time previously to his dissolution he made his will, in which he bequeathed his journal and the whole of his papers to Henry Salt, Esq., one of his executors, who presented the former and many of the latter to the Earl of Mountnorris, to whose kindness and friendship the editor is indebted for the possession of the journal."

From its pages we shall endeavour to select such accounts as appear to us to be most novel and entertaining; and we shall prefer lasting and general features to the temporary and particular circumstances of wars and rebellions, in which our countryman took part. At the period in question, the following were the kings living in Abyssinia: "Itsa Tecla Gorgia, in Waldubba; Itsa Ischias, in Gondar; Itsa Guarlu, on the throne in that city; Itsa Yonas, in Gojam; Itsa Yoas, in Gondar; Itsa Bede Mariam, in Samen. They are all (says Pearce) related to each other, and, as they boast, are descended from the true race of Menelick; but the kings of Abyssinia have so many wives from far and near, that it makes it difficult to determine to whom the crown should descend; and this point is generally decided more by might than by right."

Pearce had an Abyssinian wife, and a son, who died. At one time he was himself very ill, and the sacrament was administered to him agreeably to the rites of the Christian church. The ceremony is thus described:—

"Early in the morning, the head priest, Allicar Barhe, and my own priest, Guebra Mariam, came to demand my last confession."

I could not answer them to be understood; but, through Tringo, I made signs that satisfied him, or them. They first asked me my Christian name, and whether I had received the holy sacrament on my baptism day; and bade me now take it, as a cleansing from all sins past, and to consider it as a physic for the soul, that Jesus Christ had in his tender mercy bestowed on me, to cure and save it from everlasting perdition. They required of me, in case my soul should not depart from me at this present moment, through God's mercy, to abstain from all sins hereafter, to have no other wife than the one I had, to turn monk, and to give two thousand pieces of salt to the poor. My will was then made, in favour of my wife, my priest, slaves, and servants, leaving to each such portion of my property as I thought right; and, when all this was settled, the church carpets were brought in and spread on the ground, and I was ordered to be dressed in a cloth that had never been defiled, and to be laid on a clean carpet. Shortly afterwards, the priests came in, singing hymns and dressed in their holy apparel, and I received the sacrament from a priest, who first gave me a cross to kiss; after which they said some long prayer, and departed. When all this was over I felt quite easy, except that I was now and then troubled with the cries kept up at the door by my acquaintance, who had assembled in great numbers to do me honour; indeed, the whole ceremony was carried on as if I had been the king himself. Instead of dying, as all expected, I soon began to get better; and the priest, who frequently visited me, did not forget to hint to me what physic the holy sacrament was, both for the body and soul; and I also considered, but said nothing, that as I had two thousand pieces of salt to pay for it, the physic was rather dear, the value amounting to full sixty-six dollars. In the beginning of August I could again walk about the house. The ras this year kept at Chelicut his fast for the Blessed Virgin, which commences on the 1st of August, or Narsa, and ends on the sixteenth. During this fast, the old man, like many others, always slept upon the ground."

The subjoined account is a singular contrast to the profession of Christianity.*

"Mascarram, or September 1st, Kudus Yohannis (or St. John), is the first day in the year. During the five days of Pogme, which are after the last days of August, I had been advised to go into the river to bathe, and I found myself quite recovered. It is customary for all people to wash themselves in the rivers on the third day of the five of Pogme, which is the holy-day of Kudus Raphael, and is as strictly observed as the eleventh of Tur, or January, which is Christ's baptism. The ras had gone to Mucculla to keep his new-year's day, where he remained until the 11th, purposely to receive a great number of his chiefs, who attended him to church. This holy-day, the 11th of September, is held in veneration on account of an old monk, called Abba Annernaier, who fought, about three hundred years ago, against the Galla, and was killed in battle on the spot

* At one church the priests have a remarkable relic, "a cross called the Crying Cross of Azum, which is believed by the weak-minded people to cry whenever it is used upon these and similar occasions. Many people coming from a great distance pay a large sum to be allowed to kiss it, imagining that their sins are thereby washed away. Indeed, there is so much anxiety to see this cross, that even those far off will call out to the priests—'For God's sake hold it up higher, that we may see it!' I suspect that those crafty wretches anoint this cross with some thick oily substance, which, when held in the sun, melts and shines like drops of water; but no one being allowed to touch it except a priest or a monk, it is impossible that the cheat can be discovered."

where he is now revered. It is said that he turned into a snake, which is constantly to be seen. This sacred spot is about a mile and a half from Mucculla, in the plain of Gambela. There is no church, but a spring of water, called *moitrolloh* (holy water), whither thousands flock to be cured of their diseases. I have indeed known people come from Adowa and Gondar to procure a little of the sacred earth from this spot, which is sewed up as a charm, and worn about a person afflicted with diseases. Round the spring large stones are piled up like a wall, and two large trees grow very near it, being the only trees or bushes for many hundred yards round. Determined to look closer into the superstitious notions attached to this spot, I got up one morning under the pretence of going to bathe; but I dared not take any of my servants with me, for fear of their prejudices, and therefore told them to take my horses and mules to a place where they might eat some young grass, while I went to wash myself. I then went, just as the sun had risen, and lifted up some of the stones, in doing which I saw four or five snakes, small and large, which ran immediately under the stones beneath: I afterwards replaced the stones, as they had been left there by the priests for the snakes to drink out of, and returned to my servants, perfectly satisfied of the folly of those ignorant people. Though I said nothing at the time, I had, before a month was out, strong reasons for breaking my silence, as will subsequently appear."

Sept. 11th. "We shortly arrived at the sacred place, where a *dass* was built with the boughs of trees and marshella stakes. Here we did not find the priests going on in their usual noisy way of singing, but were surprised to see them dragging along a poor Amhara priest, as if they meant to kill him instantly. He was brought before the ras, and the priests called out that he had killed the *sardoc*, or saint. On inquiry, it appeared that this poor fellow, being a traveller from the Amhara, on his road to Axum, had seen the snake as he was washing in the sacred water, and had crushed the head with a stone, after which he called to the people near, and told them that he had killed a snake, —when, to his utter astonishment, he was seized, and the priests insisted that he should be instantly put to death; but the tender old ras, who did not like to take life, said—'Perhaps the poor man may be mad—we will chain him, and see if he is in his right senses;' which enraged the priests beyond measure. They swore they would have his blood spilt on the spot. I could not keep silence any longer, and stood up and said, 'Ber Welled Selassé, hear me;' and from that moment not a syllable was uttered until I had finished my story. I then related that, some months before, I happened to come to wash myself at this place in order to cure a complaint in my thigh, and I saw four or five snakes, among which, I added (thinking to help the poor man), was one larger than that which had been killed; and hence I supposed they had come from some distance for water, and that the snake now dead might probably from a similar cause have wandered to the spot. The ras, upon my saying this, insisted that the wall should be well looked into; and on the removal of the first stone, a snake was discovered between the stones near the same place, where the sacred reptile used to have water put before him. This statement immediately created great joy; and the prisoner was released, though severely reprimanded, and punished with a few smart stripes from the whip of one of the ras's soldiers."

The tradition is, that a large snake once ruled the country, and in, according to the priests, still alive at Axum, where, "being angry with the people on account of their sins, he confines himself to the hollow mountain close to Axum. . . . In this place stands a large flat rock of granite, as level upon the top as a platform, and at the end of this there is another rock, intermixed with red earth and gravel, with a deep ravine in the centre, apparently occasioned by the rains, which fall in a stream from a great height above the platform. In the middle of this granite rock are three large round troughs, neatly cut, about three feet deep, and about three and a half in diameter, which I suppose to have been made by the ancients to prepare some kind of cement in for building: but Guebra Middin gave me a very different story, which I affected to believe, for fear of creating a quarrel between me and Ozoro, his sister. He informed me that one of those troughs held the milk, another *sherro* and bread *sifsi*, or cooked victuals and bread mashed up together, while the third was the one from which the snake used to eat *cusho* every two months, *cusho* being the flour used to kill the tape-worm, without taking which every two months the Abyssinians could not live, though they have other medicines, made from bark of trees and bulbs, but none so effective as *cusho* in Amhara, or *hobbe* in Tigre."

Our next quotations are very illustrative of Abyssinian customs.

"The day (says Pearce) before we left Chelicut, a woman had brought in chains a poor miserable object, whom she accused of having killed her husband; the witnesses also arrived from the small village of Gibba, to which they belonged. When the ras had heard the whole story and examined the witnesses, he found the man guilty of murder, though apparently without malice, and told the woman, agreeably to the law, to do as she pleased with him. She replied, 'I have no one but myself; I have no relation; neither have I a spear or knife.' The ras said, 'Then you must hang him.' She again replied, 'How can I do that by myself? I have got a *mushcharn* [a leather rope], it is true, but I cannot hang him alone.' The ras then ordered some of the groom-boys about the house to assist her in hanging the man to the darro-tree, on the green before the house. 'God preserve you a thousand years!' said the woman, adding, in an under-tone, 'His relations are all here, and they will not have far to carry his body, as he belongs to the church.' Mariam Guddervitee Takly, one of the ras's stable-grooms, and some other of the slaves, had the management of the affair. When they came to the darro-tree, which is as easily climbed as a ladder, they helped the woman up with one end of the *mushcharn* in her hand, shewing her which was the best bough to tie it to. Takly, notwithstanding the woman had promised to give him plenty of butter for his trouble, now put the poor object's two hands within the *mushcharn*, round the neck, and, after tying it, ordered the woman to draw up the *mushcharn*, while they would lift him from off the large stone they had made him stand upon. Accordingly, she did this, and made it well fast, and then came down to behold him hanging, at the same time exclaiming, 'Blessed be Mary Ann, the mother of God, who has given me revenge for my husband! Bad as he was, I have stood true to him.' After he had hung for some time, the crowd that stood to look on cried often to her, 'Why, woman, he has been dead long ago!' 'Thank God for that!' said she; 'but they

shall not have my *mushcharn* to bury with him.' Accordingly, she, with the help of Takly, climbed up the tree and loosed the *mushcharn*, while Takly took it from his neck. The relations immediately came to take up the body, which they were allowed to do; but, before they had got ten yards, the dead man set off, without being carried, and ran into the Trinity Churchyard, where he was safe, even though he had killed a thousand persons. The woman, seeing this, was enraged and ran to the ras's gateway, crying, '*Abbate, abbate!*' She obtained admittance, and told the ras that the man had not been hung long enough. The ras, who had already heard the story, laughed and said to the woman, 'Would you wish to kill a man that God will not permit to die? He hung long enough to have killed a cat.' She answered, 'Let me have him up again, and I will pull at his legs till I break his neck.' 'You foolish woman!' replied the ras, 'would you oppose the will of God?' Seeing that the old ras looked grave when he said this, she believed it was God's will that the man should not die; and her spirit failed her, as she said, in a very low and sorrowful tone, 'Though he is such an ill-formed creature, I have seen him do things that nobody else could do. The locust never touched the little corn he had behind his house; and though we used to make a fire to smoke them away, we could not save ours as he did.' She immediately went to the church and begged his forgiveness, and they afterwards lived good neighbours as usual; indeed, I heard subsequently that he became her husband. The law in Abyssinia stands thus in cases of murder: after the fact has been proved before the chief, he passes the sentence of death; when, should the deceased party have no other relation but a female, though she may have a husband, friends, or other connexions, yet she, being nearest related to him, must strike the first blow, either with a spear or with a knife, when her acquaintances despatch him immediately. Without the formality of her striking the first blow, the friends and relations of the woman would be reckoned by the offender's relations to have spilt their blood without just cause. As soon as the sentence of death has been passed, the deceased's family may, if it be agreed upon, take cattle in lieu of the murderer's life; one hundred head of cattle being the customary redeeming price. When the offender is put to death, the relations bury his body in the church, which is permitted by the laws; but those who kill themselves are not allowed this privilege of interment within the church-wall. If a chief insists upon a party taking an equivalent for life, he can do so; but, then, whatever fine is agreed upon must be paid in the presence of the Shummegildas. This law passed in the reign of Tarlack Yasous, the king, and was again proclaimed by Ras Michael Suhul, and afterwards repeated by Ras Welled Selassé."

"In all towns there is a person appointed by the rulers of the place, to find out and conduct all strangers to lodgings, called *kordere*; and he who holds this office is provided for by the housekeepers of the town, who give him one piece of salt per year; on all holydays, also, he calls upon them for drink, and a piece of meat for his family, a sheepskin, &c. To those who most oblige him, he seldom, if he can possibly help it, sends lodgers; while those who displease him are sure, on the arrival of any chief, to have soldiers of the worst principles quartered in their habitations."

"About four o'clock I arrived at my own house at Chelicut, where I found my gate-

keeper and gardener had died four days before; and the superstitious people wanted to persuade me that they were killed by ghosts or devils, as they were both found dead together in the morning, after going to bed in perfect health, and having no signs of any wound upon their persons. The priests obliged me to let my people fire off all the fire-arms into the house, before any one should enter, and then to kill a sheep upon the ground-floor, and let the blood run upon the ground, and also drink out a jar or two of maize; to all of which I immediately agreed, knowing the extent of their superstition upon such occasions. In all parts of Abyssinia, it is customary when any new house is built, or a building has been left uninhabited for some time, and where there have been cattle killed and drink distributed, to kill a cow or a sheep, and distribute it within the buildings, which it is presumed satisfies the ghost of the place, who leaves the dwelling in peace; but, when such places become neglected, it haunts them and kills those whom it finds within the walls; and in this opinion every inhabitant of Abyssinia will firmly persist, against all reason whatever."

We have mentioned that Pearce lost his child; upon which occasion he relates the funeral ceremonies observed by the natives.

"The priests came, and the customary prayers were read, and my poor child was carried away to be buried, his mother following in a distracted manner. After the funeral, the people returned to my house; and after they had cried for about half an hour, I begged they would leave off, and let me have a little rest, as I found myself unwell. They complied, and left me with only a few friends; but, in a few minutes, the people of Antalo, my acquaintances, hearing of my misfortune, came flocking and began their cry; and I was obliged to sit and hear the name of my dead boy repeated a thousand times, with cries that are inexpressible, whether feigned or real. Though no one had so much reason to lament as myself, I could never have shewn my grief in so affected a manner, though my heart felt much more. Before the cry was over, the people with *devves* were standing in crowds about my house, striving who should get in first; and the door was entirely stopped up, till at last my people were obliged to keep the entrance clear by force, and let only one at a time into the house. Some brought twenty or thirty cakes of bread, some a jar of maize, some cooked victuals, fowls, and bread, some a sheep, &c.; and in this manner I had my house filled so full that I was obliged to go out into the yard, until things were put in order and supper was ready. The head priest came with a jar of maize and a cow. What neighbours and acquaintances bring in the manner above mentioned is called *devves*: the bringers are all invited to eat with you; they talk and tell stories to divert your thoughts from the sorrowful subject; they force you to drink a great deal: but I have remarked that at these cries, when the relatives of the deceased become a little tranquil in their minds, some old woman, or some person who can find no one to talk to, will make a sudden dismal cry, saying, 'Oh, what a fine child! and is he already forgotten?' This puts the company into confusion, and all join in the cry, which perhaps will last half an hour, during which the servants and common people, standing about, drink out all the maize, and, when well drunk, will form themselves into a gang at the door and begin their cry; and if their masters want another jar of maize to drink, they must pour it out themselves, their

servants being so intoxicated that they cannot stand. In this manner they pass away a day without taking rest. I must say, however, that the first part of the funeral is very affecting; and the only fault I can find is, that they bury their dead the instant they expire. If a grown person of either sex, or a priest, is by them when they expire, the moment the breath departs, the cries and shouts which have been kept up for hours before, are recommenced with fury; the priests read prayers of forgiveness while the body is washed, and the hands put across one another upon the lower part of the belly, and tied to keep them in that position, the jaws tied as close as possible, the eyes closed, the two great toes tied together, and the body is wrapped in a clean cloth and sewed up; after which the skin called *neet*, the only bed an Abyssinian has to lie upon, is tied over the cloth, and the corpse laid upon a couch and carried to the church, the bearers walking at a slow pace. According to the distance of the house from the church, the whole route is divided into seven equal parts; and when they come to the end of every seventh part, the corpse is set down, and prayers of forgiveness offered to the Supreme Being for the deceased. Every neighbour helps to dig the grave, bringing their own materials for the purpose, and all try to outwork one another. Indeed, when a stranger happens to die where he has no acquaintances, numbers always flock to assist in burying him; and many of the townspeople will keep an hour's cry, as if they had been related. There is no expense for burying, as every one assists his neighbour, as I have mentioned above. But the priests demand an exorbitant sum, from those who have property, for prayers of forgiveness; and I have seen two priests quarrelling over the cloth of a poor dead woman, the only good article she had left. If a man dies and leaves a wife and child, the poor woman is drained of the last article of value she possesses, to purchase meat and drink for those priests, for six months after her misfortune; otherwise they would not bestow a prayer upon her husband, which would disgrace her and render her name odious amongst the lowest of the populace. In this manner I have known many families ruined. An Agow servant of Mr. Coffin's, who had been left behind with me on account of ill health, died at Chelicut, where he had formerly taken a wife; and the little wages he had saved had enabled him and his wife to keep a yoke of oxen, she having a piece of land of her own. Knowing the man to be very poor, and the great regard he had for his master, I was induced to give a fat cow and a jar of maize to the priests, to pray for the poor man's soul; this they took, and the poor woman made what corn she had into bread and beer for them; after which they refused to keep their weekly *fettart* [prayers of forgiveness] for a month, unless she paid them more; to complete which, and to satisfy these wretches, she was obliged to sell her two oxen; and the poor woman was again reduced to work and labour hard with the pickaxe.

"There are numbers of men and women who get a living by making rhymes and attending at cries, who are often sent for from a great distance to attend the cry of a person of distinction; and if they are noted poets, they receive high pay in corn, cattle, or cloth. I am acquainted with a very handsome middle-aged woman, who, though she has a large estate to live upon, has studied poetry from her infancy, and attends gratuitously at all cries that are very public, and for no other

purpose than to distinguish herself. She is reckoned the best poet, either in the Amhara or Tigré language, in the country; her name is Welleta Yasous; she was born in Gondar, but her father was a Tigréan. Many great men have offered to marry her, but she could never be persuaded to listen to their proposals, though I do not mean to say she led a chaste life—a very rare virtue indeed in Ethiopia. The Amhara people differ from the Tigré in their manner of crying and weeping: that of the latter is very affecting, but that of the former is really ridiculous. They dress themselves as fine as possible, and cry, sing, and dance to the beat of a drum. When the cry is over, those who have not far to return to their homes, in general feast with the relatives of the deceased. When such great people as Ito Debbib die, a general cry is held throughout the whole country, both in Amhara and Tigré, and for three days' journey around, the people will bring *devves* to the relations. The natives of Tigré are more accustomed to wear mourning than the Amhara; and some, instead of making mourning cloths, wear their cloth until it is entirely black with dirt, and this serves them for a mourning suit. They in general go into mourning for sixty days. Some wear a piece of blue Surat cloth, such as the merchants bring from the East; but the true mourning suit of the people of rank is a new white cloth, first dyed yellow with *waver*, the wood of a tree which the monks use to dye their garments. When the cloth is dyed yellow, it is again buried in a black mud, common in all plains, called *walkar*; after remaining buried three days, it is taken out and washed, but still remains black. Such suits of mourning will last in a family for many years; they borrow and lend them also among friends."

[To be continued.]

Memoir of Sebastian Cabot.

[Second notice: conclusion.]

In concluding our preceding notice of this valuable book, we alluded to several points towards which it was our wish to direct the public attention: one of the chief of these is the state of the Records, whence the author has so satisfactorily derived that important document, the second royal patent to Cabot (3d February, 1498).

"The manner," he observes, "in which the precious document referred to, and others of a similar kind, are kept, cannot be adverted to without an expression of regret. They are thrown loosely together, without reference even to the appropriate year, and are unnoticed in any index or calendar. It required a search of more than two weeks to find this patent of 3d February, 1498, although the year and day of its date were furnished at the outset. Another document which appears in the present volume—the patent of Henry VII. to three Portuguese and others, dated 19th March, 1501, authorising them to follow up the discoveries of Cabot—has never before been published. This also was discovered, after a long search, not even folded up, but lying with one half of the written part exposed, and, in consequence, so soiled and discoloured, that it was with the greatest difficulty it could be deciphered, and some words finally eluded the most anxious scrutiny. And this of two documents indispensable to the history of maritime discovery, and for the want of which, the account of these voyages has been completely unintelligible! An extraordinary compensation is claimed at the Rolls Chapel, on account of the trouble attending a search amidst such

a confused mass. For finding the documents, two guineas were demanded, in addition to the cost of copies. The applicant is informed that the charge must be paid, whether the document be discovered or not; so that the officer has no motive to continue perseveringly the irksome pursuit."

Again, speaking of the will of John Cabot, we are told:

"If, as is probable, he died at Bristol, it would be proved at Worcester. On application at the Bishop's Registry, the acting registrar, Mr. Clifton, writes thus: 'The indices of wills proved, and letters of administration granted, do not extend farther back than the year 1600. Previous to this period, these documents are tied up in linen bags *without much form or order*; so that a search for the will of John Cabot, or Gabot, or Kabot, would be attended with *very considerable* trouble and expense, whilst the *chance* of discovering it would be uncertain.' Aside from historical purposes, it would be curious to see an instrument, dated some months before the time when Columbus (in August 1498) first saw the continent of America, which, probably, makes a disposition of the testator's interest in the tract of land lying between the present Hudson's Strait and Florida."

And again: "The curious and important documents at the Rolls Chapel will probably one day be arranged and made available to the purposes of history. Evidence may then come forth, and it is desirable that no erroneous hypothesis should be found in the way of truth. Until that period we must be content to remain in the dark. Where the records are in such a state of confusion as to warrant the charge which has been before mentioned for finding a specific paper, of which the exact date, the name of the party, the purpose and general tenor, are given, it is obvious that no private fortune would be adequate to meet the expense of a general search."

Our author has proved what new and strong light is yet to be thrown upon history, by the diligent search for, and careful examination of, ancient papers; and we the more heartily join in his regret at the slovenly manner in which these public treasures are kept. Surely, if farther argument were wanting to enforce the expediency of arranging, cataloguing, describing, and preserving in some national repository, the records scattered over so many quarters, so constantly exposed to destruction, so little known, and so difficult of access, it is to be found in the work before us, whether we consider its successful results, or the obstacles with which the author's zeal and perseverance in the quest of truth had to contend.

Respecting Cabot's discoveries, we think the subjoined extracts very interesting.

"Great perplexity has been caused by the statement, that the expedition under Cabot found the coast incline to the north-east. *'He himself informs us* that he reached only to 56° north latitude, and that the coast in that part tended to the east. This seems hardly probable, for the coast of Labrador tends neither at 56° nor at 58° to the east. (Forster, p. 267.) So Navarette (tom. iii. p. 41) thinks that Ramusio's statement cannot be correct, because the latitude mentioned would carry the vessel to Greenland. It is to be remembered, that the language of Cabot suggests that at the immediate point of arrest he was cheered by the prospect of success. We are led, then, to infer that the sanguine adventurer was, for some reason, inspired with fresh confidence, in which his associates refused to participate; and that,

terrified by the perils they had encountered, their dissatisfaction came to a head when they found a new career of peril suggested by what they deemed the delusive hopes of their youthful commander. Let us look into the subject with the aid which these suggestions afford. Bylot, who, after penetrating into Hudson's Bay, proceeded up its northern channel on the west side, as far as 65° and a half, represented the coast as tending to the north-east. The *Quarterly Review* (vol. xvi. p. 158), in an article urging a new expedition in search of the north-west passage, refuses its belief to this statement. We turn then to Captain Parry's Narrative of his Second Voyage. It is apparent from an inspection of the map, that the course pointed out by Cabot, for passing through the strait, would conduct a navigator, without fail, to Winter Island. Now, from the very outset of Captain Parry's course from that point, we find him engaged in a struggle with the north-eastern tendency of the coast. On 13th July, he was off Barrow's River, which is in lat. 67° 18' 45"; and having visited the falls of that river, his narrative is thus continued:—'We found, on our return, that a fresh southerly breeze, which had been blowing for several hours, had driven the ice to some distance from the land; so that at four P.M., as soon as the flood-tide had slackened, we cast off, and made all possible sail to the northward, steering for a headland, remarkable for having a patch of land towards the sea insular in sailing along shore. As we approached this headland, which I named after my friend Mr. Edward Leicester Penhryn, the prospect became more and more enlivening; for the sea was found to be navigable in a degree very seldom experienced in these regions, and the land trending two or three points to the westward of north, gave us reason to hope, we should now be enabled to take a decided and final turn in that anxiously desired direction.' Another remark is suggested by Captain Parry's Narrative. Every one who has had occasion to consider human testimony, or to task his own powers of recollection, must have observed how tenaciously circumstances remain which had affected the imagination, even after names and dates are entirely forgotten. The statement of Peter Martyr exhibits a trophy of this kind. He recalls what his friend Cabot had said of the influence of the sun on the shore along which he was toiling amidst mountains of ice; '*vastas reperit glaciales moles pelago natantes, et lucem fere perpetuam, tellure tamen libera gelu liquefacto*' (Decades iii. lib. 6); a passage which Hakluyt (vol. iii. p. 8), borrowing Eden's version, renders, 'he found monstrous heaps of ice swimming on the sea, and in manner continual day-light; yet saw he the land in that tract free from ice, which had been molten by the heat of the sun.' Where do we look for this almost continual day-light, and this opportunity of noticing the appearance of the land? In that very channel, we would say, leading north from Hudson's Bay, where Captain Parry, later in the summer, whilst between 67° and 68°, and threatened every moment with destruction, thus records his own impressions (p. 261), 'Very little snow was now lying upon the ground, and numerous streams of water rushing down the hills and sparkling in the beams of the morning sun, relieved in some measure the melancholy stillness which otherwise reigned on this desolate shore.'"

The following is a shrewd guess at the fate of Cabot's manuscripts.

"Great surprise has been expressed that Cabot should have left no account of his voy-

ages; and this circumstance has even been urged against him as a matter of reproach. 'Sebastian, with all his knowledge, and in the course of a long life, never committed to writing any narrative of the voyage to North America. The curious on the continent, however, drew from him in conversation various particulars which gave a general idea,' &c. (Historical Account of North America, &c., by Hugh Murray, Esq. vol. i. p. 66.) Let us see how far the reproach on Cabot may be retorted on his country. In this work of 1582, after citing the patent granted by Henry VII. and the testimony of Ramusio, Hakluyt says:—'This much concerning Sebastian Cabot's discovery may suffice for a present taste; but shortly, God willing, shall come out in print ALL HIS OWN MAPPS AND DISCOURSES *drawne and written by himselfe*, which are in the custody of the worshipful Master William Worthington, one of her Majesty's pensioners, who (because so WORTHIE MONUMENTS should not be buried in perpetual oblivion) is very willing to suffer them to be overseene, and published in as good order as may be, to the encouragement and benefite of our countrymen.' It may be sufficient here to say of William Worthington, that he is joined with Sebastian Cabot in the pension given by Philip and Mary on the 29 May, 1557 (Rymer, vol. xv. p. 466). The probable fate of the maps and discourses will be considered on reaching the painful part of Cabot's personal history which belongs to this association."

"We look round with some interest for information as to William Worthington. The only notice of him discovered, is in a passage of Strype's Historical Memorials, (vol. ii. p. 506), where, amongst the acts of Edward VI. the youthful monarch is found, with an easy liberality, forgiving him a large debt, on his allegation that a servant had run away with the money. 'A pardon granted to William Worthington, being indebted to the king for and concerning the office of bailiff and collector of the rents and revenues of all the manors, messuages, lands, tenements, and hereditaments, within the city of London, and county of Middlesex, which did belong to colleges, guilds, fraternities, or free chapells, in the sum of 392 pounds 10 shillings 3 pence, as upon the foot of his account, made by the said William, before Thomas Mildmay, auditor of the said revenues, manifestly it doth appear.—In consideration of his service, both in France and Scotland, and also his daily service and attendance, being one of the ordinary gentlemen and pensioners; and for that the debt grew by the unfaithfulness of his servant, who ran away with the same. Granted in March, but the patent signed in April.' It will be remembered that in Hakluyt's earliest work, published in 1582, he speaks of all Cabot's maps and discourses written with his own hand, as then in the possession of William Worthington. The facts disclosed may, perhaps, assist to account for their disappearance. It is obvious that such documents would be secured, at any price, by the Spanish court, at the period of Hakluyt's publication, when English enterprise was scattering dismay amongst the Spanish possessions in America. The work of Hakluyt (six years before the Armada), shewed where they were to be found. The depositary of them was the very man who had been the object of Philip's bounty during his brief influence in England. Were they not bought up? There can be now only a conjecture on the subject; yet it seems to gather strength the more it is reflected on. Suspicion may even go back farther, and sug-

gest, that a main object in associating this man with Cabot was, to enable him to get possession of the papers, that they might be destroyed or sent to Spain. The fact that Worthington had received them, was probably too well known to be denied by him; and his remark to Hakluyt may have been a mere mode of evading that person's prying curiosity. The same alarm which dictated the demand on Edward VI. for the return of Cabot, would lead Philip to seize, with eagerness, an opportunity of getting hold of these documents, so that the author's dreaded knowledge might expire with himself. Of one thing we may feel assured. Hakluyt, who is found attaching so much importance to an 'extract' from one of Cabot's maps, was not turned aside from efforts to get a sight of this precious collection, but by repeated and peremptory refusals, for which, if it really remained in Worthington's hands, there occurs no adequate motive."

Spanish and Portuguese fabrication during all the sixteenth century, contributed, no doubt, to involve Cabot's voyages in obscurity; and it is delightful to see so much of the darkness which overspread that great navigator's discoveries, now rolled away. The account of his death is very affecting.

"Sixty-one years had now elapsed since the date of the first commission from Henry VII. to Sebastian Cabot, and the powers of nature must have been absolutely wearied out. We lose sight of him after the late mortifying incident; but the faithful and kind-hearted Richard Eden beckons us, with something of awe, to see him die. That excellent person attended him in his last moments, and furnishes a touching proof of the strength of the ruling passion. Cabot spoke feebly, 'on his death-bed,' about a divine revelation to him of a new and infallible method of finding the longitude, which he was not permitted to disclose to any mortal. His pious friend grieves that 'the good old man,' as he is affectionately called, had not yet, 'even in the article of death, shaken off all worldly vaine glorie.' When we remember the earnest religious feeling exhibited in the instructions to Sir Hugh Willoughby, and which formed to decide a feature of Cabot's character, it is impossible to conceive a stronger proof of the influence of long-cherished habits of thought, than that his decaying faculties, at this awful moment, were yet entangled with the problem which continues to this day to vex and elude the human intellect. The dying seaman was again, in imagination, on that beloved ocean over whose billows his intrepid and adventurous youth had opened a pathway, and whose mystères had occupied him longer than the allotted span of ordinary life. The date of his death is not known, nor, except presumptively, the place where it occurred. From the presence of Eden, we may infer that he died in London. It is not known where his remains were deposited. The claims of England in the New World have been uniformly and justly reaped on his discoveries. Proposals of colonisation were urged, on the clearness of the title thus acquired, and the shame of abandoning it. The English language would probably be spoken in no part of America but for Sebastian Cabot. The commerce of England and her navy are admitted to have been deeply, incalculably, his debtors. Yet there is reason to fear, that in his extreme age the allowance which had been solemnly granted to him for life was fraudulently broken in upon. His birth-place we have seen denied. His fame has been obscured by English writers, and every vile calumny against him eagerly

adopted and circulated. All his own maps and discourses, 'drawn and written by himself,' which it was hoped might come out in print, 'because so worthy monuments should not be buried in perpetual oblivion,' have been buried in perpetual oblivion. He gave a continent to England; yet no one can point to the few feet of earth she has allowed him in return!"

There are many other passages which might well tempt us to enlarge this review; but as we hope the book itself will be very widely consulted, we shall content ourselves with requesting the author's notice to the reference, page 107, to Thorne's Memorial. He will find in our description of the Cecil Papers a different reading of that passage, and one which bears something in favour of the views he has so ably and patriotically advanced.

HOPE'S ESSAY ON MAN.

[Concluding Notice.]

LITTLE as this work can be generally known, we trust our continued extracts will not fail to interest the reader.

"Further examples of the differences, physical and mental, of different human races.—As the examples of the differences between certain human tribes and others lead me to races higher, and having an organisation of body and of mind more flexible, I find it necessary more to distinguish the characteristics that are given them directly by mere nature from those which are superadded by later art; since the latter, well conducted, may raise individuals higher above their earlier natural pitch; and, on the contrary, ill conducted, may sink them lower beneath their natural standard. Like the extremes of heat, the extremes of cold still have produced human races pointedly and exclusively adapted to the regions in which they first arose. The Samoyedes seem as little able to support life on the coast of Guinea, as the negroes of the Gold Coast seem able to live near the poles. Only the autochthones of the intervening more temperate regions, less distant from either extreme, seem able, to a certain degree, to brave both the cold of the one and the heat of the other; and even that but imperfectly, as we have found at Sierra Leone. Like the lowest of the tropical races, the lowest of the hyperborean races still seem to shew the inferior combination of the elements of which they are composed, in all their forms and habits. The Samoyede still has a skull depressed and shapeless; hair lank, oily, and coarse. His dim half-closed eyes form with each other an angle, descending over his flat mishapen nose. His cheek-bones protrude preposterously. His head, seen sideways, rests obliquely on his curved spine. His body is bloated, and his extremities seem consumptive. His arms and legs are crooked and ill formed: they appear the rude performances of some bungling artificer. His stature is squat and dwarfish; his complexion swarthy; his skin from infancy so shrivelled, that before he attains manhood he seems to verge on extreme old age. The female is only distinguishable from the male by her dugs, which hang down to her navel, when not flung over her shoulders, in order to support the infant suspended from her back. Feasting on the remains of the dead whales cast on their shores, the Samoyedes, like their dogs, growl when approached during their meals, and, like dogs, approach their own females for carnal purposes in the sight of strangers. Their short summers they waste, when they can, in intemperance: their long winters they sleep away. The smallest oppo-

sition to their momentary whims renders them furious; the weightiest considerations of future welfare hardly make them stir a step. Frightened at a shadow, their cowardice equals their irritability. Of human laws they are ignorant: of divine laws heedless. Their deity is a black cat; their worship, the slaying of their cattle and captives. So unsuited is their frame to any climate milder than their own, that even the temperature of Denmark and Norway is to them mortal.—In the new as in the old world there still remain vestiges of nations which bear the marks of original inferiority of organisation, variously modified, strong upon them. Among these are the red or copper-coloured tribes, of which some are also found in Africa. So torpid are in some of these, and especially in the Caribes, the vital functions, that they can for whole days remain deprived of food, ere the cravings of hunger induce them to make the least exertion for the purpose of seeking sustenance; though, when food is at hand, they gorge till repletion alone forces them to leave off, and to lie down motionless till digestion is performed. As slow in their productive as in their consuming powers, their sexual frigidity at first excited the wonder of the more ardent Spaniards. Only capable of being stimulated to exertion by a present bodily stimulus, they are unable to be, by the mere recollection of the most pinching past wants, made to guard against future privations. Only having advanced to the most primitive arts of hunting and fishing, they disdain the labours, lighter but more regular, of the shepherd and the husbandman. Consequently, they by turns lie in complete torpor, or endure the utmost fatigue: alternately suffer the extremes of want, or wallow in beastly excess. At a single meal they consume the provision of a month, and are content to pay for their intemperance by as long a period of abstinence. In the morning, on rising, for an intoxicating draught they give away the mat which on going to sleep they will again want: when unengaged in the chase or in warfare, they sit for whole days close huddled together in a circle, not for the sake of society or mental companionship, but for that of mere bodily warmth; as silent, and indeed as solitary, as if they were alone. There is between them only physical contact, not intellectual communication, interchange of ideas. Their eyes are fixed on vacancy—their intellects in abeyance. Unheeding passing objects, however new and strange; inaccessible to curiosity and wonder, however little they know; incapable of any real merriment;—from mere absence of thought, seeming absorbed in deep cogitation,—they only awake from total apathy to give way to the most sudden and extreme irritation. They pass, without any ostensible reason, from the apparent gravity of the sage to the groundless laughter of the infant. They sometimes bestow on worthless trifles the admiration they withhold from real wonders. If they recognise a Providence, it is only in evil. For the performance of no deed, however kind, do they feel any obligation, or return any thanks. How should they? They cannot conceive a desire to oblige. They only fancy man to give away what he wants to get rid of,—what he finds it a trouble to keep. But while no favour bestowed excites in them any gratitude, the least boon denied provokes their utmost wrath. Desiring no applause, they fear no disgrace. They know not the value of virtue, of truth, of honour, of renown. They thieve, they lie, they are faithless, without remorse and without shame. They are unable to compass abstract ideas of number

or of quantity. The least process of addition or subtraction exceeds their mental faculties. Their hardly articulate language only affords words for a few concrete ideas. In their wilds, which, however extensive, are hardly able to supply the restricted wants of a thin population, each new-comer is looked upon as an intruder, and treated as an enemy. Each tribe, however small, regards each other tribe, however distant, with hostile eyes. Each tribe even regards its own members who no longer can contribute to the general defence, as no longer entitled to the general protection; as lapsed from their former privileges, as having become a mere encumbrance, as only fit to be spurned or be despatched. Between two different tribes, any meeting, avoided as long as possible, when no longer to be averted, becomes a fight;—not, indeed, in the open field and by fair warfare, but in ambush and by treachery. Prisoners are devoted to a lingering death; and the hardihood with which torture is endured, only proceeds from the hopelessness of inspiring pity. On their wives they never bestow the least endearment—on their offspring any correction. Their companions ill or wounded they leave behind. Their parents, when old and infirm, they drive away, to die deserted. A life of distrust and suspicion is early closed by a miserable death; for while the African black, like the spaniel, thrives in slavery and fawns upon his tyrant, the copper-coloured American, like the hyena, cannot be tamed or brook a master. The small number of those that still prowls about their wastes diminishes daily, and soon the vast continent of America will be entirely stripped of aboriginal races—America, however, seems to have spontaneously produced races more finely organised than the Caribs. To the south of the line, in the vicinity of Rio de Janeiro, are still seen those Indians of Tamoy, whose bow no European can bend; across the inland plains of Patagonia still roam those tribes that by their size make the tallest European look diminutive. Before America was remodified by the arts of Europe, it brought forth, from its native exuberance, large cities and flourishing empires. Of some of these the European invaders accomplished the fall: of others the sun had again set even before these strangers appeared. Of such we find the remains on the borders of the Mississippi and in the province of Quito. It does not, however, appear that the sciences or even the arts ever attained among the Americans a very great degree of eminence. All the gold they possessed still left them destitute of coin—all the languages they spoke, of writing. They used for representing their thoughts none but symbolical signs. In their most civilised states government still remained an unmodified despotism; religion, a senseless and sanguinary idolatry. It is of Asia that the high central table-lands, the outskirts every way slanting down to the surrounding seas and the far-spreading islands, seem to have produced the human races most different in their organisation, most distant in their faculties of mind and body. Among these races, already very superior both physically and morally to those described as having arisen at its Austral Asian extremities, are the more central Mongul race. Still do its individuals yet preserve many marks of inferiority. Their enormous cheek-bones often give their flat faces a width exceeding their length. Their obtuse os frontis and shaggy eyebrows completely overshadow their small piercing eyes, of which the long close-drawn lids descend obliquely toward their

small depressed nose. Their organs of smell hardly rise to the level of their large and skinny lips, which extend the whole width of their ample and projecting jaw. Their enormous hemless ears stand out at right angles from their ill-formed head, while their small receding chin is only decked with a few coarse bristles. Their contracted brains do not prevent the thickness of their skull from giving a preposterous size to the circumference of that head, which the shortness of their neck keeps wedged close within their huge elevated shoulders. Their bulky body, ill supported by meagre and bandy legs, seems almost by nature itself so formed as to need the assistance of that equestrian life which their native steppes so particularly favour. To the Tartars they owe their written language, to the Tibetans their creed; and however long they have had the physical peculiarities of their frame remodified by intermarriages with other surrounding races, less marked by the hand of nature, these peculiarities are so tenacious, that their descendants still retain the impress of the Mongul features. The Chinese still display the same aberrations of form, but in a milder degree, and therefore are supposed to be descended from the Monguls: but why may they not spring from primitive parents distinct from those of the Monguls, which only from having arisen in a soil and climate nearly similar, have thence alone derived an organisation naturally very similar? If the Chinese, though resembling the Monguls, seem to excel these in mental faculties, the Japanese again, in their turn, seem equally to resemble, and yet in energy of mind far to surpass, the Chinese. I shall not pursue any further my examples of races higher than those described, and yet in their qualities, physical and moral, short of the very highest races; like that of the Malays, the Indians, the Arabs, and the Copts. All of these alike still prove their inferiority to the higher exemplars, by certain features either too long or too short, too full or too meagre, too protruding or too depressed,—to preserve the exact middle line compatible with the highest degree of utility and of beauty. All of these alike, by complexion too uniformly light or too uniformly dark, seem to want in their countenances that variety and contrast of hue which marks the most perfect mixture of the different elements that compose the human frame. The races which by nature seem most gifted with these qualities seem to have arisen in those regions to the south-west of the Caspian and of Caucasus, where Xenophon still beheld pleasure-gardens similar to that of Eden, the first cradle of the first scriptural pair, and bearing like that the name of Paradise. They seem to have arisen in those regions, where, after the deluge of Noah had overwhelmed the surrounding land, the ark first touched ground on Mount Ararat; where rose near the Euxine that city, from the anchor found imbedded high up in the neighbouring mountain, called Ancyra; where in later eras on the rocks of Samothrace still remained marks of the deluges of Ogyges and Deucalion; where alone the cereal plants, since diffused over a great part of the globe, first were by nature spontaneously produced; where arose the first great postdiluvian monarchies of Armenia, Persia, Assyria, and Media; where originated the most ancient and widespread language on record, that Pahlî, the mother of the Sanscrit, the Greek, and the German; where Babel's tower since passed for the central point whence diverged in different directions tongues wholly different; where first prevailed that earliest and simplest

deviation from the pure worship of the Creator himself, which still had for its object his earliest and most general creations, ethereal fire, and its first offspring the heavenly bodies; where to the last the kings of Media, of Persia, and of Pontus, still had the symbols of this fire worship displayed on their mitres and impressed on their monuments; whence through the regions of Colchis, round the northern shores, and through Pontus, round the southern coasts of the Euxine, seem to have travelled westward those tribes which, settling further down on the opposite continents of Europe and of Asia, and in the intervening islands of the Archipelago, bore the earlier different appellations of Hellenes, of Pelasgi, and others, which at last were confounded in the more general denomination of Greeks, and became that of the people most eminently gifted of which records have survived the wrecks of time;—where to this day specimens of the physical perfection of their first ancestors still are beheld in the population of Circassia, Armenia, and Georgia, still reckoned the handsomest of the human race. Those Greeks who in their own original nature must have found the models of those pre-eminent forms of which their art offered the imitation, and of which their degenerate descendants only present the partial remains, mixed with baser alloy, and defaced by subsequent corruption, must in their primitive state have possessed the highest organisation of body, and the highest capabilities of mind. They formed the races who in the shortest limits of time, and in the smallest circumference of space, with the least assistance from foreign example or tuition, made in art and in science the furthest strides in the most opposite directions: who in natural powers of body and of mind must not have excelled all other later nations which, with the benefit of their example and their precepts as guides, have still only gone beyond them in those acquirements which mere time suffices to mature and perfect, and which to this day are forced to acknowledge their by-gone pre-eminence in whatever is the spontaneous offering of innate genius and talent. In the representations of the ancient Greeks we find the skull most rounded, the forehead most square, the brow most sharp, the nose most removed both from the aquiline and snubbed extremes, the lips most wavy, most curling up, most neatly hemmed, most luxuriantly pressing on each other; the chin most convex, the outline of the face most oval, most distant alike from uniform width and from unvaried elongation; the throat most developed in its forms and disengaged in its movement; the chest most ample, elevated, and roomy; the waist of slenderest span, the extremities most taper,—of any race. We find the skin represented as having its transparent white at its surface most marked by the purple meandering vein, at its extremities most blurring with the rich crimson of the blood; the lips tinted with the richest coral hue; the long silken hair most neatly implanted, and most distinctly defined by its auburn or jetty hue; under eyebrows most arched, most confluent, and most carefully penciled, and eyelashes casting underneath the softest and most vapoury shade, we find the eyes most full, most resplendent with a lambent fire. We find a countenance most lofty, radiant, and animated; a gait most elastic and firm; movements most easy, varied, and replete both with vigour and with grace; and when, from the contemplation of the qualities that strike the sense, we pass to those only cognisable to the mind, we find

symptoms of that mental aptitude to every pursuit of art and of science, the most varied and the most opposite, which by its transcendency justified, over other nations called barbarians, the pre-eminence universally allowed to the Greeks. Still do even the Greeks themselves seem not entirely to have filled the full measure of perfection which, under the most favourable circumstances, appears by nature to have been allotted to the organisation of man. Every nation of antiquity, even unto the Greeks themselves, preserved some record of a nation still more highly gifted than itself, which once flourished on the earth, but was subsequently again, in one of those great revolutions which marked the infancy of the globe, swept away from its surface. The Greeks retraced its existence in those Titans, afterwards subdued by their gods, and cast into the fiery furnaces of Etna; the Jews recorded its recollection in the rebel angels, by Jehovah for their pride hurled into the flames of hell; in those giants, which on this globe are only once mentioned; and in those very descendants of Adam himself, whose longevity, like the size of the Titans, far exceeded the dimensions of later generations; and bespoke a vital energy, since greatly diminished in the postdiluvian races. The Medes and the Persians preserved similar memorials of races gone by, more perfect than any of those remaining, in their Peris, their Dives, their Girs, and their preadamite monarchs, also at last for their crimes cast into the regions of everlasting fire. Even the Hindoo mythology retraced this primitive perfection of human beings in those powerful spirits which, arisen from earth and warring with the hosts of heaven, were at last swallowed up by the very parent from which they had sprung, and, in the deepest recesses of the globe, doomed to eternal flames. Plato particularly describes as more beautiful in person and more transcendent in intellect than any of the nations remaining on the earth, those Atlantes who probably inhabited the vast inland basin since filled by the waves of the Mediterranean, along whose southern coast still soars Mount Atlas. Having in their pride forgotten that Deity to which they owed their excellence, and having only retained a superiority in vice, their day of final doom at last drew near. When the high waters, long pent up in the table-lands of Asia, whence rivers now flow downwards to every point of the compass, broke their barriers, and in their descent westward successively formed the inferior reservoirs of Lake Aral, of the Caspian Sea, the Euxine, the Archipelago, and that last aggregate of internal waters, shut out from the vast ocean by the Straits of Gibraltar, called by pre-eminence the Mediterranean, together with the intervening steppes and plains of salt,—these Atlantes were at last, with their country, forever swept away from the face of the earth."

With this we conclude. We have almost confined ourselves to one part; but the whole of these extraordinary volumes, where Hobbes has puzzled and Lucretius inspired, is well calculated to excite philosophical inquiry for years to come.

Croker's Boswell's Johnson.

(Third Notice.)

AGREEABLY to our promise, we continue the interesting illustrations with which Mr. Croker has so greatly enriched this work.

Upon the offence of Lord Chesterfield which led to the bitter castigation from John-

son, there is a curious statement in exculpation of the noble lord.

"Hawkins, who lived much with Johnson about this period, attributes the breach between him and Lord Chesterfield to the offence taken by Johnson at being kept waiting during a visit of Cibber's; and Johnson himself, in his celebrated letter, seems to give colour to this latter opinion. He says: 'It is seven years since I waited in your outer rooms, or was repulsed from your door, during which I have pushed my work to the verge of publication, without one act of assistance, one word of encouragement, or one smile of favour.' The expressions, *waited in your outer rooms, and repulsed from your door*, certainly gave colour to 'the long-current and implicitly adopted story' as told by Hawkins, and sanctioned by Lord Lyttleton. In all this affair, Johnson's account, as given by Boswell, is involved in inconsistencies, which seem to prove that his pride, or his waywardness, had taken offence at what he afterwards felt, in his own heart, to be no adequate cause of animosity.

"Why was it to be expected that Lord Chesterfield should cultivate his private acquaintance? that he did not do so, was a loss to his lordship; and the *amour propre* of Johnson might be (as indeed it probably was) offended at that neglect; but surely it was no ground for the kind of charge which is made against his lordship. But even this neglect of Johnson's acquaintance is not without some excuse. Johnson's personal manners and habits, even at a later and more polished period of his life, would probably not have been much to Lord Chesterfield's taste; but it must be remembered, that Johnson's introduction to Lord Chesterfield did not take place till his lordship was past fifty, and he was soon after attacked by a disease which estranged him from society. The neglect lasted, it is charged, from 1748 to 1755: the following extracts of his private letters to his most intimate friends will prove that during that period Lord Chesterfield may be excused for not cultivating Johnson's society:—20th January, 1749: 'My old disorder in my head hindered me from acknowledging your former letters.'—30th June, 1752: 'I am here in my hermitage, very deaf, and consequently alone; but I am less dejected than most people in my situation would be.'—11th Nov. 1752: 'The waters have done my head some good, but not enough to refit me for social life.'—16th Feb. 1753: 'I grow deaf, and consequently more *isolé* from society every day.'—10th Oct. 1753: 'I belong no more to social life, which, when I quitted busy public life, I flattered myself would be the comfort of my declining age.'—16th Nov. 1753: 'I give up all hopes of cure. I know my place, and form my plan accordingly, for I strike society out of it.'—7th Feb. 1754: 'At my age, and with my shattered constitution, freedom from pain is the best I can expect.'—1st March, 1754: 'I am too much *isolé*, too much secluded either from the busy or the *beau monde*, to give you any account of either.'—25th Sept. 1754: 'In truth, all the infirmities of an age still more advanced than mine crowd upon me. In this situation you will easily suppose that I have no pleasant hours.'—10th July, 1755: 'My deafness is extremely increased, and daily increasing, and cuts me wholly off from the society of others, and my other complaints deny me the society of myself.' Johnson, perhaps, knew nothing of all this, and imagined that Lord Chesterfield declined his acquaintance on some opinion derogatory to his personal pretensions. Mr. Tiers, however, who knew Johnson early, and

more familiarly than the other biographers, suggests a more precise and probable ground for Johnson's animosity than Boswell gives, by hinting that Johnson expected some pecuniary assistance from Lord Chesterfield. He says, 'It does not appear that Lord Chesterfield shewed any substantial proofs of approbation to our philologist. A small present Johnson would have disdained, and he was not of a temper to put up with the affront of a disappointment. He revenged himself in a letter to his lordship, written with great acrimony. Lord Chesterfield indeed commends and recommends Mr. Johnson's Dictionary in two or three numbers of the *World*: but 'not words alone, please him.'"

Boswell says, the air of indifference with which Lord C. treated Johnson's letter "was certainly nothing but a specimen of that dissimulation which Lord Chesterfield inculcated as one of the most essential lessons for the conduct of life;" upon which Mr. Croker asks,—"Why? If, as may have been the case, Lord Chesterfield felt that Johnson was unjust towards him, he would not have been mortified—*il n'y a que la écrit qui blesse*. By Mr. Boswell's own confession, it appears that Johnson did not give copies of this letter; that for many years Boswell had in vain solicited him to do so, and that he, after the lapse of twenty years, did so reluctantly. With all these admissions, how can Mr. Boswell attribute to any thing but conscious rectitude Lord Chesterfield's exposure of a letter which the author was so willing to bury in oblivion?" He adds, in contradiction to another charge of Boswell, founded on Johnson's calling his "*désolée* pride":—"Lord Chesterfield made no attack on Johnson, who certainly acted on the offensive, and not the defensive."

An ancient Bride.—"Susan, daughter of Sir Alexander Kennedy, of Culzean, third wife of the ninth Earl of Eglintoun. She was a clever woman, and a patroness of the belles lettres. Allan Ramsay's *Gentle Shepherd* was dedicated to her in a very fulsome style of panegyric. She died in Ayrshire, in 1780, aged ninety-one. The eighth Earl of Eglintoun, the father of her lord, had married, as his second wife, Catherine St. Quentin, the widow of three husbands, and aged above ninety at the time of her last marriage, being, it is presumed, the oldest bride on record."

Comfort to Card-Players.—"Johnson said, 'I am sorry I have not learnt to play at cards. It is very useful in life: it generates kindness, and consolidates society.' And "the late excellent Doctor Baillie advised a gentleman whose official duties were of a very constant and engrossing nature, and whose health seemed to suffer from over-work, to play at cards in the evening, which would tend, he said, to quiet the mind, and to allay the anxiety created by the business of the day."

We recommend a game at Boston, as more a relaxation than whist.

After the Hebridean, we have Johnson's Welsh tour; his journal of which was published by Mr. Duppa, in 1816. From this we also pick two or three of the novelties for which we are indebted to the present editor.

Johnson's Gastronomic Taste.—"Johnson affected to be a man of very nice discernment in the art of cookery (Duppa); but if we may trust Mrs. Pissini's enumeration of his favourite dainties, with very little justice. And observing in one of her letters to Mr. Duppa on this passage, she says, 'Dr. Johnson loved a fine dinner, but would eat perhaps more heartily of a coarse one—boiled beef or veal

pie; fish he seldom passed over, though he said that he only valued the sauce, and that every body ate the first as a vehicle for the second. When he poured *oyster sauce* over *plum pudding*, and the *melted butter* flowing from the toast into his *chocolate*, one might surely say that he was nothing less than delicate."

A Lady of Quality: Lesson on Hospitality.—"Lady Catharine Perceval, daughter of the second Earl of Egmont: this was, it appears, the lady of whom Mrs. Piozzi relates, that 'For a lady of quality, since dead, who received us at her husband's seat in Wales with less attention than he had long been accustomed to, he had a rougher denunciation: 'That woman,' cried Johnson, 'is like sour small beer, the beverage of her table, and produce of the wretched country she lives in: like that, she could never have been a good thing, and even that bad thing is spoiled.' And it is probably of her too that another anecdote is told: 'We had been visiting at a lady's house, whom, as we returned, some of the company ridiculed for her ignorance: 'She is not ignorant,' said he, 'I believe, of any thing she has been taught, or of any thing she is desirous to know; and I suppose if one wanted a little *run tea*, she might be a proper person enough to apply to.' Mrs. Piozzi says, in her MS. Letters, 'that Lady Catharine comes off well in the *diary*. He said many severe things of her, which he did not commit to paper.' She died in 1782."

Anecdote.—In passing through Ruabon the following "occurrence took place: 'A Welsh parson of mean abilities, though a good heart, struck with reverence at the sight of Dr. Johnson, whom he had heard of as the greatest man living, could not find any words to answer his inquiries concerning a motto round somebody's arms which adorned a tombstone in Ruabon churchyard. If I remember right, the words were,

Heb Dw, Heb Dym,
Dw o' diggon.

And though of no very difficult construction, the gentleman seemed wholly confounded, and unable to explain them; till Mr. Johnson, having picked out the meaning by little and little, said to the man, 'Heb is a preposition, I believe, sir, is it not?' My countryman recovering some spirits upon the sudden question, cried out, 'So I humbly presume, sir, very comically."

We are not sure that the following is quite new:—

"He was always vehement against King William. A gentleman who dined at a nobleman's table in his company and that of Mr. Thrale, who related the anecdote, was willing to enter the lists in defence of King William's character, and, having opposed and contradicted Johnson two or three times petulantly enough, the master of the house began to feel uneasy, and expect disagreeable consequences; to avoid which, he said, loud enough for the doctor to hear, 'Our friend here has no meaning now in all this, except just to relate at club to-morrow how he teased Johnson at dinner to-day—this is all to do himself honour.' 'No, upon my word,' replied the other, 'I see no honour in it, whatever you may do.' 'Well, sir,' returned Dr. Johnson, sternly, 'if you do not see the honour, I am sure I feel the disgrace.'"

Boswell, describing one of the club meetings, states that "patriotism is the last refuge of a scoundrel." Upon which Mr. Croker notes with no very liberal allusion.

* "This remarkable sortie, which has very much amused

At sixty-six Johnson visited France, in company with Mr. and Mrs. Thrale; and from this tour we must also derive a few bits for our mosaic.

Statuary.—Johnson says, "Painting consumes labour not disproportionate to its effect; but a fellow will hack half a year at a block of marble to make something in stone that hardly resembles a man. The value of statuary is owing to its difficulty. You would not value the finest head cut upon a carrot." On which Mr. Croker remarks: "Dr. Johnson does not seem to have objected to ornamental architecture or statuary *per se*, but to labour disproportionate to its utility or effect. In this view, his criticisms are just. The late style of building introduced into London, of colonnades and porticos, without any regard to aspect, climate, or utility, is so absurd to reason, so offensive to taste, and so adverse to domestic comfort, that it reconciles us to the short-lived materials of which these edifices are composed. It would have been well if we had, according to Johnson's sober advice, thought it necessary that the 'magnificence of porticos,' and the 'expense of pilasters,' should have borne some degree of proportion to their utility. With regard to 'statuary,' when it does 'preserve the varieties of the human frame,' it deserves all that Mr. Boswell says for it: but Johnson's objection was, that it more frequently produced abortive failures, 'hardly resembling man.'"

Mr. Croker notices that Mrs. Hannah More is supposed to be the individual referred to in the annexed. "He would not allow me to praise a lady then at Bath; observing, 'She does not gain upon me, sir; I think her empty-headed.' "Yet (he observes) it seems hard to conceive in what wayward fancy he could call her 'empty-headed.'"

Sir Joshua Reynolds' Dinners.—"On Sunday," Johnson writes to Mrs. Thrale, "I dined at Sir Joshua's house on the hill [Richmond], with the Bishop of St. Asaph [Shipley]: the dinner was good, and the bishop is knowing and conversable." To which Mr. Croker adds: "This praise of Sir Joshua's dinner was not a matter of course; for his table, though very agreeable, was not what is usually called a good one, as appears from the following description given of it by Mr. Courtenay (a frequent and favourite guest) to Sir James Mackintosh; and which is not, the editor hopes, misplaced in a work in which Sir Joshua and his society have so considerable a share. 'There was something,' said Courtenay, 'singular in the style and economy of Sir Joshua's table that contributed to pleasantry and good-humour; a coarse inelegant plenty, without any regard to order and arrangement. A table, prepared for seven or eight, was often compelled to contain fifteen or sixteen. When this pressing difficulty was got over, a deficiency of knives, forks, plates, and glasses succeeded. The attendance was in the same style; and it was absolutely necessary to call instantly for beer, bread, or wine, that you might be supplied with them before the first course was over. He was once prevailed on to furnish the table with decanters and glasses at dinner, to save time, and prevent the tardy manœuvres of two or three occasional undisciplined domestics. As these accelerating

the world, will hereafter be still more amusing, when it is known, that it appears by the books of the club, that at the moment it was uttered, Mr. Fox was in the chair."—"Lord Lauderdale informed the editor that Mr. Fox (a great authority on this as well as on more important subjects) told him, that the deepest play he had ever known was between the year 1772 and the beginning of the American war. Lord Lauderdale instanced 500000. being staked on a single card at Faro."

utensils were demolished in the course of service, Sir Joshua could never be persuaded to replace them. But these trifling embarrassments only served to enhance the hilarity and singular pleasure of the entertainment. The wine, cookery, and dishes, were but little attended to; nor was the fish or venison ever talked of or recommended. Amidst this convivial, animated bustle among his guests, our host sat perfectly composed; always attentive to what was said, never minding what was ate or drank, but left every one at perfect liberty to scramble for himself. Temporal and spiritual peers, physicians, lawyers, actors, and musicians, composed the motley group, and played their parts without dissonance or discord. At five o'clock precisely dinner was served, whether all the invited guests were arrived or not. Sir Joshua was never so fashionably ill-bred as to wait an hour perhaps for two or three persons of rank or title, and put the rest of the company out of humour by this invidious distinction. His friends and intimate acquaintance will ever love his memory, and will long regret those social hours, and the cheerfulness of that irregular, convivial table, which no one has attempted to revive or imitate, or was indeed qualified to supply."

We have still Vols. IV. and V. to consult; but we do not anticipate that they will lead us to trespass much farther on our readers, especially as the work is already so extensively circulated, that most persons have access to the original.

United Efforts; Poems of a Brother and Sister.
Pp. 100. Sherwood and Co.

WELL-MEANT; and that is all we can say.

Roscoe's Novelist's Library. Vol. III. Humphrey Clinker. London, 1831. Cochraue and Pickersgill.

HUMPHREY CLINKER, in a single, clearly printed, and legible volume, with a portrait of Smollett, and four illustrations by G. Cruikshank, and "all," as the showmen say, "for the small price of five shillings," is enough to tempt a miser to buy the book.

If this new publishing scheme goes on as it has thus capitally begun, we shall rejoice in the resuscitation of our best novels, which more modern performances have thrown somewhat into shade, and at a rate which will make them accessible to readers of every class. Surely if all other things are dear, books are now cheap enough.

The Staff Officer; or, the Soldier of Fortune: a Tale of Real Life. By Oliver Moore. 3 vols. London, 1831. Cochraue and Pickersgill.

WE regret to have here another novel upon which we are bound to pronounce a sentence of decided condemnation. If the reader can suppose a man of mature age, or rather dipping into the vale of years, who will sit down and retrace the scenes of his youthful follies and promiscuous amours with a gloating complacency, a fair idea may be formed of the *Staff Officer*. Oliver Moore is evidently a fictitious name; and we would advise the author, whoever he may be, to preserve his incognito. A retrospective story of the indiscretions, follies, and intrigues, of an Irish lad, can reflect but little credit on an individual of any station in society. Had time brought its best gift, prudence, and experience taught its best lesson, wisdom, we should not have been offended by a production of this kind, which ought neither to have been penned nor published. As we

cannot lend our page to the propagation of prurient and ribald descriptions, we will give no extract from this injudicious and polluting novel.*

Reform; a Poem. By H. J. Paull. 8vo. pp. 63. London, 1831. Whittaker and Co. A FOOLISH subject for a poet; and Mr. Paull displays so much poetry in his opening, that we regret the more his having attempted a political absurdity.

Philosophy in Sport made Science in Earnest. 3 vols. 12mo. London, 1831. Colburn and Bentley.

THIS is a new edition, with additions, of Dr. Paris's work; for our opinion of which, we can refer to a (double) *Gazette*, with engravings to match. Having so fairly introduced the worthy and humorous doctor's philosophy, with its toys and sports, it would be no reviewing in sport to our readers to treat them again with the same remarks in earnest. We shall therefore only repeat, that knowledge was never taught in a more pleasant way than in these volumes.

The New Estate; or, the Young Travellers in Wales and Ireland. By the Author of "Portugal." pp. 302. London, 1831. Harvey and Darton.

WE like this little volume much—both for embodying a good deal of information, and for pleasantly conveying it. The progress of a journey through Wales to Ireland would seem at first beaten ground; but we are deceived if other than our juvenile readers do not find both novelty and entertainment in its details. The young travellers themselves are very interesting; and their impressions and remarks give additional attraction to the scenes through which they pass. There are some pretty woodcuts.

Family Classical Library, No. XIX. London, Valpy.

BADHAM's Juvenal, and Sir W. Drummond's *Persius*, form this volume of the Classical Library,—and an excellent volume it is.

Dr. Lardner's Cabinet Cyclopædia, Vol. XX. History of Poland. Longman and Co.

DERIVED from many and the most authentic sources, this concise history of Poland is extremely well-timed and appropriate. It is systematically arranged and clearly written. The author assures us that he has exercised a most impartial judgment in speaking of Poles or Russians; and he bears a high testimony to the just and beneficent character of the Emperor Nicholas. It is a good sign of a book when we find the writer bold enough to set his face against popular opinion; and without compromising himself at all, the author of this volume has fairly done so, rather than pay his court to passions or prejudices. It is altogether a production fit for the information of the hour.

Library of Entertaining Knowledge. C. Knight. PARIS and its historical scenes are here set before us. It is curious that London should not have been first in the field; but the facility of compiling from foreign sources is a great temptation. The volume is various and pleasant.

* We had prepared this notice last week, when we were informed, that though we had an early copy of the book, it had not been published: therefore, agreeably to our rule, we abstained from saying any thing of that of which we could not truly say any thing advantageous.

Divines of the Church of England. No. XIV. By the Rev. T. S. Hughes, B.D. Valpy. A SECOND volume of Jeremy Taylor;—a divine always to be read with advantage and delight.

National Library, No. XI. Lives of Celebrated Travellers. Vol. I. London, 1831. Colburn and Bentley.

AN excellent design, and, if ably executed, likely to revive a vast fund of curious and entertaining knowledge. This volume is compiled from William de Rubruquis, who travelled in Egypt, Tartary, Syria, &c., in the thirteenth century; from the renowned Marco Polo; from Ibn Batuta; from Leo Africanus; from Pietro della Valle; from Tavernier; from Bernier; from Chardin; from Kæmpfer; and from Maundrell. It must be, that some 300 pages of a small book can give us but a taste of so many voluminous authors; yet the selection is agreeable and attractive.

The Five Nights of St. Albans: a Romance of the Sixteenth Century. 3 vols. 12mo. Second edition. London, 1831. Sherwood and Co.; and W. Kidd.

A HUMOROUS address to the "discerning public" introduces this new edition of the *Nights of St. Albans* to notice: it quotes the criticisms of various periodicals favourable to the romance, since its first appearance two years ago; and suggests the author's just claim to a compensation from them in Equity, should they have misled him by their praise thus to speculate farther. To get rid of our part of the penalty, we must recommend the *Five Nights*, which we do to the utmost consistently with our former review of it.

The Picturesque Pocket Companion to Margate, Ramsgate, Broadstairs, and the parts adjacent; with 120 Illustrations on Wood. By G. W. Bonner. 18mo. pp. 216. London, 1831. Kidd.

THIS is a truly picturesque little volume of some very picturesque and beautiful scenery. Its principal recommendations are the numerous wood engravings with which it is illustrated, some of which are as delicate specimens of the art of wood-cutting, and as faithful views of the several objects, as any thing we have met with in the landscape department: they are equally creditable to the skill of the artist and the taste of the publisher. The letter-press is just sufficient for the purpose intended,—briefly historical, and therefore admirably calculated for a pocket companion; while a copious index affords instant reference for every remarkable object on the river Thames and the Isle of Thanet. We apprehend few solitary travellers, or new visitors, to the Isle, will be without a "Pocket Companion."

ARTS AND SCIENCES.

CAPTAIN NORTON'S RIFLE-SHELL.

WE have recently had an opportunity of seeing Captain Norton repeat experiments with his rifle-shell, with the success of which we, as far as our knowledge of gunnery went, were perfectly satisfied. Captain N. loaded a rifle-pistol in the usual way, putting instead of a ball a shell with a peg, which should first strike the object aimed at, and, being driven in, explode the shell. The principle of this projectile is, that the effect of the rifling upon the shell shall always keep it in the direction which

is given to it on leaving the muzzle of the gun; so that it shall invariably impinge on the same point, penetrate the substance, and explode with destructive precision. We witnessed this in repeated instances. The board fired at was pierced and ignited; and it appeared to us that such an engine employed against ammunition-waggons, baggage, and camp equipages, must be of prodigious efficacy in war.

LITERARY AND LEARNED.

ROYAL ASIATIC SOCIETY.

SIR GEORGE STAUNTON, Bart., in the chair. J. R. Morrison, Esq. of Canton, presented a curious collection of spells, charms, amulets, &c. used by the Chinese with a view to propitiate various powers, and secure riches, honours, and longevity. One article was a sword, of the size and shape of a Roman cut-and-thrust sword, and formed of the coin called *cash* by Europeans in India: the influence of the emperors in whose reigns the coins were struck, is supposed to be effectual in keeping away evil spirits. Sir A. Johnston, the Rev. Mr. Roberts a missionary in Ceylon, and other individuals, likewise made sundry donations. The only paper read was Mr. Morrison's explanation of the objects presented by him. His Majesty the King of Persia was unanimously elected an honorary member.

FINE ARTS.

NEW PUBLICATIONS.

Engravings of Ancient Cathedrals, Hôtels de Ville, and other Public Buildings of celebrity, in France, Holland, Germany, and Italy. Drawn on the spot, and engraved by John Coney: with Illustrative Descriptions by Charles Heathcote Tatham, Esq., and able Assistants. Part VII. Moon, Boys, and Graves.

WORTHY of the preceding Parts. The plates are, "Cathedral, Milan, S.W. view," "Cathedral, Strasburg," "University, Pavia," and "St. Martin's, Landshut." Of these, the Cathedral at Milan is decidedly the most magnificent. It is, indeed, to borrow a term from our continental neighbours, *superb*. "It was in the centre of the transept of this cathedral," observes Mr. Tatham, "that Napoleon was crowned King of Italy; and it was on that occasion he snatched the crown from the hands of the Archbishop, and placed it on his own head, exclaiming, 'Dio mi diede, guai a chi la tocca'—God gave it to me, woe to him who touches it." This remarkable sentence has since become the motto of the order of the Iron Crown." By the by, there is a discrepancy between the French and English text, in speaking of the celebrated figure behind the choir of St. Bartholomew, by Marcus Agrati. The one attributes to the sculptor great anatomical knowledge, the other charges him with great anatomical ignorance. It is scarcely necessary to add that the former is the correct character.

Characteristic Sketches of Animals. Drawn from the Life and engraved by Thomas Landseer; with Descriptive Notices by John Barrow, Esq. Part VI. Moon, Boys, and Graves.

"THE Llama," "the Wapiti," "the Neel-gau," and "the Wolf," are the subjects of the four animal portraits, and the four illustrative vignettes, which ornament the sixth Part of Mr. Landseer's work. They are all executed with extraordinary felicity. If we were to select any one as peculiarly attractive,

it would be the representation of Mrs. Wapiti suckling — Wapiti, Jun., Esq. It is a fine exhibition of maternal tenderness; and is full of grace.

Views of the City of New York and its Environs. Part I. Peabody and Co., New York; Rich, London.

It is not equal to some English works of a similar description (and it would be flattery to say that it is so), we have nevertheless been much pleased with this little publication, which promises to render us well acquainted with the principal features of New York and its neighbourhood.

Landscape Illustrations of the Waverley Novels. Engraved by W. and E. Finden. Part XV. Tilt.

It is highly tantalising, and we must say that we do not think it kind on the part of the publishers of this work, to place before us, in the very heat of the dog-days, such charming plates as "the Frith between Cumberland and Galloway," and "the Castle of Crookstone;" and thus to remind us so strongly of the refreshing sea-breeze, and the delicious shade of the groves. We are almost provoked, in revenge, to omit stating, that the first is from a drawing by Copley Fielding, and the second from a drawing by D. Roberts—that they are both finely engraved by E. Finden—and that the Part contains two other interesting views of "the Round Tower at Windsor in 1660," and of "Liege."

The Most Noble Elizabeth, Marchioness of Stafford. Engraved by Dean from a Painting by Sir Thomas Lawrence. Colnaghi. Possessing great breadth and sweetness; with that peculiar and dignified air which Sir Thomas so well knew how to communicate to his subjects of rank. It is the seventy-ninth of the Series of the Female Nobility, in *La Belle Assemblée*.

Mademoiselle Tagliani. From a Drawing by A. E. Chalon, R.A.; drawn on stone by R. J. Lane, A.R.A. Dickinson.

We know no one who could have so happily depicted the exquisite, though foreign, *tour-nure* and grace of this fascinating *déesse de la danse* as Mr. Chalon. He has been ably seconded by Mr. Lane.

The Right Hon. Lord Clifford, Baron Chudleigh. Painted by James Ramsay; engraved by Charles Fox.

A FIRM, unaffected portrait of the late lord; equally creditable to the painter and the engraver.

The Spanish Bandit. Painted by J. C. Zeiter; engraved by J. Egan. Harding. PICTURESQUE and forcible. A gentleman we should be very sorry to meet in a narrow lane at night.

ORIGINAL POETRY.

WRITTEN BY A NATIVE OF BRUNO,
On approaching the Cornish coast, June 1831.

[We think it will give an added interest to this poem, if we state that it is the production of John Lander, the African traveller; but we would not have betrayed the secret, were it not that it will give a point to many of the sentiments so naturally and fervently expressed.—Ed. L. G.]

"By secret charms our native land attracts."

ROLL on, ye waves! ye winds that round me
roar,
O bear me safely to my native shore!

May no dull clouds enwrap thee, queen of
heaven!

Nor be ye shrouded, gentle stars! this even;
But shine resplendent, wondrous orbs, I pray,
And light the weary wanderer on his way.
Ye viewless spirits, roving through the air,
If ye have power, O aid this humble prayer!
And thou, my gallant ship, sail fast and free,
For hearts beat high that are expecting thee.
Let not the eagle, in his lonely flight,
Outstrip thee in thy homeward course to-night:
Let not the arrow, whizzing from the bow,
More swiftly travel, or more true than thou.
Rapid as thought, fleet as the lightning's flash,
I would that o'er the waters thou couldst dash,
And onwards bear me, through the sounding
foam,

Where soft affection lures me to my home.
As thirsts the weary hind for crystal springs,
Or as the widowed dove lamenting sings—
So long, so mourns my spirit to retrace
Those goodly scenes which charmed my dwell-
ing-place!

And oft I've grieved, Cornubia! wept for thee,
As mourned for Venice tender Foscarei,
Or as the Grecian sage, as stories tell,
Sighed to regain the land he loved so well,
When driven by tempests, and by whirlwinds
tossed,

Seven dreary winters saw his wishes crossed:
For, like the sparrow, wandering from her nest,
My weary soul has found no place of rest.
Yet thoughts of home have made my heart
rejoice,

E'en as an angel's or a sister's voice;
And through my veins I've felt the genial fire,
Charming as Orpheus' harp or David's lyre.
And oft have I indulged this pleasing theme
(My daily vision and my nightly dream);
And oft when 'neath some fragrant citron's
shade,

For sooty nymphs and sable lovers made,
Hope has exulting spread her golden wings,
Spangling the future with all glorious things.
Touched with her wand, as by Ithuriel's spear,
Dread, sorrow, suffering, soon dissolved in air;
The howling wilderness and desert wild
With bloom and verdure like a garden smiled;
And from the roaring storm and withering blast
A kindly shelter offered to the last.

Dear soft enchantress! heaven-born though
thou art, [my heart!
How often hast thou cheered, how oft forsook
Uncalled, hast scattered rose-buds of delight,
And when I would embrace thee, taken flight!

The stars are up in all their proud array,
The moonbeams tremble on the billows' spray,
The wind propitious fills the swelling sails,
And sacred silence every where prevails.
'Tis charming all, and beautiful and bright,
Nor southern clime can boast a richer sight;
Though there I've watched, with a lover's eye,
The golden sun march grandly down the sky;
Beheld the blushing tints of coming even
Match in their loveliness the gates of heaven,
And in these rainbow shades, with glory dressed,
Hesperian fields and gardens of the blessed
Have oft-times pictured.

'Tis pleasant thus to be so near one's home,
When one is weary of the wish to roam;
To feel the wasting sickness of the heart,
Which hope delayed and languishment im-
part,
Give place to vigorous health, and feelings gay,
The spirit's flutter, and the warm heart's play.
And soothing 'tis to muse on dangers past,
Each former peril yielding to the last—
Recall each scene of wretchedness and pain,
And count one's ills and sufferings o'er again.

Where scorching zephyrs sigh o'er burning
lands,

Where palmy groves wave over golden sands,
Where black tornadoes wild and furious play,
And man is fierce and merciless as they,—
There rages fever with his ghastly train,
And death's pale horse, triumphant, scours the
plain,

While his grim rider, with his shadowy dart,
Meets every eye, and threatens every heart.
There have I seen the young, the gay, the
brave, [grave
All droop their heads, then huddled to the
No kindly tongue relates their mournful tale.
Nor neighbours feel their loss, nor friends be-
wall;

But far from home, neglected, and forgot,
They lie without a stone to mark the spot.
In that cursed soil no father dies alone,
A partner's spirit flits behind his own,
And orphan children, ere they've time to cry,
Stretch forth their little trembling arms and die.
Thou hast no evils, Cornwall, like to these;
Health, chief of blessings, sports in every breeze,
And rosy cheeks and vigorous limbs proclaim,
Thy children know them only by their name.
Land of my birth! what rapture fires my veins
That I again shall tread thy verdant plains,
Again to mingle with the friends I love,
Through boyhood's sunny scenes again to rove,
Again to recognise in lovely faces
Beauty's sweet blush, and virtue's winning
graces;

To stroll o'er daisied fields and pastures green,
With flowery lane and hawthorn hedge between,
And hear at eventide the tuneful lays
Of feathered songsters warbling from the sprays.
How charming are the thoughts of so much
bliss,
Such hope ecstatic—springing joy as this!

But lo! a beacon, shining from afar,
Gleams o'er the waters, like a golden star:
Is it the Lizard's cheering light I see?
Welcome to thousands—O how dear to me!
It is—it is Cornubia!—O my God!
I thank thee.

SKETCHES OF SOCIETY.

PROGRESS OF KNOWLEDGE.

We have not seen a surer sign of the general progress of improvement than has recently been afforded by the presentation of a petition to parliament, signed by upwards of four thousand respectable native inhabitants of Bombay, of every religion, caste, and sect. This remarkable document, which may be considered to speak the sentiments of fifty or sixty millions of British subjects, prays for—1. The extension of his majesty's courts all over India; 2. for the extension of the legal privileges, &c. of the natives, rendering them eligible to trusts from which they are now excluded; and, 3. for the introduction of the English language throughout the empire. On the first point, the petitioners gratefully refer to the memorable labours of Sir Alexander Johnston, who, by intrusting natives with the administration of justice, has demonstrated their fitness to be so elevated in the scale of society. They complain that the laws as understood at the presidencies are not the code by which the provinces are governed; and that the judges are extremely deficient in the knowledge necessary for the performance of their duties. It is, therefore, they say, no exaggeration to affirm, that the natives beyond the presidencies are treated in the character of a conquered, distinct, and degraded people. On the second topic they con-

tend, that by rewarding moral and intellectual merit with honourable and profitable offices, the immense population of India will be cemented in a bond of union round the British crown; and the introduction of the English language into the vernacular languages of the country, is also strenuously insisted upon, as the means of consolidating and strengthening this cohesion. This would facilitate the general improvement of India.

We trust that these representations will have due weight with our legislators: they are both of great present and future importance. Our notice to them, however, is attracted more in a literary light; for we could not help being struck by a purely native Indian production so ably drawn up as this petition, and taking such just and comprehensive views of the policy which can best promote the welfare and happiness of that vast and populous country.

NEW TEMPERANCE SOCIETY.

A NUMEROUS meeting of persons, including a large proportion of the Society of Friends, took place on Tuesday last at the Rev. Mr. Fletcher's chapel, Moorfields; with a view of establishing institutions in the metropolis for preventing, or, at least, restraining, the vice of intoxication. Our readers are aware that Temperance Societies have, within the last few years, been pretty generally established in various parts of the United States; and from reports which have been published, it would appear that they have effected a considerable reform in the habits of the working classes, who were more addicted to the immoderate use of ardent spirits than even the people of this country. Within the last two or three years the subject has also engaged the attention of many philanthropic individuals in Glasgow, and other parts of Scotland; and from statements read to the meeting on Tuesday, by a gentleman named Collins, it is affirmed that there has been a decided change in the habits of many of the labourers in Scotland, such as smiths, iron-founders, and other artisans, who formerly considered ardent spirit essential to keep up their strength, but who now entirely abstain from it, and use water instead; in consequence of which they enjoy infinitely better health than before. As this is not a mere question of economy, in a pecuniary sense, but one of vital interest to the community at large, the trial of the experiment in this great metropolis is earnestly enforced; and some gentlemen of the provisional committee, at the late meeting, are employed in establishing local societies, under the denomination of Temperance Societies. Nothing is required from the members in the form of pecuniary contribution, but that they should enroll themselves under a sort of voluntary bond or promise to abstain from the use of ardent spirit, or other intoxicating liquors:—the slight incidental expenses of these meetings to be provided for by the voluntary contributions of such philanthropic persons as may feel zealous in support of the undertaking. We understand that a considerable number of persons of various sects have already enrolled their names among the supporters of these institutions.

MUSIC.

ROYAL ACADEMY CONCERT.

The committee of managers of the Royal Academy of Music gave their annual concert on Thursday morning, at the Hanover Square Rooms, previous to the distribution of the

medals, and other orders of distinction, merited by the respective pupils whose talent and application have been most prominent during the preceding year. A considerable number of persons of rank honoured the concert with their presence.

It is a very high compliment to a young lady named Wharton, that she sung *Se m' abbandoni* (a most intricate cavatina of Mercadante) in a style little inferior to Madame Malibran; and Miss Postans (a contralto) sung the difficult *scena in Il Italiano in Alghieri*, with nearly equal effect. Yet, as a whole, we should say the balance of power is decidedly in favour of the instrumental performers. The best performance of the day was a *concerto* by four violins, and although not quite Paganini, it was exceedingly well played for young performers. A very promising youth also gave a concerto on the horn, highly creditable to his preceptors.

At the conclusion of the concert, Sir G. Warrender, in the name of the directors, awarded the honorary distinctions, after some suitable remarks on the decided improvement which had been manifested in our national taste for music, since the first establishment of the Academy, and the patronage thereby given to native talent.

VOCAL MUSIC.

On Wednesday evening Mr. T. Phillips gave his concluding lecture on vocal music, accompanied by Messrs. Horncastle and Taylor, and the Misses Brandons, before a select, yet numerous auditory, at the Argyle Rooms. As we have already had occasion to speak in terms of much commendation of the objects proposed in these lectures, that of improving our national taste, and encouraging native talent, by the application of foreign modes of tuition, combined with the just application of *sound to sense*, we shall only in the present case observe, that the concerted pieces selected on Wednesday evening by Mr. Phillips and his assistants, were equally creditable to their good taste and musical talents. From the vocal powers and perfect taste displayed by one of the Miss Brandons in a cavatina of Winter's, and an air of Bishop's composition, we should say that young lady is destined to occupy a distinguished place among English vocalists at no distant day.

Young Aspull's concert was equal to our expectations. He has become a very fine performer. It was also pleasing on this occasion to find another of our young and gifted phenomena growing into mature excellence. The little Miss Coveney, so full of precocious talent, is already distinguished as an accomplished vocalist.

DRAMA.

COVENT GARDEN.

We had only room enough last week to say that Covent Garden Theatre had closed. We have now to express our fears that it has been an unproductive season at the best; the difference in the expenses being all that has saved the proprietors from the fate of those of Drury Lane. Great changes, it is supposed, must take place next season at this theatre also. We do hope and trust there will be changes of measures as well as of men. The cry has now become general—"the old system will not do." Change it, then, gentlemen managers, for your own sakes. It is false that the drama has declined; it is false that the English are not a play-going people. It is only true that they

will not go to a theatre to yawn at old, long, dull, pieces, played by third-rate performers till past one, even on Sunday mornings, and to feel, that unless their daughters go without their bonnets, "so as to entitle them to a seat in the dress circle," they must witness the most disgusting scenes, and sit amidst the vilest of the vile, exposed to personal insult, which, as that might lead to the interference of the police, they are almost anxious to incur.

We subjoin our usual list of the novelties produced during the season. Interludes have carried it hollow at both houses. Mr. Poole's *Turning the Tables* was decidedly the most successful piece produced at Drury Lane; and *Hide and Seek* and *The Omnibus* were the only true hits at Covent Garden. The pantomime, the Easter piece, and *Napoleon*, though all well enough in their way, but dragged their slow length along, from the positive lack of brisker matters; and Spohr's opera, though highly creditable to its producers and the establishment at large, scarcely, we should imagine, paid its own expenses.

Oct. 19, 1830. Blue Anchor, Melo-drama, 2 acts: Pocock. 15 nights.

Oct. 20. Jew of Arragon, a Play, 5 acts: Wade. Withdrawn.

Oct. 30. Carnival at Naples, Play, 3 acts: Dimond. 16 nights.

Nov. 11. Hide and Seek, Interlude. 24 nights.

Nov. 30. Chancery Suit, Comedy, 5 acts: Peake. 10 nights.

Dec. 6. Omnibus, Interlude: Pocock. 25 nights.

Dec. 27. Harlequin Pat or Fat, Christmas Pantomime: Peake and Farley. 43 nights.

Feb. 2, 1831. Married Lovers, Comedy, 2 acts: Power. 16 nights.

Feb. 3. Romance of a Day, Operatic Drama, 2 acts: Planché. 10 nights.

Feb. 11. Comrades and Friends, Melo-drama, 2 acts: Pocock. 5 nights.

April 4. Neuha's Cave, Easter-piece, 2 acts: Peake. 29 nights.

April 5. Azor and Zemira, Opera, 3 acts: Ball and Peake. 21 nights.

April 29. Exquisites, Comedy, 5 acts: T. de Truebe: 5 nights.

May 16. Napoleon, Pageant in 7 parts: Lacey. 30 nights.

May 31. Gipsy Father, Drama, 2 acts: Mrs. Norton. 3 nights.

ENGLISH OPERA, ADELPHI.

On Monday *The Feudal Lady*, a Melo-drama, by Mr. Banim, was produced here with but indifferent success: as it has since been withdrawn, we need not enter into criticism.

QUEEN'S THEATRE.

Our reports of the performances at this handsome little theatre, under the management of Mr. Keppell, continue to improve upon us. *Love and Mystery*, a new piece, is acted with great spirit and success by Mrs. Waylett, Mr. Greene, Mr. Keppell, and others: it is the production of a Mr. Haynes, a provincial comedian, and is very effective, if not very original. It is gratifying to observe that good houses reward these meritorious exertions to please; and show that wherever sufficient and proper entertainment is provided, there will be encouragement enough of the drama.

VARIETIES.

New Mineral Species.—Mr. Johnston describes the brownish-yellow-coloured mineral, with four-sided nearly rectangular prisms, from Leadhills, and well known to mineralogists by the name of new mineral, as a vanadate of lead. Vanadium is a new metal, just discovered by Sefström. Mr. J. has also in his possession specimens of the same mineral from Alston Moor.

New Steam Vessel.—A steam vessel on the high-pressure principle, the steam generated in

pipes instead of a boiler, (so that if one bursts, the explosion is not general or dangerous,) was tried on the Thames on Thursday, with, as we are informed, complete success. This plan allows more room for stowage, requires less fuel, and possesses many advantages over the machines hitherto employed.

British Museum.—We rejoice to gather from the parliamentary reports, that a rather more liberal grant than usual has this year been allowed to this national institution.

The Labouring Poor.—In the midst of greater political turmoil, it is gratifying to perceive that minor propositions for bettering the condition of the poor are not neglected. The plan so zealously advocated and exemplified by Mr. Montagu Burgoyne, *i. e.* for enclosing and allotting lands in the neighbourhood of London, by way of provision for the labouring poor, is gathering friends and strength. As far as it goes, we can conceive nothing more eligible; and it is surely a great encouragement to proceed and extend the practice, when we witness the excellent effects which have been produced wherever it has been already tried—near Richmond, near Pottton, Bedfordshire, and other places. There is, we believe, another public meeting to-day in favour of this good work.

Death of Mr. Roscoe.—This distinguished and elegant scholar died last week at Liverpool, at an advanced age. He was one of the ten royal associates of the Royal Society of Literature, to whom a grant of a hundred guineas a-year had been assigned, in consideration of the works with which he had embellished our national literature; and his death at this time causes us the more to regret, that a bounty, so ennobling to the giver and receiver, should have been stopped in the new reign. Of the ten associates, two, the learned Mr. Davies and the accomplished Mr. Roscoe, have already thinned the list: is the economy of England, that rich and great country, to be manifested by withholding this slight token of honour from the rest? We hope not.

Death of Patrick Gibson.—This “*anciente marinere*” died, the other day, at his residence near the *World’s End Lane* (the address for so long a liver!), Chelsea, at the remarkable age of one hundred and eleven!! He was a purser in the navy, superannuated after he had passed his hundredth year. Gibson was an Irishman, and of a very strong, sinewy frame. His hand was like whalebone, and his grip and shake, to the very last, such as would have astonished, if not annihilated, the nerves of a modern exquisite. Faithful to his old sea customs, he lived chiefly on salt junk, which he laid in for the week, and so had little trouble in marketing. He was very cheerful, and his conversation extremely entertaining. The last time we saw him (for so singular a person was well worth the attention of his neighbours), he had returned from his half-yearly visit to the Bank, per coach, to receive his dividends. He was in high spirits, and told us a story of the taking of Quebec, where he was a purser, in 1759. He had, it seems, gone ashore to bathe, and was in a state of nudity when he perceived boats from the fleet with the immortal Wolfe, and the gallant admiral who commanded the naval part of the expedition, approaching the spot selected for his ablutions. He had barely time to huddle up his clothes, and take refuge in a hut which stood by the sea-side. It happened curiously enough that the two commanders walked into the same cabin, and while the shivering purser was in secret trying to get into his shirt and trousers, he, per force, over-

heard their conversation. Wolfe bluntly stated to the admiral that he was determined to attack the heights next morning; and asked him if he would assist him with the marines from the vessels. “Not only with the marines,” was the characteristic reply, “but with every sailor who can be spared to bear a hand.” This, said old Gibson, was the only court held on the memorable occasion,—the brave officers shook hands upon it, and returned to their boats—the glorious result of their union is a bright page in English history.

Royal Tablet.—We find the specimen of this tablet sent for our inspection by Messrs. Smith and Dolier, very superior to the asses’ skin hitherto in use for memoranda, &c. We do not know what the composition is, but it has a china or enamel-like appearance—takes the pencil very neatly and clearly—retains legibly what is written—and, on being cleaned by moisture, resumes all its original freshness for new inscriptions.

Cholera Morbus.—In every newspaper cholera morbus heads a column of intelligence. In every company cholera morbus is the theme of general conversation. Nursery-maids keep naughty children in order by telling them that cholera morbus will fetch them. The very ballad-singers fright the streets from their propriety with cholera morbus. The other day we heard a ragged urchin bawling out, to the old tune of “Abraham Newland,” a string of verses, one of which, to the best of our recollection, ran as follows:—

Since at Riga and Dantzic
There’s many a man sick,
The subject is one should absorb us; *
For unless folks are humming,
It really is coming.
This ill-looking cholera morbus.
Oh! cholera morbus!
Terrible cholera morbus!
But one out of five
They say will survive,
If we’re all seduced with cholera morbus.

Variety!—“Custom cannot state his infinite variety.” Over the stall of a public writer in la rue du Bac, at Paris, is the following inscription:—“M. Renard, public writer, advising compiler, translates the tongues, explains the language of flowers, and sells fried potatoes.” *Furet de Londres.*

Methodists of Geneva.—Several societies of Methodists have of late years sprung up at Geneva; some of these are said to be extremely anxious to draw upon them the public attention, no matter by what means, so that they could but give themselves out for the victims of persecution. During the last summer, a number of persons of both sexes were observed at night in the churchyard, passing to and fro among the graves. The police had an eye on these persons, and, under the idea that they might be what we call “resurrectionists,” they placed a *gens-d’arme* to watch them. The next night the visitors came again; but as the concealed sentinel perceived nothing amiss, he did not interrupt them. When, however, they were about to depart, he stepped before them, and begged the company to follow him to the lieutenant of police. They were all delighted at this—for they wished for nothing more than to be punished. On being questioned at the police-office, they replied:—“We go to the churchyard to place ourselves in contact and communion with the beloved spirits of our de-

* The writer of this declared there was no other possible rhyme to *morbus* in the English language. He was dumb-founded by the following impromptu:

I begged for a kiss from a pretty young miss;
But she said, “What will you give me for *bus*?”
I made no reply; for a kiss you can buy,
Is as bad as the *cholera morbus*.

ceased relatives and friends; God enjoins this, though the temporal authorities forbid it.” “O no,” replied the lieutenant of police, “the authorities don’t forbid it; on the contrary, I will furnish you with a key to the churchyard, so that you may let yourselves in without being put to the inconvenience of going through the neighbours’ gardens.” Since that time not a creature has been seen in the churchyard, and the “beloved spirits” have been left in peace.—*Desultory Foreign Reading.*

Female Courtship in Rome.—The women of Rome know nothing of those restraints which delicacy, modesty, and virtue impose upon the sex in northern Europe. A Roman lady, who takes a liking to a young foreigner, does not cast down her eyes when he looks at her, but fixes them upon him long and with evident pleasure;—nay, she gazes at him alone whenever she meets him, in company, at church, at the theatre, or in her walks. She will say, without ceremony, to a friend of the young man’s: *Dile al signor che mi piace*—“Tell that gentleman I like him.” If the man of her choice feels the like sentiments, and asks, *Mi volete bene?*—“Are you fond of me?” she replies, with the utmost frankness, *Sì, caro*—“Yes, dear.” In this simple and unembellished manner commence connexions which last for years, and which, when they are dissolved, plunge the men into despair. The Marchese Gatti lately shot himself, because, on his return from Paris, he found that his mistress had been false to him.

Gresham Prize Medal.—We hear that it is intended to establish an annual prize medal for the best original composition in sacred vocal music. The words to be selected from the canonical Scriptures, Apocrypha, or Liturgy of the Church of England.

LITERARY NOVELTIES.

[*Literary Gazette’s Weekly Advertisement, No. XXVIII. July 9.*]

Mrs. Bray (so advantageously known to the literary world) is superintending the production of a curious volume—the poems of a female servant in Tavistock, who has lived twelve years in the same family, and corresponded with the laureate. Her name is Mary Maria Colling; and the work, with her portrait, is to be published by subscription for her benefit. We are told that Lord Dover has just completed a *Life of Frederic the Great, King of Prussia*.

The forthcoming No. of the Quarterly Review is, we learn, to contain—*Connexion of Intellectual Operations with Organic Action*; *Rob Don’s Poems*; *Heracle’s Discourse on the Study of Natural History*; *Doctrine of St. Simeon*—*New Distribution of Property*; *Subversion of Ancient Governments*; *Old English Domestic Architecture*; *Friendly Advice to the Lords*; *Sanscrit Poetry* and *the Hindoo Drama*.

LIST OF NEW BOOKS.

Moore’s Staff Officer, 3 vols. post 8vo. 11. 4s. bds.—*Thorn on Sexual Diseases*, 8vo. 7s. bds.—*Cock’s Pathological Anatomy*, 32mo. 7s. bds.—*Kidd’s Pictorial Pocket Companion to Margate*, &c. 12mo. 6s. cloth.—*River Companion*, 18mo. 1s. 6d. sewed.—*Lant’s History of Painting*, 2 vols. crown 8vo. 16s. bds.—*Ottley’s Rustum Khan*, 3 vols. post 8vo. 11. 10s. bds.

TO CORRESPONDENTS.

We are sorry that it is inconsistent with the plan of the *Literary Gazette* to insert the appeal to public benevolence on behalf of the suffering descendants of the late Mr. Adam Walker: their distress might, we think, be made sufficiently known by private means, and thus find the relief required.

We cannot advise G. W. to cultivate poetry for sought beyond his own gratification. We read with the most entire approbation Lord Fife’s speech on the subject of the law and its administration, for which we consider the noble Earl entitled to the gratitude of his country. The subject, however, is hardly of so distinct a literary character as to come within our range; and all we can say to “*Anti-Oppression*” is, that we shall omit no incidental opportunity of enforcing those enlightened views which would redeem us from this most burdensome and cruel slavery—the slavery imposed, and the cruelties inflicted, upon the whole community by pettyfoggers, in the name of law.

We can only refer to M. Joffroy’s advertisement as a sequel to our remarks upon his manner of cleaning paintings in last *Gazette*.

ADVERTISEMENT,

Connected with Literature and the Arts.

THE GALLERY of the SOCIETY of PAINTERS in WATER COLOURS, Pall Mall East, WILL CLOSE for the present Season on Saturday next, the 10th instant.

Open from Nine till Dusk.

Admittance, 1s.—Catalogue, 6d.

CHARLES WILD, Secretary.

NOTICE.—The Exhibition of the National Repertory Gallery of the Royal Mews, Charing Cross. Patron, the KING.

The Fourth Annual Exhibition of this Institution is now open daily.

Admittance, 1s.—Catalogue, 1s.

T. S. TULL, Secretary.

Royal Asiatic Society's House, 14, Grafton Street, Bond Street.
THE ANNUAL DINNER of the ROYAL ASIATIC SOCIETY, at which His Royal Highness the Duke of Sussex, one of its Vice-Patrons, will preside, will be held at the Thatched House Tavern, St. James's Street, on Saturday, the 10th July, at Six o'clock precisely.

Tickets, price One Pound each, may be obtained by the Members for themselves and their Friends, at the House of the Royal Asiatic Society, and at the Bar of the Thatched House Tavern, on or before the 14th of July.

WILLIAM HUTTMANN.

ARGYLL ROOMS.—The Nobility and Gentry are most respectfully informed, that J. Turrill has at his fashionable Repository, 300, Regent Street (on the site of the late Argyle Rooms), a very large and choice Assortment of Stationery, Albums, and Drawing Books, Ladies' and Gentlemen's Travelling Cases, Writing Desks, and Dressing Cases, Despatch Boxes and Portfolios, Bibles and Prayer Books, Account Books, Brevets and Ebony Inkstands, Fancy Stationery, &c. J. T. begs to observe, that the whole of his Stock is entirely new, and warranted of the best manufacture; and particularly invites the Nobility and Gentry at large to try his very cheap and superior Writing Papers, which he offers at the following low prices, for cash; viz. fine Bath 6d. per quire, 9s. per ream; ditto, 8d. per quire, 12s. per ream; ditto, 10d. per quire, 15s. per ream—superfine large blue wove post, hot-pressed, 10d. per quire, 15s. per ream—best thick Bath, 1s. per quire, 15s. per ream. Also, best Seal-ling-wax 5s. per pound—good pens 4s. per 100—Hudson's Bay and Swan Pens 12s. per 100—best Blacklead Pencils 4s. per dozen; ditto, prepared lead, 6s. per dozen—Travelling Cases, 18 inches length, with patent inkstands, 19s.; 14 inch ditto, 11s.; 14 inch round ditto, 21s.—a very great variety equally as low. All orders by post will meet with immediate attention.

Manufactory, 351, Oxford Street.

The Fine Arts.

SIGNOR L. JOFFROY, Professor of the Fine Arts, from Italy, has made a most important Discovery, in an improved Method of Cleaning and Restoring Old Paintings to all their original beauty, by which the use of Acids and Alkalis (so destructive to Colours), is entirely avoided. L. J. also gives Instructions in the Art of Painting in Water Colours and Drawings in a superior style. B.—Services as to ability, &c. at Messrs. Colnaghi and Son, 14, Pall Mall East. For Terms, apply at his Residence, 15, Penton Square, Coventry Street.

WANTED, a Person well qualified to teach the Modern Greek, through the medium of English, French, or Italian. Apply by letter only, (post-paid), to S. B., Vine Cottage, Vine Street, Lambeth.

SUPERIOR GENTLEMEN'S BOARD. SING SCHOOL to be DISPOSED OF, by immediate application, in Person only, to Messrs. Elkins and Son, 59, Newman Street, Oxford Street, between the Hours of Eleven and Three o'clock.

FOUR VACANCIES.—A Married Clergyman, LL.D. residing in an elegant mansion near London, long accustomed to the Education of Youth for the Universities, Army, Merchants' Houses, knowing the objections of Parents to Public Schools, London Universities, Colleges, &c. on account of the cruel discipline in the former, and the little learnt, except evil, in the latter, combines all the Classical Courses of Eton with the Mathematical Instructions of Cambridge, of which he is a Member; and thereby affords Junior Pupils, with the comforts and plenty of home, the classical advantages of public schools, without their cruel discipline, and senior Pupils the scientific instruction of Universities, without their moral evils, expenses, &c. But to expand the minds of his Pupils and make them intellectual, no ordinary school studies are sufficient. The principal, therefore, and four resident assistants, (two graduates), devote eight hours daily to the education of only 30 Pupils. This academy, combined with lectures on history, belles lettres, astronomy, chemistry, &c. large library, instruments, &c. have made many clever boys, some of which now rank among the first scholars.

Terms, including every expense, 60 Guineas, if under 14; 15 above, 80 Guineas.

Plans and Prospectuses, gratis, at Messrs. Dixie's, 8, New Bond Street; and Mann's, 39, Cornhill.

PREPARED PARCHMENT.—To Attorneys, Conveyancers, Architects, &c.—Messrs. Phillips and Co. Law and General Stationers, No. 106, Chancery Lane, represented by Mr. Charles Terry, of above Lane, beg leave to inform the Legal Profession, that they can be supplied with the Prepared Parchment in every variety of size and form, as well as impressed with the proper Stamp for any Deed or Document.

N.B. Parish Registers printed according to the Forms prescribed by Act of Parliament.

Maps of India and of the Burman Empire, corrected to 1831.

This day is published, by Parbury, Allen, and Co. 7, Lendalhall Street.

A NEWLY CONSTRUCTED and EXTENDED MAP of INDIA and of the BURMAN EMPIRE, from the latest Surveys of the best Authorities. Compiled principally for the Use of the Officers of the Army in India. On Six Sheets, price 12s. 6d.; or on cloth, in a Case, 34s. 6d.; or on cloth, with Rollers, varnished, 44s. 6d.

Among the great mass of materials used in the construction of this Map, the following may be particularly mentioned:—The Surveys of Colonel M'Kenzie in the Mysore; of Brigadier Lambton, as well as numerous Positions determined by him in the course of his Trigonometrical Operations; of Colonel Hodgson, and of Captain Franklin in Bundelcund; of Captain Johnson in Bhopal; of Lieut. Wilcox in Assam; of Lieut. Fisher in Sylhet; and of Lieut. Pemberton in Manipoor. Malwa is copied from Sir John Malcolm's Map.

2. A smaller Map of India and of the Burman Empire, compiled from the latest Documents. On 1 large Sheet, 18s.; or on cloth, in a Case, 11s. 6d.; or on cloth, with Rollers, varnished, 11s. 9d.

BOOKS PUBLISHED THIS DAY.

THE THIRD VOLUME of COLONEL NAPIER'S HISTORY of the WAR in the PENINSULA. 8vo. with Plans, price 30s. boards.

"Napier's History of the Peninsular War is an admirable production, and at a stroke levels all others before it." *Metropolitan*.

T. and W. Boone, (from the Strand), 29, New Bond Street.

With Notes by the Editor, Sir Walter Scott, Lord Stowell, Sir James Mackintosh, &c. with several original Portraits, 5 vols. 8vo. 34s.

BOSWELL'S LIFE of JOHNSON, a new edition, incorporating Hawkins, Mrs. Plozier, Tour to the Hebrides, Tour in Wales, &c. By the Right Honourable JOHN WILSON CROKER. John Murray, Albemarle Street.

HAVERHILL; or, Memoirs of an Officer in the Army of Wolfe.

By JAMES ATHEARN JONES.

3 vols. post 8vo. price 11s. 6d. boards. "It is to the full as earnest and impressive, and conceived in nearly as philosophical a spirit, as 'Lawrie Todd,' while it is more full of adventure, character, and historical details." *Atlas*.

T. and W. Boone, (from the Strand), 29, New Bond Street.

Just published, in 1 thick vol. third edition, much enlarged and improved, price 15s.

MODERN DOMESTIC MEDICINE; or, a Popular Treatise, exhibiting the Nature, Symptoms, Causes, and most efficacious Treatment of all Diseases, embracing all the modern Improvements in Medicine. Containing also a copious Collection of approved Prescriptions, Medical Management of Children, &c. The whole forming a clear and comprehensive Medical Guide for the Family, Clergy, and Invalids. By T. J. GRAHAM, M.D. &c.

"We conscientiously recommend it. It is very far above the celebrated 'Beecham's,' and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need, without any doubt of being benefited by its wisdom." *Literary Chronicle*.

"In the opinion of a respectable physician, well known in our profession, it is enriched with the use of that modern practice has ascertained to be valuable, and is not only incomparably superior to Buchan's, but also to every similar work in our language." *Weston Magazine*.

"It is altogether deserving of permanent popularity." *London Weekly Review*.

"It is one of the very best and most useful books published in modern times." *Monthly Olio*.

Published by Simpkin and Marshall, London; and sold by all Booksellers.

Also, by the same Author, 8d. edition, revised and enlarged, price 8s. 6d.

2. A Treatise on Indigestion; illustrating the Symptoms, Varieties, Causes, and correct Treatment of the prevailing Disorders of the Stomach and Liver; with Practical Observations on some painful Complaints originating in those Disorders, as Tic Douloureux, Gout, Fulness of Blood in the Head, &c.

"We sincerely recommend it, and have long been convinced that such a work was imperatively called for." *London Medical Journal*.

"It is very evidently the result of close attention, to, and deep experience in the subject. Mr. Abernethy speaks of it in terms of high praise." *British Magazine*, Jan. 1830.

The Public Records.

THE COMMISSIONERS for PRESERVING the PUBLIC RECORDS, having authorised their Publishers to sell these important National Treasures, for a limited period, at such very moderate prices as will place them within the reach of even private individuals, a Catalogue of all the Works which have been printed by order of the Commission, with the reduced Prices annexed, may be had of the Publishers, Baldwin and Cradock, Paternoster Row.

Bampton Lectures for 1831.

In 8vo. price 12s. in boards.

THE POPULAR EVIDENCE of CHRISTIANITY STATED and EXAMINED, in Eight Discourses, preached before the University of Oxford, in the Year 1831, at the Lecture founded by the late Rev. John Bampton, M.A. Canon of Salisbury.

By THOMAS WILLIAM LANCASTER, M.A. Vicar of Banbury, and formerly Fellow of Queen's College, Oxford.

Oxford: Printed for J. Parker; and C., J., G., and F. Rivington, St. Paul's Churchyard and Waterloo Place, London.

Briffon's Architectural Works.

THE Publishers of the following splendid and truly interesting Works solicit the attention of Antiquaries, Architects, and all classes of Connoisseurs, to their contents, and to the peculiarly faithful and beautiful style in which every department has been executed. In archaeological information and Picturesque Antiquities are unrivalled in the present country. The whole series may be said to constitute a Cyclopædia of the Architectural Antiquities of England. Some of the large paper copies are out of print, and will never be reworked; and of the small paper only a very limited edition has been printed. Prices and purchases may be certain of good impressions. The most eminent draftsmen and engravers have been engaged in the different works; and all the published critiques both of our own and foreign countries have uniformly praised them for fidelity, beauty, and varied information.

A Dictionary of the Architecture and Archaeology of the Middle Ages; including the Words used by Old and Modern Authors in treating of Architectural and other Antiquities, &c. The volume will contain at least Forty Engravings, by J. Le Keux, and be completed in Four Parts, in the year 1831. Price, royal 8vo. 12s. each; medium 4to. 31s.; imperial 4to. 31s. 6d.

Picturesque Antiquities of the English Cities; containing Sixty Engravings by Le Keux, &c., and Twenty-four Woodcuts, of Ancient Buildings, Street Architecture, Bars, Castles, &c.; with Historical and Descriptive Accounts of the Subjects, and of the Characteristic Features of each City. This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 756.

SATURDAY, JULY 16, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Speeches of the Right Hon. W. Huskisson; with a Biographical Memoir, supplied to the Editor from Authentic Sources. 3 vols. 8vo. circ. pp. 1850. London, 1831. Murray.

To the political and commercial world a work of greater interest than the present could not be offered. A mind combining clear practical views, and a knowledge of all the details of business, with the most comprehensive and enlightened principles of general policy—like the proboscis of the elephant, equal at once to the minute and stupendous—is a rare phenomenon among men. Such, however, was the mind of Mr. Huskisson; and the vast variety of his information only seemed more extraordinary from the prodigious extent of the accumulated mass—we observed and wondered how one so intimately acquainted with particular points should also possess so enlarged an understanding. But with his abilities the points continued into lines—the lines spread into surfaces—the surfaces thickened into solids—and the whole displayed a pyramid of naturally acute perception, of acquired intelligence, and of rational induction, whence the times in which he lived might reap the benefit of wise counsels, and to which succeeding statesmen, of all ages and countries, may advantageously look back for instruction and guidance.

We are well aware, that upon many important questions, persons of much experience and judgment held opinions very opposite to those of Mr. Huskisson; but still even those who most differed from him, acknowledged the great scope of his talents, and the convincing powers with which he supported the theories he had adopted. More could not be expected in our complicated system, where so many private interests clash with plans for the public good, where the most obvious national improvements are sure to have their inveterate opponents, and where assumed or vested rights very naturally resist any personal sacrifice, or even the chance of ultimate loss, for the sake of promoting innovation, no matter how favourably it may paint the blessings to the future. Be it currency or corn laws; colonisation or Canada timber; steam tax or tallow duty; restriction upon or opening of trade; levying of poor's rate or tithing; partial or sweeping reform—there will always be as much of ingenious objection and sturdy opposition as there are selfish motives to be alarmed, and productive monopolies to be threatened, by an alteration in their course. The stock-holder will be for cash payments; the landowner for high prices of grain; the over-burdened parish for emigration; the monopolist for things as they are; the poor, oppressed, and suffering, for change; the borough-proprietor for close or nomination boroughs to work well; the clergyman for tithes; the dealer for remission of taxes on whatever article he deals in, and against the imposition of any tax upon that article—and so on to the end.

He is the true statesman who can see through all the bearings of these conflicting elements; and happy indeed is it for the people if he possess sufficient influence to rule and direct them for the common weal. Mr. Huskisson accomplished much; and when we consider how, with our old institutions, wherein abuses as well as superior policy must have gathered strength for centuries, he could so far prevail, we are forced to pay as high a tribute to his perseverance and genius as the utmost estimation can express.

It will strike our readers, that the more valuable such a work as this is, the more our difficulty of rendering it aught like justice is augmented. Every speech in parliament would demand a notice to the full compass of our limits; and the whole circle of European politics would be embraced by the discussion. We are, therefore, compelled to indicate rather than review the contents of these volumes; and, in short, to leave them with their own certain pretensions to public regard, with only our hearty approbation of the manner in which they have been produced. The industry of the editor has been well seconded by access to the best sources of information; and he has, without that delay so injurious to works of the kind, presented us with a very complete epitome of the life and labours of the celebrated individual whose biography he has undertaken to illustrate, while yet we are warm with the memory of his exertions, while yet almost all the topics on which he displayed his great powers are of deep and immediate consequence, and while yet our sympathies are touched by his unfortunate and melancholy fate.

The preface affords further particulars.

"In addition to the whole of the expositions made by Mr. Huskisson, on introducing his measures for the amelioration of the commercial and colonial policy of the country, and which, at the solicitation of his friends, he was induced to give to the public in a corrected shape, the present volumes will be found to contain nearly all the other speeches delivered by him, during his long parliamentary life, on subjects connected with the improvement of the moral condition, and the security of the civil and religious rights, of the people. No pains have been spared to render this portion of the work as correct as possible; and so liberal has been the assistance afforded to him, that the editor believes he may safely assert, that a collection of a similar description was scarcely ever offered to the public with more claims to confidence on the score of fidelity, and that it will, indeed, be found to contain 'a mass of the most profound and valuable information, and be considered by those who formerly assisted Mr. Huskisson's labours, and now uphold his principles, as forming a manual for future ministers on all questions of commercial and international policy.' As so much had been said and written respecting the French Speech, delivered by Mr. Huskisson in the year 1790, at the 'Société de 1789,' and

as the object and character of that speech had been grossly misrepresented, it became desirable that it should have a place in this collection. Even the immediate friends of Mr. Huskisson did not, however, possess a copy; and it was only after a diligent search, that the editor at length found it amongst the mass of tracts connected with the early period of the French revolution preserved in the British Museum. It is inserted, with the Prospectus of the Society, in the Appendix; together with some speeches addressed by Mr. Huskisson to his constituents at Liverpool and Chichester; and also one, which will be read with much interest, delivered by him at the public meeting for erecting a monument to the late James Watt. To Mr. Murray, who, with his wonted liberality, has allowed him to insert the pamphlet, written in 1810, on the currency question, which forms an important commentary on Mr. Huskisson's Speeches upon that intricate subject, the editor is greatly indebted. His grateful acknowledgments are also due to Sir Robert Peel, for the readiness with which he has consented to allow the fine head of Mr. Huskisson, painted for him by Sir Thomas Lawrence, to be engraved for this work."

It is dedicated to Mrs. Huskisson. To the faithfulness of the Memoir, consisting of 268 pages, we can bear testimony, having lately had occasion to go over the same inquiry, though on a more confined scale.

We think the following elucidation of the early portion of his life, which has been so much commented upon, will be an acceptable extract.

"Though, in common with many of the most virtuous and most eminent men of the day, he had hailed with transport the first rising of the day-star of liberty, and had openly proclaimed his zeal for the cause of reformation, yet his generous ardour for its ultimate success was speedily chilled; and he recoiled from the frightful excesses and utter profligacy of those who had by this time assumed the direction of the revolution. The scenes which crowded one upon another, and marked each succeeding day with some fresh outrage against humanity—with some more flagrant violation of all laws, divine and human—were such as to fill every virtuous breast with horror and alarm. Even the iron sceptre of royal despotism seemed preferable to the blood-dripping axe of the frantic demagogues of Paris; and when the mild virtues of the reigning monarch, and the extensive reforms and ameliorations which had already relieved the people from their most venacious burdens, and removed or alleviated the most galling of their grievances, were calmly weighed against the cruelties of the sanguinary tyrants of the clubs; not a few of the best and wisest of the earliest champions of the new doctrines resolved to exert their utmost endeavours to preserve for the nation the benefits already won; but to arrest, if possible, the further progress of the revolutionary torrent, which threatened to sweep away all the landmarks of civilised government, and to

involve the world in one wide chaos of anarchy and infidelity. That such a change in the feelings of Mr. Huskisson had been operated on this subject, when he resolved to accept the offer of Lord Gower, cannot be doubted; that they were known to have experienced such an alteration may fairly be presumed, or that offer would scarcely have been made; and that the different society into which he was now thrown, and his initiation into a more extensive and confidential acquaintance with the science of politics, strengthened and confirmed his determination to withdraw from any farther participation in the debates of clubs, and from all intimate communication with those who still pressed onwards their plans of revolutionary reform—is a supposition so reasonable, that it might be asserted as a fact, even if his own authority did not survive for stating such to have been the case. The following letter paints in strong terms the nature of his political feelings in 1792.

"Paris, June 29, 1792.

"My dear —, when I wrote to our friend * * *, a fortnight ago, I explained to him the principal reason of my delay in answering your kind letters. I did not expect that, after this delay of the office, fresh obstacles would be thrown in my way at the Bibliothèque du Roi, as I was acquainted with the chef, le Président d'Ormesson. Unfortunately, intestine quarrels in the library, and an infamous *délation*, have deprived him for these three weeks of his own comforts, and of the power of being of service to his friends in his capacity of librarian. Descendant of an ancient family illustrious in the parliamentary annals of France, he is, as you may imagine, a great aristocrat. His love of curious old writings, joined to his principles, made him wish to preserve several old titles, genealogies, &c. deposited in the library; all of which the Assembly has ordered to be committed to the flames. His conduct on this occasion was traduced to the Assembly by the demagogue Carra, who holds a place under him. Having absented himself from Paris, I thought more proper to wait his return than to make any inquiries among his enemies; and as he will be back tomorrow, I shall be able to inform you exactly, by the next courier, whether the Bibliothèque contains any thing curious relative to Milton. I suppose you will have seen in all the English papers an account of the shameful and odious conduct of the people of this place on the 20th instant. The miraculous preservation of the king amidst so many dangers, his admirable presence of mind during this long and painful scene, have gained him many friends among the better order of people, and seem to have added much to the affection of the army. His friends only wish that his courage was of a more active nature. In his conduct he seems to be supported by the spirit of a martyr, the tranquillity of a good conscience, the resignation of a Christian; but nothing hitherto shews the enterprising courage and intrepidity of a hero, capable of great and astonishing resolutions, executed with that energy which strikes his enemies with terror, and ensures success to his cause. Believe me, &c. &c. W. H."

"To pursue the fearful march of the French Revolution is no part of this work; but one anecdote connected with the events of the fatal 10th of August, may well find admittance here. The publication of it can no longer offend the delicacy or wound the feelings of any person now living. On the evening of that dreadful day, when slaughter had stayed its weary arm, and it became possible for a foreigner to ven-

ture forth into the streets of Paris, Mr. Huskisson wandered out to view the field of conflict, and to endeavour to obtain some more accurate information of the transactions which had taken place in the last twenty-four hours. The residence of the English ambassador was then at the Hotel de Monaco, in the Fauxbourg St. Germain, where Mr. Huskisson inhabited a suite of rooms on one side of the gate, similar to one on the other side, which had been the apartments of the Comte de Valentinois while the Princesse de Monaco lived there. When Mr. Huskisson returned to his apartments, he found that during his absence M. de Champcenetz, the then Governor of the Tuileries, had taken refuge there. It appeared that this nobleman had, when the palace was assaulted and carried by the infuriated mob, either been thrown or had jumped from one of the windows, and that he had fallen amongst some of the unfortunate Swiss, whose bodies lay in heaps around the palace which they had so gallantly attempted to defend. After remaining in this perilous situation for some hours, and happily eluding the murderous search of the wretches who were busily engaged in giving the finishing stroke to any of the victims who still breathed, M. de Champcenetz had, as the darkness of the evening closed on this fatal day, contrived with much difficulty to make his way unperceived to the hotel of the British ambassador; where, by passing himself for an Englishman, he had obtained access to the apartments of Mr. Huskisson, with whom he was slightly acquainted. Here Mr. Huskisson found him concealed. The situation was one of the utmost delicacy, and one of the greatest embarrassment. M. de Champcenetz threw himself upon his honour, and appealed to his generosity and humanity to protect him against the assassins. To drive him from his refuge was virtually to become his murderer, and to deliver him up to a fate even more cruel than that from which he had escaped. To allow him to remain was to incur the deepest responsibility, to run the risk of compromising the ambassador, and consequently to hazard the danger of provoking a war between France and England. It was as imperative to keep the knowledge that a person so closely attached to the royal family had taken shelter in the hotel of the embassy from reaching Lord Gower, as it was to prevent the circumstance from being discovered by the blood-thirsty populace. In this dilemma, Mr. Huskisson at last bethought himself of placing his unfortunate guest under the protection of a laundress, on whose fidelity he knew he could confide. He contrived to have him secretly conveyed to her dwelling, furnished him with money and whatever else he required, and at the expiration of a week of mutual alarm and anxiety, had the happiness of ascertaining that he had quitted Paris in safety. This nobleman died a few years ago, having been restored to the government of the Tuileries by Louis the Eighteenth."

The following is a curious personal history:—

"There are some persons who are recorded never to have gone into action without being wounded. Mr. Huskisson seems to have laboured under a similar fatality in regard to accidents, from his earliest infancy to that fatal one which closed his career. As a child, he fractured his arm;—a few days before his marriage his horse fell with him, and he was severely hurt;—soon after, he was knocked down by the pole of a carriage, just at the entrance to the Horse Guards;—in the autumn of 1801, being then in Scotland, at

the Duke of Athol's, he missed his distance in attempting to leap the moat, and gave himself a most violent sprain of the ankle, accompanied with a considerable laceration of some of the tendons and ligaments of his foot; and it was many weeks before he recovered sufficiently to leave Scotland:—indeed, the effects of this accident were visible in his gait during the remainder of his life. He afterwards fractured his arm by a fall from his horse at Petworth; and again, in 1817, by his carriage being overturned. On this occasion none of his surgeons could discover the precise nature of the mischief; but Sir Astley Cooper was of opinion that the bone was split from the fracture up to the joint. The recovery was slow, and his sufferings very severe—as all kinds of experiments were employed to prevent the joint from stiffening. In spite of every exertion, he never recovered the full use of his arm; and a visible alteration in the spirit and elasticity of his carriage resulted from the injury. He was constantly encountering accidents of minor importance; and the frequency of them, joined to a frame enfeebled from the severe illnesses under which he suffered during his latter years, had given rise to a certain hesitation in his movements, wherever any crowd or obstacle impeded him, which may, perhaps, in some degree have led to that last misfortune, which to his friends and to the country may well be termed irreparable."

At page 65 of the Memoir there is a statement relative to the friendship between Mr. Canning and Mr. Huskisson, of the tone of which we cannot approve.

"In the summer of 1814 (says the writer) Mr. Canning accepted the embassy to Lisbon. It has been lately stated, in a work of great authority, that he did so reluctantly, and that he was only 'induced to do so, because the government had made it the condition of enrolling in its ranks those of his personal friends, who had attached themselves to his political fortunes.' Who the friends were for whom Mr. Canning sacrificed himself on this occasion, it is not pretended to guess. But as Mr. Huskisson, it is believed, was the only one of those friends who was appointed to the chief direction of a department, an inference might be drawn, that it was for his advancement principally, that Mr. Canning took upon himself the unpopularity which was attached to the Lisbon embassy. This inference is distinctly repelled on the part of Mr. Huskisson's friends. If any faith is to be placed in the anecdotes of the times, it would be contradicted by what was then currently reported, and often alluded to even in parliament; namely, that Mr. Canning had, not long before his appointment, released his adherents from all political allegiance, and, as Mr. Whitbread sarcastically expressed it, told them 'to shift for themselves.' But, without attaching any importance to what was possibly merely an idle report, it must appear rather incredible, that no expedient could have been devised by which the services of Mr. Huskisson could be made palatable to the government, short of endangering Mr. Canning's public reputation; or that government should have been, all of a sudden, so blind to the value of the former, as to have made his admission to office contingent upon the appointment of the latter to a post, the acceptance of which he was well aware would enable his enemies 'to misrepresent and calumniate' him. On the contrary, it is only due to the memory of Mr. Huskisson to say, that, however closely united to Mr. Canning in private and in political friendship, he was a

fair and indisputable right to be considered as the worker-out of his own greatness. His connexion with Mr. Canning may have retarded—it certainly did not hasten—his rise to the highest offices of the state."

We doubt this inference entirely; and we will venture to say, positively, and of our own knowledge at the time, that Mr. Canning would not accept the embassy to Lisbon until the accession of his friends, and particularly of Mr. Huskisson, to office, was made a distinct part of the treaty. The friendship between these great men—a pure, lasting, and disinterested one—was of essential advantage to both: a more honourable attachment never adorned political life; and we should be sorry to record that so noble an example was clogged by the belief that it was of disservice to either.

We do not enter into the grand question of free trade. Upon that portion of it which relates to America, we quote an amusing morceau.

"The following dialogue, in his own handwriting, and bearing various marks of correction in the same, has been found among Mr. Huskisson's MS. papers; and as there is every reason to believe it to have been his own composition, it is inserted as a specimen of that easy playfulness which has been mentioned as one of the charms of his private society.

"*Fraternal Dialogue between John Bull and his brother Jonathan.* (Date, July 1825.)—*Jonathan.* You are a very good and constant customer, John, at my shop, for flour, hoops, staves, and many other articles of my trade; you are good pay, and I am always glad to deal with you. *John.* I believe all you say—I wish to continue a good customer; but I must say your mode of dealing with me is rather hard. Every time I travel to, or send to your shop (Sunday or not), I am obliged to pay double toll at the turnpike-gate, which is close before it. *Jon.* You need not take that trouble. I prefer sending my goods to my customers by my own porters; and as they are always ready and punctual in delivering the packages, I do not see why you should complain. *John.* I complain because my own cart and horses have nothing to do, and my people are upon the poor-rate, whilst I am paying you for portage. I will not go on in this way. *Jon.* Well! we will consider it next Christmas, when the partners in our firm meet to talk over the concern. (John remains patient for another year; when, finding the Sunday toll still continued, he asks what brother Jonathan and his firm have decided. July 1826.) *Jon.* We have resolved to grant a new lease of the toll, without making any alteration in the terms. *John.* You have!—then I withdraw my custom. *Jon.* The devil you do! (*Aside.*) We mistook him for a more patient ass than he proves to be. How shall we contrive to bring him back to our shop?"

We will contrast the playful with the affecting. "The following extract is taken from a MS. book, found after his death in a private box. 'Whatever pains I have taken for the improvement and simplification of the laws which regulate our commerce and industry, I have taken it all for the sake of the public interest. So far from serving any interest of my own, I have gained the ill-will and enmity of many—partly secret, partly declared; painful to myself, but not useless, perhaps, to the country.'"

With this we conclude. The publication needs no recommendation from us: it must be found in every good library.

Waverley Novels, Vol. XXVI. The Fortunes of Nigel. Vol. I. Edinburgh, 1831, Cadell; Whittaker and Co. London.

ONE of Sir Walter's peculiarly neat prefaces ushers in the present volume: we prefer, however, quoting from the notes, as containing more of novelty.

"*George Heriot.*—This excellent person was but little known by his actions when alive; but we may well use, in this particular, the striking phrase of Scripture, 'that being dead, he yet speaketh.' We have already mentioned, in the Introduction, the splendid charity of which he was the founder; the few notices of his personal history are slight and meagre. George Heriot was born at Trabroun, in the parish of Gladsmair; he was the eldest son of a goldsmith in Edinburgh, descended from a family of some consequence in East Lothian. His father enjoyed the confidence of his fellow-citizens, and was their representative in parliament. He was, besides, one of the deputies sent by the inhabitants of the city to propitiate the king, when he had left Edinburgh abruptly, after the riot of 17th December, 1596. George Heriot, the son, pursued his father's occupation of a goldsmith, then peculiarly lucrative, and much connected with that of a money-broker. He enjoyed the favour and protection of James, and of his consort, Anne of Denmark. He married, for his first wife, a maiden of his own rank, named Christian Marjoribanks, daughter of a respectable burgess. This was in 1586. He was afterwards named jeweller to the queen, whose account to him for a space of ten years amounted to nearly 40,000*l.* George Heriot having lost his wife, connected himself with the distinguished house of Rosebery, by marrying a daughter of James Primrose, clerk to the privy council. Of this lady he was deprived by her dying in childbirth in 1612, before attaining her twenty-first year. After a life spent in honourable and successful industry, George Heriot died in London, to which city he had followed his royal master, on the 12th February, 1624, at the age of sixty-one years. His picture, (copied by Scougal from a lost original,) in which he is represented in the prime of life, is thus described: 'His fair hair, which overshades the thoughtful brow and calm calculating eye, with the cast of humour on the lower part of the countenance, are all indicative of the genuine Scottish character, and well distinguish a person fitted to move steadily and wisely through the world, with a strength of resolution to ensure success, and a disposition to enjoy it.'—*Historical and Descriptive Account of Heriot's Hospital, with a Memoir of the Founder, by Messrs. James and John Johnston.* Edinburgh, 1827.—I may add, as every thing concerning George Heriot is interesting, that his second wife, Alison Primrose, was interred in St. Gregory's church, from the register of which parish the Rev. Mr. Barham, rector, has in the kindest manner sent me the following extract:—'Mrs. Alison, the wife of Mr. George Heriot, gentleman, 20th April, 1612.' St. Gregory's, before the great fire of London which consumed the cathedral, formed one of the towers of old St. Paul's, and occupied the space of ground now filled by Queen Anne's statue. In the south aisle of the choir Mrs. Heriot reposed under a handsome monument. * * * The loss of a young, beautiful, and amiable partner, at a period so interesting, was the probable reason of her husband devoting his fortune to a charitable institution."

"*Sir Mungo Malagrowth.*—It will per-

haps be recognised by some of my countrymen, that the caustic Scottish knight, as described in the preceding chapter, borrowed some of his attributes from a most worthy and respectable baronet, who was to be met with in Edinburgh society about twenty-five or thirty years ago. It is not by any means to be inferred, that the living person resembled the imaginary one in the course of life ascribed to him, or in his personal attributes. But his fortune was little adequate to his rank and the antiquity of his family; and, to avenge himself of this disparity, the worthy baronet lost no opportunity of making the more avowed sons of fortune feel the edge of his satire. This he had the art of disguising under the personal infirmity of deafness, and usually introduced his most severe things by an affected mistake of what was said around him. For example, at a public meeting of a certain county, this worthy gentleman had chosen to display a laced coat, of such a pattern as had not been seen in society for the better part of a century. The young men who were present amused themselves with rallying him on his taste; when he suddenly singled out one of the party:—'Auld d'ye think my coat—auld-fashioned?—indeed it canna be new; but it was the work of a braw tailor, and that was your grandfather, who was at the head of the trade in Edinburgh about the beginning of last century.' Upon another occasion, when this type of Sir Mungo Malagrowth happened to hear a nobleman, the high chief of one of those Border clans who were accused of paying very little attention in ancient times to the distinctions of *meum* and *tuum*,—addressing a gentleman of the same name, as if conjecturing there should be some relationship between them, he volunteered to ascertain the nature of the connexion by saying, that the 'chief's ancestors had *stolen* the cows, and the other gentleman's ancestors has *killed* them;' fame ascribing the origin of the latter family to a butcher. It may be well imagined, that among a people that have been always punctilious about genealogy, such a person, who had a general acquaintance with all the flaws and specks in the shields of the proud, the pretending, and the *nouveaux riches*, must have had the same scope for amusement as a monkey in a china shop."

Dymock's Ainsworth's Dictionary. 18mo. circ. pp. 860. 7th edition. London, 1831, Tegg; Glasgow, Griffin and Co.; Dublin, Cumming.

It is a strange thing to sit down to review the classic labours of One, who in days of yore has cast his scanning eye over our tasks and versions: the world, indeed, is turned topsy-turvy, when the pupil has to pass his opinion upon the performance of the master.

Memories of boyhood! how crowded and thronged are thy images when such a task is given—how pleasant, how painful! Where now are all the seniors before whom the ordeal of examination was undergone—that ordeal which the hope and confidence of mounting youth taught us to wish for, rather than to fear? What has become of the many companions of our studies and sports, of our rivalries and reconciliations, of our sudden quarrels and more steady friendships? How remain the haunts of those early days—by what footsteps and with what feelings are they trodden? The wood with its wild cherries—the trees still there to tempt the adventurous climber? The lovely and beloved river—do its swarming fins and crystal wave yet provoke the dexterous art which made the half-holiday indeed a boon,

and refresh, with many a stolen bath, limbs hot from the bounding ball and play-ground? The ruins of ancient castle and gray abbey—afford they their dangerous and rugged paths for the bold boaster, who recked not “how hard it would be to climb?” The mysterious cave—dares any one penetrate it, with halfpenny light, scientifically warned of fire-chokes, but more afraid of toads and aspicks (i. e. harmless lizards)? Who walks the fearful parapet of the bridge? who dives to the bottom of the engulfing eddy? who lives in the moment and dream, if ever dream come, of futurity as of a vision of glorious enterprise and assured reward? Alas! nearly the entire generation of the elders has been gathered to the dust! The anxious and exulting parent knows anxiety and exultation no more—the former rests on the hearts of their progeny, who have grown into the toiling concerns of the world—there are few successors to the latter. But it is not alone the more aged who have withered away. In the brief space—it is as an hour in retrospect—the vast majority of the youthful, too, have ceased to be. Of that numerous school which our author taught—and he is still living, and full of active energy to measure the briefness of the span of time—of all that numerous school, not one in ten survive. The climes of the East and the West have claimed their victims; and some, gallantly fighting the battles of their country, have fallen by the sword: but the uncertain lot of humanity has been equally demonstrated at home and in peace; the churchyard tombs record the triumphs of death as widely o’er the quiet indweller of the farm and native town, as the distant announcement has told of the fate of the remote sojourner and those exposed to perils by sea and land. The sweep of change is over all; nor do even inanimate things continue the same. The pastoral stream is defiled by the encroachments of trade; the axe has been laid to the root of the memorable tree; and the seclusion of the wood is bared to the flaunting of improvements—nature has been altered by the “march of mind,” till all her tranquillising and ennobling effects have been destroyed; and what of man’s own works were dear from association and feeling, have perished beneath the beautifying hand of a more enlightened age. Oh, let us look forward—it is sad to look back.

If from the sublime to the ridiculous is but a step, from the personal to the public is a chasm we find it very difficult to overleap. Into the former we have been betrayed by the circumstances of the case. Our old master, who first taught us to decline and conjugate, is before our literary tribunal. Well, it is with great gratification we can speak of his *Abridgment of Ainsworth*—that it is a very skillful, able, and useful production, and excellently adapted for the purposes of tuition. This, indeed, we had a right to expect from his long experience and success in education upon an extended scale; and the words “seventh edition” on the title-page might have spared us the necessity of a particular tribute. All we shall add, therefore, is, that we heartily wish the editor health and a happy leisure to complete those other works for the benefit of the young, upon which we are informed he is engaged: he has already done enough to merit their lasting gratitude; but for their sake he cannot do too much.

An Outline of Sematology; or, an Essay towards establishing a New Theory of Grammar, Logic, and Rhetoric. London, 1831. WE have been favoured with an unpublished

copy of this able and acute work, the nature of which we can best shew by a few extracts from its contents.

“In the last chapter of Locke’s *Essay on the Human Understanding*,” says the author in his Introduction, “there is a threefold division of knowledge into *φυσική*, *πρακτική*, and *σημασιολογική*. If we might call the whole body of instruction which acquaints us with *τὰ φυσικά* by the name *Physiology*, and that which teaches *τὰ πρακτικά* by the name *PracticoLOGY*,—all instruction for the use of *τὰ σηματά*, or the signs of our knowledge, might be called *Sematology*.”

The work is divided into three chapters: the first on Grammar, defined to be “the right use of words with a view to their several functions and inflexions in forming them into sentences;” the second on Logic, defined to be “the right use of words with a view to the investigation of truth;” and the third on Rhetoric, defined to be “the right use of words with a view to inform, convince, or persuade.” Every chapter is divided into sections; forming a closely-connected chain of reasoning, the object of which is thus briefly but explicitly described in the last section:—

“The theory which, in this treatise, we have endeavoured to establish, is this,—that we come at all our knowledge by the use of *media*, which *media* are, chiefly, words; and that, as the words procure the notions, the notions exist not antecedently to language:—that when, by these means, we have gained knowledge, and try, by similar means, to communicate it to others, we do not, while the process is going on, represent our own thoughts, but we set their minds a thinking in a particular train; that our own thought is represented by nothing short of the completely formed *word*, whose parts, if any or all of them are separately dwelt upon, are not parts of our thought, but signs of knowledge which we and our hearers possess in common, and which, by bringing their minds into a particular attitude, enables them to conceive our thought, when the whole *word* that expresses it, is formed:—that if, before this *word* is formed, there are parts by which something is communicated not known before, yet, being communicated, it is still but a part of the means toward knowing something not yet communicated, and still, therefore, the principle holds good, that we are adding part to part of the whole *word* which is to express something not yet communicated; which word, even though it extend to an oration, a treatise, a poem, &c., is as completely indivisible with respect to the meaning conveyed by it as a whole, as is a word which consists only of a single syllable, or a single sound. If this doctrine truly describes the nature of the connexion between thought and language, we claim for it the merit of a *discovery*, because the common theory, that is, the theory which men are presumed to act upon, and to which all preceptive works are adapted,—not the theory which, unawares, they really act upon,—exhibits that connexion in a very different light. And, as a discovery, we are the more disposed to urge attention to it, because our soundest metaphysicians have expressed themselves as if there *was* something to be discovered as regards the connexion we speak of, before a system of logic could be established on a just foundation. Locke says, that when he first began his discourse on the Understanding, and a good while after, he thought that no consideration of language was at all necessary to it. At the end of his second book, he discovers, however, so close a con-

nexion between words and knowledge, that he is obliged to alter his first plan; and having reached his concluding chapter, he speaks as if he still felt that he had not yet ascertained the full extent to which language is an instrument of reason. Dugald Stewart, too, from whom, in the conclusion of our first chapter, we quoted a passage which entirely agrees, so far as it goes, with the views we have opened, has the following remark in his last work, the third volume of the *Philosophy of the Human Mind*:—“If a system of rational logic should ever be executed by a competent hand, this (viz. language as an instrument of thought) ‘will form the most important chapter.’ Our doctrine is, that this will not merely form the most important chapter, but that it will be the only chapter strictly belonging to logic; and yet the theory we offer keeps clear of the extreme which betrayed Horne Tooke, who appears to consider reason as the result of language. We pretend, then, to have made the discovery which Locke felt to be necessary, and the nature of which Stewart more than conjectured; but ours is only ‘an Outline;’ and the system of rational logic which the Scotch metaphysician speaks of yet remains to be ‘executed by a competent hand:’—we pretend but to have ascertained for it the true foundation.”

Again:

“The doctrine of the whole work may receive some light from the following way of stating it:—Man, in common with other animals, derives immediately from nature the power to express his immediate, or, as they are commonly called, his *natural* wants and feelings. But he also possesses the power of inventing or learning a language which nature does not teach; and it is solely by the exertion of this power, which we call reason, that he raises himself above the level of other animals. By *media* such as artificial language consists of, and only by such *media*, he acquires the knowledge which distinguishes him from other creatures; and each advance being but the step to another, he is a being indefinitely improvable. But if words are the means of knowledge, it is an error to describe or consider them in any other light; and we accordingly deem them not as, strictly speaking, the signs of thought, but as the means by which we think, and set others a-thinking. This principle being admitted, renders unnecessary Locke’s doctrine of ideas; and Sematology stands opposed to, and takes the place of, what the French call *Ideology*.”

We have read the whole volume with much attention and pleasure. Whoever the author may be, he is a man of learning, and a deep thinker; and there is an occasional vein of pleasantry in his disquisitions, which, to those who consider the subject of them a dry one, will afford great relief and amusement. We presume the work will be published—it ought to be!

Pompeiana. By Sir William Gell, F.R.S. F.S.A. Parts V. VI. VII. VIII. IX. X. London, 1830-31. Jennings and Chaplin.

THE fifth part of this learned and curious work consists of a continuation of the account of the *thermæ* at Pompeii; from which we will extract two passages, relating to some of the detergent processes of the ancients.

“The ancients had an astonishing number of oils, soaps, and perfumes; and their wash-balls seem to have had the general name of *amalgmata*, a word derived from the Greek. Among the oils are named the *mendenium*,

megalum, metopium, amaracinum, cyprinum, susinum, nardinum, spicatum, and jasmine; and Heliogabalus never bathed without oil of saffron or crocum, which was thought most precious. We hear also of nitre and aphroditrum in the baths. To these were added all kinds of odoriferous powders, called diaspasmata. The cyprian was not only a perfume, but was supposed to put a stop to further perspiration; and its name has been retained to the present day. Persons of lower condition sometimes used, instead of soap, meal of lupins, called lomentum, which, with common meal, is yet used in the north of England; while the rich carried their own most precious unguents to the thermæ in phials of alabaster, gold, and glass, which were of such common use, both in ordinary life and at funerals, that they have very frequently been found in modern times, when they acquired the name of lachrymatories, from a mistaken notion concerning their original destination.

"It was the custom to perspire first, and, after the operation of the strigil, to resort to the warm-water bath. The strigil is well known to have been a sort of concave and sickle-shaped scraper, made of bone, iron, copper, or silver, for cleansing the skin from the copious perspiration caused by the laconicum. It was by no means a very agreeable operation; and Suetonius says Augustus was a sufferer by its having been too roughly used. Its place is now supplied in a Turkish bath by a sort of bag or glove of camel's hair, which, without pain, peels off the perspiration in large flakes, and leaves the skin in a most wonderfully luxurious state of softness and polish. Persons of quality carried with them their own apparatus; whence Persius, in Sat. V., says

'I, puer, et strigiles Crispini ad balnea defer.'

After the warm water, a cooler stream was probably poured on the head from the labrum, and this was the preparation for encountering the lower temperature of the tepidarium, whence, after the use of unguents, it was thought safe to enter the frigidarium, and thence to pass into the open air. The thermæ must have been of great advantage to the practice of medicine. Alexander the Great is said to have slept in the bath during a fever; and certainly, where perspiration was the object, such a plan could scarcely fail. They practised cupping, and bleeding with leeches also, in the laconicum. The physicians of antiquity have written much on the subject of thermæ and their effects, without always rendering the subject very intelligible. Galen, book x., says a bather should first go into the warm air, thence into the water or λουτρον, thence into the cold. After this he should enter the tepidarium or apodyterium, where the scraping off of the perspiration should be performed, and where Celsus says persons were anointed. This is not very comprehensible; but Celsus, book i. cap. iv., seems to have given real information, and that which is applicable to the Pompeian thermæ, when he tells us that people perspired a little in the tepidarium, thence entered the caldarium or laconicum, and retired in order through the hot, the tepid, and the cold apartments. Galen says, that he who neglects the cold chamber, or cold water, is in danger from open pores on passing into the open air. This may serve to shew that the tepidarium was not the last chamber recommended by him; and it is not improbable that some, who were ordered by the physician to pass 'from the laconicum to the caldarium, and thence to the apodyterium, from whence they are to use the solium frigidum,' might,

in the baths of Pompeii, have plunged into the natatorium, as a termination of the process. Solium is defined to be either a vessel to wash in, or a hollow into which those who washed descended. In places not affording the convenience for immersion in the solium frigidum, aspersions of cold water, like a shower-bath, are recommended; and this is, in fact, resorted to in the Turkish baths, where the natatorium does not commonly exist. It is observable, that those who bathe, or rather perspire, in the Turkish hamam, very rarely, if ever, take cold on returning to the open air. A disease depending on impeded perspiration could indeed scarcely exist where every thing like perspiration had been previously so carefully removed."

The greater portion of the Sixth Part of *Pompeiana* is occupied with a description of what is called "The House of the Tragic Poet," discovered at the close of the year 1824. "Of all the habitations of private individuals yet discovered at Pompeii," says Sir W. Gell, "the house to which the name of the tragic poet has been given, has excited the most lively interest in the public mind; and this, not so much from its magnitude, which would scarcely place it among the houses of the richer citizens, but on account of the paintings and mosaic with which it was decorated."

Without the engraved plan, the distribution of the apartments in this ancient edifice would not be intelligible. We shall therefore confine ourselves to extracting a few passages descriptive of the embellishments.

"On entering, the first object is a black dog spotted with white, represented on the pavement in mosaic, collared and chained, and in the attitude of barking. The collar is of red leather. Below the animal is inscribed, in very legible characters, CAVE CANEM, a sentence probably not uncommonly placed at the entrances of Roman houses, as we learn from a passage of Petronius Arbitr:—'Canis ingens catenâ vinctus, non longè ab ostiarii cellâ in pariete erat pictus, superque quadrata littera scriptam CAVE, CAVE CANEM.'"

On quitting the vestibule, yet remain the legs and part of the body of a beautiful Venus painted in tempera, or distemper, upon the wall. The colouring is quite that of Titian, and the attitude not unlike that of the Venus de' Medici. One hand is held up over the head, and supports a light undulating, blue drapery. On the ground is a dove and the myrtle branch, the emblems of the goddess. More of this exquisite painting might, possibly, have been preserved by greater care in excavating, though the plaster, in many parts, adhered but slightly to the wall."

Of another picture, representing Achilles restoring Briseis to the heralds who were to conduct her to her father, Sir W. Gell says:

"This is, perhaps, the most beautiful specimen of ancient painting which has been preserved to our times; and it has been the means of awakening the attention of artists and of the public to the hitherto depreciated merit of the masters of antiquity. The size of this painting is four feet wide by four feet two inches high. The scene seems to take place in the tent of Achilles, who sits in the centre. Patroclus, with his back toward the spectator, and with a skin of deeper red, leads in, from the right, the lovely Briseis, arrayed in a long and floating veil of apple-green. Her face is beautiful; and, not to dwell on the archness of her eye, it is evident that the voluptuous pouting of her ruby lip was imagined by the painter as one of her most bewitching attitudes. Achilles presents the fair one to the heralds on the left; and his

attitude, his manly beauty, and the magnificent expression of his countenance, are inimitable. The tent seems to be divided by a drapery about breast-high, and of a sort of dark-bluish green, like the tent itself. Behind this stand several warriors, the golden shield of one of whom, whether intentionally or not on the part of the painter, forms a species of glory round the head of the principal hero. It is, probably, the copy of one of the most celebrated pictures of antiquity. When first discovered, the colours were fresh, and the flesh, particularly, had the transparency of Titian. It suffered much, and unavoidably, during the excavation, and something from the means taken to preserve it, when a committee of persons qualified to judge had decided that the wall on which it was painted was not in a state to admit of its removal with safety. At length, after an exposure of more than two years, it was thought better to attempt to transport it to the studiù at Naples, than to suffer it entirely to disappear from the wall. It was, accordingly, removed with success, in the summer of the year 1826, and it is hoped that some remains of it may exist for posterity."

A companion-picture, representing the actual restoration of Briseis, is in such a state of decay that no opinion can be formed with respect to its merits. Of another less deteriorated composition, Sir William observes:—

"Some have considered this painting as representing the moment when Thetis complains to Jupiter of the injustice done to Achilles; and this seems the most rational idea, and one with which her countenance, and every other circumstance, correspond; but others, again, have imagined that they discovered in the picture the marriage of Peleus and Thetis, and perceived, in the expression of the Nereid, the reluctance with which she is reported to have consented to a mortal alliance. The heads and the drapery are fine; but the picture, altogether, is far inferior in beauty to that of Achilles. Fate had fixed that the son of Thetis should excel his father, in consequence of which the nymph was no longer sought in marriage by the gods, and was compelled to marry Peleus, as the first of mortals. The ring on her finger is remarkable, because rings were invented from a circumstance connected with Thetis. The tradition relates that Jupiter, wishing to release Prometheus, who was bound to a rock for a certain number of years, was prevented by his oath. Prometheus, however, having shewn how the difficulty with regard to the son of Thetis might be overcome, by her marriage with a mortal, had merited restoration to divine favour. This could only be done, consistently with the oath, by making a ring in which was set a piece of the rock of Caucasus, always to be worn by Prometheus, who thus remained, in a manner, perpetually chained to the rock. Opposite to the painting of Achilles is a sea-piece, which, though now almost unintelligible, might, at first, be recognised as the flight of Dædalus, or rather the fall of Icarus. A winged sea-god, on a dolphin, seems to be assisting, with his trident, the unfortunate adventurer; and the execution of the piece, though less laboured than some of the other paintings, possesses a breadth which, probably, rendered it a beautiful picture when the colours were fresh and brilliant."

Among the engravings is a fac-simile of the head of Achilles in one of the above-mentioned pictures. We confess, however, that we do not participate in Sir William's enthusiastic admiration of it.

From the Seventh Part we select for quo-

tation the following description of a building known by the name of "the House of the Fountain."

"Adjoining the north wall of the fullonica is a house, not particular from its dimensions, but adorned with a fountain of so remarkable a structure, that the habitation was distinguished for some time by no other name. There is, however, the name of Holconius Priscus near the door, who was probably the protector of the proprietor. An angle, in size nearly equal to one quarter of the whole quadrangle occupied by this house, has been cut off so as to form a small habitation, consisting only of two little rooms, an entrance, and a peristyle of three columns on each side, and uniting, by means of a narrow door, with the fullonica. The columns are placed round a compluvium, at one extremity of which seem to have been more than the usual inventions for water-works; and certain dwarf walls are observed, the uses of which are by no means apparent. The house of the fountain is approached from the street of the Mercuries by a handsome and lofty door; and the atrium is not less than fifty feet in length, by forty broad. This atrium has its ala on each side, regularly disposed, with its tablinum in the centre; and, beyond it, a portico with a small court, the wall of which is painted to represent a garden. In the tablinum is a pretty painting of goats. The whole ground-floor of the house consists of eleven rooms, without reckoning the ala, the atrium, or the portico; and it seems to have been the property of a person of consideration. The ornaments, on the whole, do not differ much in style from those already mentioned. The inner portico has only three columns, and those of a degraded Corinthian; nor are they at equal distances from what may be termed their ante. The fountain also, though nearly in the middle of the garden, which is not rectangular, is neither placed opposite an intercolumniation, nor opposite the centre of the tablinum; so that it must have lost much of its effect. The colours and the plaster have long since fallen. There was a private entrance through the faux, and a back passage from the vicus of the tragic poet. Near the faux was also the staircase for ascending to the upper floor. The fountain itself was, however, the great source of the modern celebrity of this habitation, presenting, in fact, several circumstances calculated to strike an observer. First, its form is precisely that which every citizen would erect as a fountain at the bottom of his garden, near the metropolis, in our own times, and such as may be seen at the present day in the courts of most of the palaces in Rome and throughout Italy, and proving, that the worse the taste, the better chance it has of being handed down for imitation from generation to generation. Secondly, the materials are of a singular description, the whole being covered or incrustated with a sort of mosaic, consisting of vitrified tesserae of different colours, but in which blue predominates. These are sometimes arranged in not inelegant patterns; and the grand divisions, as well as the borders, are entirely formed by, and ornamented with, real sea-shells, neither calcined by the heat of the eruption, nor changed by the lapse of so many centuries. It has been said, that a boiler, or cauldron, in this house, was so contrived, that hot water could, if necessary, be conveyed to the cistern, or piscina, which advances in front of the fountain. We are exceedingly apt to accuse the ancients of ignorance in natural philosophy—an imputation which the excava-

tions of Pompeii almost every day contradict. Pliny states, that water in leaden pipes will rise to the height of the source whence it is derived; and in the *Sylvæ* of Statius, it is clearly shewn that the *Aqua Marcia* passed the Anio in leaden pipes. But Vitruvius, lib. viii. c. 7, gives instructions for the conveyance of water in tubes; and Pliny, lib. xxxi. c. 6, mentions the custom as common in his time. The two fountains of Pompeii confirm the written testimony. Neither does it seem that the use of shells, in the decorations of a fountain, is first noticed in the excavations of Pompeii; for Cicero, in his *Formian villa*, appears to have employed them. A certain Philander, who wrote notes on Vitruvius, has this remarkable passage:—"Quod veteres admiscuerint incrustationibus, potissimum fontium fornicibus quod nostra ætas imitatur. Quod genus videtur in villa Ciceronis ad Formias interspersis purpuris, peloridibus, cæterisque conchis." The peloris was a species of shell-fish, about which the ancients themselves seem in doubt, as *ostrea* and *echinus* are both given as synonymous interpretations."

Of the plates, the "Mosaic Pavement," and the fine outline of the picture of "Achilles and Briseis," are the most interesting. Some of the vignettes are also exceedingly beautiful.

The greater portion of the last two Parts is occupied with a Description of the Plates; and those Parts themselves contain several beautiful plates; especially "Achilles in Scyros," *Mars and Venus*, and "Perseus and Andromeda."

It gives us much gratification to learn that Sir William Gell has lately made some great discoveries of Etruscan antiquities, anterior to the Roman era; and we hope that this tasteful and indefatigable antiquary will soon be induced to communicate these discoveries to the public.

Wheaton's History of the Northmen.

[Second notice.]

THE second extract which we make from this volume will form a suitable sequel to that with which we introduced it to our readers, and confirm, we trust, the favourable opinion of the author which both are so well calculated to inspire. As an historical episode, also, it is possessed of much interest.

"The fame of the exploits of Olaf Trygvason reached the ear of the tyrant of Norway, who heard with terror that there was a youthful hero, of the race of Harald Hårfager, still surviving, who might challenge his claim to the Norwegian sceptre. Hakon sent one of his subtlest agents, Thorer Klacka, to Dublin, in Ireland, where Olaf had married a Northman princess of that country, to discover and circumvent him with artful wiles. Thorer, who had before visited Ireland, both as a merchant and a sea-rover, presented himself to Olaf as one of the victims of Hakon's tyranny, and represented that his countrymen would receive, with open arms, the descendant of their ancient princes, as a deliverer from a yoke which had become insupportable. Encouraged by these solicitations, Olaf set sail for Norway, accompanied by his pretended friend Thorer. On their arrival in that country, they found that the greater part of the chieftains and people had actually risen in arms against Hakon. Thorer was confounded at finding what he had deceitfully represented to Olaf, actually realised during his absence. He endeavoured in vain to find out Hakon, who had fled before the rising storm, and sought a refuge in a distant part of the country, with a woman of illustrious birth, named Thora, who

had been one of his concubines, and who provided him a hiding-place in a secret grotto, where he remained concealed from his enemies. In the mean time, Thorer returned to the ship, and advised Olaf to land, and take advantage of the disposition of the people in his favour; intending, however, to lead him into an ambush, and thus consummate his treachery by slaying the young prince. But Olaf anticipated the designs of Thorer, and caused him to be put to death before he could accomplish his intentions. There was now a general rising of the Norwegians against Hakon, who was assassinated by one of his own slaves. The bloody head of his enemy was brought to Olaf, who commanded the slave to be instantly put to death. Both their heads were then fixed up at the place of execution for common malefactors, and exposed to the gaze of the multitude, who expressed their hate by covering them with a shower of stones. The people of Norway immediately elected Olaf to fill the vacant throne. He was recommended to their choice, not only by his birth, being a lineal descendant of Harald I., and what was scarcely of less importance with the Northern nations, by his manly beauty; but also by his heroic spirit, valour, and reputation for wisdom and knowledge acquired in foreign lands. The first measure undertaken by the young monarch, was the establishment of Christianity in Norway. With this view, he submitted his conscience to the guidance of one Sigurd, probably a recently converted heathen, who was wholly unscrupulous as to the means to be used for the accomplishment of this holy purpose. Olaf marched through the country, accompanied by his priests and his Berserker, proffering honours and rewards to those who would submit to the ceremony of Christian baptism, alarming the superstition of the vulgar with pretended visions and miracles, and menacing the contumacious with cruel and bloody vengeance. In the southern part of Norway, the people were induced, by these means, to accept the new religion in their public national assembly of the *All-thing*. But in the extreme North, the power of ancient prejudice obstinately resisted his persuasions. Several of the pagan chieftains were exiled, others were ignominiously put to death, as a punishment for the crime of idolatry. The pagan temples and idols were every where destroyed by the furious zeal of the king, who shewed as much courage in this crusade as he had ever manifested in any of the most romantic adventures of his eventful life. Having assembled the people in a provincial *Thing* at Frosta, he proposed to them the abolition of the ancient religion. This proposal was received by them with indignation. They had recourse to arms, and threatened the life of Olaf if he should persevere in his intentions. But his presence of mind did not desert him; and having secured the persons of some of the leading chieftains, he adjourned the assembly to the isle of Mære. Here was situate the famous temple of Thor, the tutelary deity of Norway. The pontiff-chieftain of this district engaged in a dispute with Olaf on the subject of religion, in which he took some liberties with the Christian name, which kindled the wrath of the king to that degree, that he darted his lance at the statue of Thor, which fell to the ground, whilst his champions and Berserker immediately attacked the chieftain and put him to death. The people, struck with consternation at the overthrow of the idol, complied with the wishes of the king. In order to atone for the murder of Jarnakegg, Olaf consented to espouse his

daughter Gudruna, but separated from her the next day after their nuptials, because she had attempted to poniard him in the night! Under the impulse of this blind zeal, Olaf joined treachery to cruelty as one of the means of propagating the true faith. He invited a descendant of Harald Hårfager, named Eyvind Kelda, who was the chief of an association of magicians (perhaps adherents to the anti-Odinian or Finnish religion), to a festival with his brethren; and not being able to persuade these obstinate pagans to abjure their odious practices, caused the house in which they were assembled to be set on fire. All the guests were consumed except Eyvind, who, fortunately, made his escape, but was afterwards retaken and exposed, bound on a low rock in the sea, to be drowned by high water. Other pagans were tortured in the most cruel manner, and this persecution produced the usual effects of conversion compelled by force. Many of the pretended converts relapsed into their idolatrous practices, and retired into the inaccessible fastnesses of the stupendous ranges of the Norwegian Alps, there to adore, in 'temples not made with hands,' the gods of their fathers. Even to this day the remnants of the ancient popular faith still linger in these Northern forests and glens, in a thousand forms of fantastic superstition, peopling the woods and waters, and even the subterraneous regions of the earth, with good and evil genii, fairies and elves, mountain-demons, river-demons, forest-demons, and mine-demons. The fame of Olaf was now spread far and wide in all the countries of the North, and when he demanded the hand of Sigrid the Proud, a Swedish princess, who had rejected with disdain many a suitor of kingly birth, his overtures were favourably received. A treaty of marriage was about to be concluded between them, when it was broken off upon the point of religion, the king insisting that Sigrid should renounce the errors of paganism. The haughty princess rejected this proposal with disdain. 'I will not forsake the old worship of my fathers for any new faith; but that does not hinder you from believing in such gods as you think fit.' To which Olaf answered, in most uncourteous terms, that he would 'not consent to live with an old heathen hag,' and being greatly incensed, struck his proud mistress with his glove. The insulted princess broke off this strange courtship, and predicted to Olaf that this outrage should cost him his throne and his life. This prediction was soon fulfilled. Sigrid became the wife of the Danish king Svend. This prince had a sister named Thyra, who was espoused to the same Vendish prince whose daughter Olaf had formerly married. Thyra became dissatisfied with her husband, and not daring to return to Denmark, sought a refuge in Norway. Here the rejected suitor of Sigurd immediately married her without the consent of her brother, the king of Denmark, and in violation of the most sacred precepts of that religion he was so anxious to impose on others with fire and sword. Sigrid painted his conduct in the blackest colours to her husband, the Danish monarch. Some jealousy already existed between the two kings, and Svend lent a willing ear to the suggestions of his revengeful queen. King Olaf undertook an expedition to Venden (Pomerania), in order to reclaim the dowry and other property of his queen, left by her when she fled from that country. This expedition, which must necessarily pass through the seas over which the kings of Denmark claimed, even at that early day, a territorial jurisdiction, having been undertaken without

asking the consent of Svend, afforded a pretext for his hostility. To give effect to her machinations, Sigrid employed the agency of Sigvald Jarl, then chieftain of the piratical republic of Jomsborg. The subtle and intriguing Jarl formed a confederacy against the Norwegian monarch, in which he engaged the king of Sweden, together with Erik, son of Hakon Jarl. Sigvald went to the place where the Norwegian fleet lay in Venden, where he entered into an insidious negotiation with the unsuspecting Olaf, in order to induce him to delay setting sail on his return to Norway, until the three allied princes had combined their fleets. In the mean time, the fear of the imposing force Olaf had brought with him, constrained the prince of the Vends to conclude an amicable arrangement of their controversy. The kings of Denmark and Sweden had already armed for the purpose of executing their hostile designs against Olaf; and Erik Jarl, who had taken refuge in Sweden, availed himself of this opportunity to attempt the recovery of his patrimony in Norway. The rumour of these preparations reached the ear of Olaf in Venden, but his suspicions were lulled to sleep by the artful protestations of Sigvald Jarl, who represented that there was nothing to be apprehended from that quarter, and even carried his falsehood and perfidy so far as to offer the aid of his own valiant Jomsvikings, in case of a sudden attack. Olaf at length resolved to return with his fleet to Norway; and the treacherous Jarl, who had undertaken to lead the van, and to pilot the king through the passages between the small islands which lay along the coast, conducted him into the midst of the enemy. Olaf had no sooner reached the isle of Svoldur, near the present city of Stralsund, than he descried the enemy's vessels, which were at first concealed by the islands. The foremost division of the king's fleet, which formed the greater part of his effective force, had already reached the main sea, perhaps through other passages, none of the vessels at least observing any danger or enemy. The friends of Olaf advised him to hasten to reach his main fleet; but he indignantly rejected their counsel, declaring that he had never yet turned his back upon an enemy, and should scorn to save his life by flight. The king took his stand upon the lofty stern of his gallant ship, called the *Long-Serpent*, the largest and finest vessel which had ever been seen in the North, from which he could observe and direct every movement of the fight. As he descried the different divisions of the enemy's fleet, he called out to his companions with a loud and animated voice: 'These Danes have never yet vanquished us, nor will they this day have cause to boast their prowess. As for the Swedes, better for them would it have been to have staid at home, devouring the mangled carcasses of their bloody heathen sacrifices, than to come here to hack their swords against our invincible *Serpent*. But farther off, I see the ships of Erik Jarl: it is they alone who are to be dreaded, for they, as well as ourselves, are Norwegians!' The contest was too unequal to be long maintained by Olaf, whose ship was soon surrounded by the overwhelming force of the enemy, who attempted to take it by boarding. But Erik Jarl, finding that his boarders could not reach the deck of the huge *Serpent*, which lay like a castle upon the water, went on shore and cut down tall trees, which he placed with one end in his own vessel, and the other on board of Olaf's *Serpent*, which thus sunk down on its side, and was taken by boarding. Erik Jarl, at the same time, made

a solemn vow to become a Christian, if he should obtain the victory. Einar, an expert archer on board Olaf's ship, twice aimed his well-directed arrows at Erik, and had put a third arrow to his bow, which probably would have proved fatal, and turned the fortune of the day, when the string was struck by a broad-pointed missile, and broke with a loud noise. 'What brake?' said Olaf, who heard the sound. 'Norway from thy hands,' exclaimed Einar. King Olaf was angered, and replied, 'That must God decide, not thy bow!' But the odds was too fearful; and Olaf being himself wounded, and the greater part of his champions slain, threw himself into the sea, and perished with the remainder of his faithful friends. Thus fell Olaf Tryggvason, according to Snorre the most distinguished prince of his times, in all those qualities which attracted the esteem and admiration of men in that age of the world. His bodily strength exceeded that of most men of his time, and he was eminently skilled in all manly arts and exercises—swimming, rowing, hunting, and the use of arms. His natural temper was mild and gentle, courteous, cheerful, and inclined to the indulgence of social pleasures. His taste in dress and living was showy and magnificent. His eloquence in discourse, and exceeding valour, fortitude, and skill in war, especially in naval enterprises, eclipsed the fame of the most illustrious heroes of the ancient North. His kindness and generosity to his friends was only equalled by his fierce cruelty to his enemies, and especially those who were at the same time enemies to the Christian faith—persecuting them with fire and sword, mutilating them with cruel tortures, and casting their mangled limbs to the ravenous beasts of prey. Hence he was as much hated and dreaded by his foes, as beloved and esteemed by his friends; and the success of his designs was proportioned to the active zeal with which the latter lent their co-operation, whilst the former were intimidated by fear from making any effectual resistance to his will. Olaf's taste for the liberal and useful arts had been improved by his widely extended travels, both in the East and the West. He admired and liberally rewarded the poetry of the Skalds, although its connexion with the ancient faith would seem naturally adapted to excite his prejudices against this favourite national art. Olaf greatly encouraged ship-building; and the advantages of commerce and civilisation, which he had seen strikingly exemplified in the countries of the East, which he had visited during his youth, induced him to become the founder of a city, at the mouth of the river Nid, called, from its position, Nidaros, which might serve as a commercial staple and granary for that part of Norway, so often exposed to the scourge of famine. The city thus founded by him was afterwards called Drontheim, from the name of the province of which it is still the capital. The romantic incidents in the eventful life of this monarch gave rise to a tradition long cherished by his countrymen, similar to the famous Portuguese legend of Don Sebastian. Like the kingly hero of Portugal, Olaf is said to have disappeared in the midst of a battle, and never returned to his own country. But, according to the legend recorded by his biographers, Gunnlaug and Oddur, the king saved his life by swimming, proceeded in the disguise of a palmer to Rome and the Holy Land, and afterwards became an anchorite in Syria, where he was still living in the reign of Magnus the Good, his fourth successor in the throne of Norway."

We need hardly add our hearty recommendation of Mr. Wheaton's production.

Pearce's Abyssinian Travels.

[Second Notice.]

FROM funerals, with which our limits obliged us to break off in our review of this work last Saturday, we pass to christenings and marriages, both of which ceremonies, in Abyssinia, possess curious features.

"Their manner of christening is somewhat singular. A man does not stand godfather for a girl, nor a woman for a boy; and the parents always look out for a person most able to make some present to their child. The parent or priest gives it the name, the godfather or godmother holding it in a piece of cloth, which they destine as a present to their god-son or god-daughter. Some, who can afford it, will present the child to the priest, to be baptised, in a very valuable piece of cloth. During the first part of the ceremony, the godfather or godmother holds the child, and promises to do his or her best for it. During the whole ceremony, the priest swings to and fro a brass vase suspended by four brass chains, with small bells attached to it, in which frankincense is kept burning, and the fumes of which are sent forth during the whole of the ceremony. Before the priest places the child in the new cloth held by the godfather, he dips it in a large pan of water, and then takes a small wooden cross, and, beginning on the forehead, says, 'I baptise thee in the name of the Father, the Son, and the Holy Ghost.' After repeating this, he crosses every joint of the body, behind and before; he then takes a feather, dipped in a certain oil which is obtained from Egypt, and is called *meiron*, repeating this formula—'In the name of the Father, the Son, and the Holy Ghost, I anoint thee with the holy oil, as a token that thou hast entered into Christ's flock.' All this having been performed in the churchyard, near the entrance-gate, the mother takes the child into the church, and there waits till the sacrament is administered to the people, as well as to the child; some *ambasha*, cakes of bread, and beer, are the usual acknowledgements made to the priests by the parents on these occasions, except in the case of people of quality, who in general invite all the priests of the church in which their child is christened, and give them a hearty feast. I cannot help adverting to a practice which is not unfrequent, but which might appear fabulous to any one who had not witnessed it. When a woman has had one, two, or more children, and they have all died, she will, in hopes of saving the life of another just born, cut off a piece from the tip of the left ear, roll it up in a piece of bread, and swallow it; and others will keep one side only of the head shaved until the child is grown up. For some time I was at a loss to conjecture the reason why a number of grown people of my acquaintance had one ear cut; and, when told the truth, I could scarcely believe it, till I went into the house of a neighbour, though contrary to the custom, purposely to see the operation. An old woman cut off the tip of the ear and put it into a bit of cold cooked victuals, called *sherro*, when the mother of the infant opened her mouth to receive it, and swallowed it, pronouncing the words, 'In the name of the Father, Son, and Holy Ghost.' They have recourse to many other superstitious and whimsical practices to prevent children from dying. I shall give an account of their marriages; but as the Amhara and Tigré differ in some points, my narration

may be considered as more particularly applying to Tigré. No marriages are performed in churches, or by the interference of a priest. A man may have as many wives as he chooses, if he does not think it prudent to be attached to one, which is seldom the case. But when it does happen that a man and woman imagine they can be content with each other, and live together a religious life, they agree in the presence of a court of the elders of the town, or district, called *shummargildas*, to put whatever property they may have together, which property is counted and considered as belonging to them both; and the one cannot dispose of any part of it without the approbation of the other. They then swear, in the presence of the *shummargildas*, to be mutually faithful, and to take the holy sacrament together frequently on holidays; after which they go to the church to make a confession, and the sacrament is administered to them for the first time. This is the only marriage that is a little Christian-like. During the time they are living in this holy state they are called *carrava*, which is sacred people; but I have seldom known it to continue long without either the one or the other being suspected of adultery. The party accused of this act is taken before the *shummargildas* by whom they were joined, or, in case of their absence, before a court of any other *shummargildas* in the town; and, on the crime being proved by a certain number of witnesses, the *shummargildas* consult together and pass what sentence they think fit, according to the nature of the offence and the custom of the country, which makes a difference with regard to the number of times he or she may have been caught in the fact. If after this they still do not wish to be parted, which is often the case, the offender is sentenced to forfeit part of his or her share of the property joined together on their marriage, which is given to the offended party as *rana*, which signifies a penalty, to be at his or her sole disposal. But, should the complainant insist upon being parted, whether it be the man or woman, the offender is sentenced to forfeit half of his or her original property. If they have children, they are divided according to the sentence of the *shummargildas*; when a boy and a girl, the father in general takes the boy, and the mother the girl. At the separation of man and wife, I once saw, to end the dispute about a little girl, the father and mother cast lots which should have her: this is done in a very fair way; the *shummargildas* takes two sticks, one of them being longer than the other, that they may be identified; then they are presented to the man and wife, and the *shummargildas* says to the man, 'This belongs to you,' and to the woman, 'This belongs to you,' after which a stranger is called in who never saw the sticks; but knowing what they are presented to him for, it being a common custom to cast lots on several occasions, he takes hold of them, and, putting them between his hands, places them behind his head, when, rolling them round rapidly, he throws one down, saying, 'In the name of God, this is the owner;' and each of the parents, knowing their own stick, thanks God, and takes away the child. In the above-mentioned marriages I have known instances of many being cheated by impostors. There are a number of people in different parts of Abyssinia who get their living by *moggot* and *sheffart*, which signify 'lawyering and cheating,' though *tuvverku* is the common name given to a lawyer, *moggot* being more applicable to those who plead causes, who are connected often with men who make such marriages a

business. One of these, knowing a woman to have a good property, feigns to fall in love with her, and entices her into the snare. After he has succeeded in persuading the poor woman to be his wife, and they are bound by an oath to receive the sacrament together and live as the select people of Christ, he in a very short time brings one of his acquaintances to be a constant visitor, and a plan is arranged between them in what manner to act; for instance, a day will be appointed for the ruin of the poor woman, when the acquaintance will be lying and playing on the same sofa with the woman, such liberties being common in Abyssinia, when the parties are intimate friends and familiar in the family, and then the husband will come in suddenly, bringing several witnesses with him, whom he has told previously that he has frequently caught a man with his wife. On their approach the friend jumps from the sofa and makes his escape, in order to confirm the fact; and in this way the poor woman is cheated. If she says any thing in her defence when before the *shummargildas*, the witnesses against her, who suppose they are attesting the truth, are too numerous, and she is accordingly condemned. I have known several instances of this kind; and, indeed, I once knew a woman to have been guilty of this shameful practice in several towns where she had lived. She was a native of Gondar, who set herself up for a *tuvverku*, or lawyer, by which profession she procured her maintenance as one of the higher class of people. She is known in all the principal towns of Abyssinia by the name of Wolletta Gorgis Sheffart, or cheat. In all lawsuits, either before the governor of a province or a court of *shummargildas*, the plaintiff and the defendant stand up, with their cloth tied round their middle, leaving the upper part of the body naked, which is customary even in the severest weather. The *tuvverkus* stand on each side of them, pleading in a loud tone of voice their several causes, during which time wagers of mules, cows, sheep, or *wakeaks* of gold, &c., are continually laid by the *tuvverkus* that they will prove such and such charges which may be denied by the plaintiff or defendant; which wagers, when won, become the perquisites of the governor. They will also bind each other over to forfeit a mule, or a *wakeak* of gold, not to speak till the other has finished his speech; but it often happens that the falsehood which the one may be relating incense the other, who in general holds his mouth with his hand, to such a degree, that, forgetting he is bound by a forfeit not to speak, he bursts out into a rage, exclaiming, *Assert!* [a lie!];—when he is instantly taken up by the governor's servant, whose office it is to look for such slips, and obliged to give bond on the spot for the forfeit lost; or he has a chain put on his wrist, and is chained to one of the governor's servants, till he pays the sum forfeited; though it is seldom that they cannot find some one standing or sitting by to be bond for them. These forfeits are also the governor's perquisites. I have known a great man lose by one wager fifty white mules, which are the most esteemed, the wager having been made merely to shew his consequence."

"I shall now give some account of the way in which the Abyssinians procure husbands for their daughters, and their mode of marrying. The Amhara, as well as the Tigré, when they fancy their daughter old enough to take a husband, which is in general, especially among the Amhara, incredibly young,*—plait her

* "I have known many middle-aged men take children from eight to twelve years of age to their wives, and they

hair very neat, and blacken her eyes with a mineral called *ooch*, which they obtain from the caravans from Egypt. They also dye her hands with a root called *socella*, resembling our sweet potato, of a dark red colour. She is then placed constantly at the door in dry weather, either spinning or clearing corn; so that every one who passes may behold her; and she is taught by the mother to turn up the whites of her eyes (which are in general very large) when young men or strangers pass, and put on a smiling look, between modesty and bravery, when answering their questions. If any man take a liking to a girl in this situation, let him be young or old, he either goes or sends to the mother, or any relation she may have, and asks for her; and, to satisfy himself respecting certain points, he himself sends a female acquaintance to inspect her. The mother then demands her dowry, which is a dress, consisting of a cotton shirt and a piece of cloth, which, if he chooses to be extravagant, will cost to the amount of four and a half or five dollars for six months, she on her part engaging to do the labouring work in the house; but she is allowed a servant for fetching wood and water, and other out-door duties. If the man has reason to feel satisfied with the girl, he sends a piece of white cloth, dipped in the blood of a fowl, to her friends; but if not, he returns her, and takes back the cloths he gave. The first three days the girl is obliged to drink a gravy made from a fowl, very hotly seasoned with pepper and onions, from an erroneous notion that it may effect the purpose intended; but as I have no skill in such matters, I shall say no more about it. The husband can turn her away when he chooses; and she may quit him at the expiration of the time first settled, if they cannot agree. Those of a higher rank, such as chiefs of districts, farmers, or tradesmen, in general look-out for some person's son of the same station as themselves; and the marriage is agreed on in the presence of the *shummegildas*, the father and mother of each giving a dowry. Only half the quantity of the girl's dowry is given to the son, though in Amhara both are equal. If it be a chief's son or daughter, the parents give a certain number of matchlocks, swords, cattle, cloths, hard money, and salt, the common currency of the country. The marriage is celebrated in great style. A large square *dass* is built with the branches and boughs of trees; and on the day appointed, all the relations and friends of the parties assemble, except the father or nearest relation of the man, who, after sending the son's portion to the *shummegildas*, prepares to receive the married couple at his own house. Several cows are in general killed, and in the *dass* a table or platform is spread out from one end to the other, covered with bread, maize, and *sowa*, called by the Amhara *trug* and *taller*, so that all who attend may drink till they become intoxicated. When all is ready, the man, who is to take the woman away as his wife, comes riding on horseback, with several attendants, into the *dass*, dismounts, and, with spear and shield in hand, shews himself off to the best advantage; boasting of his former deeds, and of those he will still perform, &c. &c., according to the custom of the country. His *arkeys* follow his example, in turn telling of their exploits. They then sit down; and the goods, cattle, and other articles, given on either side in dowry, are counted by the *shummegildas*, put together, and consigned to the *arkeys*, who

send them home to the husband's premises. The festival then begins, and the raw meat is handed about, while it still reeks and shivers under the large two-edged knife, with which every man is furnished. The girl, whom, perhaps, the husband has never seen in his life, is seated on a couch, surrounded by her female servants and her *arkeys*, who hold their cloths before her, to conceal her from his sight. Before the festival arrives at its height, and when the parties are beginning to be intoxicated, the husband again jumps up, boasting as before, while his *arkeys* fly to the girl, take hold of her, drag her away, as if by force, and put her upon a mule, one of the *arkeys* jumping up behind her. The husband and his followers then mount their horses, and ride off together. The *arkeys* in Tigré (called *musiers* in Amhara) are in general four or five in number. The woman has only two *arkeys*, intimate acquaintances, who have been entreated to take the office. They are sworn to be true to each other through life, and to protect each other's wives and families; and they afterwards live together as the dearest friends. They also go about the country to which they belong, to collect gifts in a pitiful manner (as I have often told them) for the new-married pair, each striving to outdo the other in collecting the most; and, to complete their share, they often steal sheep, goats, and even cows, and take the fowls from the poor by force. This wild career lasts about three weeks. After the husband has taken his wife a great distance from the place whence he fetched her, if he cannot possibly reach his own district that day, he will take up his lodgings, which his attendants soon find, in some village in the neighbourhood. Here, after some refreshment, the man and wife retire to bed for the first time, an *arkey* of each party lying by them, to give assistance in case of illness or accident. If the husband is satisfied with his bride, a fowl is immediately killed, and a white rag soaked in its blood, which, together with a fat goat and a hornful of white honey, is sent back to the father and mother by one of the man's *arkeys*, who in general receives a present for his good tidings. But should he have reason to suspect her virtue, the husband takes a whip and makes her tell the name of her paramour, that he may take measures to prevent any communication between them in future. He may, if he chooses, send her back immediately to her parents, and demand restitution of his dowry, though, for the sake of peace between his and her parents, he in general keeps her. In this case, however, instead of a fat goat and a hornful of honey, he sends back an old lean goat, with one ear cut off, and a horn half-full of bad honey. This very often happens, as the girls are not remarkable for their chastity."

We may perhaps revert to these volumes; for the genuine characteristic traits of any people, and especially of any people so imperfectly known as the Abyssinians, are always entertaining and instructive.

Pyrus Malus Brentfordiensis; or, a Concise Description of selected Apples. By Hugh Ronalds, F.H.S. With a figure of each sort, drawn from nature on stone by his Daughter. 4to.

THE apple is the most useful of British fruits, being employed for culinary purposes, as well as for eating raw, by all ranks, and throughout the whole year. In those parts of the country where the best sorts of the pear, plum, and cherry, are not even attempted to be grown, the apple is cultivated with success; and in

consequence the tree is to be found in every garden—from that of the labourer to that of the landowner—from John o' Groat's house to the Land's End. Of a fruit so universally cultivated, there may naturally be expected to be a great number of varieties, good, bad, and indifferent. Every gardener knows this to be the case, and knows, at the same time, the extreme difficulty of procuring from the nurseries sorts containing the precise qualities which he requires for any particular purpose. For example, early sauce apples; early dessert apples; pie and tart apples for summer, for autumn, for winter, and for spring; apples that will keep till apples come again; apples for exposed, windy situations; apples, the trees bearing which assume a timber-tree character; apples, the trees bearing which assume the character of bushes; and so on. These are but a few of the desiderata which the gardener or orchardist requires to know concerning apples. And how is he to know them?—by the catalogues of nurserymen? No! these contain merely names—at least, the greater part of nurserymen's catalogues contain nothing more; and therefore the intending purchaser must have some other means of ascertaining the nature of the fruit to which the name is applied. These means are a practical knowledge of the fruit, from having seen it growing, and having tasted it; verbal descriptions of it; or coloured figures. The work before us supplies coloured figures and descriptions of all the best apples cultivated in Britain, (179 in number,) and may therefore be characterised as an invaluable present to the horticultural world. Mr. Ronalds has paid particular attention to the culture of the apple during a long and active life spent in the nursery business, and has grown all the sorts described and figured, with a great many more, in his own nurseries; preserved them in his own fruit-room; cooked them, in all manner of ways, in his own kitchen; and eaten them at all seasons, in company with, and hearing the criticisms of, his gardening friends, at his own table. The present work is the result of his experience.

With regard to the execution of this volume, the drawings are from nature on stone by Miss Elizabeth Ronalds, and are alike admirable for their beauty and fidelity. Too much praise, indeed, cannot be bestowed upon this clever young lady, who has so powerfully seconded the accurate descriptions of her father. But it is needless to say more of a book the value of which has long been anticipated by the gardening world.

No Fiction: a Narrative founded on Recent and Interesting Facts. By Andrew Reed. Eighth edition. pp. 427. London, 1831. Westley and Davis.

EIGHTH edition! what can a critic say after that? not much, certainly. The present volume is very neat and pretty, and half the original price. The narrative is interesting, and pervaded by an exalted tone of religious feeling, which has and will insure its popularity with a large class of readers. On this subject, however, we must hazard an opinion. The piety advocated in this little work is of the most strict and circumscribed nature, putting a veto on much of innocent amusement and liberal pursuit. Reading novels, seeing plays, dancing, &c. have, in real life, none of the destructive tendencies which our author ascribes to them; the worst that can be said of them is what may be said of every earthly employment, that their excess is prejudicial; but what excess is not? Does not our author perceive, by this overstrained strictness of religious rule, that he

have borne children at fourteen." The editor adds:—"I am informed by Mr. Coffin, that he has known many girls become mothers at eleven, or even ten years of age."

wastes on small things that salutary horror of vice which does so much towards deterring from crime? He who regarded a dance, a play, or a novel, as spiritual offences, would almost have exhausted his remorse by the time he arrived at committing a really grave fault. An over-tender conscience is the soonest hardened; and we doubt the advantage of making this life too much of a religious quarantine. Still, whatever is held to be a duty ought to be performed; and he who holds that such acts are contrary to the religion he professes, is quite right in abstaining from them.

A Tale of Tucuman; with Digressions English and American. By JUNIUS REDIVIVUS. pp. 201. London, 1831. E. Wilson.

THIS is one of the number of poems which surprise us. We are surprised that it should ever have been written, and more surprised that it should ever have been published. Five hundred and fifty-eight stanzas, after the measure of Don Juan! We confess we can make neither rhyme nor reason of it.

Chefs-d'œuvre Dramatiques Français; ou, Cours de Lectures Dramatiques Françaises. Accompagnés du Discours d'Ouverture, de celui de Clôture, et de Notices Littéraires sur les Auteurs. Par C. J. Dupont. 2 tom. Londres, 1831. Bossange et Co.

AN excellent preface is affixed to a very judicious selection of French dramas,—a species of reading well adapted to advance a learner. Nothing familiarises a language to the ear more than metre; and familiarity is the first step towards dialogue. M. Dupont need only refer to the names of Zaire, L'Optimiste, La Métromanie, &c. to justify his choice; and one great merit is, that his selection contains nothing which could be objectionable for the perusal of his most youthful readers,—no small praise in a collection of French (or any) dramas.

The Life and surprising Adventures of Robinson Crusoe. 2 vols. post 8vo. London. J. Major.

ONE of Mr. Major's beautiful works, and embellished with a great number of wood engravings, from designs drawn with great feeling by George Cruikshank. With capital typography, and every accessory which can recommend such volumes to the eye, we need say nothing farther in praise of this edition—it is entirely worthy of the eulogium:

There are few books one can read through and through so, With new delight, either on wet or dry day; As that which chronicles the acts of Crusoe, And the good faith and deeds of his man Friday.

The Soldier Boy; or, the Last of the Lyalls. By ROSALIA ST. CLAIR. 3 vols. 12mo. London, 1831. Newman.

ROSALIA ST. CLAIR, author of "The Banker's Daughters of Bristol," "Eleanor Ogilvie," "Ulrica of Saxony," "The Sailor Boy," "Son of O'Donnel," "Fashionables and Un-fashionables," "First and last Years of Married Life," &c.—this is really somewhat in the style of Robert of Lincoln, who, as Geoffrey Crayon expresses it, "built a pyramid of books to immortalise his name." Readers (a very ungrateful class, by the by) ought to have some feeling, were it but for the mere labour of writing so many pages, some thousands in number. We feel ourselves most humanely disposed, "a fellow-feeling makes us wondrous kind;" and we shall merely observe

of the work before us, that it belongs to a class which once, at least, gave delight to a large circle of readers.

Cabinet Library, Vol. VI. Historical Memoirs of the House of Bourbon. In 2 vols. Vol. I. London, 1831. Longman and Co.

WE have nothing to say in favour of this compilation, (we can give it no higher title): it is a specimen of that ingenious art of book-making, which is now-a-days rapidly "progressing" to the dignity of a science. The history of the House of Bourbon is so completely included in that of France, that a separate work is quite one of supererogation. The arranger of the present pages has, we think, been a little put to it for "want of stuff;" accordingly, the annals of the House of Bourbon are eked out by a list of cruelties practised by some feudal lords; and by quotations from Adam Smith, Lord Byron, and Sir Walter Scott. We must express our opinion, that the present volume does not deserve its place in the Cabinet Cyclopædia. In justice to the author we should observe, that it is not the execution of his task with which we find fault.

Manuscript Memorials. 12mo. pp. 208. London, 1831. Effingham Wilson.

A *MELANGE*, and evidently the performance of a young writer. Upon such productions we are slow to give an opinion; for, though there is nothing in them which seems deserving of publication, (especially in a collected form), they frequently indicate observant and intelligent minds, which may afterwards lead to better things. Therefore, though we cannot highly commend, we would not wish to discourage; the blossom may turn to fruit.

Tales from the Scrap-Book of a Country Clergyman. By the Rev. J. E. N. Molesworth, M. A. Author of "the Rick-burners." Rivingtons.

A *LITTLE* book of 115 pages, and containing four tales, intended to deter from vice by the force of example shewing the misery to which it leads; and, on the opposite hand, the temporal good which flows from the practice of virtue. The volume is dedicated to Mrs. Howley, and bears a laudable testimony to the pure patronage of the Archbishop of Canterbury, in seeking out the author, and promoting him in the church "solely on professional grounds."

ORIGINAL CORRESPONDENCE.

ANDREW HOFER.

To the Editor of the Literary Gazette.

SIR,—In a recent visit to Tyrol, I felt much interested in making inquiries respecting the renowned patriot Hofer, whose brilliant but short career, in the defence of his country against the invasion of the French, is an event of our days. Strange, however, to say, I could not get at any positive source of information on the subject, and was obliged to be satisfied with the uncertain and varying accounts of verbal tradition. In some points all these accounts agreed—In their description of Hofer as a middle-sized, stout, red-faced man, meek and courageous, who preserved to the last the unaffected simplicity of his manners and his Tyrolean peasant's dress, though commanding in chief the forces of Tyrol, and inhabiting, when at Innsbruck, the palace of the governors of Tyrol.

The belt and sword worn by Hofer, and the images of saints which he had always suspended round his neck, are shewn in the Museum of Innsbruck, as well as a transcript of the last letter he wrote, a few hours before his execution. I was allowed to have a copy of that letter, which I now send to you *pro bono publico*, i. e. the readers of the Literary Gazette.

Hofer's family was made rich and noble by the Austrian government, after his death; and his son is now living at Vienna. That is all I could learn of this heir to his name. I have the honour to be, &c.

G. V. D.

A literal copy of a Letter of A. Hofer, written at Mantua, 1810, on the morning of his execution.

LIEBSTER Herr Prueder (Bruder), Der göttliche willen, ist es gewissen, Das ich habe missen hier in mandua mein seiliches mit Den Ebigen Ver wöxlen (verwechseln), aber gott sei Dankh um seine gödliche gnad, mir ist Ess (es) so leicht for ge khomen (vorge kommen), das wan ich zu waas anderen ausgefierth (hinausgeführt) wurd, gott wirth (wird) mir auch Die gnad Ver leihen wiss (bis) in lösten (letzten) augen Plickh, auf das ich khomen khon (kann) albo (wo) sich mein sehl, mit alle ausser wölte (Auserwählten), sich Ebig Ehr freien mag, alwo ich auch fir alle Bitten werde Bei gott absonderlich fir wölliche (welche) ich in meresten (am meisten) zu Bitten schuldig Bin, Und fir sie Und inen (Ihre) frau Liebat, wögen den Plechl (Büchlein) Und andere guet Datten (Gut- or Wohlthaten), auch alle hier noch lebente guete freint wöllen fir mich Bitten, Und mir auss die Heissen flamen Helfen, wan ich noch in fegfer Piessen (büssen) muss.

Die gottes Dienst wolle Die Liebete mein: oder Wirthin zu sanct Marthin halten Lassen, Bein Rossen farben Pluet (Blut), Pitten (bitten) in pede (beiden) Pfarren, Den freinten beim Vatter Wirth ist ssuppe und fleisch zu göben lassen nebst Einder halber Wein.

Lieber Herr Pickhler, gien (gehen) sie mir Hinein, Und beim Vatter Wirth zu sanct marthin zeigen sie Die sache an, Ehr Wirth (er wird), schon angestald machen, Und machen sie seonst niemand nicht khomper (?) y (in) Diesser sache.

Y (in) Der Welt Lebet alle wohl, wiss (bis) mir (wir) in himel zam (zusammen) khomen, Und Dorttea gott Loben An ent (hinsichtlich) alle Paseyter Und Bekhonte (Bekannte) wöllen mir (meiner) Einge Denkt (eingedenk) sein in heilligen ge Beth (Gebet) Und die Wirthin solle sich nikt so Be khimern (bekümmern) ich werde Piden (bitten) Bei gott fir sie alle.

Ade mein schuede Welt, so leicht khomst mir das sterben for Das mir nit die Augen nas werden geschrieven um 5 Uer in der frue, Und um 9 Ure Reiss ich mit der Hilfe aller Heillig zu gott. — Mandua den 20 Februari 1810.

Dein in Leben geliebter Andere Hofer (von) ssant in Passeyer, in namen Des Hern Wille ich auch Die Reisse for nemen (vornehmen) mit gott.

The language of this letter is that usual in Tyrol and the south of Germany; but the style and spelling are those of an illiterate man: *ss* for *s*, *p* for *b*, *t* for *d*, *ü* and *ö* for *i* or *ie* and *e*, and *vice versa*, are used throughout, and quite at random; the same is the case with the employment of capital letters, which are almost invariably found in the wrong place, and even in the middle of words. Many words, too, are divided into syllables, each forming a separate word. But there is a spirit of calm resignation and genuine piety, artlessly mixed up with a love of friends and kindred, and an attention to trivial matters, which are highly characteristic, and make us easily forget the want of style and orthography. The words between brackets have been introduced by way of emendation, for the assistance of those who are unacquainted with the manner of spelling of illiterate German peasants.

Translation.

Dear Sir and Brother,—It has been the divine will that I should exchange here in Mantua temporary existence for eternal life; but God be thanked for his divine mercy; it has appeared

as easy to me, as if I were to be led out to something else. God will also grant me this mercy till the last moment, that I may get where my soul will eternally rejoice with all the elect; where I shall also pray to God for all, especially for those to whom I owe it most to pray for, and for you and your dear lady, on account of the little book and other kind deeds; and I beg that all surviving friends may pray for me, and help me out of the hot flames, if I have still to do penance in purgatory. My dearest, or the hostess, is to have the worship solemnised at St. Martin's, and pray by the rose-coloured blood in both parishes. Our friends are to have soup and meat, with an *einder halber** of wine, at the house of father-host.

Dear Mr. Pückler, do go in for me and announce the matter to father-host at St. Martin; he will no doubt make arrangements; and do not make any one else participator in the matter.

Fare all well in the world, till we meet in heaven, and there praise God. May all the people of Passeyer, and all acquaintances remember me in holy prayers; and the hostess is not to grieve too much. I shall pray to God for all.

Adieu, my worthless world! death appears to me so easy that I cannot shed a tear. Written at five o'clock in the morning, and at nine o'clock I shall travel, with the help of all saints, to God.—Mantua, 20th February, 1810.

Thine, loved in life, Andrew Hofer, of Sand, in Passeyer. In the name of the Lord will I also undertake the journey with God.

Extracted with fidelity from the original, deposited with the family Hofer, at Sand. St. Leonhard in Passeyer, 24th March, 1824.

(L. S.) I. STRATZ, Imp. Local Judge.

The above extract has been faithfully made by the above-named gentleman, from the original letter of Andreas Hofer, he having known his hand-writing. At Sand in Passeyer, 24th May, 1824.

(L. S.) DOMINIK v. Leis, Imp. Roy. Comp.

Hofer was the son of a publican at a place called *am Sand* (spelt by himself *asant*), at Passeyer; on which account he was generally known by the name of the Sandwirth (Sand-host) of Passeyer. "My dearest, or the hostess," is evidently meant for his wife, and "father-host" for his father.

ARTS AND SCIENCES.

EXPANSION OF MARBLE.

A GERMAN chemist stated some time ago, that by direct experiment he had found crystals of calcareous spar to expand in length when heated, but contract in breadth and thickness, and, in fact, to preserve their volume unaltered. This statement led Dr. Brewster to conclude, that pure white marble, which consists of a confused assemblage of such crystals, would afford what is a great desideratum, an inexpandible pendulum; since the expansions and contractions of the crystals lying in different directions might be supposed to balance one another. At his suggestion, a clock with a pendulum of this material was accordingly constructed. A description of this clock having been read before the Society of Arts, the subject attracted the notice of two of its members, Mr. Sang, mathematician, and Mr. Dunn, optician, both of this city; and they made some experiments on the expansion of marble, the

* *Halber* is a measure, used in the Tyrol, Hungary, and parts of Austria, equal to about a bottle. *Einder* seems a mistake in the original.

result of which was read to the Society of Arts at a late meeting. They employed a narrow slab of white Carrara marble, thirty-two inches long, and a slab of black marble, or Lucullite, of the same size. To measure the expansion, they used a beam compass of wood, and another of glass tube. The former was kept as nearly as possible of one temperature; the latter was allowed to vary its temperature with the marble; but its specific expansion was previously ascertained, by filling a portion of the tube with mercury at the freezing point, and weighing the quantity which ran over when it was heated to 212°. The expansion of the glass in bulk was concluded from the experiment to be .002964, and in length .000988, for 180° of Fahrenheit. A small brass pin, with a minute cavity in it for receiving one point of the beam compass, was fixed at one end of each slab. The slabs with the glass compass were then exposed to a freezing temperature by being laid in a tin trough among ice and water, and scratches made across brass pins in the other ends with the movable points of the two compasses; next they were put into water kept at the boiling temperature in the same trough, the wooden compass in each case being suddenly applied with as little change of temperature as possible; and the distance between the traces was then measured. The expansion measured by the wooden compass was—in the black marble, .000350; in the white, .000837. The expansion measured by the glass compass was, in the black .000426, in the white .001072. The difference is attributed to the expansion of the wood during the few seconds when it was exposed to moisture in the one case, and to heat and moisture in the other. Carrara marble seems, therefore, to expand about one inch in the thousand of length, under a difference of temperature of 180°, and black marble rather less than half as much. It was found that the marble-cutters were aware of this expansibility, and accustomed to guard against its effects. Marble being 2,300 times heavier than air, a variation of one inch in the barometric column would make a change of 5-8ths of a second per day; and assuming the expansion to be 1 in 1000, the change in the rate of going would be 1-4th of a second for each degree, or 2 seconds per day for 8 degrees, or 6 or 8 seconds of difference between summer and winter. The common wooden pendulum, with a leaden bob, will therefore act more equally than one of marble. An elongation of 1-8th of an inch upon a marble slab of thirty-four inches, was exhibited in presence of the Society, spirit-lamps being employed to heat it.—*Edinburgh Scotsman*.

On the relation of the Island of Ceylon to certain Mountain Masses observable on the Surface of the Moon.

THE general form of the island of Ceylon may be compared to that of a pear, but if we abstract the low part of the island which extends towards Jaffnapatam, it will be nearly a circle; in the centre of which we find a mass of mountains, also almost circular, whose surfaces rise up from all sides of the circumference to the centre, in the form of a cone; none of the crests prolong themselves to the centre or to the axis, but all terminate at a circular crest which surrounds the centre of the island, leaving a funnel-shaped cavity, which reminds one of a *caldera*, (or the crater of a volcano), and in which the town of Kandy is situated. M. Elie Beaumont has pointed out that there exist several circles of this character on the surface of the moon; many of which (especially

that called Archimedes) are larger than that of Ceylon. These annular figures on the surface of the earth and of its satellite, are, not only with regard to Ceylon, but also to other places, comparable in point of size, of elevation, and of external configuration; and these relations are not a simple object of curiosity. It has been long asserted that all the valleys of the earth are occasioned by the erosive action of water,—but among the different forms of these valleys some are found similar to those observable in the moon. Now, as the best glasses have not been able to perceive on the surface of the moon any furrowed lines which could be looked upon as the channel of a moving liquid, and as the most exact observations have failed to discover any liquid in the same secondary planet, it is evident that the observed cavities cannot be looked upon as particular forms of channels of erosion; and this leads us naturally to consider, that the valleys on the surface of the earth which resemble them are any thing but accidental and particular forms of furrows or of channels of erosion.

TEMPERATURE OF THE EARTH.

THE following observations were made by Mr. R. Fox, in the mines of Cornwall, and are recorded in the *Quarterly Mining Review*. In their results they corroborate the views of Professor Cordier of Paris.*

At Tingtang copper-mine, in the parish of Gwennap, at the bottom of the engine shaft, which is in Killas, and 178 fathoms deep, the water, about two months ago, was at the temperature of 82°. In 1820, when the same shaft was 105 fathoms deep, the temperature of the water was 68°: thus an increase of 14° has been observed in sinking 73 fathoms, which is equal to 1° in 5 fathoms.

At Huel Vor tin-mine, near Helston, the water was 69° at the bottom of a shaft 139 fathoms deep, in the year 1819. It is now 209 fathoms deep, and the temperature is 79°; which gives a mean increase of 1° in sinking 7 fathoms. This part of the mine is in Killas.

The highest temperature of the water at the bottom of Poldice copper and tin mine, in the parish of Gwennap, in 1820, which was then 144 fathoms under the surface, was 80°. It is now 176 fathoms deep, and the temperature is 99°; and in a cross level 20 fathoms further north, the water is 100°.

The two last-mentioned temperatures are the highest hitherto observed in any of the mines in this country; and the increase is equal to 19° in one case, and 20° in another, in sinking 32 fathoms, or 1° for 1½ fathoms. Three persons only were employed at a time near each of these stations; and the water pumped up from this part of the mine was estimated at 1,800,000 gallons in 24 hours; and was found, on examination, to contain a considerable quantity of common salt (chloride of sodium) in solution.

LITERARY AND LEARNED.

ETYMOLOGY OF THE WORD "PYNE."

Ut silve: foliis pronos tumantur in annos
Primo cadunt, ita verborum interit ætas.—Horat.

In a letter from Sir Walter Scott, in reference to an article by the Secretary of the Antiquarian Society of Perth, on the subject of the Gowrie conspiracy,† this renowned author re-

* For our less scientific readers we may notice, that Professor Cordier's theory is founded on the assumption that the temperature of the earth increases in proportion to its depth; and that the oxidation or hardening of the crust is caused by the loss of heat.—*Ed. L. G.*
† *Literary Gazette*, No. 656, page 538.

marks:—"A word is used the meaning of which is obvious; but the etymology is unknown to me. The king cried to Ramsay to strike laigh, for that Ruthven had on a *pyne doublet*. Secret armour of course is meant; but what is *pyne*?"

Let me try to give an explanation of this word; more competent judges may decide whether I am right. *Pin*, in English as well as in other dialects, imports something which terminates in a point. Hence *pyne*, or *pine*, (*pein*, German) signifies, in the figurative sense, grief or suffering, from *to pine*, and that from *pinan*, Saxon. I guess, therefore, that this word has been misspelt, and that probably the chronicler had himself not a clear idea of its meaning, otherwise he would not have added the word *doublet* for the sake of explanation.

Pyne, as used in the quotation above, seems to imply a coat (or shirt) of mail: it is the Saxon *byrn*, *brinn*, *byrne*: the letter *b* has been changed into *p*, and the *r* omitted—alterations which often occur.* Cotgrave calls this armour "a fashion of brigandine,"† used in old time." By the laws of Aethelstan, King of the Saxons, they were obliged to prove they had a *byrne*, a helm, and a gilt sword;—"And theah he begytath the he hæbbe *byrne*, and helm, and oferyglde sward."‡ In some other dialects this word underwent accidental transpositions, or additions of letters, viz. *Suio-Gothic*, *brynja*; *Teutonic*, *bryne*, *brinne*, *bringe*, *brun*, *brunne*, *bruene*, *prune*; *Islandic*, *brynien*; *Armoric*, *peytrin*;|| *Irish*, *bronnvolh*; *Welsh*, *bronddor*; *Slavonic*, *bronja* (generally, *arma defensiva*); *Bohemian*, *berněnj* (*brnjř*, harness-maker); *French*, *broigne*, *broingue*, *brugne*, *brunie*; *Lat. bar.*, *brunea*, *brunia*, *bronia*. The etymology of *byrne*, as spelt in the different dialects, can be traced from *bry* (Cornish), *bru* (Celtic, Gaelic, Welsh, and Irish), or *brun* (Armoric), which all signify belly; or from *bryn* (Welsh), *brynn* (Celtic), *bryon* (Saxon), which mean a hill,—this armour forming, in the metaphorical sense, an elevation, or covering, over the breast. This word may also be derived from *bron* (Celtic), *bronn* (Irish), *bryst* (Danish), *bríost* (Icelandic and Runic), *breost* (Saxon), which signify breast.§ It may have been a secret armour; but that it was usually worn openly, the following quotations, taken from the *Heldenbuch* (Book of Heroes, a well-known collection of old German poetry), will prove:

"Da komt er inne Helm unte Brunglen."

There he comes, with helmet and byrne.

"Atelstan, der Angelsachse, hætte Byrne und Helm." Atelstan, the Anglo-Saxon, had byrne and helm.

Very often this armour was an object of shew and finery:

"Then put on all thy gorgeous arms,
Thy helmet and brigandine ¶ of brass."—Milton.

* Conf. Lhuys, Comparative Etymology; G. T. Voss, Etymologicon Ling. Lat.

† An ancient kind of armour, with many plates and joints, like a coat of mail. Holsheide derives brigand from this word: "Besides two thousand archers and brigands, so called in those days of an armour which they were named brigandines, used by footmen." But I am not of this opinion. *Bri* (Gaelic and Irish) means anger, *brige* (Chaucer) contention, and *briga* (bar. Lat.) jurgium, rixa, pugna; in Italian this word has still the same signification:—hence the derivation of the word brigand.

‡ Schilter Gloss. Teuton: voce Brunia.

|| *Poiing* (Gaelic), or *peioing* (Irish), means a vest or waistcoat.

§ *Brest* (Dutch), *bröst* (Swedish), *brust* (German), *brískot* (Scottish), *Thorus* (Greek) means breast, and also a breast-plate.)

¶ Synonymous with *byrne*, as already remarked.

"Darum will ich euch geben
Eine Brinne wunnear;
Die kein Herr in sein Leben
Nit besser mag gehan—

This armour reached to the hip; for which reason the king cried to Ramsay, "To strike laigh" (*low*, Scotch). It is a curious circumstance that many verbs resembling in sound and orthography a *byrne*, as spelt in the different dialects, mean to polish, viz. *Suio-Gothic*, *brynsten*; *Teutonic*, *brinnen* (from *byr*, *wyr*, Greek *pyr*, fire), to burn; *bernan*, *byrnan*, Saxon; but in the figurative sense, to shine, to glitter (*prun*, adjective, has the same meaning); *French*, *brunir*; *Italian*, *brunire*; *Spanish*, *brunir*; *Dutch*, *bruyniren*; *English*, to burnish. *Brisk* (Shakespeare) denotes also blank, neat, polished. But

"There are more things in language, Horatio,
Than are dreamt of in our philosophy."

BARON VON FAHNENBERG.

Carlsruhe.

ORIENTAL LITERATURE.

WE have inserted regular and systematic notices of the proceedings of our comparatively recent, although we are glad to add vigorous, Asiatic Society; and have also given an account of their publications. It is well to remark, also, what similar Societies are doing. The Asiatic Society of Paris has just published *Srikalidasa viratohitam abhidhana Sakountalam nama nāthakham*—The Gratitude of Sakountala, a Sanscrit and Pracrit drama, by Kalidasa, from a unique manuscript in the National Library; accompanied by a French translation, philological, critical, and literary notes, and an appendix, by L. Chézy, a Member of the Académie des Inscriptions et Belles-Lettres.†

FINE ARTS.

NEW PUBLICATIONS.

Hogarth Moralised. Part III. Major. The embellishments of the present Part are, one plate of the series of "Mariage à la Mode," one of "The Election," two of "The Harlot's Progress;" two of "The Rake's Progress," two of "Industry and Idleness,"

Wohl achzig tausend Marke
Ist dieselb Brinne werth."

Heldenbuch.

Therefore I will give you a handsome byrne—no knight in his life shall have had a better—worth even eighty thousand marks.

* "Menegen Helm prunen" (many a glittering helmet).—Old Poem on the Campaigns of Charlemagne.

† The immense quantity of poems in Sanscrit literature, of almost immeasurable length, overwhelms the imagination. The *Mahabharata*, a grand heroic poem, containing the history of the gods and semi-gods, consists of 250,000 verses. The *Vedas*, sacred writings, which, according to the Brahmins, comprehend all human knowledge, are each composed of 50,000 verses. The eighteen *Puranas*, cyclic poems, contain nearly 1,000,000. The *Ramayana*, an epic poem, of which M. G. de Schlegel has commenced in Germany the publication, with a Latin translation, extends to 48,000 verses—[part of it has also been translated and published by the Serampore missionaries, of which three large volumes are in our Asiatic Society]; while the *Iliad* and the *Odyssey*, the two greatest poems of the classical world, do not together exceed 27,938 hexameter verses. The poem most known, after these colossal Indian poems, is the *Shah-Nameh* (the book of kings), by Ferdowsi, in Persian, which has 60,000 verses—it has lately been published at Calcutta, in 4 vols. 8vo. price a hundred rupees. The Sanscrit works on surgery, medicine, music, dancing, military science, architecture, and the mechanical arts, are considerable. The astronomical works are exceedingly numerous; one catalogue alone specifies seventy-nine of them. There are many writings on jurisprudence, of which a complete digest exists in twenty-seven volumes. There is a very great number of philosophical works, and commentaries on all the distinguished writers. There are seventy dictionaries of the language, either in verse or in prose, of high reputation. Immense and most abstract grammars, which comprehend above five thousand rules, make all our European grammars shrink into insignificance. The Indians, as well as the Chinese and the Japanese, possess many encyclopedias; rhetorical treatises in Sanscrit, and treatises on the metrical and poetical art, are abundant; and various poems, which we have not mentioned, but which have much celebrity, constitute an addition of about 2,000,000 verses!

"The Company of Strollers," "The Country Inn-yard," "Beer Street," "Gin Lane," "The Medley," "Columbus breaking the Egg," and four "Groups of Heads." The editor has very judiciously added a number of illustrations from Ireland, Cunningham, and others, to the descriptions of Dr. Trualler; his object being "to render this a variorum edition of Hogarth in miniature."

Views in the Mauritius, or Isle of France.

Drawn on stone by W. Rider, from the originals by T. Bradshaw, Esq. With an Account of the Island, &c. Nos. I. and II. Carpenter and Son.

It is not one of the least of the benefits derived from lithography, that its easy and cheap execution has led to the publication of a number of topographical works, and has thereby increased our opportunities of becoming acquainted with the most striking features of countries hitherto little known to us. Such, for instance, is that under our notice. The drawings are, perhaps, a little heavy, but they are full of picturesque forms and effect.

TRAFFIC IN THE FINE ARTS.

To the Editor, &c.

SIR,—Last year you did me the favour to insert in your valuable paper a few remarks on the Water-Colour Exhibition, and the dealers in the productions of its members. I have been informed that those remarks excited much attention at the time, and have since had some influence on the wholesome regulation of the Society. So far, then, my endeavours have been useful; yet vigilance is still necessary on the part of the artists and their patrons; and I also shall be on the watch to prevent the abuses then alluded to from again creeping in under more covert contrivances.

My present observations are directed to abuses of a kindred nature, but having relation to those who act in the double capacity of artists and dealers. That a man whose sole occupation is traffic should have recourse to all justifiable means for putting money in his pocket, is quite allowable; and my animadversions only fell upon such when the means employed were not exactly of that description. That an artist should also endeavour to advance the interest of his fellow-artist by promoting the sale of his works, although he add something to the contents of his own purse by so doing, is not only allowable, but commendable, as it manifests a liberal feeling towards the talents of others. But when an artist assumes the character of a regular dealer—when he bargains, like a Jew, for every drawing he buys, and puts his cent per cent on the sale—it is quite impossible to look upon such proceedings as resulting from that liberality which seems to lie upon the face of the transaction. A fair per centage on the sum obtained from the purchaser would be a just compensation for the time and judgment bestowed upon the selection; but any thing beyond this places a man beneath the character of an artist, and at once reduces him to that of a dealer and chapman.

There is another manœuvre got into practice of late, and which, to my notion, is not a little reprehensible. Suppose, for example, I find in the study of an artist of known talent, but whose finances are not in the most flourishing state, certain detached studies, or drawings partly completed, which I can purchase at a moderate price. There certainly can be no objection to my doing so; nor can there be any, if I choose to cut out parts of such studies or

West's Pictures.—We observe that several of the late President's finest productions, the Bard, the Deluge, Eve driven from Paradise, &c. come under Mr. George Robins' hammer to-day; besides some other pictures of a high order, which belonged to Mr. West. We have always considered the Bard to be altogether, perhaps, his most effective work; and we afford this notice to our readers who may wish to take an opportunity of seeing it.

The New Society of Painters in Water-Colours is proceeding with its organisation, and with the most encouraging prospects.

M. Simond, whose travels in England, Italy, &c. have enjoyed great popularity, died lately at Geneva, aged 64. His death was sudden, and occasioned by apoplexy.

Distances of the Planets from the Sun.—The vast extent of the solar system is but vaguely to be conceived from the ordinary mode of stating it in millions of miles. To demonstrate it in a more striking and impressive manner, a continental astronomer has proposed, or rather renewed the proposal, that the computed distances of the planets be measured by comparison with the velocity of a cannon-ball, rated at $1\frac{1}{4}$ German mile per minute. With this velocity, a cannon-ball, fired from the sun, would reach the planet Mercury in 9 years 6 months; Venus in 18 years; the earth in 25 years; Mars in 38; Jupiter in 130; Saturn in 238; and Uranus (Herschel) in 479 years. With the same velocity a shot would reach the moon from the earth in 23 days, little more than three weeks.

Horticulture.—In imitation of the Horticultural Societies of London, Holland, and Belgium, the Horticultural Society of Paris made, for the first time, a splendid exhibition of flowers and fruits, on the 12th, 13th, and 14th of June; and on the 15th adjudged a number of prizes to the various exhibitors.

Extraordinary Speed.—The steam-boat *Le Sphinx* left Toulon on the 10th of June, at eleven o'clock at night, arrived at Civita Vecchia in thirty-six hours, and returned to France in the same time. By this conveyance the French ambassador at Rome received a telegraphic despatch from Paris in fifty hours.

Civilisation.—At the last bull-fight at Aranjuez, the most celebrated *matador* in Spain was embowelled on the spot, amidst the loudest applause of the court and the other spectators!

Monte Rosa.—Monte Rosa, a mountain of the Alps which separate the Valais from Piedmont, is not quite so high as Mont Blanc, but of far greater circumference;—indeed, as a single mountain, it surpasses in magnitude any other in Europe. Since it was visited, thirty years ago, by M. de Saussure, the mountaineers dwelling around its everlasting snows have not seen a stranger, with the exception, in recent times, of a few Piedmontese refugees. This mountain has lately been ascended by M. Hirzel, of Zurich. The south side of it belongs to Savoy. Here he saw the long-abandoned fortress of St. Theodule, which formerly defended one of the passes, now very rarely trodden, leading from Piedmont to Switzerland; and which being 10,416 feet above the level of the sea, is consequently the most elevated military post in Europe. A little lower down there is an ancient gold mine, which is yet wrought for the King of Sardinia, though very negligently, and only in summer, as it is buried every winter by the snow. It is a curious fact, that this south side of the mountain is yet inhabited by Germans, a robust and honest race, who live almost wholly secluded on their unvisited heights, and have

very little intercourse with the Italians dwelling lower down. They are subjects of the King of Sardinia; and M. Hirzel remarks, with just indignation, that the clergy have forbidden them, on pain of excommunication, to speak German any longer; but they care very little about this interdiction. The men are absent all the summer, going as masons and day-labourers to France and Germany; so that the women alone are left behind on the mountain to look after the cattle. In winter, when the men return, they are confined by the snow, and cannot descend into the valleys. Under these circumstances, they may perhaps maintain their ground for a long time to come, if they should not be routed out (says our authority) by the cruelty of the missionaries. — *Desultory Foreign Reading.*

The ex-King of Sweden.—King Gustavus IV., or, as he now styles himself, Colonel Gustavson, employed himself at Gripsholm, after his deposition, in expounding the book of Revelations; a project which he seems to have meditated at an earlier period. Some one had found that in the name of Napoleon Buonaparte was comprehended the number 666; and in this number the king fancied that he had discovered the mystic denomination of the beast in the Apocalypse; and hence deduced the prognostic, that he was appointed to overthrow Napoleon. This illusion seems to have been the original source of his misfortunes. — *Desultory Foreign Reading.*

Gleanings from Borne's Works.—"Ministers fall to the ground like bread and butter; most commonly on the best side.

"Diplomatists see with their ears; the air, not light, is their element; and for this reason they prefer silence and darkness.

"A Spanish sugar-baker professes to have discovered the means of warming ice. He was apparently educated at court."

"What renders the transition from the old to the new times so bloody, is the narrowness of the path which leads from the one to the other. A broad stream flows between them, and the present is the bridge which runs across it.

"Mankind would become wiser after every fresh lesson of experience, which history affords them, could they profit by it without paying for it. It is not gratuitous, and, therefore, they leave it unheeded; for fortune holds the same language as the bookseller; 'soiled or cut copies cannot be taken back.'

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement, No. XXIX. July 16.*]

Descriptive Sketches of Tunbridge Wells, and the improvements on the Calverley Estate, &c., are announced by Mr. Britton. From his pen we shall look for a superior guide to this charming retreat, so surrounded by scenes of interest and beauty, and now in a course of such improvements, by the building of villas, cottages, &c. &c. that we hardly know (from a recent visit) whether to call them more truly splendid for their style, or delightful for their site, convenient arrangements, and disposition.

The Landscape Annual prospectus for the ensuing year has reached us, and affords a view of great promise. The engravings are from drawings by J. D. Harding of a tour in Italy, and a sequel to the preceding volume of the finely-illustrated tour by Prout. The specimen is Puzioli, &c., engraved by Brandard, a good subject, and extremely well done. As before, the literary part of the publication is by Mr. T. Roscoe.

A Picturesque Annual is also on the tapis; the original paintings by Stanfield, the engravings by C. Heath, &c. The etchings we have seen are admirable.

Parts III. and IV. of Professor Weber's Anatomical Atlas, are announced by Mr. Schless.

LIST OF NEW BOOKS.

Edwards and Vaseau's Manual of Materia Medica, by Davies, 8vo. 12s. bds.—Manna laid up for the Sabbath, 18mo. Mean..... $56^{\circ} 40' 35''$

Barometer—Highest..... 29.98

Lowest..... 29.32

Mean..... $29^{\circ} 70' 11''$

Number of days of rain, 11.

Quantity of rain, in inches and decimals, 1.7565.

Winds.—1 East—7 West—2 North—0 South—0 North-east—0 South-east—10 South-west—10 North-west.

General Observations.—The mean temperature higher than for the last two years, yet the extremes were not so great; the barometer very steady, and generally high; the mean fourteen hundredths of an inch above that of last year in the same month, though it did not reach those in the years 1828 and 1829; rain fell on eleven days, and the quantity was less than since June 1827; the weather during the month was mostly fine—on the morning of the 11th it blew a heavy gale from the S.W.; an indistinct lunar halo seen on the 23d, at 10 p.m., and thunder was heard on the 27th, about midnight. The evaporation 0.71875 of an inch.

TO CORRESPONDENTS.

Alpha is declined.

We have several letters, &c. &c., far too late for us. The Great Vase, Old Tapestry, and other novelties, will be noticed next week.

Concerts, Exhibitions, &c. &c.—We have to apprise parties interested in our visiting concerts, exhibitions, or other spectacles or public entertainments, that we must be their announcements in good time. We were prevented from noticing P. Clanchettini's Concert, Signor Lanza's Concert, and several other places last week, in consequence of receiving the invitation cards too late. We may add, that as we generally act by deputy, single cards are seldom of use.

ADVERTISEMENT,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall Mall.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

Last Week but One.

SOCIETY OF BRITISH ARTISTS' Gallery, Suffolk Street, Pall Mall East.

The Eighth Exhibition for the Sale of Works of Living British Artists, is now Open, from Ten till Seven, and will Close on Saturday, the 23d of July.

Admission, 1s.—Catalogue, 1s.

JOHN WILSON, Secretary.

All Works of Art will be ready for delivery on Tuesday and Wednesday in the following Week.

N.B. The Galleries to Let, from the 1st of August till 1st of March, 1881.

VALUABLE NEWSPAPER PRO-

PERTY.—The Proprietor of a highly popular Weekly Paper, in extensive circulation, finding himself unable, from ill health, to bestow upon it the time and attention required, is desirous of meeting with a Partner, who would take an interest in the Concern, and a part of its Superintendence. It presents a most eligible opportunity to a Literary Man of Capital, a Merchant with extensive Foreign Correspondence, or a Gentleman at the head of a Printing Establishment. To the latter it would afford unlimited Advantages, and consequent Profit.

Letters, post-paid, from Principals only, addressed to M. H., Peel's Coffee House, Fleet Street, will be attended to.

Maps.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

No. XIV. is published this day, and contains

PART OF SPAIN, and PART OF INDIA.

No. XV. will speedily follow.

London: Baldwin and Cradock, Paternoster Row.

The latest Numbers of the Library of Useful Knowledge are, *A Life of Michael Angelo—A Treatise on Commerce—and Part VIII. of the History of the Church—and of the Farmer's Series, a Treatise on Planting.*

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against imitations, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s name. These pencils contain the same quality of pure Camberland lead as their silver patent pencils.

Warranted Protection.—The Lock with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it; neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that dupes are entirely precluded, and dishonesty and curiosity equally guarded against.

• S. Mordan and Co. Makers, London, is stamped on each Lock.

• Scientific gentlemen and others are invited to inspect the Manufacturing, 22, Castle Street, Finsbury.

BOOKS PUBLISHED THIS DAY.

In 1 vol. 8vo. price 12. 1s. Illustrated with Twelve Views of Scenery, drawn on Stone by Nicholson, from original Sketches, and a Map of Piedmont.

WALDENSIAN RESEARCHES, during a Second Visit to the Waldenses of the Valleys of Piedmont. With an Introductory Inquiry into the Antiquity and Purity of the Waldensian Church, and some Account of the Edicts of the Princes of Piedmont, and the Treaties between the English Government and the House of Savoy, in virtue of which this sole Remnant of the Primitive Church in Italy has continued to assert its religious Independence.

By WILLIAM STEPHEN GILLY, M.A.

Prebendary of Durham.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, the 4th edition of

Mr. Gilly's First Excursion to Piedmont in 1822, with Ten Plates of Scenery. 8vo. 12s.

Published by E. Cox, St. Thomas Street, Borough, and Longman, Rees, Orme, Brown, and Green, Paternoster Row.

7th edition, enlarged and improved, price 21. 8s. mounted on canvas and roller, varnished and coloured.

THE STREAM of TIME; or, General

Outline, at one View, of Universal History, Chronology, and Biography. Translated from the German of FREDERICK STRAUSS, and continued down to 1881, with a Descriptive Guide.

By WILLIAM WELLS.

Dr. Butler's Geography, Atlases, &c.

New edition, 8vo. 4s. boards.

A SKETCH of MODERN and ANCIENT GEOGRAPHY, for the Use of Schools.

By SAMUEL BUTLER, D.D.

Archdeacon of Derby, &c.

In the present edition the Author has made some very important Additions, chiefly in the Modern part of it.

New Novels by Distinguished Writers.

THE DUTCHMAN'S FIRE-SIDE. A Tale.

By the Author of "Letters from the South," the "Black-woodman," "John Bull in America," &c. In 3 vols. post 8vo.

II.

Pin Money, by the Authoress of "Manners of the Day." In 3 vols. post 8vo.

"A novel of extraordinary merit. The authoress has an admirable acquaintance with the habits, the follies, and the vices of the society she has delineated."—*Morning Post*.

III.

Philip Augustus; or, the Brothers in Arms. By the Author of "De L'Orme," "Darnley," "Richelieu," &c. In 3 vols. small 8vo.

"This monarch, it will be remembered, derived the most effective assistance from Richard I. while in the Holy Land, in the reduction of Acre. His after-differences with the English king—his successes over the English in Normandy, in violation of his oath to the 'lion-hearted' crusader—his divorce from the Princess of Denmark—his new marriage and excommunication by the Pope—and his campaign against the weak-minded King John—afford rich subjects for the pen of the novelist."—*Courier*.

IV.

Jacqueline of Holland. By the Author of the "Maiores de Bruges," "Highways and Byways," &c. 3 vols. post 8vo.

"The story of the heroine, which is one of intense interest, strongly resembles, in many respects, that of Mary Queen of Scots."—*Globe*.

V.

Bogle Corbet; or, the Emigrants. By John Galt, Esq. Author of "Lawrie Todd," "Annals of the Parish," &c. In 3 vols. post 8vo.

"It is impossible to do justice to a work which contains the records of a life so full of practical experience."—*Literary Gazette*.

VI.

Paris and London. By the Author of the "Castilian," the "Exquisite," &c.

Contents: The Little Milliner—Parvenus and Charlatans—Public Dinners—Fashion—Exquisite's Catechism—Vocabulary of Ten—Modern Follies—English Liberty and Game Laws—Intrigue—Illustration of Equality—Adventure in the Diligence—Sporting Gentlemen—Life in Paris—Dancing House, &c. &c. Henry Colburn and Richard Bentley, New Burlington Street.

Nos. 196 and 197, completing the Seventh Volume of

THE OLIO, illustrated with Two fine Engravings.

Vol. VII. will be ready at the same time.

"It is hardly possible to dip any where without being attracted by the matter to read on."—*Literary Gazette*.

Vols. I. to VII. price 21. 14s. 6d. are embellished with upwards of 800 Engravings, and contain 2140 closely printed pages. The Volumes of the *Olio* are complete in themselves, and may be had separately or together.

A New Volume will be commenced with No. 197, on Saturday, the 23d instant.

Nos. I. II. and III. of the Scrap-Book Illustrations are just ready.

J. Shackell, Publisher, 15, Wine Office Court, Fleet Street.

In crown 8vo. price 4s. 6d. in cloth boards,

SPECIMENS of MACARONIC POETRY, with an Introduction.

Printed for Richard Beckley, 49, Piccadilly; and sold by Simpkin and Marshall, Stationers' Court.

Recently published,

A Catalogue of Foreign Books, with the Prices affixed.

Rev. W. Trollope's *Salust*, with English Notes.

In 12mo. price 8s. 6d. bound,

THE BELLUM CATALINARUM of SALLUST, and Cicero's Four Orations against Catiline. With English Notes and an Introduction; together with the Bellum Jugurthinum of Sallust.

By the Rev. W. TROLLOPE, M.A.

One of the Classical Masters of Christ's Hospital.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

MANUSCRIPT SERMONS.

By a DOCTOR OF DIVINITY.

Part XIV. may now be had, price 6s.

T. Cadell, Strand.

The Fifteenth Part will be published in August, which will complete the Series of Sixty Sermons. The Purchasers of any of the former Parts are particularly requested to complete their Sets, as the Paris will not be sold separately after the concluding one has been published.

THE ENGLISHMAN'S MAGAZINE

will be published in future

By H. Maxon, 64, New Bond Street,

by whom Advertisements will be received, and where all Communications for the Editor are requested to be addressed.

Contents of No. IV.

1. The Eventful Session.
2. Case of the "Royal Associates."
3. Three Meetings on the King's Highway, by the Author of "Scenes in Poland."
4. He comes no more.
5. Confessions of a Tipling Philosopher, Part II.
6. Phytic and Physicians in 1831.
7. The Magdalen, by a Modern Dramatist.
8. Scottish Ballads.
9. The Adventurer of a Day.
10. The Bill and the Lords.
11. The Oak Tree.
12. Letters from Ireland, by a "Little" Cantab.
13. Notre Dame de Paris, by Victor Hugo.
14. The Laying Professor and the Living Mummy.
15. Genius and Poetry of the Virgin.
16. Adieu to Scotland.
17. Notes on Rome, Albano, and Tivoli—Song to the Firm.
18. Ours Early Patriots—John Fyke.
19. Charlotte Corday, Marat, and Duperré.
20. Precautions against the Indian Cholera.
21. Mrs. Siddons.
22. Poland and the Family System.
23. Journal of Literature, Drama, Fine Arts, Music, &c.

In 1 vol. price 6s. in cloth,

THE HISTORY OF POLAND.

Being Vol. XX. of Dr. Lardner's Cabinet Cyclopædia.

Published June 1,

Optics. By Dr. Brewster. Vol. I.

To be published August 1.—Lives of British Statesmen, 3 vols. Vol. I.

A List of the Volumes published and in preparation may be found in the Vol. last published.

Printed for Longman and Co.; and John Taylor.

A new edition, (being the 4th), in 1 vol. 12mo. price 6s. 6d.

NARRATIVE OF A JOURNEY from CONSTANTINOPLE to ENGLAND.

By the Rev. R. WALSH, LL.D. M.R.I.A. &c. &c.

This work, which has received so extensively the seal of public approbation, is now printed a small volume, and is particularly interesting in the present circumstances of the Turkish Empire.

London: Frederick Westley and A. H. Davis, Stationers' Hall Court and Ave Maria Lane.

In 1 vol. 8vo. price 5s. boards,

OBSERVATIONS on the NATURE and TREATMENT OF CHOLERA, and on the Pathology of Mucous Membranes.

By ALEXANDER TURNBULL CHRISTIE, M.D.

Madras Medical Establishment, and lately in Medical Charge of the Civil Department in the Southern Mahratta Country.

At a Meeting of the French Institute, held in November last, this work, as stated in the public report after proceedings of that body, was highly spoken of as being the only work from which any positive knowledge could be obtained respecting this malady.

Printed for Macclachlan and Stewart, Edinburgh; and Simpkin and Marshall, London.

Of whom may be had, lately published,

Dunbar and Barker's Greek and English Lexicon. In 1 large vol. thick 8vo. price 25s.

Also,

Dr. Milligan's valuable Edition of Celsus de Medicina. The 3d edition, much improved; to which is added, a complete Delphin Index of 155 pages, without any increase of price. In 1 thick vol. 8vo. price 15s.

THE EDINBURGH MEDICAL and SURGICAL JOURNAL, No. CVIII. July 1831, is just published, price 6s.

Among other interesting Articles, the present Number contains an Analysis of the Asiatic Cholera, from the Russian Official Documents, by D. J. R. Lichenstadt—Case of probable Dislocation of the Heart from External Violence, by W. Stokes, M.D.—Case in which a Nose was supplied (with a Plate), by M. Colles, A.B.—On the Treatment of Malignant Ulcers of the Nose and Face, by Francis Adams, Esq.—Case of Spontaneous Varicose Anæurism (with a Plate), by J. Syme, Esq. &c.

Also, price 7s. 6d. with Two Engravings,

The Edinburgh New Philosophical Journal, conducted by Professor Jameson, No. 31, April—June, 1831.

The following Articles exhibit a Specimen of the Contents:—On the Formation of Alluvial Deposits, by J. Yate, M.A. &c.—On the History and Progress of Comparative Anatomy, by D. Craigie, M.D. &c.—On the Influence of Rocks on Native Vegetables, by A. Murray, M.D. &c.—Biography of the late David Carmichael, Captain 7th Regiment—Hunting the Cougar, by J. J. Audubon, F.R.S. &c.—On the present Nervous and Expansive Systems of Life Assurance, by Mr. Fraser—Navigation of the Mississippi, by J. J. Audubon, Esq.

Adam Black, Edinburgh; and Longman, Rees, Orme, Brown, and Green, London.

In 8vo. price 5s.

HISTOIRE des CAMPAGNES de

BOHLENLINDEN et de MARENGO.

Par M. DE BULOW.

Contenant les Notes que Napoléon fit sur cet Ouvrage en 1819, à Ste. Hélène. Le tout mis en ordre et publié

Par Brevet Major EMMETT,
Du Corps Royal du Génie.

London: Chez Whittaker, Treacher, et Arnot.

Rev. W. Trollope's Ovid, with English Notes.

In 12mo. price 3s. 6d. bound,

EXCERPTA ex OVIDIO. With English Notes and an Introduction, containing Rules for construing, a Parsing Praxis, &c.

By the Rev. W. TROLLOPE, M.A.

One of the Classical Masters of Christ's Hospital.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

London's Works on Gardening, Agriculture, Botany, &c.

In 1 large vol. 8vo. price 12s. 10s. extra boards, with upwards of Eleven Hundred Engravings on Wood, a new edition of

AN ENCYCLOPEDIA of AGRICULTURE, comprising the Theory and Practice of the Valuation, Transfer, Laying-out, Improvement, and Management of Landed Property; and the Cultivation and Economy of the Animal and Vegetable Productions of Agriculture, including the latest Improvements, a General History of Agriculture in this Country; and a Statistical View of the present State, with Suggestions for its future Progress in the British Isles.

By J. C. LOUDON, F.L.S. &c. &c.

No pains have been spared on the part of either the author or the publishers to render this second edition of the Encyclopedia of Agriculture as perfect as possible. The author undertook a journey into France and Germany in 1828, on purpose to procure information respecting the present state of agriculture on the Continent; and the publishers have gone to the expense of nearly 500 new engravings, nearly half of which are new subjects. The co-operation of upwards of forty individuals, (a list of whom is appended), has also been procured, or voluntarily given; and their suggestions or additions have embraced almost every department of the work of the whole, the author himself warranted in asserting that the work is now as perfect as its nature and the present state of agricultural science and practice will admit.

An Encyclopedia of Gardening, comprising the Theory and Practice of Horticulture, Floriculture, Arboriculture, and Landscape Gardening; including all the latest Improvements, a general History of Gardening in all Countries, and a Statistical View of the present State, with Suggestions for its future Progress in the British Isles. Illustrated with upwards of 700 Engravings on Wood. Complete in 1 large vol. 8vo. price 12s. extra boards.

Hortus Britannicus; a Catalogue of all the Plants indigenous, cultivated in, or introduced to Britain. 1d 8vo. price 1s. 1s. cloth boards.

Part I.—The Linnean Arrangement, in which nearly Thirty Thousand Species are enumerated; with the Systematic Name and Authority, Accutention, Derivation of Generic Names, Literal English and Specific Names, Synonymes Systematic and English of both Genera and Species, Habit, Habitation in the Garden, indigenous Habitation, Popular Character, Height, Time of Flowering, Colour of the Flower, Mode of Preparation, Soil, Native Country, Year of Introduction, and Reference to Figures; preceded by an Introduction to the Linnean System.

Part II.—The Jussieuian Arrangement of nearly Four Thousand Genera, with an Introduction to the Natural System, and a general Description and History of each Order.

The Linnean Arrangement and its Supplement are entirely the work of Mr. George Don, the Natural Arrangement is taken from that of Professor Lindley, with some Additions and Alterations rendered necessary by the Plan of this Catalogue; and Dr. Orville, the profound Cryptogamist, assisted in arranging the Cryptogamia.

An Encyclopedia of Plants, comprising the Description, Specific Character, Culture, History, Application in the Arts, and every other desirable Particular, respecting all the Plants indigenous, cultivated in, or introduced to Britain.

Complete in 1 large vol. 8vo. with nearly Ten Thousand Engravings on Wood, price 4s. 14s. 6d. extra boards.

The Specific Characters, &c. by John Lindley, F.R.S. L.S. and G.S. &c. the Drawings by J. D. C. Sowerby, F.L.S.; and the Engravings by R. Branstetter.

The Gardener's Magazine, and Register of Rural and Domestic Improvement. Conducted by J. C. Loudon, F.L.S. H.S. &c. In 8vo. Nos. 1. to XXXII. (published every Two Months, alternately with the Magazine of Natural History), price 5s. 6d.

Also,

Vols. I. to VI. price 57. 1s. 6d. boards.

The Magazine of Natural History, and Journal of Zoology, Botany, Mineralogy, Geology, and Meteorology. Conducted by J. C. Loudon, F.L.S. G.R. Z.S. &c. In 8vo. Nos. 1. to XX. (published every Two Months, alternately with the Gardener's Magazine), price 3s. 6d.

Also,

Vols. I. to III. price 24. 17s. boards.

Printed for Longman, Rees, Orme, Brown, and Green.

8vo. 2s.

THE HISTORY OF THE NORTHMEN, or DANES and NORMANS, from the earliest Times to the Conquest of England by William of Normandy.

By HENRY WHARTON,

Honorary Member of the Scandinavian and Icelandic Literary Societies of Copenhagen.

John Murray, Albemarle Street.

Britton's Architectural Works.

THE CATHEDRAL ANTIQUITIES of

ENGLAND; or, an Historical, Architectural, and Geographical Illustration of the English Cathedral Churches. Price 12s. per Number, in medium 4to. and 12s. in imperial 4to. Forty-nine Numbers are already published. Each size to class with the Architectural Antiquities of Great Britain.

The following are complete, and either may be had separate, viz. 1.—

- Salisbury Cathedral, with 21 Engravings, med. 4to. 2s. 3s.; imp. 4to. 5s. 6s.
 Norwich, with 25 Plates, med. 4to. 2s. 10s.; imp. 4to. 4s. 4s.
 Lichfield, with 16 Engravings, med. 4to. 1s. 12s.; imp. 4to. 2s. 2s.
 York, with 25 Engravings, med. 4to. 2s. 12s.; imp. 4to. 4s. 4s.
 Winchester, with 20 Engravings, med. 4to. 2s. 2s.; imp. 4to. 4s. 4s.
 Oxford, with 11 Engravings, med. 4to. 1s. 4s.; imp. 4to. 2s. 2s.
 Canterbury, with 20 Engravings, med. 4to. 2s. 2s.; imp. 4to. 4s. 4s.
 Exeter, with 22 Engravings, med. 4to. 2s. 10s.; imp. 4to. 4s. 4s.
 Wells, with 24 Engravings, med. 4to. 2s. 10s.; imp. 4to. 4s. 4s.
 Peterborough, with 17 Plates, med. 4to. 1s. 12s.; imp. 4to. 2s. 2s.
 Gloucester, with 22 Engravings, med. 4to. 2s. 10s.; imp. 4to. 4s. 4s.
 Bristol, with 14 Engravings, med. 4to. 1s. 4s.; imp. 4to. 2s. 2s.
 Hereford, Nos. 1 and 2 of which are published, and Worcester Cathedrals are in preparation, and will be comprised in 3 Nos. to each.

* * * Of the above Works, a small Number of Copies are printed on super-royal folio, with Proof, and with Proof and Etching of the Plates.

The History and Antiquities of Bath Abbey Church, with 10 Engravings, by J. and H. Le Keux. Royal 8vo. 14s.; med. 12s. 11s. 6d.; imp. 4to. 2s. 2s.

The Architectural Antiquities of Great Britain, consisting of 278 Engravings of Castles, Churches, Old Mansions, Crosses, &c.; with Historical and Descriptive Accounts of each Subject. 4 vols. medium 4to. 51s.; large paper, 2s. half-bound.

The Architectural Antiquities of Normandy, consisting of 80 Plates, engraved by J. and H. Le Keux, of Plans, Elevations, Views, &c. of the most interesting Edifices in Caen, Rouen, Bayeux, &c. with Historical and Descriptive Letterpress. Med. 4to. 6s. 6d.; imp. 4to. 10s. 10s.

History and Illustration of Redcliffe Church, Bristol, with 18 Plates. Royal 8vo. 16s.; imp. 4to. 1s. 11s. 6d.

London: Published by Longman, Rees, Orme, Brown, and Green, Paternoster Row; J. Britton, Barton Crescent; and J. Taylor, Architectural Library, High Holborn.

In 2 vols. 8vo. with a Portrait, engraved by W. Finden, from the Painting by Sir Thomas Lawrence, in the Gallery of the Right Hon. Sir Robert Peel, Bart. 2s. 2s.

SPEECHES of the Right Hon. WILLIAM

HUBKISSON in the House of Commons. With a Biographical Memoir, supplied to the Editor from Authentic Sources.

PRICE 8d.

REVIEW OF NEW BOOKS.

An Historical Inquiry into the Production and Consumption of the Precious Metals. By William Jacob, Esq., F.R.S. 2 vols. 8vo. London, 1831. Murray.

WE run, we think, little risk, in predicting that this will be a standard work—that it will be resorted to by the present and by succeeding generations, as an authentic and fertile source of the information best fitted to guide or to confirm their reasonings on the many important points with which the subject it treats of is connected.

The book originated, it seems, in a friendship of very long standing between the late Mr. Huskisson and the author. That statesman expressed a wish to see some comprehensive view of such fluctuations as history can trace, in the supply and consumption of the precious metals, brought down to our own times, and applied to our own position. He suggested some parts of the plan; and Mr. Jacob tells us, with a natural but melancholy satisfaction, that shortly before he died, he had inspected, and expressed pleasure at, the progress of its execution. The outline of that plan is very extensive; and it has been most industriously filled up. The author divides the history of mankind (for his present purposes) into four periods of unequal duration. The first, that which preceded the reign of Augustus; the second, that which elapsed between his reign and the discovery of the American mines; the third, between their discovery and 1809; the fourth, the short but eventful interval between the beginning of the convulsions in Spanish America and 1830. In each of these periods, with unwearied industry he traces throughout the world (as far as history has made them known to us), the various sources from which the precious metals were supplied; the rate at which they were probably consumed, or withdrawn from commerce and circulation; and the causes, commercial and political, which have attracted them for a time in masses to particular communities, and have then dispersed them, and given them a tendency to concentrate themselves elsewhere. With a wise and self-denying abstinence, he mingles modestly and sparingly throughout some cautious views as to the influence of all these circumstances on the money prices of commodities.

The first of these periods will perhaps be the most interesting to scholars. Mr. Jacob here follows up his subject in eight chapters, through Assyria, Persia, Asia east of Persia, Phœnicia, Palestine, Egypt, Nubia, Greece, Rome, Illyria, and ancient Spain. Where almost every page is replete with striking facts, it is difficult to select. The following probably will be new to most of our readers.

“This subject (namely, the familiar use of gold and copper before that of iron) has been illustrated in Denmark, by opening many Scandinavian tumuli of very remote ages, from

which have been collected specimens of knives, daggers, swords, and implements of industry, which are preserved and arranged in the Museum at Copenhagen. There are tools of various kinds formed of flint or other hard stone, in shapes resembling our wedges, axes, chisels, hammers, and knives, which are presumed to have been those first invented. There are swords, daggers, and knives, the blades of which are of gold, whilst an edge of iron is formed for the purpose of cutting. Some of the tools and weapons are formed principally of copper, with edges of iron; and in many of the implements the profuse application of copper and of gold, when contrasted with the parsimony evident in the expenditure of iron, seems to prove, that at the unknown period, and among the unknown people who raised the tumuli, which antiquarian research has lately explored, gold, as well as copper, were much more abundant products than iron.”

The internal economy and resources of the great empires of which the capitals were seated on the banks of the Euphrates and Tigris, are very imperfectly known to us. Mr. Jacob, enumerating many sources from which they derived bullion, acquaints us with the curious fact, that some came from Scythian hordes, numerous relics of whose mining operations have very lately been discovered by Gmelin, Lessechin, and Pallas, on the southern and eastern borders of the Ural mountains. After describing their copper instruments and shallow excavations, (some of them, however, twenty fathom deep), he says:

“The smelting, whether in the mines or on the surface, was performed in small furnaces, of which Gmelin observed near a thousand in the eastern parts of Siberia. They were made of red bricks, and in them pieces of melted copper, from two to three pounds in weight have been found. The height and breadth of these furnaces were about two feet, and the length three feet. There were holes on both the front and back sides, but which of them was appropriated for the bellows could not be discovered by any marks. In the neighbourhood of these furnaces there are large heaps of scoræ; but no one has had the curiosity to ascertain what metals, if any, they contain. It may be presumed that a long period must have elapsed since the works were in activity; for the roots of large fir-trees have spread themselves among the stones that are heaped against the sides of the furnaces. It appears strange that the ancient inhabitants of this country, with their imperfect means, should have been able to melt so hard a metal as copper, and should have acquired the art of separating the gold from it. It is now impossible to form any judgment of the portion of gold which the copper contained; but the fact of some being found is sufficiently proved, and it may have given rise to the puerile tales that have been noticed, and which Herodotus has transmitted to the ages that have succeeded to his.”

The strange tales of Herodotus here referred to, about ants bigger than foxes, griffins, and one-eyed Arimaspians, the reader, who is not already familiar with them, may find in the first volume of this work, pp. 32—34.

There is a full account of the mines of the Romans in Sicily, Sardinia, Spain, Thrace, and Macedonia, and of their management and modes of working. The Illyrian mines, it seems, at one time, produced abundantly.

“At one period, this gold was laboured so extensively, that its great quantity caused a decrease of one third in the price through all Italy, and induced the proprietors to employ fewer workmen, in order to raise the value.”

But the great permanent source was Spain. The extreme misery inflicted on the native Spaniards by their invaders, and the introduction of African slaves to assist the enfeebled and diminished native population, are circumstances which will not fail to attract forcibly the attention of every one who calls to mind the career of the modern Spaniards in South America.

“The new settlers, by means of their troops and their superior weapons, speedily compelled the aborigines to explore the bowels of the earth for silver, and thus inflicted on those uncivilised people a series of calamities which exhausted their strength and thinned their numbers. ‘These people,’ says Diodorus, ‘though by their labour they enriched their masters to an almost incredible extent, did it by toiling night and day in their golden prisons. They were compelled by the lash to work so incessantly, that they died of the hardships in the caverns themselves had dug. Such as, by great vigour of body, continued in life, were in a state of misery, which made death a preferable fate.’ This oppression and exhaustion of the native labourers led to the trade in human beings, which was carried on by the Carthaginians with the interior of Africa, and supplied to Andalusia the place of those native workmen who had been destroyed by the excessive toil imposed on them by their Asiatic intruders. This horrid traffic was extended and continued, and it augmented the produce of the mines of Spain in such a degree, as to have an influence on the whole commerce of the world at that period.”

The author brings all his information as to this period to a head by calculating the amount of bullion existing under Augustus, and its annual consumption. Then, after a short interval, came a long succession of ages, during which, from the unproductiveness of the mines, the amount of bullion in the world was constantly decreasing. How this was effected, by political and other causes; by the invasion of the northern barbarians; and by the rise of the Mahometan powers; and by the general decline of the useful arts, is fully explained; and a body of facts is given, shewing the mode of operation of these causes in the different parts of the old world. This apparently dark and uninviting period turns out, in the hands of the author, very far from barren, and has supplied him

with materials for an animated and amusing narrative.

At length we reach the discovery of America, and a fresh influx of the precious metals, till, when compared with commodities, they approached once more the plenty of the age of Augustus. This part of the subject is treated with the fulness which its importance merits, and the effects of the swelling stream on prices, and on the manners and habits of society, are well and distinctly sketched, and in the best and most satisfactory manner; that is, by the production of a body of facts and anecdotes.

The remaining chapters contain an account of the produce and condition of the American mines since 1809. For this part of his subject the author was well prepared by long attention to it, and by the possession of a great and digested mass of materials. The conclusions he has arrived at as to the actual state and probable future productiveness of these mines deserve, and no doubt will obtain, very serious attention.

There is still unnoticed a portion of the book on which the writer has evidently bestowed extreme pains, namely, an account, or rather an estimate, of the annual consumption of bullion by the whole world; that is, of the quantity annually lost to commerce and circulation. It would be in vain to give an idea of the process by which Mr. Jacob arrives at this estimate, either by an abstract or by insulated facts. The general result is, that he estimates "the whole quantity of the precious metals taken from the general stock of them, and destined to purposes of ornamental and useful gratification, to amount annually to the sum of five million eight hundred and ninety-three thousand two hundred and forty-one pounds."

There are inquiries into the interchange of bullion between Europe and Asia; into the amount of paper money current before and since the defalcation of the mines; and an appendix, with some curious documents. The reader will find prefixed to each volume, a detailed and exceedingly well-executed table of contents, which will enable him to get at once a commanding view of the course of the author's labours, and to select, if he chooses to select, the periods and places about which he is most interested.

Upon the whole, we cannot doubt that this work contains attractions of no common kind for various classes of readers. It throws a steady light upon many hitherto obscure classes of facts highly interesting to the classical scholar and to the antiquary; it presents materials towards the solution of important and difficult questions in political science; and such is the simplicity and facility of its execution, that while all this is effected, it can never cease to excite and entertain the most careless general reader.

For research and induction we know no work more important and curious: and though we can now only afford a hasty general notice, we mean hereafter to enrich our pages from its ample stores.

The Dutchman's Fireside; a Tale. By the Author of "Letters from the South," the "Backwoodsmen," &c. 2 vols. 12mo. London, 1831. Colburn and Bentley.

WE know not whether this be a reprint from some Transatlantic publication, but it is very evidently an American work, and well worthy, for its animated and graphic sketches, to be introduced to the British public. As a novel, its merits are not very striking; the story, of unnecessary jealousies, &c., is as "old as the

hills;" and the style often inelegant and florid. For example, every motion of the hero throws him into either a "cold" or a "profuse perspiration;" and these occur so often, that we wonder he has not shared the fate of Latona, and melted away, before the end of the book. Again; what can be more ludicrous than describing the heroine as more "white and innocent" than the sheets in which she was sleeping?—we never heard of the innocence of Russia or Irish cloth before. To inelegancies we may also add prejudices: witness the ensuing description:—

"Sir Thicknesse Throgmorton was what is now generally designated 'a real John Bull;' a being combining more of the genuine elements of the ridiculous than perhaps any other extant."

We now proceed to what constitutes the merit these pages possess; they often illustrate American characters and scenes, as those only can who are familiar with what they describe. The sketch of Sir William Johnson is very spirited; but we prefer that of Timothy, as being a whole.

"What! have you never heard of Timothy Weasel, the Varmounter, as he calls himself?" "Never." "Well, then, I must give you a sketch of his story before I introduce him. He was born in New Hampshire, as he says, and in due time, as is customary in those parts, married, and took possession, by right of discovery, I suppose, of a tract of land in what was at that time called the New Hampshire grants. Others followed him, and in the course of a few years a little settlement was formed of real 'cute Yankees, as Timothy calls them, to the amount of sixty or seventy men, women, and children. They were gradually growing in wealth and numbers, when one night, in the dead of winter, they were set upon by a party of Indians from Canada, and every soul of them, except Timothy, either consumed in the flames, or massacred in the attempt to escape. I have witnessed in the course of my life many scenes of horror, but nothing like that which he describes, in which his wife and eight children perished. Timothy was left for dead by the savages, who, as is their custom, departed at the dawn, for fear the news of this massacre might rouse some of the neighbouring settlements in time to overtake them before they reached home. When all was silent, Timothy, who, though severely wounded in a dozen places, had, as he says, only been 'playing possum,' raised himself up and looked around him. The smoking ruins, mangled limbs, blood-stained snow, and the whole scene, as he describes it with quaint pathos, is enough to make one's blood run cold. He managed to raise himself upright, and, by dint of incredible exertions, to reach a neighbouring settlement, distant about forty miles, where he told his story, and then was put to bed, where he lay some weeks. In the mean time the people of the settlement had gone and buried the remains of his unfortunate family and neighbours. When Timothy got well, he visited the spot; and while viewing the ruins of the houses, and pondering over the graves of all that were dear to him, solemnly devoted the remainder of his life to revenge. He accordingly buried himself in the woods, and built a cabin about twelve miles from hence, in a situation the most favourable to killing the 'kритters,' as he calls the savages. From that time until now he has waged a perpetual war against them, and, according to his own account, sacrificed almost a hecatomb to the manes of his wife and children. His in-

trepidity is wonderful, and his sagacity in the pursuit of this grand object of his life beyond all belief. I am half a savage myself; but I have heard this man relate stories of his adventures and escapes which make me feel myself, in the language of the red-skins, 'a woman' in comparison with this strange compound of cunning and simplicity. It is inconceivable with what avidity he will hunt an Indian; and the keenest sportsman does not feel a hundredth part of the delight in bringing down his game, that Timothy does in witnessing the mortal pangs of one of these 'kритters.' It is a horrible propensity; but to lose all in one night, and to wake the next morning and see nothing but the mangled remains of wife, children, all that man holds most close to his inmost heart, is no trifle. If ever man had motive for revenge, it is Timothy. Such as he is, I employ him, and find his services highly useful. He is a compound of the two races, and combines all the qualities essential to the species of warfare in which we are now engaged. I have sent for him, and expect him here every moment." As Sir William concluded, Sybrandt heard a long dry sort of 'H-e-e-m-m,' ejaculated just outside of the door. "That's he," exclaimed Sir William; "I know the sound. It is his usual expression of satisfaction at the prospect of being employed against his old enemies the 'kритters.' Come in, Timothy." Timothy accordingly made his appearance, forgot his bow, and said nothing. Sybrandt eyed his associate with close attention. He was a tall, wind-dried man, with extremely sharp, angular features, and a complexion, of course, bronzed by the exposures to which he had been subjected for so many years. His scanty head of hair was of a sort of sunburnt colour; his beard of a month's growth at least; and his eye, of sprightly blue, never rested a moment in its socket. It glanced from side to side, and up and down, and here and there, with indescribable rapidity, as though in search of some object of interest, or apprehensive of sudden danger. It was a perpetual silent alarm. "Timothy," said Sir William, "I want to employ you to-night." "H-e-e-m-m," answered Timothy. "Are you at leisure to depart immediately?" "What, right off?" "Ay, in less than no time." "I guess I am." "Very well—that means you are certain." "I'm always sartin of my mark." "Have you your gun with you?" "The kritter is just outside the door." "And plenty of ammunition?" "Why, what under the sun should I do with a gun and no ammunition?" "Can you paddle a canoe so that nobody can hear you?" "Can't I? h-e-e-m-m!" "And you are all ready?" "I 'spect so. I know you didn't want me for nothing, and so got every thing to hand." "Have you any thing to eat by the way?" "No; if I only stay out two or three days, I sha'n't want any thing." "But you are to have a companion." Timothy here manufactured a sort of linsey-woolsey grunt, betokening disapprobation. "I'd rather go alone." "But it is necessary you should have a companion; this young gentleman will go with you." Timothy hereupon subjected Sybrandt to a rigid scrutiny of those busy eyes of his, that seemed to run over him as quick as lightning. "I'd rather go by myself," said he again. "That is out of the question, so say no more about it. Are you ready to go now—this minute?" "Yes." Sir William then explained the object of the expedition to Timothy, much in the same manner he had previously done to Sybrandt. "But mayn't I shoot one of these tarnal kritters if he comes in my way?"

said Timothy, in a tone of great interest. 'No; you are not to fire a gun, nor attempt any hostility whatever, unless it is neck or nothing with you.' 'Well, that's what I call hard; but maybe it will please God to put our lives in danger—that's some comfort.' The knight now produced two Indian dresses, which he directed them to put on, somewhat against the inclinations of friend Timothy, who observed that if he happened to see his shadow in the water, he should certainly mistake it for one of the tarnal krittlers, and shoot himself. Sir William then with his own hand painted the face of Sybrandt so as to resemble that of an Indian—an operation not at all necessary to Timothy; his toilet was already made—his complexion required no embellishment. This done, the night having now set in, Sir William, motioning silence, led the way cautiously to one of the gates of Ticonderoga, which was opened by the sentinel, and they proceeded swiftly and silently to the high bank which hung over the narrow strait in front of the fort. A little bark canoe lay moored at the foot, into which Sybrandt and Timothy placed themselves flat on the bottom, each with his musket and accoutrements at his side, and a paddle in his hand. 'Now,' said Sir William, almost in a whisper, 'Now, luck be with you, boys; remember, you are to return before daylight without fail.' 'But, Sir William,' said Timothy, coaxingly—'now, mayn't I take a pop at one of the tarnal krittlers, if I meet 'em?' 'I tell you, no,' replied the other; 'unless you wish to be popped out of the world when you come back. Away with you, my boys.' Each seized his paddle; and the light feather of a boat darted away with the swiftness of a bubble in a whirlpool."

Like many of his compeers, our author has no especial calling as a novel-writer; he has little invention, and his pleasantry is of a ponderous kind; but he describes what he actually knows with much animation, and would, we think, pen amusing travels.

Facts relating to the Punishment of Death in the Metropolis. By Edward Gibbon Wakefield, Esq. 13mo. pp. 198. London, 1831. Ridgway.

We are afraid that the present is an unpropitious moment for the publication of a work, however well deserving of attention, upon this very important subject. Yet as the questions involved in the administration of our criminal laws do, even amid the engrossing discussions of Reform, obtain some notice from the legislature,* we trust that the *Facts* (in that one word comprising every claim to regard) brought forward by Mr. Wakefield will not escape the consideration they so richly merit.

Our author, by a three years' study in the College of Newgate, has eminently qualified himself to treat of the material points involved in this inquiry. His remarks display great acuteness, intelligence, and sound sense; and in spite, we presume, of the usual bashaw-ship of the Prison Marshal Wontner,† he appears to have been allowed, and to have availed himself of, many convenient opportunities for acquiring an insight into the manners and practices of all classes of his fellow-colleagues. The results of his investigations—and they are very

interesting in themselves, besides being ably reasoned upon—he has now laid before the public.

We shall advert to some of the leading points.

Mr. Wakefield observes: "The hatred which the thieves bear to the new police proves that the new is superior to the old system, but not that it is perfect. If it were even highly useful, though far from perfect, we should observe by this time a considerable diminution of crime. No diminution of crime, I believe, has taken place during the last year. If, then, the ordinary causes of crime have not operated with unusual force, the new police is not preferable to the old as a means of preventing crime."

This argument, however, is not conclusive: on the contrary, it appears that increased activity in the detection of crime is likely to have produced the consequence mistaken as a comparative test. It is nevertheless true that prevention, so rarely even thought of in our system, has not become a more leading principle under the new order of things. Mr. W. suggests, as improvements in this view: "First, that the law should be altered so as to render its execution against notorious thieves, and those who harbour them, less troublesome to the police. Secondly, that the execution of such a law of prevention should be confided to officers of police, *having no other occupation, and responsible for that particular service*, though under the superintendence of higher authority, so as to furnish the immediate executors of the law with a sufficient motive for doing their duty. Thirdly, some provision for unity of purpose and action throughout the metropolis and its suburbs: so that a person known to be a thief in Whitechapel should be equally notorious to the officers at Pimlico; and that a harbourer of thieves driven from Islington should not commence business in Southwark. The last-mentioned improvement could not, it may be said, take place without abrogating the present system of separate and independent police jurisdictions, and interfering with what are called the privileges of the City of London. This is true; but which is it that the public requires—separate jurisdictions, or effectual checks to crime?"

The obvious good sense of these hints who can doubt? but then, like all other improvements for the general benefit, they have local and selfish interests to combat, which are strong to procrastinate, if not to prevent their adoption. Were prevention instead of punishment the object pursued, we should not have to wonder and grieve at the nurseries of crime so openly winked at and tolerated in the metropolis, among the most atrocious and fatal of which stands Newgate itself. But besides this grand school, Mr. W. informs us, "London abounds with smaller nurseries of petty offences by persons of every age, from infancy to manhood. I had the opportunity of strictly examining more than a hundred thieves, between eight and fourteen years, as to the immediate cause of their becoming thieves; and in nineteen cases out of twenty it appeared that the boy had not committed his first crime spontaneously, but had been persuaded to commence the career of thieving by persons whose business it is to practise this kind of seduction. The most numerous class of such seducers consists of experienced thieves, both men and boys, who look out for boys not criminal, to whom they represent the life of a thief as abounding in pleasure. The object of these representations is to obtain instruments with which experienced thieves may commit robberies with

less danger to themselves—participants, whose ignorance of the trade subjects them to be put forward into the most dangerous situations, and to be cheated in the division of the spoil. But words are not the only means of seduction employed in such cases: food is given to the hungry, and all kinds of stimulating enjoyments are presented to others who do not want the means of subsistence. I state what I know to be a fact, in saying that a practised thief often spends as much as ten pounds in the course of a few days for the purpose of corrupting a youth, by taking him to play-houses and other shows, and allowing him to eat and drink extravagantly at pastry-cooks, fruit-shops, and public-houses. The inevitable consequence of such indulgences is the victim's discontent with his previous mode of life; and when this feeling predominates, he is considered ripe for receiving without alarm the suggestions of his seducer."

Other means are described, which we need not extract; but "another class of seducers consists of both men and women, but principally of old women—the keepers of fruit-stalls and small cake-shops, which stalls and shops they keep but as a cloak to their real trade—that of persuading children to become thieves, and receiving goods stolen by children. The methods of seduction pursued by these people are for the most part similar to those adopted by the class mentioned above; but they are distinguished from the thieves by some peculiarities. Residing always in the same spot, and apparently engaged in an honest calling, they have superior opportunities of practising on children, who, until known to them, were perfectly well disposed. Several instances came to my knowledge of boys, the sons of decent trades-people, carefully educated, apprenticed to some trade, and with every prospect of leading an industrious and honest life, who were seduced by persons of the class in question. The course of seduction is about as follows:—The child buys fruit and cakes at the stall or shop, the keeper of which takes pains to form a familiar acquaintance with him, by conversation, artful it must be called in this case, but such as is used by all good teachers in order to gain a pupil's confidence. He passes the shop one day without money, and is invited to help himself upon trust. If he yield to the first temptation, it is all over with him. Considering his previous acquaintances with the tempter, it is almost a matter of course that he yields. Once in debt, he continues to indulge himself without restraint, and is soon involved far beyond his means of repayment. Where is the police to save him? No act of robbery has been committed, and the police therefore is absent. Probably his parents or master have impressed on him that it is wrong to run in debt. He is already criminal in his own eyes. Instead of confessing his difficulty to his friends, he thinks of them with fear. All his sensations are watched by the wretch, who now begins to talk slightly of harsh parents and task-masters, and insinuates her own superior affection. By degrees, more or less slow according to the degree of her art and the excitability of the boy's temperament, she gets a complete mastery of his mind. At length she guides him to the first step in crime, by complaining of want of money; perhaps threatening to apply to his parents, and suggesting that he may easily repay her by taking some trifling article from his master's shop. The first robbery committed, the chances are a thousand to one that the thief will sooner or later be transported or hanged. He goes on robbing his master or

* A committee of the House of Commons has just been appointed, to inquire into the best mode of giving efficacy to secondary punishments; and reporting the same to the House.

† We had recently some opportunity of witnessing the manner and insolence of this despot of a gaol: we have seen something of official consequence in higher quarters, but we were never so astonished before.

perhaps his parents: the woman disposes of the stolen property, giving him only a moderate share of the money obtained; she introduces him to other boys who are following the same career; he soon learns to prefer idleness and luxuries to labour and plain food; and, after a while, becoming an expert thief, deserts his original seducer, with whom he is no longer willing to share the fruits of his plunder, connects himself with a gang, probably takes a mistress, and is a confirmed robber, on the high road to Botany Bay or the gallows."

After dwelling on these and other striking evils, almost encouraged by our police and manner of executing the laws, the author gives us nine tables of trials, convictions, executions, &c. &c. during the last three years; upon which he comments with much truth and talent. As we cannot insert these tables, we cannot follow him in many matters which are elucidated by them, and are well worthy of attention. We shall quote, however, some of his arguments.

"Next to the substitution of some milder punishment for that of death, the most useful improvement of our criminal laws would be the appointment of a public prosecutor. Indeed, when one reflects that the only object of punishment is the repression of crime—that, therefore, penalties ought to be so measured as to hold out in each case a stronger motive for abstaining from an offence than any motive for committing it; and that, above all, the power of punishment, as a means for the repression of crime, depends altogether on its certainty,—it does appear absurd to leave to the pleasure of an individual, in every case, what shall be the amount of punishment, if any at all. The wisest legislature would have infinite difficulty in so determining the penalty of each offence as to make punishment as effectual as possible in the repression of crime. The legislature of this country leaves the matter to be settled by individuals, acted upon by all kinds of improper motives—such as anger, laziness, compassion—and, above all, utterly thoughtless of the sole object of punishment. Ought it, then, to be matter of astonishment, that crimes should increase with the increase of population and wealth? Again, the legal punishment of crime ought clearly to be a *public work*, like a bridge, of which the cost is defrayed by a tax on the whole community. The work is beneficial to the whole community; yet the cost of it is thrown upon certain individuals, who have suffered through the previous inadequate performance of that work. This is as if we should charge toll on the bridge only from those who had slipped into the water in consequence of defects in the bridge, arising from so inadequate a mode of keeping it in repair."

The chances of escaping prosecution, conviction, and punishment, are all calculated upon by criminals, and greatly encourage the commission of offences. And when capital conviction does ensue, the course pursued is beyond credibility absurd.

"Every one who comes in contact with a man whose death by the hangman is probable, treats him, not as a criminal, but as an unfortunate. In the treatment of other prisoners, even before trial when they are presumed to be innocent, I never observed any thing like commiseration from persons in authority over them. At the best they are treated with neglect, except for their safe custody; and all convicts not capital are treated as criminals. The same men, once capitally convicted, are treated as brothers or children in distress. Why is the capital convict, he whose crime is most grave

and is proven, so favourably distinguished? Because the punishment of death shocks every mind to which it is vividly presented, and overturns the most settled notions of right and wrong."

Mr. Wakefield gives a distressing account of the affair which ended in Mr. John Montgomery's poisoning himself to avoid an ignominious death for forgery. If this narrative be true, the unhappy person was sacrificed in a most cruel and unjustifiable manner, having first confided his secret to Mr. Freshfield, on a pledge of mitigated penalty, and being then left for execution, in spite of every effort to have his sentence changed to transportation. Mr. W. reasons on this dreadful case to shew the erroneousness of the process which sends the cases and fate of London guilt to be finally decided by the king in council.

"Every where but in London the question of life or death is decided by a judge, singly responsible; who presides at the trial; who hears all the evidence, because this is the last trial; who states fully to the prisoner's face and in open court, the grounds of his decision; who has no other pursuit than the business of the assize; and whose judicial habits especially qualify him for distinguishing between right and wrong. In London the question of life or death is decided by many and irresponsible judges; who know nothing at all of the case except from report; who conceal the grounds of their decision; who give to rumour the weight of evidence; whose minds are constantly occupied with other, and to them far more important matters; and many of whom (including the chief—the first Home Secretary) act as judges here, merely because elsewhere they are skilful party politicians. Surely, then, every thing conspires for a right decision in the country, and for a wrong one in the metropolis. In the country it is probably that a man who does not deserve to be hanged will not be hanged, and that one who merits death will be killed. In London, on the contrary, the most experienced and artful offender has the best chance of escape, whilst the most ignorant, and perhaps innocent, of convicts is the most likely to be killed. No one who takes the trouble to reflect on the circumstances which attend the final decision of life or death in London, will be surprised that the officers of Newgate should say—'those whom we know to be most guilty often escape, whilst those whom we know to be least guilty often suffer—it is all a lottery.' It is, indeed, all a lottery, but with the chances considerably in favour of a wrong decision. Now this most unjust, cruel, and incalculably mischievous practice of an appeal from the presiding judge to chance, or rather to the probability of a wrong decision, springs from the nature of the punishment. The plea for the barbarous appeal is the prerogative of mercy residing in the crown. The appeal is never made except in capital cases. Why as to the capital cases of London and Middlesex only, it would be very difficult to say; though not more difficult than to explain, why the irreparable nature of the punishment should be the plea for a mode of proceeding which favours a wrong decision. Arising out of the custom of punishing by chance and with the greatest severity, a phenomenon is exhibited in the cells of Newgate well deserving the attention of law-makers. I allude to the opinion concerning their own fate of persons under sentence of death. The best probabilities of escape are exhausted when sentence of death is passed, viz. the probabilities—1, of not being detected; 2, of not being taken before a magistrate; 3, of a treaty

with the prosecutor or other material witness; 4, of the prosecutor preferring perjury to taking part in a judicial murder; 5, of the grand jury doing the same; 6, of the judge doing the same; and 7, of the petty jury doing the same in spite of a callous judge. Yet when these seven probabilities of escape are exhausted, when the prisoner's chance of escape has been reduced from perhaps 500 to 1, to 10 to 1, he is still confident, obstinately confident, of escaping the punishment which the law awards for his offence. This statement applies to nearly every case. I heard but of one exception out of 451 cases. Let the most careful inquiry be instituted, and it will be found, that hardly ever does a capital convict under sentence of death, but not yet ordered for execution, expect to be hanged. Now compare this remarkable fact with another. It shall be found, that of prisoners in Newgate charged with minor offences, for which the punishment is slight, a large proportion fully expect to be punished. The statement may be easily verified; as there are means of further ascertaining what I here state of my own knowledge,—that persons liable to slight punishments, though they may hope to escape altogether, are seldom *confident* on that point; but generally mix up with their exertions for an acquittal, and their hope of liberty, a good deal of thought about their conviction, and preparations for undergoing the punishment. For a long while I could not account for this striking difference of feeling between the two classes of prisoners; but at length the following explanation of it appeared satisfactory. Fear of death is a principle of man's nature; yet every man is so prone to believe in his own superior fortune, that the cases are rare when even the mortally sick expect to die on that occasion. Premature death is the almost certain consequence of hard drinking; yet when does the fear of premature death, by itself, operate as a motive to sobriety? Perhaps never. It is just so in respect to hanging for crimes. The principle of the fear of death is counteracted by that principle of self-love and hope, which may be called forth, to the extent of delusion, in nearly every mind. No one, perhaps, expects to escape one trifling penalty of drinking hard, viz. a headache. So it is with persons liable to comparatively slight punishments for crime. If they do not fully expect to be punished, at least they do not expect to escape. In truth, they expect to be punished, though they hope to escape. The greater the evil of which there is a rational prospect, the stronger appears the bias to delusion. In punishing with death, legislators have had in view only the universal fear of death; never perceiving, that in proportion to the fear is the delusion of hope."

The philosophy of all this, and especially of the last sentence, is admirable.

Montagu's Ornithological Dictionary. By James Rennie, A.M. &c. 8vo. pp. 592. Second edition. Hurst, Chance, and Co.

THIS edition of Colonel Montagu's valuable work is replete with those interesting details and useful facts connected with the subject, which Mr. Rennie possesses so peculiar a talent in collecting; that kind of curious information which natural history offers to the popular reader, and which, according to a contemporary author, is, without affording a very high opinion of the author's scientific attainments, not the less valuable, from placing information diffused through scientific works in an accessible form. We touch here upon a sharp and sensitive point; for Mr. Rennie

has in this work thrown the gauntlet down to almost all the naturalists of the United Kingdom and the Continent, classing himself more, from the character and nature of his plan of study, with the idea we form of a sportsman or a bird's-nester. Well sheltered under the mantle of his recent professorship,* Mr. Rennie has entered fearlessly on his new career. The success of his late publications, which, while we esteemed them as popular works, we never expected to see lauded as the best plan of study and of improvement, has given almost an ambitious cast to his writings; opposing himself to what he calls the writers of dry, methodical books, he quotes Cicero, who rejected the advice of his friends in the publication of *De Naturâ Deorum, De Officiis, &c.*, and persevering in this popular style, led the fashion—as the professor is to do in the present day. And that the esteem for a certain class of works which present the superficies of knowledge and the scrapings of philosophy, and which call themselves “popular,” may be but a fashion,—wedded as we are to the cause of all knowledge that may be useful and good—we sincerely and devotedly wish.

No author in our times has a right to arrogate to himself the introduction of observation as the true method of studying natural history. Certainly many who made, or wished to make, observation the basis of their works, have, from too closely following the old masters, dwindled into mere systematists—but this has often arisen from error of execution, and not of intention; and we have, on the contrary, names rendered illustrious by their close observance and philosophical conception of the beauty, constancy, and perfection, of nature in all her works; and, if it were necessary, we could give the argument farther extension, by demonstrating that natural history is of necessity a study depending on observation, and that those Mr. Rennie denominates literary naturalists, are essentially historians of the science—that is to say, of the labours of others—and not naturalists.

System, we agree with the author, is an index to facts, and only to be esteemed as such; but what are the materials upon which a system is founded?—they are either artificial or natural; in the one case arbitrary, and may depend upon any of the characters recognisable to the senses, and presented by the objects in contemplation; in the other, we must, in observing the structure or functions of the whole being (in zoology), search for those peculiarities most characteristic of particular groups—and these, whether few or numerous, will become the typical characters of each group. Now, in the modern state of natural science, researches into the anatomical structure of animals—and they were the most likely to produce beneficial results to our systematic views, and without system there is no science—led Baron Cuvier to form an opinion, that there is unity of composition in the animal kingdom; but this important and ancient principle is subordinate to that of the conditions of existence, the conformity of parts, and their co-ordination for the place which the animal is to fill in nature. Considering that form was fugitive among animals, another set of naturalists arrived, by the same steps, at perhaps a less complicated idea, that the organisation of animals can be reduced to a uniform type, which depends on a theory of analogies, the principle of connexion, the elective affinities of the organic elements, and the balancing of organs. Nearly at the same time, distinguishing analogy from affinity, which

* In the King's College.

is considered as a discovery, a clever zoologist in this country founded a system upon the principle of all animals grouping themselves in a circular series, which is effected by five members (though there is some dissension as to the exact number); and these five parts consist of a normal or typical form, two aberrant, and two insulating with the next series; or, according to some, two nominal and three aberrant members.

We are perfectly aware that there are journals of greater calibre than the *Gazette*, and authors well versed in the subject, who will immediately answer Mr. Rennie's objections to the last of these systems; but we cannot refrain from stating our firm conviction, that had this gentleman made a point of acquainting himself with those minutiae of organisation and slight varieties of structure which he affects to despise, and yet on which that system depends for its elucidation, he would have taken very different grounds for the feeble and puerile arguments at which he has aimed—doctrines well known to be supported by men of such eminent scientific attainments. With regard to the equally philosophic school of the continent, the laborious researches of many years, and the most extensive series of facts that have ever yet been brought to bear on one point in natural history, have already been opposed, with little success, to many of its fundamental propositions; and if Cuvier, with his well-merited and well-established fame, could bring his whole strength to the trial, Professor Rennie might at least treat the same doctrines with that respect which shews itself in an attention and exertion corresponding to the magnitude and importance of the subject. We object particularly to the religious turn which he has given to his arguments, and to his assertion that in the doctrine of the fitness of organs we make creatures their own creators; as well might he assert that, in the gradual appearance of organisation, that organisation was by its own will adapted to the new conditions of the surface of the earth; or that, in the actual circle of reproduction, species are also by their own will adapted to the climate or element in which they live, or to obtain the food which they require for their support.

We cannot enter into a discussion on the correctness of many of the professor's synonyms; most are injudicious, many erroneous; but, notwithstanding these faults, and the grave errors which we hold there exist in our author's philosophy, and the needless and unnecessary *verbiage* about the “dry, lifeless, marrowless, and unphilosophic” Linnæan school, we have stated that the dictionary is much improved by a great number of additional facts of decided interest in the natural history of the birds of varied plumage which sing in our groves, skim over our inconstant heaven, or nestle on the desolate rock. We have been quite spoiled by the admirable woodcuts of the Menagerie, and some other modern publications—so much so, that we cannot give a high tribute of praise to the present illustrations, which are too few in number, and, what is worse, oftentimes inaccurate; and though Mr. Rennie may not care for such trifles as a false number of articulations in the toes, they have not escaped our notice, nor will they that of other naturalists.

Boswell's Johnson, by Croker. 5 vols. 8vo.

J. Murray.

HAVING in preceding Numbers of the *Literary Gazette* said all we could assign space for, respecting the first three volumes of this publication, we should very imperfectly discharge our

duty to so attractive a work did we not devote some portion of our pages to the illustration of the remaining volumes, which, indeed, contain matter of very superior interest. Passing by, for the moment, selections of a minor kind, we shall beg our readers to accompany us at once to the death-bed, where this great literary light was extinguished: the subject is of a sad nature, and much has been written upon it; but the editor, having obtained original and authentic information, we are now indebted to him for a narrative which no distance of time can deprive of its claim to public sympathy. This intelligence Mr. Croker has chiefly derived from a Journal of Mr. Windham's. We could have wished that the important papers of that remarkable man had been confided to the same hands for publication. But from the following notice, which gives some intimation of their destiny, we observe it is not so.

“Understanding (says Mr. C.) that a journal kept by the late Mr. Windham contained some particulars relative to Dr. Johnson, the editor applied to his friend, Admiral Windham, that gentleman's nephew and heir, for permission to see the journal, which the admiral most readily granted; but a gentleman to whose care the papers had been previously consigned, with a view to his writing a life of Mr. Windham, declined to favour the editor with the desired information. From another quarter, however, he is enabled to present the reader with this extract made from the original journal before it had received its present destination.”

The following is Mr. Windham's journal:—

“Tuesday, December 7, 1784.
Ten minutes past 2, P.M.

“After waiting some short time in the adjoining room, I was admitted to Dr. Johnson in his bedchamber, where, after placing me next him in the chair (he sitting in his usual place, on the east side of the room, and I on his right hand), he put into my hands two small volumes (an edition of the New Testament, as he afterwards told me), saying, ‘*Extremum hoo munus morientis habeto.*’ He then proceeded to observe, that I was entering upon a life which would lead me deeply into all the business of the world; that he did not condemn civil employment, but that it was a state of great danger; and that he had therefore one piece of advice earnestly to impress upon me, that I would set apart every seventh day for the care of my soul. That one day, the seventh, should be employed in repenting what was amiss in the six preceding, and fortifying my virtue for the six to come. That such a portion of time was surely little enough for the meditation of eternity. He then told me that he had a request to make to me; namely, that I would allow his servant Frank to look up to me as his friend, adviser, and protector, in all difficulties which his own weakness and imprudence, or the force or fraud of others, might bring him into. He said that he had left him what he considered an ample provision, viz. seventy pounds per annum; but that even that sum might not place him above the want of a protector; and to me, therefore, he recommended him, as to one who had will, and power, and activity, to protect him. Having obtained my assent to this, he proposed that Frank should be called in; and desiring me to take him by the hand in token of the promise, repeated before him the recommendation he had just made of him, and the promise I had given to attend to it. I then took occasion to say how much I felt—that I had long foreseen that I should feel—regret at having spent so

little of my life in his company. I stated this as an instance where resolutions are deferred till the occasions are past. For some time past I had determined that such an occasion of self-reproach should not subvert, and had built upon the hope of passing in his society the chief part of my time, at the moment when it was to be apprehended we were about to lose him for ever. I had no difficulty in speaking to him thus of my apprehensions. I could not help, on the other hand, entertaining hopes; but with these I did not like to trouble him; lest he should conceive that I thought it necessary to flatter him: he answered hastily, that he was sure I would not; and proceeded to make a compliment to the manliness of my mind, which, whether deserved or not, ought to be remembered, that it may be deserved. I then stated, that among other neglects was the omission of introducing of all topics the most important, the consequence of which particularly filled my mind at that moment, and in which I had often been desirous to know his opinions; the subjects I meant were, I said, natural and revealed religion. The wish thus generally stated was in part gratified on the instant. For revealed religion, he said, there was such historical evidence, as upon any subject not religious would have left no doubt. Had the facts recorded in the New Testament been mere civil occurrences, no one would have called in question the testimony by which they are established; but the importance annexed to them, amounting to nothing less than the salvation of mankind, raised a cloud in our minds, and created doubts unknown upon any other subject. Of proofs to be derived from history, one of the most cogent, he seemed to think, was the opinion, so well authenticated, and so long entertained, of a deliverer that was to appear about that time. Among the typical representations, the sacrifice of the paschal lamb, in which no bone was to be broken, had early struck his mind. For the immediate life and miracles of Christ, such attestation as that of the apostles, who all, except St. John, confirmed their testimony with their blood—such belief as these witnesses procured from a people best furnished with the means of judging, and least disposed to judge favourably—such an extension afterwards of that belief over all the nations of the earth, though originating from a nation of all others most despised—would leave no doubt that the things witnessed were true, and were of a nature more than human. With respect to evidence, Dr. Johnson observed that we had not such evidence that Cæsar died in the Capitol, as that Christ died in the manner related. Dec. 11. Went with Sir Joshua, whom I took up by the way, to see Dr. Johnson. Strahan and Langton there. No hopes; though a great discharge had taken place from the legs. Dec. 12. At about half-past seven, P.M., went to Dr. Johnson's, where I stayed, chiefly in the outer room, till past eleven. Strahan there during the whole time; during part, Mr. Hoole; and latterly, Mr. Cruikshanks and the apothecary. I only went in twice, for a few minutes each time: the first time I hinted only what they had before been urging, namely, that he would be prevailed upon to take some sustenance; and desisted upon his exclaiming, 'Tis all very childish; let us hear no more of it.' The second time I came in, in consequence of a consultation with Mr. Cruikshanks and the apothecary, and addressed him formally, after premising, that I considered what I was going to say as matter of duty: I said that I hoped he would not suspect me of the weakness of importuning

him to take nourishment for the purpose of prolonging his life for a few hours or days. I then stated what the reason was: it was to secure that which I was persuaded that he was most anxious about; namely, that he might preserve his faculties entire to the last moment. Before I had quite stated my meaning, he interrupted me by saying, that he had refused no sustenance but inebriating sustenance; and proceeded to give instances where, in compliance with the wishes of his physician, he had taken even a small quantity of wine. I readily assented to any objections he might have to nourishment of that kind; and observing that milk was the only nourishment I intended, flattered myself that I had succeeded in my endeavours, when he recurred to his general refusal, and begged that there might be an end of it. I then said, that I hoped he would forgive my earnestness, or something to that effect, when he replied eagerly, that from me nothing could be necessary by way of apology; adding, with great fervour, in words which I shall, I hope, never forget, 'God bless you, my dear Windham, through Jesus Christ!' and concluding with a wish 'that we might [share] in some humble portion of that happiness which God might finally vouchsafe to repentant sinners.' These were the last words I ever heard him speak. I hurried out of the room with tears in my eyes, and more affected than I had been on any former occasion.—Dec. 13. In the morning meant to have met Mr. Cruikshanks in Bolt Court, but while I was deliberating about going, was sent for by Mr. Burke. Went to Bolt Court about half-past three, found that Dr. Johnson had been almost constantly asleep since nine in the morning, and heard from Mr. Desmoulins what passed in the night. He had compelled Frank to give him a lancet, and had besides concealed in the bed a pair of scissors, and, with one or the other of them, had scarified himself in three places, two of them in the leg. On Mr. Desmoulins making a difficulty in giving him the lancet, he said, 'Don't, if you have any scruple; but I will compel Frank;' and on Mr. Desmoulins attempting afterwards to prevent Frank from giving it to him, and at last to restrain his hand, he grew very outrageous, so as to call Frank scoundrel, and to threaten Mr. Desmoulins that he would stab him;* he then made the three incisions above mentioned, two of which were not unskilfully made; but one of those in the leg was a deep and ugly wound, from which they suppose him to have lost at least eight ounces of blood. Upon Dr. Heberden expressing his fears about the scarification, Dr. Johnson told him he was *timidus timidiassimus*. A few days before his death, talking with Dr. Brocklesby, he said, 'Now will you ascribe my death to my having taken eight grains of squills when you recommended only three? Dr. Heberden, to my having opened my left foot when nature was pointing out the discharge in the right?' The conversation was introduced by his quoting some lines, to the same purpose, from Swift's verses on his own death. It was within the same period, if I understood Dr. Brocklesby right,

* "Johnson fancied that his attendants were treating him with a timid leniency, merely to spare him pain,—a notion which irritated at once his love of life, his animal courage, and his high moral principle. We have already seen that when in health he had said, *whoever is afraid of any thing is a scoundrel*; and now, in the same feeling, and the same words, he censures the cowardly, as he thought them, apprehensions of his attendants. It might be wished, that in such circumstances he had spoken and acted with less impatience; but let us not forget the excuses which may be drawn from the natural infirmity of his temper, exasperated by the peevishness of a long and painful disease.—Ed."

that he enjoined him, as an honest man and a physician, to inform him how long he thought he had to live. Dr. Brocklesby inquired, in return, whether he had firmness to bear the answer. Upon his replying that he had, and Dr. Brocklesby limiting the time to a few weeks, he said, 'that he then would trouble himself no more with medicine or medical advice;' and to this resolution he pretty much adhered. In a conversation about what was practicable in medicine or surgery, he quoted, to the surprise of his physicians, the opinion of Marchetti for an operation of extracting (I think) part of the kidney. He recommended, for an account of China, Sir John Mandeville's Travels. Halliday's Notes on Juvenal he thought so highly of as to have employed himself for some time in translating them into Latin. He insisted on the doctrine of an expiatory sacrifice as the condition without which there was no Christianity; and urged in support the belief entertained in all ages, and by all nations, barbarous as well as polite. He recommended to Dr. Brocklesby, also, Clarke's Sermons, and repeated to him the passage which he had spoken of to me. While airing one day with Dr. Brocklesby, in passing and returning by St. Pancras church, he fell into prayer; and mentioned, upon Dr. Brocklesby's inquiring why the Catholics chose that for their burying-place, that some Catholics, in Queen Elizabeth's time, had been burnt there.* Upon Dr. Brocklesby's asking him whether he did not feel the warmth of the sun, he quoted from Juvenal,

* *Præterea mitius gelido jam in corpore sanguis
Febris calet solis.*

Dec. 13. Forty-five minutes past ten P.M. While writing the preceding articles, I received the fatal account, so long dreaded, that Dr. Johnson was no more! May those prayers which he incessantly poured from a heart fraught with the deepest devotion, find their acceptance with Him to whom they were addressed; which piety so humble and so fervent may seem to promise!"

After quoting and noting other portions of the various writers who have described Johnson's last hours, Mr. Croker emphatically remarks:

"The quantity of evidence now brought together as to the state of Dr. Johnson's mind with regard to religion in general, and his own salvation in particular, dispenses the editor from making any observations on the subject; but those who may wish to see a commentary on the facts, may turn to the remarks in the Christian Observer for October and November, 1827."

That our readers may not rise in a too melancholy mood from this review, we shall append a few short miscellanies to these instructive extracts.

"Miss Reynolds and Sir John Hawkins doubted whether Johnson had ever been in Dodd's company; but Johnson told Boswell that 'he had once been.' The editor has now before him a letter, dated in 1750, from Dr. Dodd to his friend the Rev. Mr. Parkhurst, the lexicographer, mentioning this meeting; and his account, at that day, of the man with whom he was afterward to have so painful a correspondence, is interesting and curious. 'I spent yesterday afternoon with Johnson,

* "The reader will be aware that other causes have been assigned for this preference; but I learn, from unquestionable authority, that it rests upon no foundation, and that mere prejudice exists amongst the Roman Catholics in favour of this church, as is the case with respect to other places of burial in various parts of the kingdom.—Markland."

the celebrated author of *the Rambler*, who is of all others the oddest and most peculiar fellow I ever saw. He is six feet high, has a violent convulsion in his head, and his eyes are distorted. He speaks roughly and loud, listens to no man's opinions, thoroughly pertinacious of his own. Good sense flows from him in all he utters, and he seems possessed of a prodigious fund of knowledge, which he is not at all reserved in communicating; but in a manner so obstinate, ungenteel, and boorish, as renders it disagreeable and dissatisfactory. In short, it is impossible for words to describe him. He seems often inattentive to what passes in company, and then looks like a person possessed by some superior spirit. I have been reflecting on him ever since I saw him. He is a man of most universal and surprising genius, but in himself particular beyond expression.

"The editor, thinking it hardly possible that Boswell should have omitted all mention of Adam Smith if Johnson had met him at Glasgow, almost doubts whether the violent scene reported to have taken place there might not, in fact, have been that which occurred at Mr. Strahan's, in London, referred to by Dr. Robertson. It is clear, that, after such a parting, they never could have met in society again.

"His annual review of his conduct appears to have been this year (1779) more detailed and severe than usual. April 2.—Good Friday. I am now to review the last year, and find little but dismal vacuity, neither business nor pleasure; much intended, and little done. My health is much broken; my nights afford me little rest. I have tried opium, but its help is counterbalanced with great disturbance; it prevents the spasms, but it hinders sleep. O God, have mercy on me. Last week I published (the first part of) the *Lives of the Poets*, written, I hope, in such a manner as may tend to the promotion of piety. In this last year I have made little acquisition; I have scarcely read any thing. I maintain Mrs. — and her daughter. Other good of myself I know not where to find, except a little charity. But I am now in my seventieth year; what can be done, ought not to be delayed."

Of Cowdray, the venerable seat of the Lords Montacute, of which Johnson said, "I should like to stay here four-and-twenty hours—we see here how our ancestors lived!" Mr. Croker gives the following singular account in a note:—

"There is a popular superstition that this inheritance is *accursed*, for having been part of the plunder of the church at the *dissolution*; and some lamentable accidents have given countenance to the vulgar prejudice. When the editor visited the ruins of Cowdray twenty years ago, he was reminded (in addition to older stories) that the *curse of fire and water* had recently fallen on Cowdray; its noble owner, Viscount Montague, the last male of his ancient race, having been drowned in the Rhine at Schaffhausen, within a few days of the destruction of Cowdray; and the good folks of the neighbourhood did not scruple to prophesy that it would turn out a fatal inheritance. At that period the present possessor, Mr. Poyntz, who had married Lord Montague's sister and heiress, had two sons, who seemed destined to inherit Cowdray; but, on the 7th July, 1815, these young gentlemen boating off Bognor with their father on a very fine day, the boat was unaccountably upset, and the two youths perished; and thus were once more fulfilled the forebodings of superstition. See some curious observations on the subject of the fatality attending the inheritance of confiscated church prop-

erty in Sir Henry Spelman's treatise on the 'History and Fall of Sacrilege.'"

On Johnson's antipathy to the Scotch, Mr. C. remarks:—

"When Johnson asserted so distinctly that he could not trace the cause of his antipathy to the Scotch, it may seem unjust to attribute to him any secret personal motive: but it is the essence of prejudice to be unconscious of its cause; and the editor is convinced in his own mind that Johnson received in early life some serious injury or affront from the Scotch. If Johnson's personal history during the years 1745 and 1746 were known, something would probably be found to account for this (as it now seems) absurd national aversion.

"Sir James Mackintosh remembers, that while spending the Christmas of 1797 at Beaconsfield, Mr. Burke said to him, 'Johnson shewed more powers of mind in company than in his writings; but he argued only for victory; and when he had neither a paradox to defend, nor an antagonist to crush, he would preface his *assent* with, *Why, no, sir.*'"

Respecting "Hugh Kelly, the dramatic author, who died in Gough Square in 1777, æt. 38," we quote the following: "Kelly's first introduction to Johnson was not likely to have pleased a person of 'predominant vanity.' After having sat a short time, he got up to take his leave, saying, that he feared a longer visit might be troublesome. 'Not in the least, sir,' Johnson is said to have replied; 'I had forgotten that you were in the room.'"

With this we now conclude, reserving a very short summary, &c. for another *Gazette*.

Pearce's Abyssinian Travels.

(Third Notice.)

OUR characteristic selections from these curious travels need no farther introductory comment.

"At the before-mentioned marriages the trumpeters, drummers, and fifers, belonging to the governor of the province, are present, and receive a piece and a half of cloth from every married pair throughout the province, which perquisites are granted to the governor to maintain the band. It may not be amiss to give in this place some account of their musical instruments. The trumpets are in general made of the skin of the elephant, except the lower broad mouth, which is the neck of a calabash. They give out a tremendous sound. The fifes are made of a hard wood, hollowed out, having three holes for the fingers of the left hand. They are blown into at the end, are about a foot and three quarters long, and their tone is very wild, especially when they are accompanied by a small instrument called *tora*, about eight inches long, which is likewise blown at the end, yielding a hollow, bass, and savage sound. Three trumpeters, three fifers, and one *tora*, with a long drum, narrower at one end than at the other, and beat at both ends with the hands, complete the band of the chief of a district. The band of a *ras* consists of the number above mentioned, and forty-four large drums, accompanied each by a small one. These drums are in the shape of the kettle-drums of Europe, cut out of trunks of large trees; they are headed with cow-hide, and, being very heavy, are carried on mules, the larger on the right side, and the smaller on the left, the drummer riding behind, with a small straight stick in the left hand, and one that turns up at the end and larger in the right. His provisions, in leather bags, beneath the drums, prevent these heavy and clumsy instruments from galling the animal's back. These

drums produce a warlike sound, and in marches are beat regularly together, though they have but few changes. Of stringed instruments, they have a sort of fiddle, consisting of a piece of wood, square and hollowed out, with a neck about a foot and a half long. The hollow part is covered with hide, on which the bridge stands. It has only one string, and the bow is a stick bent, with several horse-hairs attached to it. They have also a kind of lyre, the lower part of which is made of a hollow piece of wood and covered with cow-hide, and above which is a slight wooden arch, about two feet high, to which six strings are fastened. Each string has a piece of wood, to answer to it as a screw, which twists the string round the top of the arch. This instrument is called *charchamer*. There is another, of nearly the same form, and of the same materials, only larger and with ten strings, called *berganner*. Some of them are four feet high, and their notes are very pleasant. The nobility and great men all practise playing upon them; the strings are beat with a piece of wood, or ivory, with the right hand, while the fingers of the left command the tune. There are, besides, many childish instruments, chiefly made out of the horns of animals. Their manner of dancing consists rather in the motion of the shoulders and head than in that of the legs or feet. When several dance at a time, they move round in a ring. The men jump a great height at times, while the women squat down by degrees, making motions with the head, shoulders, and breast, until they nearly squat on the ground. They afterwards spring up in a lively manner, and go round as before. The Amhara do not practise this latter exercise, but their motions are the same. Their songs are far from humorous, and seldom consist of more than one or two short verses, sung over and over again, in a rude manner. The chanting of the priests in their churches and public places would be more agreeable if they did not exhibit the most unbecoming actions while they are so employed. The Abyssinians, while they profess to be rigid followers of the Christian faith, are yet ignorant of the greater part of its precepts; which arises chiefly from the want of a good example being shewn to them by those of the superior class. Even the heads of their clergy, instead of holding out to the populace an example of good Christian morals, practise the very reverse. They are in general the greatest drinkers in the whole country, and at feasts, the quantity of raw meat which they consume, and the ravenous manner in which they devour it, exceeds all belief; indeed, they behave more like drunken beasts, when in company, than civilised beings. They are, besides, addicted to fighting, quarrelling, lying, swearing, cheating, and adultery. By chance you find, here and there, a priest who is free from these vices, and who strives to set a good example; but the clergy are too loosely governed, all considering themselves as equals, to be corrected by the good example of one or two individuals."

"The nobility, and all those of a certain rank, live in a state of great licentiousness and debauchery, even when married. They are seldom jealous of each other, or at least never shew their jealousy, knowing well each other's culpability; but when a man actually witnesses the infidelity of his wife, he immediately kills the intruder. Nothing, however, happens to the woman more than that she is left to lament the loss of her lover, and to bear the shame of being accounted guilty of his death. This seldom happens, as the great people of Abyssinia always live in separate apartments, where both

sexes have many convenient opportunities; the women having the privilege of keeping what servants and company they please, the same as the men. Notwithstanding the libertine conduct of the Abyssinians, they strictly keep all their fasts, which are very numerous, and on those days never eat or drink till about three o'clock in the afternoon, which time they compute by measuring so many lengths of the foot given by the shade of the body on level ground. This, indeed, is the only way in which they keep time in Abyssinia. Their great Lent, which commences in February, lasts fifty-six days. The fast for the apostles, which is in one year fifteen days, and in the other thirty, begins in June. The fast for the Blessed Virgin, which is in August, lasts fifteen days. The fast of Quosquom, kept by priests only, beginning in October, and the fast before Christmas-day, called Ledetts, both continue thirty days. The fast of Tumkut, or of baptism, lasts one day, and the fast of Unus lasts three days; making altogether a total of one hundred and sixty-five days in one year, and one hundred and fifty in another, exclusive of the Wednesdays and Fridays throughout the year, except during the eight weeks after the great Lent, in which these fasts are not observed, being eight weeks of continued festival. Some eat fish on these fast days, and others eat nothing but pulse or herbs, especially during the great Lent. Their years are called after the four Evangelists—that of John is the leap-year; St. John's day is new-year's day; Christmas is on the twenty-ninth of Tisa, and answers to about the 6th of our January. They reckon the number of years from the creation of the world to the birth of Christ five thousand five hundred; and from the birth of Christ to the present time, one thousand eight hundred and five, the latter being about nine years short of our time. The *lickcounts*, or scribes, who regulate the time, esteem themselves very learned people, and are proud beyond conception. The priests are also proud of their learning, and of their rules and regulations in the performance of divine service as Christians, though numbers of them cannot read. The administering of the holy sacrament is quite a public ceremony. The sacrament is prepared in a part within the church walls, or hedge, called Bethlem, which is in general on the east side, where no female is allowed to go. It consists of ground raisins and wheat flour, mixed with water, and is brought from the apartment where it is prepared in a basket, covered with a bit of red cloth or silk, carried on the head of a deacon, a bell being carried before it, continually ringing to give notice of its approach, when every body stands up and repeats the Lord's prayer. It is then placed in the middle of the dark part, where the altar stands, and candles are burned to give light, when a priest takes the mixture, which is in a large bowl, and with a large wooden spoon puts it into the mouths of those that come up to receive it, each repeating a short prayer, while another priest gives them the cross to kiss. After receiving the holy sacrament, they place their hands to their mouths and go their way, nor will they on any consideration spit that day, even if a fly by chance be drawn into the mouth by their breath, which at other times would occasion them to vomit, as they detest a fly; and many will not even eat or drink what a fly has been found in. In the churches of a superior class the articles for preparing a sacrament are, like their other ornaments, of gold and silver, the churches in general being very richly endowed,

though I have before said the building itself is worth little. On passing a church mounted, they alight from their horse or mule, and kiss the gateway or tree in front, according to the distance they are at when passing; and, if at a distance, they take up a stone and throw it upon a heap, which is always found on the road opposite to the church. In Abyssinia, a traveller, who sees in the wildest deserts large piles of stones, might be led to attribute the custom to the same motive which occasions similar piles to be found in Arabia, where some one has been killed and buried, and all who know him, as they pass, throw a stone on his grave; but this is not the case here, those stones being thrown there by Christians, who know that the nearest church lies opposite to the spot: and on this account an Abyssinian traveller, when he sees such a pile of stones, knows that he is opposite to a church, and in consequence kisses the pile and adds another stone to the heap. The priests are numerous beyond belief. The total revenue of the church is divided into equal portions, of which the Allicar, or chief priest, has ten for his share; others, according to their rank, one or more. Numerous parties of priests also resort to the different churches, who have no part in its income. Some live by begging, and some get a maintenance from the priests of the church who are too idle to do the duty when it comes to their turn, and so employ them. There is a treasurer in every church called *carpet*, who looks after the wealth belonging to it; he is reckoned among those of the superior rank, and his income in general consists of three portions. When a priest has conduct enough to behave in a sober and righteous way, and never to be seen in company, when he first comes to live in a strange town, he is taken notice of by every one of the towns-people, and they fly to him as their father, confessing their sins, and giving him presents for forgiveness; and, if he remain a number of years, he is sure to amass considerable property. He may have two or three thousand such children, and each gives him every year, on St. John's or new-year's day, a piece or two of salt, or about the fifteenth part of a dollar. Those who have prudence enough to conduct themselves in this manner for five or six years will make money enough to maintain them during the remainder of their lives, and will then return to their native place and purchase oxen, take a wife, commence farming, and live well, so long as the country they reside in is at peace. A priest can marry only once; the greater part of the priests, however, think it not lawful to marry; and many thousands who resort to Waldubba, Beshlo, Temben, and other sacred places, never marry, though they are too often detected in the commission of adultery. No one can take upon himself, where he is known, to be a father confessor, unless he has been confirmed by the Egyptian patriarch. There are priests and deacons, who go about to the different towns, or residences of chiefs, where they find employment in teaching children to read, but this is very rare; and they have few scholars, which always surprised me, as the schooling is very cheap. The master receives, for teaching a boy or girl, one piece of cloth, equal to a dollar, every year, and two cakes of bread daily, from every scholar in turn, so that if he has many it does not bear hard on any individual. Their school is held generally in a churchyard, or in some open place near it, sometimes before the residence of the master, and, in that case, during the rains, they are all crowded up in a small dark hut, learning prayers by word

of mouth from the master, instead of from a book. When a boy is somewhat advanced in learning, he is made to teach the younger ones. However few the scholars, the master has in general great trouble with them, and, in addition to the ordinary punishments, numbers are constantly obliged to be kept in irons. The common way of punishing scholars is as follows: the schoolmaster stands over them with a wax-taper, which cuts as severely as a whip, while five or six boys pinch the offender's legs and thighs, and if they spare him, the master gives them a stroke with the taper; but the correction considered most effective for these young Abyssinian rogues is that of having irons put upon their legs for many months together, which in one instance I knew proved fatal. It was a grown Agow boy, about thirteen years of age, who had more than once contrived to get his irons off and desert from the school; for which the master, by desire of the parents, put so heavy a pair of irons upon his ankles that he found it impossible to get them off; and this enraged him so much, that he drew his large knife, cut his own throat, and soon afterwards expired. Very few Abyssinians learn to write; those who do are chiefly occupied in writing charms; and some of the more artful persuade the poor ignorant people that they are possessed of supernatural powers, especially the cunning Dofsters of Gojam, many of whom travel about the country, writing charms, &c. In country villages, the inhabitants will maintain one of these persons for months together, he pretending that he can prevent hail from destroying their corn, and the locust from approaching the district, and cure all sorts of diseases with his written charms, for which he not only gets paid, but lives upon the fat of their district, and administers justice according to his own good-will and pleasure.

"In their cooking they are very clean, except in two or three dishes, which I shall not omit to mention. Fowls are washed, after being cut into pieces for cooking, in a dozen waters at least; and the same is practised in cleaning fish. Both dishes are cooked with curry, a mixture of hot chilly-pepper, onions, and salt, called *dillack*, with the addition of some butter and spices, which altogether form a hot compound that few European throats could swallow. Mutton and goats' flesh are sometimes curried, and sometimes boiled, but more frequently only a little broiled. Partridges, guinea-fowl, and other game, are always curried. A very favourite dish is the sheep's or goat's paunch minced, the liver broiled and also minced, together with a little of the substance from the entrails that has not been digested, and a few drops from the gall, mixed all together with another compound of red pepper and salt, called *horzy*. Another sauce consists of the thin substance from a cow's entrails, boiled with mustard and the mixture called *horzy* and butter, which they generally eat with the raw beef. Another dish, which is seldom to be met with except at the tables of persons of the higher rank, or the nobility, is made from a part of the cow called *chickkinner*, which is very tender, and cut up raw into very small mince-meat, then mixed with black pepper and a great quantity of oil, that runs from the joints of the knees and other limbs of the cow while being dissected. He may consider himself a great favourite who gets his mouth crammed full of this dish. Women to all the cookery; and every chief keeps a good cook, called *abbuxer*. *Sherro* is a dish often given to a stranger, it being quickly

done; it is made of meal, butter, and pepper. As I have before mentioned, it is the custom to feed their guests by cramming them; and when a man invites a friend to eat with himself and his wife, it is reckoned very unpolite if the wife does not feed the guest with her own hands; the husband will also at times cram the guest, male or female, without distinction; and the more voraciously the visiter eats, the better bred he is esteemed, except when necessity causes a scanty table, as in a camp or on a march; then the more gluttonously a person eats, the less he is regarded. They never see a stranger standing by, if even on a march, when going to eat, without asking him to partake of their fare."

(To be concluded in our next.)

Library of Entertaining Knowledge: Historical Parallels, Vol. I. London, 1831. Charles Knight.

A VERY entertaining and instructive volume, something on the plan of Plutarch's *Parallels*, saving that here are compared epochs and events, as well as individuals; and these comparisons are executed with much industry and neatness. There are some pretty and curious wood-cuts from different gems and medals.

Past and Present Times. By a Lady. Pp. 189. London, 1831, Cadell; Edinburgh, Blackwood.

A LITTLE volume of pretty tales: a first attempt, and calling for kindness rather than criticism.

A Grammar of the Hebrew Language. In Two Parts: I. Orthography, &c.; II. Etymology and Syntax. By Hyman Hurwitz. 2 vols. 8vo. London, 1831. Taylor.

THIS is an excellent practical Hebrew grammar: indeed, we have seldom met with a more thoroughly practical introduction to any language. Writers of this kind of books seem to us to have almost entirely disregarded what we would designate as the golden rule of grammarians—*longum iter est per præcepta, breve et efficax per exempla*—and have been anxious rather to string together a mass of abstruse rules, than by copious and apposite examples to illustrate the idiom and structure of the tongue they have undertaken to elucidate. Mr. Hurwitz has adopted a more judicious course; and instead of burdening the memory at the onset with definitions, has given numerous instances of the pronunciation, formation, inflexion, use, &c. of words. After a short explanation of the vowel-points, their powers are shewn by long lists of vocables, so distinctly and lucidly arranged, as to render this difficult part of Hebrew grammar simple and intelligible to all. There are some things in his syllabication respecting which we differ from him (for instance, where *scheva* precedes either of the *begadkephath* letters without *dageah*); but these are not matters of much importance to the beginner, who, as he advances, will form his own opinions on them, whatever may have been the dicta of his grammar. The reading-lessons are good; and the method of distinguishing the grammatical accidents, &c. in the Hebrew column by *open letters* (a plan followed also throughout the tables in the etymological portions), and their corresponding English words, or parts of words, by *italics*, in the opposite column, will be found very useful to the learner, by facilitating a knowledge of the meaning of the root, and of the modifications effected in it by prefixes,

affixes, changes in the points, &c. When the student has mastered the first Part, he will be prepared to enter on the second, which contains the etymology and syntax; the former exemplified by many of the best-constructed and fullest tables we have ever seen in a similar work: they are minutely circumstantial, and yet we will venture to say that few will find fault with them on this account. The chief drawback on the value of this grammar is, that it is very carelessly printed: the lessons abound with errors which to private scholars cannot but be very prejudicial, especially as regards the pronunciation. A long list of errata, strangely huddled together, frequently corrects one misprint, and leaves two or three others in the same page unheeded!

The Presbyterian Review. No. I. Edinburgh, Waugh and Innes.

THIS first No. of a periodical (to be published every two months) is intended to supply a desideratum in the theological literature of the Church of Scotland, upon the doctrines and opinions of which it is founded. The No. before us is a very favourable specimen of the learning, abilities, and good temper, of the writers.

Daily Communings, Spiritual and Devotional, on select Portions of the Psalms. By the Right Rev. G. Horne, Bishop of Norwich. pp. 268. London, 1831. Nisbet.

Pietas Privata, the Book of Private Devotion, a Series of Private Prayers and Meditations: with an Introductory Essay on Prayer, chiefly from the Writings of Hannah More. pp. 184. Third edition. Same.

Two excellent little devotional books: much good in small compass.

Dr. Dibdin's Sunday Library. Vol. IV. Longman and Co.

WITH a pleasing portrait of Dr. Huntingford, Bishop of Hereford, this volume contains some of that prelate's writings; also excellent selections from Archdeacon Nares, Bishop J. B. Sumner, and other eminent churchmen. It is quite worthy of the preceding parts.

Homer's Iliad and Odyssey. 2 vols. 48mo. London, 1831. Pickering.

THESE are truly diamond volumes; the neatest little nut-shell epics that ever were printed. About three inches in length, and an inch and a half in breadth, and yet with the text of Homer as clear and legible at least as young eyes could desire. What a pocket companion for the student!

Robinson Crusoe. With Forty-six characteristic Wood Engravings, from Drawings by Harvey. Pp. 442. London, 1831, Baldwin and Cradock.

OF all the *Crusoes* we have seen we like this the best. The wood engravings are charming in design and admirably executed: they are just the sort of illustrations which such a volume deserves; and if any thing can increase the popularity of Robinson, they are well calculated to do so.

ARTS AND SCIENCES.

EGYPT: THE PLAGUE, &c.

Paris, July 15.

YESTERDAY a numerous and learned assembly was attracted to the sitting of the Academy of Medicine, to hear M. Pariset give an account of his visit to Egypt. The public is

acquainted with the labours of this learned traveller. Not contented with having braved the plague in Europe, he resolved to go and combat it in its cradle, where it rages with the greatest fury. He therefore undertook to visit the East; and the motive and results of his travels he made known on this occasion.

He demonstrated three propositions:—viz. Egypt is the sole focus of the plague; the plague did not appear in the world till Egypt ceased to embalm the dead; in order to extirpate this scourge, Egypt must either return to its ancient custom, or adopt, as in Europe, general measures of police and health. New and striking details, brilliant and poetical descriptions, curious anecdotes, gloomy and dramatic pictures—an elevated, yet simple style, distinguished this narrative; which excited throughout the interest and sympathy of the audience.

Our readers will, we trust, be gratified by some extracts from M. Pariset's account. From other equally remarkable passages, we have selected the following description of the grotto of Samoun.

"Not far from Manfalout, and towards the end of the long marsh which closes Upper Egypt, on the plateau of the Arabic chain, and close to the surface of the ground, is the entrance to this grotto, still but little known to Europeans, and excavated in the centre of the mountain by the unaided hand of nature. It consists of a suite of vast and lofty saloons, connected by passages so narrow, that you are forced to crawl on your knees, and separated from one another by partitions of stalactites, which are now blackened by the smoke of the torches, and the soot which accumulated during a long conflagration; but which originally must have shone with all the brilliancy of crystal. It is a sinuous and profound retreat, of which the termination, after a four or five hours' investigation, has not yet been discovered. At a period too remote to be known, the mummies of crocodiles, of all sizes, have been carried into this gloomy cavern: the largest are ranged in successive layers, from the ground to the roof of the immense halls, those of middling size in separate packages of fifty and sixty, intermingled here and there with human mummies which were once gilt, and large strata of rosin, in which are piled up, in all directions, millions of small crocodiles.

"A curious circumstance is the enormous quantity of linen in which these animals are wrapped; several vessels might be loaded with it. These melancholy remains are clothed better than the Egyptian peasantry of our days. Whether from accident or design, fire was set to these dried linens, and burnt slowly for several years. At the sight of the heap of ashes which the fire has left, we conclude all has been destroyed: on looking at what remains, we imagine that nothing has been lost."

Extract of a letter from Havre, July 12.—"Prince Paul of Wurtemberg has just arrived here from New York. The dangerous travels which this prince has made into the interior of America during the last three years, and the information which he has acquired by long study, will give an extreme interest to his stay in France. He has opened a path to science through these unknown regions, which he has traversed, often at the hazard of his life. He has written an account of his journey, and returned with an immense collection of natural curiosities. His portfolio has been enriched with the finest drawings. His memory is really extraordinary: it is curious to hear him

recapitulate the names of above sixty barbarous tribes, whose manners and customs he has attentively studied."

LITERARY AND LEARNED.

UNIVERSITY INTELLIGENCE.

OXFORD, April 13.—Being the first day of Easter term, the following degrees were conferred:—
Bachelor in Divinity.—J. Ball, Fellow, St. John's College.
Masters of Arts.—Rev. R. Grenside, University College; B. Owen, Jesus College; C. Grewell, Fellow, Oriel College; T. B. Saunders, Wadham College.

Bachelor of Arts.—C. J. Tottenham, Balliol College.
April 21st.—The following degrees were conferred:—
Masters of Arts.—H. R. Beaumont, Grand Compounder, Christ Church; Rev. G. P. Stopford, late Fellow of All Souls' College; Rev. T. Humphreys, Jesus College; Rev. R. F. Laurence, Student, Rev. S. R. Cartwright, Christ Church; Rev. W. Young, J. C. Hayward, Oriel College; Rev. P. Turner, Pembroke College.

Bachelors of Arts.—S. Taylor, St. Mary Hall, W. S. Blackstone, Christ Church, Grand Compounders; C. A. Bury, Magdalen Hall; G. Marwood, T. T. Carter, Christ Church; R. C. Clifton, Scholar, Worcester College; A. T. Gregory, Lincoln College; C. Worthy, Queen's College; S. Thackwell, Pembroke College.

April 28th.—The following degrees were conferred:—
Bachelor in Divinity.—Rev. E. P. New, Fellow, St. John's College.
Masters of Arts.—Rev. A. L. Kaye, Brasenose College; Rev. E. Riley, Lincoln College; G. C. Lewis, Student, Christ Church; Rev. G. Innes, Scholar, W. H. Surman, Trinity College.

Bachelors of Arts.—Rev. C. W. H. Alston, E. R. Berens, St. Mary Hall; B. Hemming, Magdalen Hall; E. Harland, Wadham College; H. James, Worcester College; J. Mytton, J. Fisher, Brasenose College; W. H. Boulton, W. P. Phillips, J. E. Eckley, Trinity College; W. H. Hughes, Lincoln College; W. R. Parker, A. Perkins, Oriel College; C. James, W. Bray, J. Footitt, Exeter College; G. F. Fowle, Balliol College; T. W. Cresser, Pembroke College.

May 5th.—The following degrees were conferred:—
Bachelor in Civil Law.—G. Ekins, Fellow, New College.
Masters of Arts.—R. Spry, Grand Compounder, Wadham College; Rev. J. A. Harrison, St. Mary Hall; Rev. J. Lawson, St. Alban Hall; W. M. Harvey, W. D. Bernard, Wadham College; E. Seymour, Christ Church; D. Backson, Queen's College.

Bachelors of Arts.—P. H. Symonds, St. Edmund Hall; W. B. Dymham, H. S. Hele, Magdalen Hall; W. L. Williams, Jesus College; R. Gray, A. Oxenden, University College; W. G. Giles, W. A. Bathurst, Wadham College; H. Auldjo, G. A. Goddard, Brasenose College; W. W. Knighton, J. Tobin, J. H. Grice, Christ Church; J. P. Wilson, H. C. Onslow, Demies, Magdalen College; G. Robbins, C. King, Clerk, Magdalen College; T. M. Jackson, Lincoln College; J. Stuart, Trinity College; H. Powell, A. R. Sturt, Exeter College; J. Hardy, Oriel College; G. T. Whitfield, St. John's College.

May 13th.—The following degrees were conferred:—
Masters of Arts.—J. H. Hughes, Fellow, W. Pilkington, Demy, Magdalen College; Rev. C. Whiteford, Queen's College.

Bachelors of Arts.—T. G. Simcox, Wadham College, G. B. Moore, Christ Church, P. J. Honeywood, Trinity College, Grand Compounders; G. Casson, Brasenose College; G. Clark, W. Boyd, University College; D. Latimer, Lincoln College; E. V. Foley, Scholar, W. J. Neale, Wadham College; T. D. Acland, H. Kynaston, Student, Christ Church; W. Williams, J. R. Errington, C. E. Armstrong, Worcester College; H. Holson, C. Cameron, H. G. Randall, Queen's College; T. L. Cloughton, Scholar, Trinity College; W. Kitson, Scholar, Balliol College; A. A. Cameron, Pembroke College; R. W. Browne, Fellow, St. John's College; C. S. Bunyon, New College.

May 21st.—The following degrees were conferred:—
Bachelor in Civil Law.—W. Jaques, St. Alban Hall.
Masters of Arts.—Rev. J. C. Egginton, Rev. H. D. Clarke, Grand Compounders, A. Kent, Exeter College; Rev. R. B. Hone, Brasenose College; Rev. W. Holloway, Lincoln College.

Bachelors of Arts.—J. Williams, Jesus College; F. L. Popham, F. C. Pophill, University College; J. Dudley, Worcester College; C. Vaughan, Wadham College; J. W. Richards, W. H. Whitworth, G. E. Deacon, C. Balston, F. Holme, Scholars, Corpus Christi College; R. E. Tyrwhitt, J. H. Swainson, W. E. Partridge, Brasenose College; W. J. Groves, J. L. Crawley, Trinity College; E. Stephens, G. H. Kempe, Exeter College; C. Penny, Pembroke College; J. Nurse, Merton College.

May 26th.—First day of Act Term, the following degrees were conferred:—

Masters of Arts.—Rev. F. H. Hele, Queen's College; W. C. Davies, Jesus College; Rev. W. Mayo, Rev. H. Ware, Magdalen Hall; Rev. D. Umbley, Rev. H. Thompson, St. Edmund Hall; W. W. Ellis, Brasenose College; S. Whiddon, Rev. G. S. Scott, Rev. J. Manisty, Rev. G. Bellamy, Lincoln College; Rev. E. Dix, Exeter College; Rev. G. T. Hudson, Trinity College; G. E. W. Jackson, University College; E. V. Steade, Grand Compounder, Magdalen College; G. A. Browne, All Souls' College; Rev. E. H. Orme, St. Mary Hall; Rev. H. T. Dyke, Oriel College; Rev. T. Moseley, Fellow, Rev. J. Guard, Oriel College; E. T. Daniell, Balliol

College; Rev. J. Twigger, Rev. W. Browel, Fellow, R. Guppy, Pembroke College; Rev. J. Wood, J. Matthews, Christ Church.

Bachelors of Arts.—W. J. Coope, St. Mary Hall; H. Carey, E. W. Hughes, T. Goodson, Worcester College; J. P. Cox, J. K. Glazebrook, G. Abbot, A. Hewlett, P. J. Newell, Grand Compounder, Magdalen Hall; A. S. Lendon, W. A. Vaughan, C. S. Green, Christ Church; T. B. H. Browne, Jesus College; W. Etwall, F. J. Burgmann, A. W. Wykeham, Trinity College; J. P. Taylor, Lincoln College; J. Birch, Pembroke College; J. Gaskin, St. Edmund Hall; T. Garrett, Queen's College; C. L. Parker, Wadham College; S. F. Wood, R. F. Wilson, Oriel College; E. Cookson, University College.

In a convocation holden the same day, the honorary degree of Master of Arts was conferred on J. Davies Gilbert, Esq. Gentleman Commoner of Pembroke College.

June 2d.—The following degrees were conferred:—
Doctor in Medicine.—J. M. Calvert, Oriel College.

Bachelors in Divinity.—Rev. R. W. Jelf, Canon of Christ Church, Rev. G. Gilbert, Wadham College, Grand Compounders.

Masters of Arts.—W. Gray, Magdalen College, Sir S. R. Glynn, Bart. Christ Church, Grand Compounders; Rev. W. T. Wyld, Christ Church; F. K. Leighton, Fellow, All Souls' College; J. A. Giles, Scholar, Corpus Christi College; Rev. J. James, Queen's College; Rev. C. Buckner, Wadham College; Rev. S. Twisleton, Balliol College; H. N. Goddard, Brasenose College; Rev. I. Williams, Fellow, Trinity College.

Bachelors of Arts.—J. Evans, Jesus College; J. C. Robertson, J. Norton, University College; A. C. T. Chubb, Scholar, H. C. Brookbank, Wadham College; T. Clive, H. Walker, C. Lloyd, W. Wrottesley, W. Vincent, Christ Church; G. N. Simmons, Trinity College; J. A. Morhead, Exeter College.

The Chancellor's and Sir Roger Newdigate's prizes have been adjudged as follow:—

Latin Verse.—"Numantia." R. Palmer, Scholar, Trinity College.

English Essay.—"On the Use and Abuse of Theory." C. P. Eden, B.A. Oriel College.

Latin Essay.—"Quoniam fuerit Oratorum Atticorum apud Populum auctoritas." C. Wordsworth, B.A. Student, Christ Church.

Sir Roger Newdigate's English Verse.—"The Suttices." P. M. Ashworth, Commoner, Wadham College.

June 9th.—The following degrees were conferred:—
Bachelors in Civil Law.—Rev. B. R. Perkins, Christ Church; V. Surtees, University College.

Masters of Arts.—T. F. Dymock, Balliol College, J. J. Scott, Exeter College, Grand Compounders; H. D. Wickham, A. C. Bridge, Exeter College; T. J. Heming, Christ Church; R. Greenall, T. J. Birch, Rev. J. F. E. Warburton, Rev. J. F. West, Brasenose College; H. D. Sewell, Trinity College; Rev. J. O. W. Hewels, Rev. T. O. Foley, Queen's College; Rev. W. Syme, Wadham College; Rev. J. Sutton, Oriel College; J. Williamson, New College; W. Nettleship, Merton College; J. Gregson, University College.

Bachelors of Arts.—W. F. Bethell, H. G. Surtees, A. E. Knox, Brasenose College; W. Graham, F. Moore, Christ Church; E. L. Ward, Wadham College; J. Todd, Queen's College; W. Gatty, Trinity College; W. Money, Oriel College; S. T. Adams, J. R. Hughes, Fellows, New College; H. Wightwick, Scholar, Pembroke College.

The following subjects are proposed for the Chancellor's prizes for the ensuing year, viz:—

For Latin Verse.—Attilla.

For an English Essay.—The Study of different Languages, as it relates to the Philosophy of the Human Mind.

For a Latin Essay.—De Stoicorum Disciplina.

Sir Roger Newdigate's Prize.—For the best composition in English verse, not limited to fifty lines, by any undergraduate, who, on the day above specified, shall not have exceeded four years from the time of his matriculation: "Staph."

Theological Prize.—On "The Fulness of Time" at which Christ appeared on Earth.

The judges having awarded the Theological Prize to B. Harrison, B.A. Student, Christ Church, that gentleman has sent his essay on "The Evidence deduced from Prophecy in Support of the Truth of Christianity," in the Divinity School on Thursday.

June 16th.—The following degrees were conferred:—
Doctor in Civil Law.—The Hon. E. Lascelles, Fellow, All Souls' College.

Bachelor in Civil Law.—Rev. W. G. Bayly, Fellow, New College.

Masters of Arts.—J. U. Gaskell, Magdalen Hall; Rev. J. Arncliffe, Rev. R. Morris, Rev. R. G. Lewis, Wadham College; Rev. J. Meredith, W. Boulton, Christ Church; J. F. Christie, Fellow, Oriel College; Rev. W. Y. Mills, T. Lewin, W. Nicholson, Trinity College; Rev. H. T. Parker, Balliol College; Rev. D. Dobree, Pembroke College; E. E. Villiers, Fellow, E. Eyre, Merton College; Rev. H. Lemesurier, Fellow, New College.

Bachelors of Arts.—Sir W. B. Riddell, Bart. Christ Church; H. Monieriff, New College; R. Leigh, Brasenose College.

In a convocation holden the same day, J. H. Hawkins, M.A. Trinity College, and the Rev. E. Lockwood, M.A. Jesus College, Cambridge, were admitted *ad eundem*.

June 23d.—The following degrees were conferred:—
Doctor in Divinity.—Rev. B. P. Symons, Warden of Wadham College, Grand Compounder.

Doctor in Civil Law.—W. E. Marsh, Fellow, St. John's College.

Masters of Arts.—Rev. J. E. Riddle, St. Edmund Hall;

Rev. E. Power, Magdalen Hall; Rev. W. W. Johnson, Brasenose College; Rev. J. B. Bateman, Balliol College; Rev. C. B. Pearson, Oriel College.

Bachelor of Arts.—J. F. S. Gabb, Jesus College.

Bachelor in Music.—S. Elvey, Organist, New College.

June 30th.—The following degrees were conferred:—
Masters of Arts.—A. G. Lethbridge, Fellow, All Souls' College; Rev. J. Charnock, Lincoln College; T. M. Gosling, Brasenose College; Rev. C. B. Bowles, Exeter College; Rev. F. B. Leonard, Wadham College.

Bachelor of Arts.—J. Metcalfe, Magdalen Hall.

The Rev. J. J. Smyth, M.A. of Trinity College, Dublin, was admitted *ad eundem*.

July 9th, the last day of Act Term, the following degrees were conferred:—

Bachelor in Medicine, with Licentia to practice.—S. L. Hammick, M.A. Christ Church.

Masters of Arts.—Hon. E. Phipps, Trinity College; Rev. T. A. Strickland, Merton College; Rev. S. J. I. Lockhart, Lincoln College.

Bachelor of Arts.—T. T. Champness, Merton College.

CAMBRIDGE, April 20th.—The following degrees were conferred:—

Doctor in Physic.—G. Burrows, Caius College.

Masters of Arts.—Rev. J. L. Wallace, Trinity College; Rev. W. Williamson, St. John's College; Rev. G. P. Simpson, Corpus Christi College; Rev. A. Farquhar, Rev. T. B. Lutner, Jesus College; Rev. E. Russell, Catharine Hall; Rev. J. J. Smith, Fellow, Caius College; *Bachelor in Civil Law*.—Rev. D. B. Langley, St. John's College; Rev. E. P. Nottidge, Trinity Hall; Rev. T. C. Haddon, St. John's College.

Bachelors of Arts.—A. Fitzroy, R. G. Jebb, W. H. Rough, H. T. Simpson, Trinity College; R. Wegg, W. G. Moore, J. Bull, St. John's College; H. V. Crotty, St. Peter's College; H. Westmacott, Corpus Christi College; H. N. Bousfield, E. B. Warren, P. Von Esen, T. S. Bonnin, Queen's College; H. Dawson, Catharine Hall; J. Oldknow, Christ College; J. W. Clarke, Sidney Sussex College.

May 6th.—Lord C. Wellesley, son of the Duke of Wellington, was admitted to the degree of Honorary Master of Arts; and C. W. H. Evered, Corpus Christi College, Bachelor of Arts.

May 18th.—The following degrees were conferred:—
Bachelor in Divinity.—Rev. T. Smith, Compounder, Emmanuel College, Vicar of Birtton and Stoke Mandeville.

Licentiate in Physic.—H. C. Duckie, Queen's College.

Masters of Arts.—Rev. R. M. Chatfield, St. H. Walpole, Trinity College; R. M. Boucherby, St. John's College; L. Olive, Corpus Christi College.

Bachelor in Civil Law.—J. D. H. Hill, Trinity Hall.

Bachelors of Arts.—R. W. Baron, E. Durnford, J. W. Dowell, J. H. Law, King's College; T. Anderson, H. R. Lloyd, H. S. Thompson, Trinity College; H. T. Lumsden, R. L. Hill, St. John's College; H. W. Bates, St. Peter's College; E. S. Greville, Clare Hall; J. Ranning, J. Forster, N. Wetherell, Trinity Hall; G. Farish, F. V. Pye, Queen's College; W. Barker, J. M. Jones, H. Mort, Catharine Hall; A. Baldwin, Jesus College; J. Crossley, Magdalen College; E. A. Rouse, Sidney Sussex College.

May 28th.—The Chancellor's medal for the best English poem was adjudged to G. S. Venables, Scholar, Jesus College. Subject—"The attempts which have been made of late years by sea and land to discover a North-west Passage."

June 1st.—The following degrees were conferred:—
Bachelors in Physic.—J. A. Nicholson, Compounder, Trinity College; R. Greenup, Queen's College; J. Barr, Emmanuel College.

Bachelor in Civil Law.—S. Hobson, Catharine Hall.

Bachelors of Arts.—E. Gaille, St. John's College; T. G. Kidd, Caius College; W. Oxley, W. Marsh, Pembroke College.

The following gentlemen were admitted *ad eundem*:—T. L. Cursbam, D.C.L. Lincoln College, Oxon.; W. D. Conybeare, M.A. Christ Church, Oxon.; C. Lyell, M.A. Exeter College, Oxon.

June 11th.—The following degrees were conferred:—
Bachelors in Divinity.—Rev. C. Porter, Caius College; Rev. W. H. Walker, Fellow, Queen's College; Rev. A. Veasey, Fellow, St. Peter's College; Rev. T. Tylecote, Rev. H. J. Rose, Fellows, St. John's College; Rev. R. Andrews, Fellow, Emmanuel College.

Bachelors in Physic.—H. Lee, Caius College; J. W. Noble, Trinity Hall.

Bachelors of Arts.—J. A. Nicholson, Compounder, C. D. Granville, Trinity College.

Prizes.—The following prizes were adjudged on the 13th:—

Sir William Browne's medal for Greek Ode, Latin Ode, Epigram.—J. Hildyard, Christ College.

Subjects: *Græcia triumphans Regi Guelmo quatuordecim annis in aeternum Inductum succurrit.*

Latin Ode.—*Magica accingitur arces.*

Greek Epigram.—*Magnas inter opes inopa.*

Latin Epigram.—*Prodena simplicitas.*

Poem Prize (for the best translation of a passage from Shakespeare into Greek verse).—G. Kennedy, St. John's College. Subject, *As You Like It*, act ii. scene 1; beginning, "To-day my Lord of Amiens and myself," &c., and ending, "Native dwelling-place."

Members' Prize for Bachelor of Arts.—J. Spedding, Trinity College. Subject, *Utrum boni plus an mali homines et civitates subterit dicendi causa?* (No second prize awarded.)

Members' Prize for Undergraduates.—I. W. H. Thomp-

Digitized by Google

son, & H. Alford, Trinity College. Subject, *Utrum fides Poesia an eam qualem perhibent scriptores Romani?*

July 3d.—The following degrees were conferred:—
Bachelors in Divinity: Rev. G. E. Corrie, Catharine Hall; Rev. J. Hambleton, St. John's College.

Bachelor in Civil Law.—T. G. Browne, Trinity Hall.
Licentiate in Physic.—A. Frampton, St. John's College.

Bachelors of Arts.—J. C. Middleton, King's College; R. W. Morice, J. Morgan, Trinity College; J. Weighell, Pembroke College; W. H. Harrison, Caius College; J. Hine, Corpus Christi College; E. Cantis, J. D. Baker, Christ College.

The Rev. M. Lally, D.C.L. of St. John's College, Oxford, was admitted *ad eundem*.

July 4th.—The Rev. J. Davies, of Queen's College, Bachelor in Divinity; R. M. Milnes, Esq. of Trinity College, Honorary Master of Arts; J. W. Budd, of Pembroke College, Licentiate in Physic; C. F. Broughton, of Emmanuel College, Master of Arts. W. Palmer, M.A. of Magdalen Hall, and R. Eden, M.A. of Corpus Christi College, Oxford, were admitted *ad eundem*.

July 8th.—Being Commencement Day, the following Doctors and Masters of Arts were created:

Doctors in Divinity.—The Very Rev. Davys, Christ's College, Dean of Chester; Rev. E. Everard, St. Peter's College, Chaplain to the Household at Brighton; Rev. J. Griffith, Emmanuel College, Prebendary of Rochester; Rev. A. Dicken, Fellow, St. Peter's College; Rev. M. Irving, Trinity College, Prebendary of Rochester; Rev. T. Burnet, Christ's College; Rev. J. Sharpe, Sidney College, Vicar of Doncaster.

Doctors in Physic.—E. Morton, Esq. Trinity College; H. J. H. Bond, Esq. Corpus Christi College; G. Burrows, Esq., J. R. Corrie, Esq., H. Burton, Esq., Caius College.

Masters of Arts.—S. Best, J. Flamank, F. G. Lemann, King's College; W. Potter, W. Scott, J. C. Russell, St. Peter's College; J. S. Lowry, W. Whittington, R. W. Fisher, J. Haynes, J. D. Waite, Clare Hall; C. H. Cottrell, W. Tremmerheere, Pembroke College; W. H. Stokes, J. J. Smith, G. Bland, J. Morgan, A. W. Langton, O. Pearce, J. Spedding, J. H. Jerrard, Caius College; R. Scapellhorn, L. F. Page, J. Goodwin, W. Dodd, E. Jones, W. Barker, T. W. Wrench, W. Thornton, J. Houghton, E. Kerrison, J. G. Wadsworth, T. E. Hankinson, J. H. Smith, Corpus Christi College; W. G. E. Smith, J. W. Detry, J. Radne, J. W. Barnes, J. P. Lee, C. Perry, J. L. Wallace, R. M. Chatfield, J. de K. Frampton, J. Mickelburgh, F. Parker, F. Arkwright, F. Ford, C. J. Goodhart, F. Martin, E. H. Fitzherbert, E. Salkeld, J. G. Coddington, T. W. Pelle, H. E. Fawcett, R. Iderton, H. F. Atherley, J. Wordsworth, T. A. Ashworth, J. V. Povah, C. Rawlinson, R. Wedgwood, H. F. S. Lefevre, W. E. Hartopp, H. S. Martindale, E. P. Cooper, E. Waddington, W. Webster, J. H. Stone, C. F. R. Baylay, T. J. Knight, R. Hall, J. MacLaren, J. Bental, A. Corbett, C. A. Monck, F. P. Roupell, C. J. Simpson, H. Barker, A. Glennie, C. J. W. Ellis, J. W. King, G. Platt, E. Young, G. W. Sanford, R. Drummond, A. Willis, E. Robertson, R. Cox, M. Thomas, M. G. Beresford, T. H. Croft, W. Paynter, J. J. Frohisher, Trinity College; T. Bros, J. C. Snowball, J. H. Evans, H. Almack, T. Lund, R. M. B. Botcherby, N. Cogswell, W. Selwyn, J. A. Baxter, J. Yardley, J. Gratix, M. Cooper, R. N. Whitaker, G. A. Hopkins, J. H. Anderson, C. Smith, C. Fryer, J. James, J. Weiridge, D. Robinson, J. W. Harden, J. Overton, J. Clifton, C. Brayshaw, R. Snow, W. Quekett, J. Bailly, E. Swann, E. Ramsay, R. Stammers, O. Luard, J. Appleton, G. J. A. Drake, J. D. Beecher, C. E. Douglas, H. Hoare, E. W. Lowe, E. Luard, St. John's College; G. R. Tuck, T. B. Dickson, J. Collins, F. G. Rawlins, G. Gore, E. H. K. Lacom, R. L. Page, Emmanuel College; L. Marcus, G. Cheere, E. Hollond, F. Dusautoy, T. Watkins, C. M. Heslridge, J. Priton, J. J. Hodges, J. Sheffield, T. Burrow, S. W. Bull, J. Singleton, T. J. Whittington, J. White, T. B. Ingham, J. Bate-man, M. Onslow, H. Griffiths, Queen's College; R. A. Riddell, W. Stanton, H. Romilly, F. D. Eyre, Christ's College; C. Nesfield, T. Pooley, W. N. Andrews, B. Agar, A. W. Reynard, Jesus College; T. Halsted, F. H. Wollaston, Trinity Hall; J. Shore, W. D. Sheard, Sidney College; W. Myall, S. A. Smith, R. Dixon, E. B. Seckerson, W. K. Borton, J. J. Smith, H. R. Revell, Catharine Hall; T. H. Bird, S. Smith, T. Boydell, G. W. Wrangham, Magdalen College; St. J. W. Lucas, Downing College.

ROYAL ASIATIC SOCIETY.

On Saturday last the anniversary of this Institution was celebrated at the Thatched House, St. James's. His Royal Highness the Duke of Sussex presided. There were also present the Rajah Rammohun Roy, Earl Munster, Mr. C. Wynn, Sir John Malcolm, Sir Alexander Johnston, and a distinguished list of warm supporters of the Society. After every demonstration of respect had been paid to the loyal toasts usual on such occasions, "Prosperity to the Asiatic Society and the Oriental Translation Fund," "the Royal Society," "the Asiatic Society of Bombay," "the East India Company," &c. were severally proposed, and received by the company in the most cordial

manner. For the first, Earl Munster returned thanks. The Duke of Sussex, as President of the Royal Society, acknowledged that toast; observing, that ever since he was called to the chair of the Royal Society, one of his chief objects had been to further the ends of the Society by cultivating a friendly intercourse between it and the other scientific Institutions of the metropolis. The readiness with which the East India Company throws open its library and herbaria, and the splendid liberality which often marks its donations from the latter, need no eulogy here. The enthusiastic manner in which the Asiatic Society on this occasion acknowledged the East India Company, was exceedingly gratifying. Colonel Lushington returned thanks. The *bonhomie* of the royal duke tended materially to promote and prolong the enjoyments of the meeting:—his friend, as he called Rammohun Roy, notwithstanding the sumptuous viands which were placed on the table, partook only of the Brahminical fare—rice and water.

NUMISMATICS.

M. MIONNET has published the fifth volume of the Supplement of his valuable description of ancient Greek and Roman medals. It contains the medals of Bithynia, Mysia, and Troas. Among the medals of Nicæa in Bithynia, is a very remarkable one, of which Vaillant has an inaccurate description, thus corrected by M. Mionnet: "M. ANT. TOPAIANOCATT: Head of Gordius Pius. Reverse, IHHON BPOTONOA NIKAIEON: a hero on horseback, his head covered with the Phrygian cap, and holding in his right hand a crown; the horse, the fore feet of which are human, holds in the right, lifted up, a baton or sceptre, round which is twisted a serpent, and its folded tail terminates with the head of a serpent. A little Victory flies before the hero, to crown him." The *Revue Encyclopédique*, however, sets M. Mionnet right on this subject; and states that the horse has not two human fore feet, but that, while on the left there is a human leg and foot, on the right there is a human elbow, arm, and hand, in which hand the baton round which the serpent winds is held. Both Vaillant and M. Mionnet describe the horse as holding with his right foot the baton which in fact he holds with a hand. The word BPOTONOA, composed of *Beros*, *homo mortalis*, and *Παδα* (nominative *pes*), naturally indicates the horse with a human foot: thus Vaillant translates the legend by the words "The horse with the human foot of the Nicæans;" "The town honours the horse," &c. being understood. Rasche, in his lexicon, translates these words by *equum hominum pernicioem*, which by no means renders the word *Beros*, which certainly applies to the horse thus represented with a human foot. There was, no doubt, at Nicæa a religious tradition respecting this wonderful horse, which has been lost, like so many others.

FINE ARTS.

NEW PUBLICATIONS.

Views of the intended Clifton Suspension Bridge, and of the proposed Gateway to it. Bristol, John Norton.

ANOTHER of those magnificent national undertakings, the results of that state of peace and prosperity which, we trust, no occurrence, external or internal, may disturb. It is proceeding with great spirit; and the calculation is, that it will be completed in four years. The length of the suspended road-way is to be 630

feet; and vessels will be able freely to pass under the bridge with all their sails set. The whole is to be executed according to the designs, and under the directions of Mr. Brunel, jun. The Egyptian style of the gateways will give them a very imposing stability of effect. The view of the bridge has, we observe, been lithographed by Mr. J. D. Harding, under the immediate inspection of the engineer, and expressly for the trustees, from whom the stone has been purchased by Mr. Norton.

Scrap Title. Ackermann.

FANCIFUL and elegant, and exceedingly well suited to form a commencing page to those female receptacles of drawings, MSS. &c.—albums and scrap-books.

Embellishments of the New Sporting Magazine.

WE have been favoured with proofs of the embellishments for the June and July Numbers of the New Sporting Magazine; and we must say that they do the editor and proprietors of the work great credit. "Trout-fishing," engraved by J. R. Scott, from a picture by A. Cooper, R.A., and "A View in Switzerland," drawn and etched by Lieutenant-Col. Batty, are pre-eminently beautiful.

For-Hounds in their Kennel. Painted by

R. B. Davis, Animal Painter to the King; drawn on stone by J. W. Giles. Ackermann.

A NEW and interesting specimen of lithography; being a companion print to "the King's Harriers," which we noticed on its appearance. As in that beautiful work, we are much struck with the powerful expression of intelligence and sagacity which Mr. Davis has given to his dogs. They are full of life and spirit. The lithographic execution is admirable.

The English School. Numbers VII. to XIX. Tilt.

THIS little publication continues to furnish as adequate an idea of the English school of painting and sculpture as outlines of so diminutive a size can be expected to afford.

Portraits of W. Wordsworth and J. Gibson

Lockhart, Esqrs. Drawn from the Life on stone by F. W. Wilkins. London, J. Dickinson.

SIMILAR in style to the portrait of Allan Cunningham, noticed in our No. 751, these publications are strong resemblances to the distinguished authors whose names they bear. Having seen them, no one can miss recognising the originals wherever they may chance to meet them; and should either of them ever need to prove an alibi, this may be in their favour! Mr. Lockhart's likeness, however, gives us the idea of a larger man than he is, and we hardly think that the refined and elegant cast of his features is improved by thus being magnified.

New and improved Material for Sculpture

Casts.—For some years past the Société d'Encouragement of Paris has offered a premium of six thousand francs for the composition of a material for casts to supersede plaster of Paris. This premium was lately adjudged to Messrs. Brian and St. Leger. According to the report of M. Merimée, their composition consists of chalk, clay, and flint calcined and ground. It hardens in the air and even under water, is easily worked, takes with facility every possible impression, and if it does not set so quickly as plaster of Paris, it is in consequence the more durable, and withstands the vicissitudes of the atmosphere for a great length of time.

ORIGINAL POETRY.

EPILOGUE TO THE SCHOOL FOR COQUETTES.*

WHAT have I done?—Renounced the power to vex—

The will to flirt—that charter of our sex :
Chained to one home the thousand aims of life,
And grown—oh heaven!—domestic, yet a wife.
'Tis not too late: stay! am I yet resigned?
So young—not ugly—shall I change my mind?
Shall I reform but gently, hit by bit,
And grow—a very moderate coquette!
A change too hasty, should I not repent?
And, after all, what husband is content?
If once, to please the wretch, I stoop to mend,
Say, can ye tell me where the thing may end?
May not the creature next contrive to see
My weekly routes, require a schedule B?
May he not lop exclusive seats away,
And place the opera under schedule A?
Nay, not content to curb my faults alone,
Ask universal suffrage for his own?
Extend the elective franchise of his frown,
And bring my wardrobe to an annual gown?
Well, let me hope: I've said, and, come what will,

I'll stand, if you permit me, on the bill.

Trite is the truth, where'er our sex may turn,
Home hives the joys for which at heart we yearn:

With love at home how rarely have we erred;
But scathe the nest, and aimless flies the bird—
And each wild flight but speaks the baffled breast,

Whose very wanderings are the wish for rest.
Come then, reformed ere yet it be too late,
And the light folly grows the careless fate;
Come then, reformed while yet the art to tease
Is half forgot beneath the power to please;
Bid the heart cease thus idly far to roam,
And make, like travellers, all its tours at home!

Come, fly the snare—agreed, it does no hurt;
'Tis yet no sinecure to play the flirt.
Dull are the wretches who your charms adore—
You gain the lover to secure the bore.
Think of your spouse asleep in Piccadilly,
And own the Colonel is extremely silly;
Think of the cautions of your anxious mother,
And see, Lord Charles is flirting with another:
I grant your shawl is lovely and all that,
And yet your rival has a prettier hat;
I grant last night your beauty fired Sir James,
But lo! to-night extinguished are the flames:
In short, believe me, no affliction frets
Like that which crowns the conquests of co-
quettes;

Each tree of life will grow the fruit vexation,
But, lord! you buy an orchard in flirtation.

Come, then—I own the lesson I impart
Must oft be heard before 'tis learnt by heart;
Come, then, as often as ye will to school,
And your Honoria shall repeat the rule;
Come, then, each fair whose heart for conquest pants,

Ye married nieces and ye maiden aunts,
Or young or not so young, unwed or wives,
Coqueting lasts its votaries all their lives;
Come, if the men your footsteps will pursue,
Why each true convert may select a few,
Some sober major on demure Sir John,
To practise now and then her scorn upon!
Come, then, nor fear our school should be too small,

We can contain—may we content you all!

E. L. BULWER.

* Having been favoured by Mrs. Gore with a correct copy of this Epilogue, which, though partially omitted as spoken, tells so well from the smart and pointed de-

TO AN ANCIENT SUN-DIAL.

AN hour has passed with lingering pace,
Since, bent in careless musing nigh,
I marked upon thy moss-grown face
The noiseless shadow stealing by;
An hour has passed—and wandering back
The fit of vacant idlesse o'er,
I see that shade in onward track
Advanced one scanty inch—no more.

Less blue the wide exulting sea,
More white the morning cloud may seem,
A little more the merry bee
Hath toiled beside the chiming stream,
A little bent appears the flower,
A little raised the mounting sun,
Less bright the dew—less cool the bower—
But other change on earth is none.

Yet to the world of nobler life,
What has that hour of stillness brought?
Desire—Despair—far-wasting strife—
The madness and the bliss of thought;
And Hope, that flatters to depart,
And Love, with unresisted chain;
And, O! the anguish of the heart
Which knows its all of fondness vain.

City and tower perchance have sunk,
To waste and howling ruin cast,
And armaments embattled, shrunk
Like reeds before the rending blast:
The mother to her new-born child
Has bared her life-bestowing breast,
And many a brow yet undefiled,
The ruthless grave has called to rest.

A knell for joys for ever fled—
A dooming voice beyond recall—
A trumpet signal, stern and dread,
Of warfare and of watch to all—
A sound o'er earth's arena sent,
To bid the strife of thousands cease;
Such is the gentlest moment, spent
Amidst the calm of halcyon peace.

But we, beneath the varying beam,
While thus Time's onward waters flow
O'er straw and bubble, dream and dream,
Nor heed the torrent's depth below.
Destruction, wide as land and sea,
And life, and death, and waste, and power—
Alas! who thinks that such must be
The record of each sunny hour?

J. F. HOLLINGS.

SKETCHES OF SOCIETY.

THE FRENCH TREE OF LIBERTY.

THE 14th of July having excited a strong sensation in the French capital, when an attempt was made to revive the *planting of the Tree of Liberty*, we have thrown together a sketch of the early history and progression into politics of this old mythological ceremony.

The idea of planting trees as emblems of liberty certainly dates from the French Revolution: the practice was not previously known to any nation. But there is nothing new under the sun; and as customs which appear to be the offspring of the most recent time, prove, on closer investigation, to be merely relics of very ancient popular usages, so the French trees of liberty seem to be descended in a direct line from the May-trees, which, from time immemorial, have been planted among most of the nations of Europe as tokens of rejoicing or homage.

Into the origin of the May-trees it is not our business here to inquire. Father Carmeli,

livery of Miss Taylor, we have great pleasure in inserting it.

however, in his *Storia di vari Costumi sacri e profani*, shews that the Romans planted trees or green boughs before the houses of persons to whom they wished to do honour, and that this practice has prevailed ever since in Italy. It is evidently akin to the custom of strewing palms or green branches in general before persons, as signs of rejoicing or of triumph, or on the presentation of petitions to them.

Among almost all the nations of Europe we meet with the practice of planting May-trees, with various modifications according to local circumstances. In Germany and France we find examples enow of them so far back as the thirteenth century, the parishes making the landowners stipulate in their charters to furnish trees for the purpose out of their forests. Many of the convents thundered furiously against the felling of trees in their forests for May-trees; and obvious as the reasons were, still it does frequently appear as though they had in spirit beheld the tree of liberty in the May-trees of the feudal ages.

The custom of planting May-trees was general in France at the breaking out of the revolution. With the return of the month which from the remotest antiquity has been the month of joy, this lovely emblem has been planted in every town and in every village. The aristocracy at length found means to transform this practice into a sort of privilege; and in order to be strictly legal, it was requisite that the May-trees should be planted either before the manor-house, the residence of the magistrate, or the church; for the servants of the Christian church were not the last to arrogate this honour to themselves, and in more than one place they had the ingenuity to convert this meagre compliment into a considerable revenue. It is more especially on this account that the history of the May-tree planted annually by the guild of goldsmiths, before the cathedral of Paris, is worthy of remark. At first, two of the masters, deputed by the trade, bearing the pompous title of Princes of the May, carried to the spot neither more nor less than a green tree, called *Mai verdoyant*. But the chapter soon perceived that the honour was very unprofitable, and that the flourishing May-tree, how large and green soever it might be, produced at last but a score perhaps of billets and faggots; it therefore soon contrived, in retaining the old name, to give the matter a more lucrative turn. It was not long before the May appeared in the form of silver plate, shrines, and even paintings. For upwards of a century, the cathedral of Paris received annually a votive picture, eleven feet high, which, in commemoration of the origin of the custom, was exhibited in the first days of May, decorated with flowers, at the great porch of the church. From the porch, the picture was removed to the nave; and as the *Mays* were painted by the first artists, the church had in this manner become a real museum, which was destroyed by the revolution. But from these *Mays* the tree of liberty would never have sprung; let us therefore prosecute our search after its real progenitors.

A corporation whose customs, upon the whole, were extraordinary, and which even bore the royal title, till deprived of it from jealousy by Henry III., the Basoche, the school of law of those times, composed of ten thousand scribes, planted every year, in the court of the palace of justice, a colossal May-tree, which, by virtue of its privileges, it caused to be felled in the royal forests. This was in reality the king of the Mays, a majestic oak with verdant top: it was garnished with box, and decorated with festoons of flowers, garlands, and ribands

of the colours of the Basoche, blue and yellow, and shields with the arms of the corporation, three inkstands in a field sable. This tree was left standing the whole year, till it gave place to its successor.

The Basoche, the history of which is not destitute of traits of genuine patriotism, did not with the last May which it planted originate the first tree of liberty. The idea, however, is not due by any means to this corporation of scribes: a priest was the author of it, and one of the most insignificant communes in France gave the signal for its adoption—so the late Abbé Grégoire relates, in his little work *On the Tree of Liberty*, which appeared in the year 2 of the republic. This book has become extremely rare: Buonaparte, who utterly disliked the ardent republican, is said to have caused all the copies of it that could be met with to be destroyed; so that the few which escaped the persecution now sell at auctions for nearly their weight in gold. According to Grégoire, then, it was Norbert Pressac, curé of St. Gaudens, near Civray, in the department of the Vienne, who first conceived the notion of planting the ancient aristocratic Mays in honour of liberty. In May 1790, on the day that the new municipality was installed, he caused a handsome young oak to be dug up in the wood, and the inhabitants of both sexes planted it on the village green; after which the curé delivered an address in praise of the revolution and of liberty. "In the shade of this tree," said he, "ye shall bear in mind that ye are Frenchmen; and in your old age ye shall tell your children about the ever-memorable period in which ye planted it." He then exhorted all the peasants who were engaged in law-suits to submit the matters in dispute to arbitration: they all complied, the arbitrators decided, and songs and rejoicings concluded the fête. No sooner was this patriotic proceeding made public by the newspapers, than it was imitated in a hundred places, and before long the idea of an individual was adopted as a national custom, and became in the end even a law of the state. Louis XVI. with his own hand planted a tree of liberty, with great solemnity, in the garden of the Tuileries; but the poor tree was subsequently doomed to suffer for its illustrious origin: the convention permitted the young orphans of the defenders of the country to destroy it, and to plant another in its stead.

In the early years of the revolution, the immediate derivation of the tree of liberty from the ancient Mays must have been universally acknowledged, for the month of May was almost every where chosen for setting up the first. It was in May 1792 that the enthusiasm of the nation for the new practice was especially manifested. All the communes vied with each other in planting stately trees. Just at this time the French territory was menaced by foreigners with invasion, and the communes swore before this emblem of their emancipation, as the soldier does before the colours, to defend the sacred soil of their country. The number of the trees of liberty at that time is computed at sixty thousand; for the smallest hamlet had its own, and in the towns in the south of France they were seen in almost every street, and even before most houses. Nor was it merely in towns and villages that trees of liberty were set up: they were planted also on the frontiers of the republic, and on the most elevated points of each department. Thus, French and Genevese agreed to set up, with due ceremony, an *arbre de la fraternité* at the

boundary between the two countries; and about the same time a number of popular associations met to plant a tree of liberty on the summit of the Glandosse, one of the highest mountains in the department of the Drôme.

At first the trees of liberty seem to have consisted of nothing more than the trunks with their heads. As every commune made a point of selecting for this purpose the loftiest tree that could be found, the roots were of course useless: trees of such age could not be transplanted; and as they were set up just at the time of coming into leaf, whether they were planted with the root or not, they soon died; and the withered foliage conveyed to the mind of the spectator any thing but the idea of vigour and everlasting duration, of which the tree was intended to be an emblem. This inconsistency did not escape the National Convention; and therefore, by a decree of the 4th Pluviose, year 2 of the Republic, it ordered living trees to be planted in the place of the dead ones:—"In all the communes where the tree of liberty is dead, there shall be a new one planted before the 1st Germinal. The Convention expects that the good citizens will attend to the planting and preservation of the same, that in every commune the tree of liberty may grow and flourish under the ægis of the liberty of the French people." In this decree no particular species of tree is recommended; but the choice seems to have been left to the communes. Grégoire discusses this point in a separate chapter of his book, and pronounces in favour of the oak. The traditions respecting the veneration paid to it by our remote ancestors, says he, its majestic growth, its multifarious uses, and its diffusion over all France, entitle it to the distinction of the national tree. He also adduces in its favour its almost everlasting duration; but as, for that very reason, the growth of the oak is extremely slow, the honour of being the national tree was in most cases denied it. Indeed it would have been expecting too much of republican impatience to desire that it should wait a century for the shade of the planted oak. Grégoire proposed, it is true, to plant beside the oak a tree of rapid growth, which might be removed when the oak had attained a sufficient size; but this idea was by no means generally adopted. On the other hand, according to climate and circumstances, oaks, elms, chestnut-trees, plane-trees, poplars, mulberry-trees, firs, and pines, were taken indiscriminately for trees of liberty. In very many places a preference was given to the poplar, which it certainly deserved, because it grows so rapidly, and forming a verdant obelisk, as it were, is so well adapted to the adornment of public places. A poplar was the tree of liberty of the city of Rouen, the top of which, in 1810, rivalled in height the loftiest steeples in the city. There is still to be seen in the middle of the street of the Faubourg St. Antoine at Paris, forgotten by most of the inhabitants, a tree of liberty, planted in the first days of the revolution, an elm, which is the more picturesque and the more striking from standing quite alone. This tree, a memorial of the days of the federation, having been spared by the political tempests, has become large and flourishing; while all things around it—dynasties and institutions, as well as men—have grown old and given place to others, it alone has continued to increase in vigour and beauty—an image of everlasting youth; and ere long, and before it has attained its complete maturity, it will have survived all those who saw it planted. By far the greater part of the population of Paris, it is true, know nothing of the tree in the Fau-

bourg, or at least are ignorant of its history: instead of an inscription recording its origin, a dirty sign-board is perhaps attached to its trunk; but still its import is not wholly forgotten; and in the first days after the late revolution it was decorated with a tri-coloured flag.

This example shews that all the trees of liberty have not disappeared with the form of government under which they were raised: most of them, indeed, survived that era for a longer or shorter period; nay, in many a sequestered nook, in which the influence of the subsequent reactions has been scarcely perceptible, the tree of liberty may have been forgotten, and for that very reason it may still flourish. On the pediment of a village church a few miles from Paris, the famous phrase *temple de la raison*, is still distinctly legible.

As far as we know, the imperial government took no notice whatever of the trees of liberty. Buonaparte, who knew how to tighten the thumb-screws of liberty with such scientific gentleness, was too well aware that the liberty which may be won in a day can be but slowly stifled in the course of years. He certainly struck the word *liberty* out of the vocabulary of the nation, and made a long *détour*, till he at length exchanged the fasces of the consuls for the imperial arms. He abstained, therefore, from any public attack on the most harmless of those customs which were as a thorn in his eye, and contented himself with letting them fall gradually into disuse. He did, to be sure, endeavour to exterminate the work of the Abbé Grégoire, but evidently for this reason only—that the book, as a denunciation against tyrants, incensed the despot; and man a republican maxim contained in it sounded more disagreeably in his ear than the peaceful rustling of all the trees of liberty put together.

MUSIC.

NEW PUBLICATIONS.

Napoleon's Midnight Review, a Cantata; and The Sea, a Song. By Chevalier Sigismond Neukomm. Cramer, Addison, and Beale.

THESE are two vocal compositions by the Chevalier Neukomm, a gentleman holding, we believe, a distinguished station in the French embassy in London. Though not a professor he has, it is said, devoted his life to the cultivation of the musical art, and in his youth had the honour of being a pupil of the great Haydn. The cantata, "Napoleon's Midnight Review," may strike some persons as being deficient in melody; but on a little acquaintance, its excellencies begin to unfold themselves, and the hearer is impressed with the beauty of the composer's thoughts, and with the novelty and solemnity of the harmonic effects. The subject of the cantata is a review in "the shades" of his phantom troop by the ghost of Bonaparte, of which a version appeared in the *Lit. Gaz.** The second son is of a jovial cast, with an open, perspicuous melody, fit to be sung on the waves. The words are Barry Cornwall's. In composition this, the musician has renounced what might be called his *Germanisms*, and kept to his key and his theme with a clearness of purpose that cannot fail to lead to popularity.

DRAMA.

HAYMARKET.

MRS. GORE's comedy is flourishing, and we rejoice in its success for three reasons. First

* This is the song we have also mentioned as likely to have so great an effect if sung by Brahms.

* A wise, excellent, and Christian advice: well would it be for society if it were generally adopted.—Ed. L. G.

we rejoice on the lady's account, who deserves the favour she has met with. Secondly, because it has given a fillip to the business at the laymarket, which was rather slack at the commencement of the season. Thirdly and lastly, because it has ousted from the bill the acknowledged comedies and haggled operas which were the cause of the slackness aforesaid. The laymarket company is a good working one, but it requires novelty to render it attractive. There is no stock comedy, opera, or tragedy, which does not run the risk of most "odorous comparisons" if enacted now-a-days at the laymarket. But novelties may be rendered equally unapproachable by any other establishment. The *faded* melo-drama of *Clari* still appears in the bill. Now why, we would ask, when successful novelties may be and have been provided for Miss Taylor, why oblige the town to recollect Miss Tree, Mrs. Fawcett, Miss Love, Mr. Keeley, Master Longhurst, the strong vocal corps, and the splendid appointments, that established its original reputation? The *Hunter of the Alps* is another gone-by piece of sentimentality. A semi-historical play is, however, announced (we understand by Mr. Toole); and the improvement of the houses, since *Romeo and Juliet*, *As You Like It*, *Marriage of Figaro*, &c. &c. have disappeared, will most likely be more persuasive than the best-mentioned criticism. The late hours still remain to be corrected.

ENGLISH OPERA, ADELPHI.

On Saturday last, an opera called *Old Regiments* was produced with such success that it has been performed every night since. It is the work of Mr. Bernard, to whom we are indebted for the very entertaining dramatic memoirs of his father. Bartley, Reeve, O. Smith, and Miss H. Cawse, are the stars of this agreeable piece. We are glad to see that Collins, the English Paganini, is about to appear at this theatre: the amusement of comparison and contrast must ensure great attraction.

SIGNOR della Torre's concert was postponed, at a short notice, from Monday to Wednesday, and notwithstanding this, always unfavourable step, was fully attended. The music was altogether of a delightful order. Pasta was rather cool; but Mad. Raimbaux, Lablache, and Della Torre himself, were most efficient. The latter exerted himself greatly. Our young favourite, Jules Regondi, charmed the audience with his guitar.

VARIETIES.

Scientific Meeting at York.—This meeting is fixed for the 26th of September. Regulations similar to those of the German association have been drawn up. The society is to be called the Society of the British Cultivators of Science; and to consist of patrons as well as authors. It is to deliberate with open doors in different towns; to hold no property; and to provide accommodation for foreigners.

Aimé Bonpland.—We have a letter from Monte Video, of April 26th, which says, "Bonpland has not yet arrived; but he is daily expected."

Association for the General Encouragement of Literature.—At the last quarterly meeting of this Association, which was but thinly attended, Lord Dover took the chair. His lordship, referring to the engrossing nature of the political measure now under public discussion, recommended an adjournment of proceedings

till the popular mind had become more settled; which, after some conversation, was adopted. Another meeting will probably take place about, or soon after, Christmas next. In our opinion, the plan, as heretofore developed, cannot succeed or do any good; but the principle of the design is so excellent, that we trust it may be matured and carried into effect, greatly to the benefit of authors and of general literature. The existing system is so obnoxious in many particulars, that its improvement is anxiously to be desired.

Pimlico Palace.—We are glad to see that Colonel Trench, ever a distinguished and active friend to the improvement of the metropolis, has brought the case of this palace into a tangible shape for discussion, and for the determination of its destiny. Having cost the country £632,000, the honourable gentleman assured the House of Commons that it might be so appropriated as to produce above £1,700,000. The matter is sent to the committee.

Northcote.—This ancient artist, whose mortal illness we mentioned a few weeks ago, has submitted to the common lot. He died last week at his house in Argyle Street, at the advanced age of eighty-six. He was the oldest member of the Royal Academy, in which *Deanery* he is, we believe, succeeded by Sir William Beechey, whose recent works, nevertheless, shew him to be still in full possession of those powers which have so justly raised him to the highest rank in his profession.

The Hounshynms.—Swift's satire seems to be no longer entirely imaginary; for we see by a newspaper paragraph, that horses, even in this country, where they are not educated, are blessed with the faculties he ascribes: it runs as follows—"Some horses belonging to the Royal Artillery came from Woolwich on Wednesday, for the purpose of giving instructions to the horses stationed at Windsor in a newly discovered method of drawing."—*Windsor Express.*

Closings.—Melancholy times these! almost every place of amusement and exhibition has been closed or is closing; and yet the Reform Bill must condemn the capital to a prolonged, a numerous, and a feverish autumnal population. The two large theatres are shut; Somerset House Exhibition and the Water Colours locked their doors on Saturday; the Suffolk Street Gallery ends to-day; on Monday the French Company finished with Potier's benefit, not very crowded, though the bill of fare was tempting; and at Madame Petralia's concert on the same morning Paganini failed to draw a bumper. These are strange signs. At a meeting of the National Cemetery Company, however, it was resolved to open that, and the processions to go to the earth by water. The coronation, too, is to be on a scaly scale: the Age of Coppers has surely arrived; and in this hitherto august ceremony the triumph of chandlery over chivalry will be complete.

Chateaubriand.—The following anecdote of

* We see from the newspapers, that the colonel proposes to convert Buckingham House into a national picture gallery, a national statue gallery, and a local habitation for the King's College, leaving one entire end of the palace, and one wing, with the whole of the attics, for other public purposes. From the statement accompanying this plan, it appears that Buckingham House is 9,860 feet square, while King's College is but 5,180, little more than one-fourth the size of the former. The rooms of the unfinished palace to be appropriated to the picture gallery by the plan are, the present gallery, three rooms at the north end of it, the music-room, the armoury, and the chapel. The statue gallery to comprise two conservatories to the garden-front; and a conservatory in the south-west angle would afford a fine hall for examination. These suggestions do not involve the necessity of a new grant. We shall offer some remarks on this subject in our next.

this eminent writer is related on the authority of his own publisher. Some time since, two or three Paris booksellers united to purchase the copyright of his works. They made him the liberal offer of half a million of francs (about twenty thousand guineas); it was accepted; and they gave him bills or notes at various dates for the whole sum. When as many of these as amounted to three hundred thousand francs had been paid, the booksellers acknowledged that instead of making a profit, they could not fail to lose by the speculation. A selfish man would have replied, "That is your affair, not mine." Chateaubriand, on the contrary, returned them the remaining bills, and thus sacrificed at once two hundred thousand francs.

Cleanings from Borne's Works.—"Never was Luther wiser than when he threw the inkstand at the devil's head! For the devil dreads nothing but ink, and betakes himself to his heels as soon as he sees it.

"Freedom may use her tongue, because speech is both her weapon and her spoils; but despotism is lost from the moment it attempts to vindicate its ways.

"A rusty shield prayed to the sun and said, 'O sun! illumine me with thy ray!' To which the sun retorted, 'O shield! make thyself clean!'"

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXX, July 21.]

¶ We have to repeat (periodically), that while we diligently collect and publish every particle of what may be considered literary information, we cannot make this head of our *Gazette* a vehicle for covert Advertisements. These must appear in the regular course.

LIST OF NEW BOOKS.

TO CORRESPONDENTS.

An article on Coronations, and the announced Coronation of the King and Queen, is intended for our next No. Answers to many correspondents are unavoidably postponed.

ERRATUM.—Last week, page 452, col. 1, line 12, for "dream," read "dreams;" and insert a comma after "moment" in the same line.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

THE EXHIBITION OF LODGE'S PORTRAITS OF THE MOST ILLUSTRIOUS PERSONAGES OF GREAT BRITAIN, from the Galleries of His Majesty, the Nobility, and from Public Collections, at Messrs. Harding and Leppard's, 4, Pall Mall East, will close on Saturday next, the 30th instant.

WILKIE'S CHELSEA PENSIONER READING THE GAZETTE OF THE BATTLE OF WATERLOO.

Moon, Boys, and Graves, respectfully announce, that the Engraving, by Mr. Barnett, from the above celebrated Picture, will be completed by the 10th of September next, when the printing will begin; up to which time the Subscription will continue open at the original prices, viz. 3s. 6d. 10s. and 15 Guineas; the advance of price previously announced will then commence, viz. Prints, 4 Guineas; 15 Guineas; India Proofs, 12 Guineas; India Proofs before the letters, 15 Guineas. It is therefore requested, not only on account of the advance of price, but also because the prior insertion of the Subscriber's Name will insure the earlier impression, that those who are desirous of possessing this highly interesting National Engraving, will immediately forward their Names to the Publishers, or through the medium of any Print or Bookseller, if more convenient.

Moon, Boys, and Graves, Printers to the King, 6, Pall Mall.

LEOPOLD, KING OF THE BELGIANS.

The National Portrait Gallery, No. 58, will contain a Portrait and Memoir of Leopold the First, engraved by J. Thomson, from the Original Painting by Sir Thomas Lawrence, at Marlborough House. The Part will also contain Portraits of Sir Thomas Lawrence and Admiral Lord Howe.

“Those who wish to possess themselves of a series of portraits of the illustrious characters whose names are distinguished in the political or the scientific records of our country—who have raised its dignity and improved its intellectual character—may have that with abundant gratification by adding this very superior work to their respective libraries. The portraits are truly splendid, each embodying in itself the very spirit of the original paintings, of which they form such faithful copies.”—*Herald*.

Sir Walter Scott, the Earl of Albemarle, and Lord Lynedoch, after the Paintings by Sir Thomas Lawrence, were the Portraits in No. 37, of which the *Literary Gazette* observes:—“Such a production is alone sufficient to make the fortune of a Number. The romantic military career of the ‘gallant Vrahnam’ is a good contrast to the literary life of the great poet.”

Imperial 8vo. 2s. 6d.; royal 4to. India Proofs, (the King's edition), 7s. 6d.; Single Proofs of the Portraits for framing, 3s. each.

Fisher, Son, and Co. London.

Literature, Science, and the Fine Arts.

THE PROPRIETORS OF THE ATHENÆUM.

From their own honest anxiety, and in compliance with the desire of many well-informed persons, to extend as much as possible the diffusion of general Literature and useful Knowledge, have resolved, that on and after the first Saturday in August, that Paper shall be reduced in price from Eightpence to Fourpence!

Each Number of the *Athenæum* contains, on an average, 30 Columns of Review, with copious Extracts of all important New Works; and 32 Columns in addition, comprising Reports of the Proceedings of Learned and Scientific Societies, (some exclusively and by authority); Original Papers by distinguished Writers; Early Notices of Scientific Voyages and Travels; Criticisms on the Expository Literature; Theatrical, Musical, &c.; with Miscellaneous, including all that is interesting in Literature, Art, and Science. Handsomely printed in sixteen large 4to. pages!

Orders received by all Booksellers and Newsmen.

BOOKS PUBLISHED THIS DAY.

Established School Books.

CHRONOLOGICAL, BIOGRAPHICAL, HISTORICAL, and MISCELLANEOUS EXERCISES, on a New Plan; designed for daily Use.

By the late WILLIAM BUTLER.

4th edition.

Enlarged by WILLIAM B. BOURN,

Teacher of Writing, Arithmetic, and Geography.

18mo. 7s. 6d. bound.

Sold by Samuel Leigh, 18, Strand; J. Harris; Harvey and Darton; and Simpkin and Marshall.

Of whom may be obtained, by the same Author and Editor, Exercises on the Globes and Maps. 11th edition, 18mo. 6s. bound.

Arithmetical Questions, on a New Plan. 10th edition, 18mo. 6s. bound.

Geographical Exercises on the New Testament. 4th edition, 18mo. 5s. 6d. bound.

Miscellaneous Questions in English History and Geography. 3d edition, 18mo. 4s. bound.

Arithmetical Tables. 15th edition, 8d. stitched.

Also.

Bourn's Gazetteer of the most Remarkable Places in the World. 3d edition, 8vo. 15s. bound.

Bourn's Biographical Copies. 1s. sewed.

GUY'S SCHOOL GEOGRAPHY, on a new and easy Plan.

By JOSEPH GUY.

Late of the Military College, Great Marlow.

A Key to the Problems, price 1s. 6d.; and the Maps done up separately, printed on royal drawing paper and coloured, price 2s.

2. Guy's General School Question-Book, in Ancient and Modern History, Biography, Geography, Astronomy, and all other Subjects tending to enlarge the Boundaries of Juvenile Knowledge. 3d edition, in a thick vol. 12mo. handsomely printed, price 4s. 6d. bound and lettered.

“No School-book of late years has had the success that this very useful volume has experienced since its first publication. Before its appearance a scholar had many many volumes to wade through to gather the information this small volume so agreeably communicates.”

3. Guy's Chart of General History; a Companion to the above, on a large Sheet, coloured. 5th edition, price 7s.; on rollers, 10s. 6d.

4. Guy's Elements of Astronomy, familiarly explaining the general Phenomena of the Heavenly Bodies, &c. 4th edition, with 18 fine Copper-plates, price 8s. bound.

“This handsome school-book is formed on the same attractive plan as the School Geography.”

5. Guy's Pocket Cyclopædia, the 9th edition, enlarged and extensively improved, with the addition of numerous appropriate Cuts, in a handsome thick vol. 12mo. price 10s. 6d. boards.

6. Guy's New British Primer, new edition, in a neat half-binding, price only 6d.

7. Guy's British Spelling-Book, the Thirty-third edition, with fine Frontispiece, and many Cuts, price 1s. 6d. bound.

8. Guy's New British Expositor; or, Companion to the above; containing an Alphabetical Collection of the most useful, usual, and proper Words in the English Language, calculated for the Use of Schools and Families. A new edition, price 1s. 6d. neatly bound.

“This indispensable school-book answers all the useful purposes of an explanatory dictionary; and the fine taste of the author in the choice of the words introduced, has given it a preference over all similar publications.”

9. Guy's New British Reader; a Sequel to the Spelling-Book, with 17 Woodcuts. 6th edition, price 3s. 6d. bound.

10. Guy's School Ciphering-Book, 4to. 7th edition, price 3s. 6d. half-bound.

Key to ditto, 6d.

“The Figures used in the printing of this edition are much larger and bolder than those in former impressions, and the paper is the finest large post writing paper.”

11. Guy's Tutor's Assistant; or, complete Scholar's Arithmetic. Seventh edition, price only 2s. bound and lettered.

12. A Key to the Arithmetic, with Solutions of the Questions given at length, and in the most approved School Form of Working, with numerous Examining Questions added. Price 4s. 6d. bound in blue and lettered.

London: Printed for Baldwin and Cradock, Paternoster Row.

Where are also published, the following esteemed Works, by Joseph Guy, Jan. Member of the University of Oxford:

1. Guy's English School Grammar, in which practical Illustration is, in every step, blended with Theory, by Name, Examples, and Exercises. The 7th edition, demy 18mo. 1s. 6d. bound in red.

2. New Exercises in English Syntax, intended to succeed those usually and classically given, and furnish the Senior Scholars in Ladies' and Gentlemen's Schools with additional Rules and Examples to complete their Knowledge of Syntax. Demy 18mo. 1s. 6d. bound in green.

3. Guy's New Exercises in Orthography, 5th edition, with the addition of an Expositor. 18mo. price 1s. bound.

4. A Key to Guy's English School Grammar, and New Exercises in Orthography. In 1 vol. price 3s. bound.

5. Guy's Outlines to Walker's Themes and Essays, price 1s. sewed.

6. Guy's new Arithmetical Plan; or, an Improved Method of Teaching the First Four Rules. To which a complete Set of Tables is now added. The 4th edition, printed on an enlarged Type, and much improved, price 1s. half-bound.

A Key, price 1s.

7. Guy's School Epitome of British Geography, price 1s. sewed.

In 2 vols. 18s. or large paper, 32s. boards.

J. MAJOR'S EDITION OF ROBINSON

CRUSOE, uniform with Walton's Angler and Lives, with a Poetical Introduction, by Bernard Barton, and highly illustrated with about 40 entirely new Designs, by George Cruikshank. The Wood Engravings are executed by the best Artists, including Thomson, Jackson, Wright, S. and T. Williams, &c.

“The designs are extremely clever, and faithful to the text, which is an indispensable merit.”—*Spectator*.

“This is the most beautiful edition yet published of this delightful work; the paper and print, from the Shakespeare press, are perfection. The poem prefixed, by Bernard Barton, is one of his very best.”—*Athenæum*.

“What marvel, then, that I should greet once more My former favourite as a welcome guest? Nor less so when I find his antique lore With novel decorations richly drest, Where Art has done her warmest and her best, Guided by Taste and Genius, to portray

The author's beauties; giving added zest To scenes and objects whose delightful way Thus triumphs over Time, and needs not dread decay.”

J. Major, 60, Fleet Street; and may be had of all Booksellers.

Keith's Mathematical and Geographical Works, &c. &c.

A NEW TREATISE ON THE USE OF THE GLOBES; or, a Philosophical View of the Earth and Heavens; comprehending an Account of the Figure, Magnitude, and Motion of the Earth; with the Natural Changes of its Surface, caused by Floods, Earthquakes, &c. 12mo. with Plates, 6s. 6d. bound and lettered.

The Elements of Plane Geometry, containing the First Six Books of Euclid, from the Text of Dr. Simson, with Notes, Critical and Explanatory. To which are added Book VII. including several important Propositions which are not in Euclid; and Book VIII. consisting of Practical Geometry; also Book IX. of Planes and their Intersections; and Book X. of the Geometry of Solids. 2d edition, 8vo. 10s. 6d. boards.

An Introduction to the Theory and Practice of Plane and Spherical Trigonometry, and the Stereographic Projection of the Sphere, including the Theory of Navigation; comprehending a variety of Rules, Formulae, &c. with their practical Applications to the Mensuration of Heights and Distances, &c. &c. 8vo. 14s. boards, 8th edition.

A System of Geography, on an entirely new Plan, in which the recent Alterations in the Division of the Continent are carefully attended to. A new edition, 18mo. 6s. 6d.

The Arithmetician's Guide; or, a Complete Exercise Book, for the Use of Public Schools and Private Teachers. By William Taylor. New edition, 18mo. 2s. 6d. bound.

A Key to the Same. By W. H. White. 4s. bound.

An Introduction to Practical Arithmetic, in Two Parts, with various Notes, and occasional Directions for the Use of Learners. By Thomas Molnues. 18th edition, 18mo. Part I. 2s. 6d. bound. Part II. 4th edit. 2s. 6d. bound.

Keys to both Parts, 6d. each.

Printed for Longman, Rees, Orme, Brown, and Green.

In 8vo. price 4s. 6d. in boards, a new edition of RELIGIO PHILOSOPHI; or, the Principles of Morality and Christianity Illustrated, from a View of the Universe and of Man's Situation on it.

By WILLIAM HAY, Esq.

Printed for the Editors; and sold by C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

New and improved Editions of the following approved Books of Education, by MAJOR, BLAIR, GOLDSMITH, JOYCE, BARROW, &c. &c. have just appeared.

Now ready, in 1 vol. printed uniformly with Evelyn and Pope, **THE PRIVATE CORRESPONDENCE of DAVID GARRICK** with the most celebrated Persons of his Time, published from the Originals.

This highly interesting and important work comprises upwards of Two Thousand Letters, from Persons of the greatest eminence in the Political, Literary, and Dramatic World. Among other Names may be mentioned Lord Chesterfield, Lord Lyttelton, Lord Pembroke, and the leading Nobility of Garrick's time—Warburton, Burke—Johnson—Hume—Gibbon—Sir Joshua Reynolds—Goldsmith—Robertson—Junius—Beattie—Chambers—Mason—Camden—Boswell—Colman—Mackintosh—Wm. Darnley—Barrow—Thomson and R. B. Sheridan—Hugh Kelly—Murphy—Dr. Hoody—Isaac Bickerstaff—Tickell—Home—C. Verté—Madame Riccoboni—Mrs. Montagu—Whithead—Dr. Franklin—Hawkesworth—Mallet—Mrs. Cowley—John Wilkes—Wilson—Gainsborough, &c.—and among others, the following Dramatic Characters: Mr. Cline—Mrs. Cibber—Mrs. Abington—Mrs. Yates—S. Foote—Spranger Barry—Powell—Henderson—Moore—Parsons—T. King—Smith—Macklin—Moody—Le Kain—Madame Clairon—Charles Dibdin—T. Wilkes—Reddish—Holland—Herrison—Mrs. Pope—Bensley—Alcock—Dr. Arna, &c. &c.
Henry Colburn and Richard Bentley, New Burlington Street.

THE ENGLISHMAN'S MAGAZINE for August will contain, in addition to Articles from several Distinguished Writers, an Essay from the pen of Elia. This will be followed by a paper, in future, containing a Series of Essays to the Englishman, under the title of "Peter's Net."

Edward Moxon, 64, New Bond Street.

New and improved Edition of Miller's Gardener's Dictionary.
On the 1st of August will be published, in 4to. with numerous Woodcuts, price M. 12s. boards, the First Volume (and at the same time Part I. price 6s. to be continued monthly).

A GENERAL SYSTEM OF GARDENING AND BOTANY, containing a complete Enumeration and Description of all Plants hitherto known, with their Generic and Specific Characters, Places of Growth, Time of Flowering, Mode of Culture, and their Uses in Medicine and Domestic Economy; founded upon Miller's Gardener's Dictionary, and arranged according to the Natural System.

By GEORGE DON, F.R.S.
London: Printed for C. J. G. and F. Rivington; J. and W. T. Clarke; Longman and Co.; T. Cadell; J. Richardson; Jeffery and Son; Baldwin and Cradock; J. Basker; J. Booth; Harvey and Darton; B. Basker; Asher and Co.; Harding and Lepard; J. T. Seabach; Whittaker and Co.; Simpkin and Marshall; and E. Hodgson.

The interest now so universally felt in the sciences of Agriculture, Gardening, and Botany, appears to demand a work of more ample and varied information on those important subjects, than any to which the public can at present have access. Under this conviction, the Proprietors of Miller's Gardener's and Botanist's Dictionary, have caused to be prepared for publication a general System of Gardening and Botany, on a new and comprehensive plan, which includes the whole of what is valuable in the justly celebrated performance of Miller, together with all the recent discoveries and improvements that have been made in these departments of knowledge. The system will be contained in four volumes, (the three first containing the Dicotyledonous Plants), arranged as follows:—

Vol. I. Plants having the Stamens inserted in the Receptacle, (corresponding with the Class Polyandria of Linnaeus, but without reference to number.)

Vol. II. Plants having the Stamens inserted in the Calyx, (corresponding with the Class Icosandria of Linnaeus, but without reference to number.)

Vol. III. Plants having the Stamens inserted in the Corolla.

Vol. IV. Monocotyledonous Plants, such as Lilies, Palma, Orchideous, and Scitamineous Plants, Grasses, &c.

For facility of reference will be given a Synopsis of the Genera, with their essential characters, preceding each natural order—An Alphabetical Index of the Genera of each system, with each volume—An Index of the Genera, arranged according to the Linnæan artificial method, and comprising a brief character of each Genus—A Glossary of the Terms used throughout the work—And a complete Alphabetical Index to the whole work.

For facility of reference will be given a Synopsis of the Genera, with their essential characters, preceding each natural order—An Alphabetical Index of the Genera of each system, with each volume—An Index of the Genera, arranged according to the Linnæan artificial method, and comprising a brief character of each Genus—A Glossary of the Terms used throughout the work—And a complete Alphabetical Index to the whole work.

SATURDAY, JULY 30, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Life and Death of Lord Edward Fitzgerald. By Thomas Moore. 2 vols. post 8vo. pp. 612. London, 1831. Longman and Co.

THIS book will, we presume, be read with very different feelings, as the readers may happen to sympathise with or abhor the Irish Rebellion of 1798, of which its subject was one of the most interesting heroes. As matter of history it is not of much importance;—as the memoir of a private individual, connected with some of the first families in the kingdom, and unhappily concerned in a plot to overthrow the government, in the prosecution of which he lost his life, and as being thought worthy to employ the pen of Mr. Moore, it will possess greater popular attraction. We shall, therefore, keep as wide as possible from the debatable ground of politics—the most repulsive of all politics too, being Irish politics—and endeavour to illustrate the more general topics embraced by Mr. Moore, by our remarks and quotations. We are, however, bound to say, that the preface professes the work to be historical rather than revolutionary; and Mr. Moore's sanguine expectation that the liberal conduct of the present Administration will leave no excuse for the latter sentiment in the Emerald Isle.

Without entering upon the discussion, whether Lord Edward Fitzgerald was justifiable or criminal; we may observe, that his character offers a very curious study. He is represented as a most amiable rebel, a "frank and simple" conspirator. "I cannot," says his biographer, "resist the gratification of adding a few words of my own; though conscious that the manner in which his frank, simple character has unfolded itself before the reader of the foregoing pages, renders any further comment on it almost wholly superfluous. Both of his mind and heart, indeed, simplicity may be said to have been the predominant feature, pervading all his tastes, habits of thinking, affections and pursuits; and it was in this simplicity and the singleness of purpose resulting from it, that the main strength of his manly character lay. Talents far more brilliant would, for want of the same clearness and concentration, have afforded a far less efficient light." We are not quite sure that we attach a definite meaning to the last sentence; but we are free to acknowledge that all the correspondence, with every fact relating to him in this book, shews Lord E. Fitzgerald to have been what he is painted, an exceedingly kind-hearted fellow, an affectionate relative, and especially a fond son, whose filial love for his mother could not have consisted with a bad disposition. Mr. Moore intimates that he was obstinate; and to our view he appears to have partaken largely of that defect which is but too prevalent among his countrymen, and betrays them into most of their errors;—he was a creature of impulses, and not of reason, and his very warm and good feelings were the cause of his connexion with

the enemies of his country, and plunging headlong into treason. An ardent temperament, without the balance of sound judgment; a mind alive to strong passion, but destitute of real strength; many virtues, but even these tending to extravagance and unguided by a leading principle—such were the component qualities and defects of Lord Edward Fitzgerald; such are the "bane and antidote" of tens of thousands of living Irishmen, the sources of their excellences and of their faults, the origin of the mingled brightness with the misfortunes, troubles, and miseries of Ireland. For it is a waste of sense to talk of this or that government of Ireland, as the cause of its turbulence, and poverty, and discontent: the spirit of the rulers will undoubtedly have some influence on the condition of the nation; but look at Irish history from the earliest record to the present hour, and the same scene presents itself, whether under native kings or foreign conquerors, under severe or lenient systems—it is the character of the people, from breaking their neighbours' heads at a fair or wake, to civil wars and rebellions.—But we hope we are not getting into political speculation—we are sure we are not into party.

Lord E. Fitzgerald, it seems, entertained a pretty fervent first love to one Kate; but this was superseded by a more fervent second love, in which he was disappointed. As Moore is an authority on such matters, we beg leave to call him into court: he agrees with another poet, "that, in nature of this kind, a first love is almost always but a rehearsal for the second; that imagination must act as taster to the heart, before the true 'thirst from the soul' is called forth, and that, accordingly, out of this sort of inconstancy to one object is oftenest seen to spring the most passionate, and even constant, devotion to another." It might, on this theory, be useful for ladies, when they are flattered or wooed, to inquire whether it were the lover's first or second offence; and we philanthropically throw out the hint. Lord E. F. being in the second and true passion, suffered exceedingly from its rejection, and to divert his mind went a second time to America, in a fit mood to wander as he did among the savages, and engraft democracy on his personal grief. Thus, when he returned to Europe, he was just ripe to become an enthusiast for the French Revolution, and join the band of United Irishmen. He had previously acted almost throughout (*i. e.* except when the Duke of Leinster sided with the ministry) with the opposition in the Irish Parliament; and we notice within two pages a sort of contradiction between his biographer and him respecting his fellow-patriots. Mr. Moore says, "Mr. Conolly again appears among the supporters of government; while the name of Lord Edward is found, as usual, shining by the side of those of Grattan and Curran, among that small, but illustrious band,—the few, fine flushes of departing day,"—that gave such splendour to the last moments of Ireland as a nation; whilst in a letter, of February 26th, 1787,

Lord Edward writes, "when one has any great object to carry, one must expect disappointments, and not be diverted from one's object by them, or even appear to mind them. I therefore say to every body that I think we are going on well. The truth is, the people one has to do with are a bad set. I mean the *whole*; for really I believe those *we* act with are the best. All this is between you and me." The "illustrious band" being but "a bad set," is a droll contradiction. A little further on we are surprised by a bit of a fling of Mr. Moore's own at the Whigs, anno Domini 1790, when Lord E. was in London.

"Left thus open to the influence of all that was passing around him, it may be conceived that the great events now in progress in France could have appealed to few hearts more thoroughly prepared, both by nature and position, to go along with their movement. In the society, too, which he now chiefly cultivated,—that of Mr. Fox, Mr. Sheridan, and their many distinguished friends,—he found those political principles, to which he now, for the first time, gave any serious attention, recommended at once to his reason and imagination by all the splendid sanctions with which genius, wit, eloquence, and the most refined good-fellowship could invest them. Neither was it to be expected, while thus imbibing the full spirit of the new doctrines, that he would attend much to those constitutional guards and conditions with which the Whig patriots, at that time, fenced round even their boldest opinions,—partly from a long-transmitted reverence for the forms of the constitution, and partly, also, from a prospective view to their own attainment of power, and to the great inconvenience of being encumbered, on entering into office, by opinions which it might not be their interest, but their duty, to retract."

The difficulty of maintaining in power the doctrines of opposition is, indeed, a confounded bore: for our parts, as honest and fair men, willing to do by others as we should wish others to do by us, we declare in sincerity that we think it out of nature to insist upon it. Our author continues, "it was not, indeed, till Lord Edward's visits to France in 1792 that he appears to have espoused zealously and decidedly those republican principles upon which, during the short remainder of his life, he acted with but a too fearless consistency."

From Paris he writes: "I lodge with my friend Paine,—we breakfast, dine, and sup together. The more I see of his interior, the more I like and respect him. I cannot express how kind he is to me; there is a simplicity of manner, a goodness of heart, and a strength of mind in him, that I never knew a man before possess."

No wonder, under such influence, that he, with Sir Robert Smith, renounced his title at a public meeting, and fraternised with the republicans. For this he was dismissed from the British army, in which he held a majority. At this period he met, fell in love with, and married the celebrated Pamela, though bearing

the horridly unromantic name of Mlle. Sims, the daughter of Mad. de Genlis and the Duke of Orleans.* With her he returned to London in 1793; and afterwards went to Ireland, where, in 1796, as Mr. M. contends, and not before, he joined the United Irishmen, and became a, if not *the*, head of that dangerous conspiracy, which in February 1798 counted "little less than 300,000 men," regimented and armed at its beck.

Into its details we have neither space nor inclination to enter: the differences between the Presbyterians and Roman Catholics; and among the chiefs, as to the aid from France, the proper time for rising, &c. &c.; and the betrayal of its organisation to government, weakened its force; and when it did break out, led to the catastrophe of its gallant leader. The accounts of the fidelity with which he was sheltered and concealed for several months is extremely honourable to the Irish character; but as there are no hair-breadth 'escapes' to relate, we shall leave the narrative to Mr. Moore's readers. At length he was betrayed while residing in the house of a Mr. Murphy. In the afternoon he had gone up to his bedroom, and lain down, without his coat, on the bed.

"Mr. Murphy," continues the story, "had but just begun to ask his host [quære guest?] whether he would like some tea, when, hearing a trampling on the stairs, he turned round, and saw Major Swan enter the room. Scarcely had this officer time to mention the object of his visit, when Lord Edward jumped up, as Murphy describes him, 'like a tiger,' from the bed, on seeing which, Swan fired a small pocket-pistol at him, but without effect; and then, turning round short upon Murphy, from whom he seemed to apprehend an attack, thrust the pistol violently in his face, saying to a soldier, who just then entered, 'Take that fellow away.' Almost at the same instant, Lord Edward struck at Swan with a dagger, which, it now appeared, he had had in the bed with him; and, immediately after, Ryan, armed only with a sword-cane, entered the room. In the mean time, Major Sirr, who had stopped below to place the pickets round the house, hearing the report of Swan's pistol, hurried up to the landing, and from thence saw, within the room, Lord Edward struggling between Swan and Ryan, the latter down on the floor, weltering in his blood, and both clinging to their powerful adversary, who was now dragging them towards the door. Threatened, as he was, with a fate similar to that of his companions, Sirr had no alternative but to fire, and, aiming his pistol deliberately, he lodged the contents in Lord Edward's right arm, near the shoulder. The wound for a moment staggered him; but, as he again rallied, and was pushing towards the door, Major Sirr called up the soldiers; and so desperate were their captive's struggles, that

they found it necessary to lay their firelocks across him, before he could be disarmed or bound so as to prevent further mischief. It was during one of these instinctive efforts of courage, that the opportunity was, as I understand, taken by a wretched drummer to give him a wound in the back of the neck, which, though slight, yet, from its position, contributed not a little to aggravate the uneasiness of his last hours. There are also instances mentioned of rudeness, both in language and conduct, which he had to suffer, while in this state, from some of the minor tools of government, and which, even of such men, it is painful and difficult to believe. But so it is,

'Curs snap at lions in the toils, whose looks
Frighted them being free.'

It being understood that Doctor Adreen, a surgeon of much eminence, was in the neighbourhood, messengers were immediately despatched to fetch him, and his attention was called to the state of three combatants. The wounds of Major Swan, though numerous, were found not to be severe; but Mr. Ryan was in a situation that gave but little hope of recovery. When, on examining Lord Edward's wound, Adreen pronounced it not to be dangerous, his lordship calmly answered, 'I'm sorry for it.'

"In the desperate resistance which he made, Lord Edward had no other weapon than a dagger, and the number of wounds he is said to have inflicted with it on his two adversaries is such as almost to exceed belief. This dagger was given by Lord Clare, a day or two after the arrest, to Mr. Brown, a gentleman well known and still living in Dublin, who has, by some accident, lost it. He describes it to me, however, as being about the length of a large case-knife, with a common buck handle,—the blade, which was two-edged, being of a waved shape, like that of the sword represented in the hands of the angel in the common prints prefixed to the last Book of *Paradise Lost*."

Having been committed to Newgate, all access was denied to him till very near his death; but the following memoranda, in the handwriting of his brother, Lord Henry, supply some affecting information upon this melancholy period.

"Has he got fruit?—does he want linen? How will the death of R. (Ryan) affect him? What informers are supposed to be against him? Upon his pain subsiding, the hearing of Ryan's death (which he must have heard) caused a dreadful turn in his mind. Affected strongly on the 2d of June—began to be ill about 3. Clinch executed before the prison. He must have known of it—asked what the noise was. 2d of June, in the evening, was in the greatest danger. Mr. Stone, the officer that attended him, removed the 2d of June—could not learn who was next put about him. 2d of June, in the evening, a keeper from a mad-house put with him—but finding him better in the night, left him. June 3d, exhausted, but composed. 3d of June, wrote Chancellor a pressing letter to see E.* The answer of the Chancellor to the application here mentioned was as follows:—

From the Earl of Clare to Lord Henry Fitzgerald.

"Ely Place, June 3, 1798.

"My dear Lord,—Be assured that it is not in my power to procure admission for you to Lord Edward. You will readily believe that Lord Camden's situation is critical in the extreme. The extent and enormity of the treason which has occasioned so many arrests,

make it essentially necessary, for the preservation of the state, that access should be denied to the friends of all the persons now in confinement for treason. Judge, then, my dear lord, the situation in which Lord Camden will be placed, if this rule is dispensed with in one instance. Mr. Stewart has just now left me; and from his account of Lord Edward, he is in a situation which threatens his life. Perhaps, if he should get into such a state as will justify it, your request may be complied with; and, believe me, it will give me singular satisfaction if you can be gratified. You may rest assured that his wound is as well attended to as it can be. Yours always, truly, my dear lord,

'CLARE.'

We are glad to see, in another place, that while condemning his politics, Mr. Moore does justice to the generous conduct of Lord Clare towards Lord E. Fitzgerald; whose death we now describe from a letter from Lady Louisa Conolly to Mr. Ogilvie (the second husband of the Duchess of Leinster), Dublin, June 4, 1798.

"At two o'clock this morning, our beloved Edward was at peace; and, as the tender and watchful mercy of God is ever over the afflicted, we have reason to suppose this dissolution took place at the moment that it was fittest it should do so. On Friday night, a very great lowness came on, that made those about him consider him much in danger. On Saturday he seemed to have recovered the attack, but on that night was again attacked with spasms, that subsided again yesterday morning. But, in the course of the day, Mrs. Pakenham (from whom I had my constant accounts) thought it best to send an express for me. I came to town, and got leave to go, with my poor dear Henry, to see him. Thanks to the great God! our visit was timed to the moment that the wretched situation allowed of. His mind had been agitated for two days, and the feeling was enough gone, not to be overcome by the sight of his brother and me. We had the consolation of seeing and feeling that it was a pleasure to him. I first approached his bed: he looked at me, knew me, kissed me, and said (what will never depart from my ears), 'It is heaven to me to see you!' and, shortly after, turning to the other side of his bed, he said, 'I can't see you.' I went round, and he soon after kissed my hand, and smiled at me, which I shall never forget, though I saw death in his dear face at the time. I then told him that Henry was come. He said nothing that marked surprise at his being in Ireland, but expressed joy at hearing it, and said, 'where is he, dear fellow!' Henry then took my place, and the two dear brothers frequently embraced each other, to the melting a heart of stone; and yet God enabled both Henry and myself to remain quite composed. As every one left the room, we told him we only were with him. He said, 'That is very pleasant.' However, he remained silent, and I then brought in the subject of Lady Edward, and told him that I had not left her until I saw her on board; and Henry told him of having met her on the road well. He said, 'And the children too?—She is a charming woman;' and then became silent again. That expression about Lady Edward proved to me, that his senses were much lulled, and that he did not feel his situation to be what it was; but, thank God! they were enough alive to receive pleasure from seeing his brother and me. Dear Henry, in particular, he looked at continually with an expression of pleasure. When we left him, we told him that as he appeared inclined to

* Of this individual we copy some account from a letter of Lady Sarah Napier's, in 1788, after her husband's death: "She is a character, but it is noble, elevated, great, and not easily understood by those who level all down to common worldly rules. According to the observations you must have made, in reading and experience of characters, you will find her susceptible of all that belongs to a superior one. Uneven in strength of body and mind, she rises or sinks suddenly with illness and with affections. She launches out into almost ravings from her lively imagination,—sees things in too strong lights—cannot bear violent checks, but is soothed into reason by tenderness with ease. I know no human being more formed by your tender, patient perseverance to bring her poor distracted mind to composure; and your talents for cheerfully occupying her thoughts will, I doubt not, chime in with her natural youthful vivacity so well, as to give you full powers of consolation over her mind in due time."

sleep, we would wish him a good night, and return in the morning. He said, 'Do, do;' but did not express any uneasiness at our leaving him. We accordingly tore ourselves away; and very shortly after, Mr. Garnet (the surgeon that attended him for the two days, upon the departure of Mr. Stone, the officer that had been constantly with him) sent me word that the last convulsions soon came on, and ended at two o'clock; so that we were within two hours and a half before the sad close to a life we prized so dearly. He sometimes said, 'I knew it must come to this, and we must all go;' and then rambled a little about militia, and numbers; but upon my saying to him, 'It agitates you to talk upon those subjects,' he said, 'Well, I won't.' I hear that he frequently composed his dear mind with prayer,—was vastly devout, and, as late as yesterday evening, got Mr. Garnet, the surgeon, to read in the Bible the death of Christ, the subject picked out by himself, and seemed much composed by it. In short, my dear Mr. Ogilvie, we have every reason to think that his mind was made up to his situation, and can look to his present happy state with thanks for his release. Such a heart and such a mind may meet his God! The friends that he was entangled with pushed his destruction forward, screening themselves behind his valuable character. God bless you."

With this we should drop the curtain, but for a few particulars which we can hardly persuade ourselves to omit, though we cannot arrange them very consistently. They must pass as loose notes.

Mr. Moore, at page 10, vol. ii. favours his admirers (i. e. the public) with a statement of his age, viz. that in 1798 he had just turned his seventeenth year; so that our delightful lyriat must now count fifty. He further tells us, that his first essay as a writer in prose was in the "Press newspaper,"—a journal which had been in the year 1797 established in Dublin, for the express purpose of forwarding the views of the Union, and of which Mr. O'Connor had lately become the avowed editor. In this newspaper," he says, "the author of the present memoir confesses to have made his first essay as a writer of prose; and among those extracts from its columns which are appended to the report of the secret committee, for the purpose of shewing the excited state of public feeling at that period, there are some of which the blame or the merit must rest with an author who had then but just turned his seventeenth year."

Of fashionable society in Dublin, the following naive trait is furnished by Lord E. F. (1792.)

"I have dined by myself, and intended giving up the evening to writing to you, but have had such a pressing invitation from Mrs. * * * to sup that I cannot refuse. I hope it is to make up a quarrel which she began the other night, because I said I thought she was cold. I find it is the worst thing one can say of a Dublin woman:—you cannot conceive what an affront it is reckoned."

As the politico-satirical powers of Mr. Moore were bitterly exercised upon our late King, we think the subjoined quotations relating to his Majesty must excite considerable interest. Mr. M. has just mentioned the execution of Lord E. F.'s will in Newgate, and he adds:

"During this painful interval, the anxiety of Lord Edward's friends in England was, as the following letters will shew, no less intense and active. The letter from the late King will be found to afford an amiable instance of that sort of good-nature which formed so astonishing an ingredient in his character. While,

with the world in general, it seems to be a rule to employ towards living kings the language only of praise, reserving all the license of censure to be let loose upon them when dead, it is some pleasure to reverse this safe, but rather ignoble policy, and, after having shocked all the loyal and the courtly by speaking with more truth than prudence of his late Majesty when living, to render justice now to the few amiable qualities which he possessed, at a time when censure alone is heard, over his grave, from others. Seldom, indeed, were the kindlier feelings of George the Fourth more advantageously exhibited than on the subject of Lord Edward Fitzgerald,—not only at the time of which we are speaking, when, on his first interview with the afflicted mother of his noble friend, he is said to have wept with all the tenderness of a woman in speaking of him, but at a much later period, when it was in his power, as monarch, to perform an act of humane justice towards Lord Edward's offspring, which, both as monarch and man, reflects the highest honour upon him."

The letter follows:

From his Royal Highness, George, Prince of Wales, to William Ogilvie, Esq.

"Carlton-house, June 6, 1798.

Three quarters past 5, p. m.

"I feel so truly for the duchess and the unfortunate Edward, that I am sure there is nothing in the world I would not attempt to mitigate the pangs, which I am afraid but too much distress her grace at the present dreadful crisis. I would, were I in the habit of so doing, most undoubtedly write to Lord Clare; though, even were that the case, I should hesitate as to the propriety of so doing, thinking that such an application to the Chancellor might be subject to misconstruction, and consequently detrimental to Lord Edward's interests. But I have no hesitation in allowing you to state to his lordship how much pleased I shall be, and how much I am sensible it will conciliate to him the affections of every humane and delicate mind, if every opportunity is given to poor Lord Edward to obtain an impartial trial, by delaying it till his state of health shall be so recruited as to enable him to go through the awful scene with fortitude;" and until the minds of men have recovered their usual tone, so absolutely necessary for the firm administration of justice. This, my dear sir, I have no scruple to admit of your stating in confidence, and with my best compliments to the lord chancellor. My long and sincere regard for both the Duchess and the Duke of Leinster would have naturally made me wish to exert myself still more, were I not afraid by such exertion I might do more harm than good. Excuse this scrawl, which I pen in the utmost hurry, fearing that you may have left London before this reaches Harley-street. I am, dear sir, with many compliments to the duchess, very sincerely yours,

GEORGE P."

The benevolent sequel to this humane and illustrious conduct was the reversal of the attainder of Lord E. Fitzgerald, in 1819, and the provision for his son by a commission in the Tenth Hussars. Reflecting on these noble actions, will it be thought that Mr. Moore's introductory remarks, balancing between the living and posthumous abuse of George IV., do justice to his character? All we shall say is, that our meed would have been warmer. But we must conclude. Having chiefly taken

* "It will be seen, by a subsequent letter, that the Duke of York exerted himself with such zeal, on this point, that he succeeded in obtaining the royal consent to a delay of the trial."

up events, we should state, that though of slight public consequence, most of the correspondence in these volumes is delightful reading; and that a fine portrait of Lord E. F., by Hamilton, engraved by Dean, adorns the work. We rise from its perusal with a mixture of pain and sorrow; for, after all the hues thrown upon its subject by the kindly and glowing pen of the biographer, it is lamentable to contemplate a high-minded and generous young man, deeply imbued with the best social affections, so utterly torn from his true sphere in the rank of gallant soldiers, and the enjoyment of refined pleasures, as to die in a dungeon, a death of suffering and disgrace, a murderer and a traitor.

The Club-Book: being original Tales, &c.

Edited by the Author of "The Dominic's Legacy." 3 vols. 12mo. London, 1831.

Cochrane and Pickersgill.

THERE are some of these tales with which we will not march through Coventry; that's flat. We have no objection at all to the leader of the company, James, whose "Bertrand de la Croix" is worthy of the author of *Richelieu*, *Darnley*, and *De l'Orme*: it is a very spirited story, in the compass of a hundred pages. Neither do we object to companionship with Tyrone Power's "Gipsy of the Abruzzo;"—we only wonder where the deuce our clever comedian has got all his acquaintance with Italian scenery and manners. We should like to go to the same fountain for information's sake. But we will not say so much for our next grenadier comrade, Galt, who seems to have emptied his knapsack of its least valuable contents for this expedition. The "Unguarded Hour" is the very old anecdote of a murderer surprised into a confession of guilt, by the judge leading him to suppose the ghost of the murdered is coming. Of "The Painter," we dislike the incident much; besides, it is one of his dramas turned into prose. The "Book of Life" has appeared in Blackwood; and "Haddad-ben-Ahab" is an eastern apologue, in which we delight not. "The Fatal Whisper" is the best. Mr. Moir, the Delta of Blackwood, has, under the title of "The Bridal of Borthwick," expanded into a prose narrative a very stirring ballad, which he found in Ellis's *Specimens*, and which he has by no means improved. The Ettrick Shepherd's "Laidlaws" is without any thing particular to recommend it; and his "Bogle of the Brae" has no magic, except its lantern. "The Deer Stalkers" and "The Three Kearneys," by the editor, Picken, are but dull and mediocre; and "The Cheatrix Packman," by Leitch Ritchie, is neither new nor captivating. "Gowden Gibbie," by Allan Cunningham, promises more of whim and character at its outset than is fulfilled in its performance. It is a great evil in modern, and particularly in periodical literature, that articles are often executed to measure,—the order is for three volumes, a sheet, or so many pages, and no matter what the intrinsic nature of the material, it must be *pro-Crusted* accordingly. In the midst of the prose, the staple of these volumes, and so much of it from Scotch hands, we have, we were going to say, the relief of some poetry by an English Lord, F. Leveson Gower; but it is only some pieces of the romantic play of *Hernani*, done from the French into our own language in a very task-like manner.

Resembling the *Annuals* in its composition, the variety of the *Club-Book* will, however, recommend it to every class of readers, who read for amusement; for though, as we have truly stated, some of its parts are but level,—as a

whole, it is well deserving of that popularity which must be the extent of its claim, viz. a circulation of some three thousand copies. That we may do our *possible* towards accelerating this consummation, we will quote one of the stories entire; and it is very natural that we should select the one entitled "The Sleepless Woman," by William Jerdan. For this writer we can have no predilection; and indeed we are so little acquainted with any original performances of his (for we understand he is a mere hack critic, who, as we gather from the continual censures and abuse of a dozen or two of superior but unsuccessful periodicals, scribbles for booksellers; and, what is most extraordinary, though universally esteemed by the public, without the talent to give satisfaction to any of these contemporaries), that it is the novelty, and not the merit of the thing, which tempts us, in this instance, to honour him with our notice. The idea seems to be fanciful: we should like to know whence it sprung; but that is impossible, and we must take it as we find it. We presume nobody will dispute our grave right to this particular mode of criticism: if they do, we can only pun in our defence, that it is Joking a-Part.

"Heavily set in massive brass, whose rich and ingenious carving was tarnished and dull, a ponderous lamp swung from a ceiling blackened by its smoke. Every thing in the room spoke of time, but of time that had known no change. Knights, whose armour was, at the latest, of two centuries back—ladies, in dresses from which their descendants started in dismay—looked out from the discoloured tapestry; and the floor, dark with age, added to the gloom. Beside the hearth, whose fire, from the rain beating down the huge chimney, burnt every moment dimmer, sat two old domestics. The man in a scarlet gown, and a belt, from which hung a heavy bunch of keys, was the seneschal; and opposite was his wife, in a brown silk dress, and a string of ebony beads, which she was busily employed in counting. Between them was a small antique oak table, where a flask and two bell-mouthed glasses appeared temptations which, it must be owned, somewhat interrupted the telling of the beads. In the centre of the chamber stood an immense hearse-like bed; the purple velvet curtains swept to the ground, and at each corner drooped a large plume of black ostrich-feathers. On this bed lay a little withered old man, apparently in the last extremity of age, and very close upon the border of death. His spare form was hidden in an ample black robe, fastened round the waist with a white girdle, on which were graven strange characters in red; and on his breast was a white square, covered with stars and signs wrought in gold. The old man's face was ghastly pale, and rendered yet paler by the contrast of his black scull-cap, which was drawn down even to his gray and shaggy eyebrows. But the features were restless; and the small keen eyes, though fast losing their brightness, were full of anxiety. The wind shook the tall narrow windows, and howled in the old trees of the avenue; at every fresh gust, the baron's impatience seemed to increase—for what we are telling relates to the Baron de Launaye. 'Tis a rough night,' muttered he; 'but Adolphe is as rough a rider—and a dangerous road; but I am the first De Launaye who ever drew bridle for that. And then my summons—it was sure to reach him; ay, though alone, in the midnight howl of the mistress whose name and his suspicion had never coupled together even in a dream—even though consciousness were

drowned in the crimson flowing of the wine—though sleeping as men sleep after battle, pillowed on the body of their deadliest enemy, or of their nearest and dearest friend—my summons would be borne on his inmost soul. But will he come, at the bidding of his dying uncle?—will Adolphe, he, the only human being whom I ever loved—will he or will he not come?' The question was answered even at the moment it was breathed. The horn at the castle-gate was blown impatiently—the fall of the drawbridge was heard—a moment's pause, and a light foot sprang up the oaken staircase with all the speed of haste and youth. The door opened, and in rushed a young cavalier. The white plumes of his cap were drenched with wet—the diamond clasp that fastened them was dim with damp—but his bright auburn hair glistened with the rain-drops. Hastily flinging his riding cloak, heavy with moisture, to the ground, the stranger sprang to the bedside. A gleam of human love, of human joy, passed over the old man's face, as, tenderly and gently, his nephew asked of his tidings, and expressed such hopes as affection hopes when hope there is none. 'Child of my love,' murmured the dying baron, 'for whose sake only I have ever given one thought to the things of earth, bear yet a moment with the feeble wretch who but a brief while will stand between you and the title of your ancestors and wealth. Many a prince of your mother's house would think his kingdom overpaid if purchased by its half. You are young—I never was—my heart, even in boyhood, was old with premature knowledge. You have that beauty, the want of which has made my life a curse—you have that strength of body, the want of which has paralysed my strength of mind. I have doubted if happiness dwells on this evil earth—I will not doubt, when I hope for yours. You will hear me called necromancer: out on the base fools who malign that which they understand not, and would bring down the lofty aim of science, the glorious dream of virtue, to their own low level! You will hear me called miser: Adolphe, have you ever found me so?' 'My father—my more than father!' passionately exclaimed the young man, hiding his face on the pillow, as if ashamed of the violence of mortal grief, in the presence of one so soon to be immortal. 'Adolphe,' continued his uncle, 'you have heard, though not from me—for I sought not to weigh down your ardent mind with all that has pressed upon me with the burden of hopelessness, and long has the knowledge been mine—that the fetters of clay are too heavy for the spirit. Your young hand was fitter for the lance than the crucible; and the bridle-rein would have been ill exchanged for the lettered scroll. But something I know of that future, into which even the sage can look but dimly. Adolphe, the only question I asked was for thee! Alas! the vanity of such wisdom! It has told of danger that menaces, but not of the skill that avoids. My child, evil came into the world with woman, and in her is bound up the evil of your destiny. Vain as the glance they throw on the polished steel of their mirror—false as the vow they make for the pleasure of breaking—inconstant as the wind, which changes from point to point, and for whose change no philosophy hath ever discovered a cause: shun them, Adolphe, as you would disloyalty to your king, flight from your enemy, or falsehood to your friend.' The old man's voice became inaudible, and his head sank on Adolphe's shoulder:—'Margarita, water—or, Jacques, give me the wine.' The youth tried to pour

a few drops into the baron's mouth. The dying man motioned back the glass, and, looking in the cavalier's face with a strong expression of affection and anxiety, muttered something of 'woman' and 'danger'—'bright,' 'eyes,' 'bright,' 'beware'—these were his last broken words. He expired. Contrary to the charitable expectations of his neighbours, the Baron de Launaye was buried with all the rites of the church; the holy water was sprinkled on the corse, and the holy psalm sung over the coffin. A marble tablet marked his grave; and there the moonlight slept as lovingly as ever it did on the sinless tomb of saint or martyr. The new Baron de Launaye lamented his uncle's death in a very singular manner, for he was his heir—and the young and the rich have not much time for regret. But Adolphe (he was remarkable from a child for his memory) could not forget the kindness—and more than kindness—the love that his uncle had lavished on the little orphan, who noble and pennyless at the age of five years, was left dependent on his bounty. However, sorrow cannot—indeed nothing in this world can—last for ever. Adolphe's grief became first only sad; next, melancholy; thirdly, calm; and, fourthly, settled down into a respectful remembrance, and a resolve to bear his uncle's last words in mind. Indeed, the muttered, vague, and uncertain prediction quite haunted him. 'I am sure,' said he, in one of his many pondering moods, 'I am sure my past experience confirms his words. I never got into a scrape but a woman was the cause. I had been in my outset at court, page to the Duke Forté d'Imhault, and, gone with him on that splendid embassy to Russia, had he not been displeased with my awkwardness in fastening the duchess's sash!' And he laughed as he said this: who in the world could guess why the loss of his appointment should make the young baron laugh! 'And then, who caused the duel between me and my Pylades, the Marquess de Lusignan, but that little jilt, Mlle. Laure? However, my sword only grazed his arm: he wore an exquisite blue silk scarf, and we were better friends than ever. Oh, my uncle was right: women were born to be our torment.' Still was this conviction impressed on his mind like a duty. Yet he could not help thinking that a few bright eyes would light up the old hall better than the huge brazen lamps which now served to make darkness visible. From thinking of the pleasantness of such an illumination, he began to think of its difficulties; and the difficulties of the project soon referred only to the place. One thought suggests another; and from thinking how many obstacles opposed the introduction of bright eyes and sweet smiles into the castle, he arrived at the conclusion, how easily they were to be obtained in other parts. To say the truth, Paris became daily more familiar to his mind's eye; and, as he justly observed, staying at the dull old castle could do his uncle no good, and he was quite sure it did himself none. Now, in spite of philanthropy, people are not so very fond of doing good gratuitously; but, to be sure, such doctrines were not so much discussed in those days as they are in ours, though the practice was about the same. Sometimes he argued with himself, 'it is as well to be out of harm's way';—and the prediction and a cold shudder came together. But we are ready enough to dare the danger we do not know; and though a few years of Parisian life had placed the nephew's early on a level with the uncle's late experience, touching the evil inherent in womanhood, nevertheless

Adolphe supposed their bad qualities might be borne, at all events, better than the dullness of the château de Launaye. One day riding with his bridle on his horse's neck, meditating whether his next ride should not be direct to Paris, a most uncommon spectacle in that unfrequented part of the country attracted his attention. This was a large lumbering coach, drawn by six horses, whose rich harness and housings bore the crest in gold—a lynx rampant. A very natural curiosity, (by the by, all curiosity is natural enough), made him look in at the window. Was there ever a face half so beautiful as that of the girl who, like himself, actuated by natural curiosity, looked out as he looked in? The black silk wimple was drawn over her head, but allowed a very red upper lip—an exquisite Grecian nose—and a most brilliant pair of eyes, to be seen. Our young cavalier sat as if he had been stupefied. This is a very common effect of love at first. It goes off, however,—so it did with Adolphe. His first act on recovering his senses was to gallop after the coach. He spurred on, and caught a second glance of the most radiant orbs that ever revolved in light. Large, soft, clear, and hazel, as those of a robin—they were bright and piercing as those of a falcon. Certainly De Launaye had never seen such eyes before, or at least none that ever took such an effect upon him. He ate no dinner that day—walked by moonlight on the terrace—and the only thing which excited his attention was the seneschal's information, that the Marquise de Surville and her grand-daughter were come to stay for some months at their château. 'They could not have done that in the late baron's time—the Lord be good unto his soul!' And the old man forthwith commenced the history of some mysterious feud between the two families, in which the deceased Baron Godfred had finally remained victor. To this tedious narrative of ancient enmities, Adolphe was little inclined to listen. 'A name and an estate are all our ancestors have a right to leave behind them. The saints preserve us from a legacy of their foes! Nothing could be worse,—except their friends.' The next morning the baron arranged his suit of sables with unusual care, though it must be confessed he always took care enough. 'Pray Heaven the marquise may be of my way of thinking respecting the quarrels of our forefathers! Some old ladies have terrible memories,' were Adolphe's uppermost ideas as he rode over the draw-bridge at the Château de Surville, which had been promptly lowered to his summons—their only neighbour, he had thought it but courteous to offer his personal respects. How much more cheerful did the saloon, with its hangings of sea-green silk, worked in gold, seem than his own hall, encumbered with the dusty trophies of his ancestors. To be sure, the young baron was not at that moment a very fair judge; for the first thing that met him on his entrance was a glance from the same pair of large bright eyes which had been haunting him for the last four and twenty hours. The grandmother was as stern a looking old gentlewoman as ever had knights in armour for ancestors: still, her eyes, also bright, clear, and piercing, somewhat resembled those of her grand-daughter. On the rest of her face time had wrought 'strange disfigurements.' She was silent; and, after the first compliments, resumed the volume she had been reading on the baron's appearance. It was a small book, bound in black velvet, with gold clasps, richly wrought. Adolphe took it for granted it was her Breviary; and inwardly concluded how respectable is that piety in an

old woman which leaves the young one under her charge quite at liberty! The visitor's whole attention was soon devoted to the oriel window where sat the beautiful Clotilde de Surville. The Baron de Launaye piqued himself on fastidious taste in women and horses: he had had some experience in both. But Clotilde was faultless: there she leant, with the splendour of day full upon her face; it fell upon her pure complexion like joy upon the heart; and the sunbeams glittered amid the thick ringlets till every curl was edged with gold. Her dress alone seemed capable of improvement; but it is as well to leave something to the imagination, and there was ample food for Adolphe's, in picturing the change that would be wrought upon Clotilde by a Parisian milliner. 'This comes,' thought he, 'of being brought up in an old German castle.' For very shame he at last rose; when, with a grim change of countenance, meant for a smile, the marquise asked him to stay dinner. It is a remark not the less true for being old (though now-a-days opinions are all on the change), that love-making is a thing 'to hear, and not to tell.' We shall therefore leave the progress of the wooing, and come to the *dénouement*, which was the most proper possible, viz. marriage. Adolphe had been the most devoted of lovers, and Clotilde had given him a great deal of modest encouragement; that is, her bright eyes had often wandered in search of his, and the moment they had found them, had dropped to the ground; and whenever he entered the room, a blush had come into her cheek, like the light into the pearl, filling it with the sweet hues of the rose. Never did love-affair proceed more prosperously. The old seneschal was the only person who grumbled. He begged leave to remind the young baron, that it was not shewing proper respect to his ancestors not to take up their quarrels. 'But things are altered since the days when lances were attached to every legacy,' returned Adolphe. 'We are altering every thing now-a-days,' replied the old man; 'I don't see, however, that we are a bit the better off.' 'I, at all events, expect happiness,' replied his master, 'in this change of my condition.' 'Ay, ay, so we all do before we are married: what we find after, there is no use in saying, for two reasons; first, you would not believe me; secondly, my wife might hear what I'm telling.' 'Ah!' exclaimed the young baron, 'the caution that marriage teaches! If it were only for the prudence I should acquire, it would be worth my while to marry.' 'Alas! rashness never yet wanted a reason. My poor young master! the old marquise and her dark-eyed grand-daughter have taken you in completely.' 'Taken me in!' ejaculated De Launaye, angrily; 'why, you old fool, were this a mere match of interest, I might thank my stars for such a lucky chance. Young, beautiful, high-born, and rich, Clotilde has but to appear at the court, and insure a much higher alliance than mine. What motive could they have?' 'I do not know; but when I don't know people's motives, I always suppose the worst,' replied the obstinate dominique. 'Charitable!' laughed his master. 'And besides,' resumed the seneschal, 'the old marquise plagued her husband into the grave; and I dare say her grand-daughter means to do as much for you.' 'A novel reason, at all events, for taking a husband,' said De Launaye, 'in order that you may plague him to death afterwards.'—Well, the wedding-day arrived at last. De Launaye could have found some fault with his bride's costume, but for her face. There was

a stiffness in the rigid white satin, and the ruff was at least two inches too high—indeed, he did not see any necessity for the ruff at all; they had been quite out, some years, at Paris. However, he said nothing, remembering that a former hint on the subject of dress had not been so successful as its merits deserved. He had insinuated, and that in a compliment too, a little lowering of the ruff before, as a mere act of justice to the ivory throat, when Clotilde had rejoined, answering in a tone which before marriage was gentle reproof (a few months after, it would have sounded like reproach), that she hoped 'the Baron de Launaye would prefer propriety in his wife to display.' The sense of the speech was forgotten in its sentiment; a very usual occurrence, by the by. However, the bride looked most beautiful; her clear, dark eyes swam in light—the liquid brilliancy of happiness—the brightness, but not the sadness, of tears. The ceremony was over, the priest and the marquise had given their blessings; the latter also added some excellent advice, which was not listened to with all the attention it deserved. The young couple went to their own castle in a new and huge coach, every one of whose six horses wore white and silver favours. Neighbours they had none, but a grand feast was given to the domestics; and dominique, at his master's express orders, broached a pipe of Bourdeaux. 'I can't make my vassals,' said De Launaye, 'as happy as myself; but I can make them drunk, and that is something towards it.' The day darkened into night; and here, according to all regular precedents in romance, hero and heroine ought to be left to themselves; but there never yet was a rule without an exception. However, to infringe upon established custom as little as possible, we will enter into no details of how pretty the bride looked in her nightcap, but proceed forthwith to the baron's first sleep. He dreamt that the sun suddenly shone into his chamber. Dazzled by the glare, he awoke, and found the bright eyes of his bride gazing tenderly on his face. Weary as he was, still he remembered how uncourteous it would be to lie sleeping while she was so wide awake; and he forthwith roused himself as well as he could. Many persons say they can't sleep in a strange bed; perhaps this might be the case with his bride: and in new situations people should have all possible allowance made for them. They rose early the following morning, the baroness bright-eyed and blooming as usual, the baron pale and *abat*. They wandered through the castle: De Launaye told of his uncle's prediction. 'How careful I must be of you!' said the bride, smiling: 'I shall be quite jealous.' Night came, and again Adolphe was awakened from his first sleep by Clotilde's bright eyes. The third night arrived, and human nature could bear no more. 'Good God, my dearest!' exclaimed the husband, 'do you never sleep?' 'Sleep!' replied Clotilde, opening her large bright eyes, till they were even twice their usual size and brightness. 'Sleep!—one of my noble race, sleep? I never slept in my life.' 'She never sleeps!' ejaculated the baron, sinking back on his pillow in horror and exhaustion. It had been settled that the young couple should forthwith visit Paris—thither they at once proceeded. The beauty of the baroness produced a most marvellous sensation, even in that city of sensations. Nothing was heard of for a week but the enchanting eyes of the Baroness de Launaye—a diamond necklace of a new pattern was invented in her honour, and called *aux beaux yeux de Clotilde*. 'Those

eyes,' said a prince of the blood, whose taste in such matters had been cultivated by some years of continual practice, 'those eyes of Mde. de Launaye will rob many of our young gallants of their rest.' 'Very true,' briefly replied her husband. Well, the baroness shone like a meteor in every scene, while the baron accompanied her, the spectre of his former self. Sal-low, emaciated, every body said he was going into a consumption. Still, it was quite delightful to witness the devotedness of his wife—she could scarcely bear him a moment out of her sight. At length they left Paris, accompanied by a gay party, for their château. But brilliant as were these guests, nothing distracted the baroness's attention from her husband, whose declining health became every hour more alarming. One day, however, the young Chevalier de Ronsarde—he, the conqueror of a thousand hearts—the besieger of a thousand more—whose conversation was that happy mixture of flattery and scandal which is the *beau ideal* of dialogue,—engrossed Mde. de Launaye's attention; and her husband took the opportunity of slipping away unobserved. He hastened into a gloomy avenue—the cedars, black with time and age, met like night, overhead, and far and dark did their shadows fall on the still and deep lake beside. Worn, haggard, with a timorous and hurried, yet light step, the young baron might have been taken for one of his own ancestors, permitted for a brief period to revisit his home on earth, but invested with the ghastliness and the gloom of the grave. 'She never sleeps!' exclaimed the miserable Adolphe—"she never sleeps! day and night her large bright eyes eat like fire into my heart." He paused, and rested for support against the trunk of one of the old cedars. 'Oh, my uncle, why did not your prophecy, when it warned me against danger, tell me distinctly in what the danger consisted? To have a wife who never sleeps! Dark and quiet lake, how I envy the stillness of your depths—the shadows which rest upon your waves!' At this moment a breath of wind blew a branch aside—a sunbeam fell upon the baron's face; he took it for the eyes of his wife. Alas! his remedy lay temptingly before him—the still, the profound, the shadowy lake. De Launaye took one plunge—it was into eternity. Two days he was missing—the third his lifeless body floated on the heavy waters. The Baron de Launaye had committed suicide, and the bright-eyed baroness was left a disconsolate widow. Such is the tale recorded in the annals of the house of De Launaye. Some believe it entirely, justly observing, there is nothing too extraordinary to happen. Others (for there always will be people who affect to be wiser than their neighbours) say that the story is an ingenious allegory—and that the real secret of the Sleepless Lady was jealousy. Now, if a jealous wife can't drive a man out of his mind and into a lake, we do not know what can!"

Had we written this story, we should certainly have made it end very differently; but we dare say the author was obliged to finish it as his employers dictated,—one of the miseries of a corrupt and servile press. Had Adolphe returned with the proper spirit of a husband, and, justly exercising his marital authority, forced his wife to shut her eyes, there would have been a good moral to command our eulogium: as it is, we fear the tale can only operate as an encouragement to women to keep their eyes open to the doings of the other sex, to pry into their most private actions with unceasing watchfulness, and to drive them heaven

knows into what, by a "sleepless" supervision, not to be borne even by the most innocent and most loving.

The Library of Agricultural and Horticultural Knowledge. 8vo. pp. 509. London, 1831. Baxter.

THIS Library, or, more properly speaking, Dictionary of Agricultural and Horticultural Knowledge, is founded upon a work entitled *Gleanings in Agriculture*, and has, in its present improved condition, received the assistance of several gentlemen of scientific attainments. Notwithstanding this, it bears the characteristics rather of a plain practical work, than one of extensive details or great research, and is on these points inferior to the similar publications of Mr. Loudon. As the work is alphabetically arranged, *Acre* is the first subject treated of; but since the value of this must depend on the nature of the soil, we turn over to that article in search of our author's elementary and theoretical notions on agriculture. Here he could hardly run into error, the details being mostly derived from Sir Humphry Davy's comprehensive work, though much has been done since that time; and as an incomplete article has been admitted, "on the connexion of geology, or the influence of the mineralogical characters, and superposition of rocks, on the nature and value of soils," we may remark, that this subject has now attained a very high degree of perfection, from the attention paid to it, more especially by German agriculturists; and that it is not to be passed over, as is the case in most of our elementary works, as a mere matter of curiosity and speculation, but should, as has long been done by Dr. Coventry, the learned professor of agriculture in the University of Edinburgh, form the basis of all practical precepts on the management and cultivation of lands.

It may be remarked of a mere practical agriculturist, that however valuable the facts with which experience has made him acquainted, he always brings these into their wrong places, and as naturally deduces wrong inferences from them. It is like treating the diseases of the human body without a knowledge of its structure. And then the method used to convey information is reversed,—the one constantly labouring at the accumulation of facts, that is to say, certain results produced; while the other brings these facts to bear upon certain leading and established principles, or deduces these principles from them,—and the system which results from such a method of proceeding, saves repetition, time, and labour. As applied to agriculture, should such principles, founded on a study of climate, soil, or vegetation, be sometimes erroneous, they must still be always useful to the student, as, by systematising the facts and principles, they assist the memory, and give to the mind the useful and intellectual character of being able to distinguish a series of similar consequences and results, and group the facts in the same order that the practical cultivator would his plants or hot-beds. We will explain ourselves by a single reference. "The best natural soils," says the author, "are those of which the materials have been derived from different strata, which have been divided by air and water, and are intimately blended together; and in improving soils artificially, the farmer cannot do better than imitate the processes of nature." Now the influence of rocks on agriculture is very complicated, and is to be referred to proximate and remote causes, and to direct and indirect influences; and these, though numerous, are indispensable

to be known, as they comprise inquiries into the volume of the soil, the structure and compactness of the rock, the fissures and inclination, the retention of water, the condition with regard to caloric, and the disintegration, changes in aggregation, and changes in nature; and by a knowledge of these facts alone can we be made acquainted with the proper means of treating soils and improving their condition. In another part of the work, Mr. Johnson asserts that geology is of no immediate benefit to the cultivator of the soil; while we could prove that the knowledge given by an acquaintance with that science, at least the practical part, is indispensable to every agriculturist. Certain it is that he may obtain this knowledge empirically from experience; but this cannot afford a groundwork for new operations in novel situations, or teach the proper method of proceeding where the circumstances are changed; to which fact we must often trace the despondency of an agricultural emigrant, or the misrepresentations of a Swan River settler. Although England ranks as the best agricultural kingdom in the world in respect to the talent displayed in tillage, her skill might have raised her in the estimation of neighbouring nations still higher, had the experience of past ages been reduced to scientific rules. Indeed, most farmers in the country are adverse to any knowledge that is not to be gained by experience, as if their own farms, or the circumscribed field of their own observation, contained all the varieties of climate, soil, and rock, which are to be met with in the British islands, or required for tillage an acquaintance with all the elements of the science of agriculture. The work before us is a proof that the theory of this great source of national prosperity is only studied by amateur farmers; for the articles on agricultural chemistry, on vegetable chemistry, and physiology, and most of the botanical articles, are furnished by gentlemen whose labours have long been appreciated by the public; and under these circumstances, and from the local auspices under which the book makes its appearance, we have no doubt of its very general and well-deserved success.

Croker's Boswell's Johnson.

[Conclusion.]

HAVING devoted so full a proportion of several of our *Gazettes* to this popular work, thus, we are sure, carrying much gratification to our distant and foreign readers, though the volumes are now familiar to the country at home, we shall very briefly conclude our review, and leave it to its own attractions.

"Dr. Johnson's monument (says Malone), consisting of a colossal figure leaning against a column (but not very strongly resembling him), has, since the death of Mr. Boswell, been placed in St. Paul's cathedral, having been first opened to public view February 23, 1796. The epigraph was written by the Rev. Dr. Parr, and is as follows:

A. J. JOHNSON
GRAMMATICUS ET CRITICUS
SCRIPTORVM · ANGLICORVM · LITTERARVM · PERITO
POETAE · LVMINIBVS · SENTENTIARVM
ET · PONDERIBVS · VERBORVM · ADMIRABILI
MAGISTRO · VIRTVTIS · GRAVISSIMO
HOMINI · OPTIMO · ET · SINGVLARIS · EXEMPLI
QVI · VIXIT · ANN · LXX · MENS · II · DIES · XVII ·
DECESSIT · IDIB · DECEMBER · ANN · CHRIST ·

H · M · FACI · VNO · CVRAVER ·

On a scroll in his hand are the following words:
ENNAKAPEZZIIONNANTASIOZEIHAMOIBH

On one side of the monument:

VACIBAT JOHANNES BACON, SCULPTOR, ANN. CHRIST.
M.DCC.LXXV.

Upon which Mr. Croker remarks:

"It is to be regretted that the committee for erecting this monument did not adhere to the principles of the *round robin*, on the subject of Goldsmith's epitaph, and insist on having the epitaph to Johnson written in the language to which he had been so great and so very peculiar a benefactor. The committee of subscribers, called curators, were Lord Stowell, Mr. Burke, Mr. Windham, Sir Joseph Banks, Mr. Metcalf, Mr. Boswell, and Mr. Malone. Mr. Metcalf, Mr. Burke, and Sir Joseph, had signed the *round robin*; but it may be presumed that Dr. Johnson's preference of a Latin epitaph, so positively pronounced on that occasion, operated on their minds as an expression of what his wishes would have been as to his own. It seems, however, to the editor the height of bad taste and absurdity to exhibit Dr. Johnson in St. Paul's cathedral in the masquerade of a half-naked Roman, with such pedantic and, to the passing public, unintelligible inscriptions as the above. The following is a close translation:

Alpha Omega.
TO SAMUEL JOHNSON,
A grammarian and critic,
Of great skill in English literature;
A poet admirable for the light of his sentences
And the weight of his words;
A most effective teacher of virtue;
An excellent man, and of singular example,
Who lived 75 years, 2 months, 14 days,
He died in the ides of December, in the year of Christ
MDCCCLXXIV.
Was buried in the church of St. Peter's, Westminster,
The 13th of the kalends of January, in the year of Christ
MDCCCLXXIV.
His literary friends and companions,
By a collection of money,
Caused this monument to be made.

The reader will not, of course, attribute to the original all the awkwardness of this almost literal version; but he will not fail to observe the tedious and confused mode of marking the numerals, the unnecessary repetition of them, and the introduction of *names* and *ideas*, all of which are, even on the principles of the lapidarian scholars themselves, clumsy, and, on the principles of common sense, contemptible. Thirty-four letters and numerals (nearly a tenth part of the whole inscription) are, for instance, expended in letting posterity know that Dr. Johnson was buried in the same month of the same year in which he died. The Greek words, so pedantically jumbled together on the scroll, are an alteration by Dr. Parr of a line of Dionysius, the geographer, with which Johnson has closed the Rambler. It seems, that in deference to some apprehensions that the dean and chapter of St. Paul's might think the *Abon* is *μακαρίων ἀνθρώπων ὡς ἀμύθη*—from the blessed gods may he receive his merited reward—somewhat heathenish, Dr. Parr was persuaded to convert the line into 'Εὖ μακαρίων ἀνθρώπων ὡς ἀμύθη—may he receive amongst the blessed the merited reward of his labours. The reader who is curious about the pompous inanities of literature, will find at the end of the fourth volume of Dr. Parr's works, ed. 1828, a long correspondence between Parr, Sir Joshua Reynolds, Malone, and other friends of Dr. Johnson, on the subject of this epitaph. He will be amused at the burlesque importance which Parr attaches to epitaph-writing, the tenacity with which he endeavoured to describe Dr. Johnson, with reference to his poetical character, as *poeta probabilis*, and his candid avowal, that in the composition he was think-

ing more of his own character than Dr. Johnson's."

A list of the numerous portraits of Johnson is given in the Appendix; and five engravings adorn this publication, the one prefixed to Vol. IV. being a laughable caricature likeness of Boswell, from a sketch by Lawrence.

We have only to add, that a faithful and well-digested index much enhances the value of this excellent publication.

Pearce's Abyssinian Travels.

[Fourth Notice.]

CONTINUING our review, the behaviour of one of the kings at seeing an organ, brought by Mr. Salt, is whimsically painted.

"The organ, which Mr. Coffin had just begun to turn, next took his attention; he stood several minutes looking at it, at last went close to it, looked at the inside, and appeared quite lost in contemplation. 'I hear it breathe,' said he, several times; and as, upon putting his ear close, he could hear a hiss now and then, occasioned by there being a small hole in the leather on one side of the bellows, he cried out, 'By St. Michael, there is a snake in it! I hear it plainly;' and quickly drawing back, he exclaimed, 'Such a thing, which contains a devil, cannot be fit for a church.' Allcar Barhe, the high priest, standing close by, said, 'Ganvar, I beg your pardon, it is an angel, not a devil; our church has not suffered in any way since it came into it, but, on the contrary, has rather increased in prosperity. Ito Pearce has opened the whole before the *carmort* (congregation of priests), and all are of opinion that nothing but the wisdom of man, such as God gave unto Solomon, had made it;' and he added, 'Abuna Comfu told us that he saw one in the church of St. Paulos and Petros, in Rome, as large as twenty of this.'"

We have also a curious account of buffoons.

"At dinner Tottamasey began by pretending he had really seen the Amhara in their fright; he put on such pitiable looks and dying postures, mimicking the Amhara who thought themselves dead when they fell, that the ras could scarcely taste a morsel all the time for laughing at the buffoon and the numerous chiefs who were sitting about him with their mouths full, staring and affecting the motions of Tottamasey. This personage is very old, but a remarkably lively man, and was the head harlequin to Ras Michael. The governors of the provinces commonly keep several persons of this kind, to divert them at feasts and upon holidays, and they have the income of a district allowed them for their maintenance. They are in general good poets, and run or ride before their chief when going from or to war, descanting in poetry, and in a loud voice, to the chief and his troops, upon the reward of bravery; the redemption of the sins of a soldier, who dies in the presence of his master in the field of glory; the curse which God sends upon those who flinch or run away; and many such subjects, to keep up and stimulate the courage of the soldiers. These people are called in the Amhara language *Ozmare*; in Tigré, *Warta*; the enemy never kill them if taken in battle, any more than they do trumpeters and fifers, if Christians; but the Galla spare no one in war.

Of the more general manners and customs of the people, the following is a characteristic description.

"The people who live in the larger sort of towns, and especially the mechanics, in general

lead the most undisturbed life, and are considered the best Christians. Those who work in silver and gold, in brass, or at the carpenters' trade, are esteemed as persons of high rank; but those who work in iron or pottery are not allowed the privilege even of being in common society, nor are they permitted to receive the sacrament as Christians. They are reckoned even by their nearest neighbours to have the supernatural power of changing themselves into hyenas or other beasts, and upon that account every body dreads them. All convulsions or hysteric disorders, which are as common in Abyssinia as in other parts of the world, are here attributed to the evil eye of these people. They are called by the Amhara, Buda; and by the Tigré, Tebbib. Many marvellous deeds done by them have been related to me by persons of superior intelligence of both sexes, which, however ridiculous, may serve to illustrate the superstitious character of the people in this part of the world. Although these Budas are obliged to put up with reproaches and all manner of scorn from other Christians, and even their nearest neighbours, yet they are partial to that religion; and, though not allowed the sacrament, keep the whole of the fasts and Lents as strictly as any Christians in the country. There are, indeed, Mahometan and Jew Budas; and as I have before said, all that work in iron and pottery are deemed such. What this whimsical notion sprang from I never could learn. Gojam is the province supposed to contain most of them. The Zackary are another extraordinary set of beings: though esteemed good Christians, I have myself seen them go roaring about the towns, making a most dreadful noise, and being apparently in great trouble, whipping themselves, and at times cutting their flesh with knives. These people are most numerous in the province of Tigré, and they have a church which is resorted to by none but themselves; it is at no great distance from Axum, and is dedicated to their saint, Oun Arvel. They are very proud of styling themselves descendants of St. George. In their church Oun Arvel they pretend that a light burns continually without the assistance of human aid. I have more than once watched an opportunity to blow this light out; but those in care of it were too attentive to their duty to let me succeed, though I once effected my purpose in pointing out a similar imposition of these priests at Jummer-a-Mariam in Lasta. There is also a holy water at the church Oun Arvel, which is greatly esteemed for the cure of persons afflicted with evil spirits. This is a very wonderful disorder, which I cannot pass over in silence, though the reader may think it fabulous and ridiculous; yet we have accounts of something of the same kind in the New Testament, which the priests and learned men of Abyssinia believe to be the same complaint. This complaint is called *tigretier*; it is more common among the women than among the men. The *tigretier* seizes the body as if with a violent fever, and from that turns to a lingering sickness, which reduces the patients to skeletons and often kills them, if the relations cannot procure the proper remedy. During this sickness their speech is changed to a kind of stutering, which no one can understand but those afflicted with the same disorder. When the relations find the malady to be the real *tigretier*, they join together to defray the expenses of curing it; the first remedy they in general attempt, is to procure the assistance of a learned Dofter, who reads the Gospel of St. John, and drenches the patient with cold water daily for

the space of seven days—an application that very often proves fatal. The most effectual cure, though far more expensive than the former, is as follows. The relations hire for a certain sum of money a band of trumpeters, drummers, and fifers, and buy a quantity of liquor; then all the young men and women of the place assemble at the patient's house, to perform the following most extraordinary ceremony. I once was called in by a neighbour to see his wife, a very young woman, and of whom he was very fond, who had the misfortune to be afflicted with this disorder; and the man being an old acquaintance of mine, and always a close comrade in the camp, I went every day, when at home, to see her; but I could not be of any service to her, though she never refused my medicines. At this time I could not understand a word she said, although she talked very freely, nor could any of her relations understand her. She could not bear the sight of a book or a priest, for at the sight of either she struggled, and was apparently seized with acute agony, and a flood of tears, like blood mingled with water, would pour down her face from her eyes. She had lain three months in this lingering state, living upon so little that it seemed not enough to keep a human body alive; at last her husband agreed to employ the usual remedy; and, after preparing for the maintenance of the band during the time it would take to effect the cure, he borrowed from all his neighbours their silver ornaments, and loaded her legs, arms, and neck, with them. The evening that the band began to play, I seated myself close by her side as she lay upon the couch; and about two minutes after the trumpets had begun to sound, I observed her shoulders begin to move, and soon afterwards her head and breast; and in less than a quarter of an hour she sat upon her couch. The wild look she had, though sometimes she smiled, made me draw off to a greater distance, being almost alarmed to see one nearly a skeleton move with such strength; her head, neck, shoulders, hands, and feet, all made a strong motion to the sound of the music; and in this manner she went on by degrees until she stood up on her legs upon the floor. Afterwards she began to dance, and at times to jump about; and at last, as the music and noise of the singers increased, she often sprang three feet from the ground. When the music slackened, she would appear quite out of temper; but, when it became louder, she would smile and be delighted. During this exercise she never shewed the least symptom of being tired, though the musicians were thoroughly exhausted; and when they stopped to refresh themselves by drinking and resting a little, she would discover signs of discontent. Next day, according to the custom in the cure of this disorder, she was taken into the market-place, where several jars of maize or tsug were set in order by the relations, to give drink to the musicians and dancers. When the crowd had assembled, and the music was ready, she was brought forth and began to dance and throw herself into the maddest postures imaginable, and in this manner she kept on the whole day. Towards evening, she began to let fall her silver ornaments from her neck, arms, and legs, one at a time, so that in the course of three hours she was stripped of every article. A relation continually kept going after her as she danced, to pick up the ornaments, and afterwards delivered them to the owners from whom they were borrowed. As the sun went down, she made a start with such swiftness, that the fastest runner could not come up with her,

and, when at the distance of about two hundred yards, she dropped on a sudden, as if shot. Soon afterwards, a young man, on coming up with her, fired a matchlock over her body, and struck her upon the back with the broad side of his large knife, and asked her name, to which she answered as when in her common senses, a sure proof of her being cured; for, during the time of this malady, those afflicted with it never answer to their Christian name. She was now taken up in a very weak condition and carried home, and a priest came and baptised her again in the name of the Father, Son, and Holy Ghost, which ceremony concluded her cure. Some are taken in this manner to the market-place for many days before they can be cured; and it sometimes happens that they cannot be cured at all. I have seen them in these fits dance with a bruly, or bottle of maize, upon their heads, without spilling the liquor or letting the bottle fall, although they have put themselves into the most extravagant postures. I could not have ventured to write this from hearsay, nor could I conceive it possible, until I was obliged to put this remedy in practice upon my own wife, who was seized with the same disorder, and then I was compelled to have a still nearer view of this strange disorder. I at first thought that a whip would be of some service, and one day attempted a few strokes, when unnoticed by any person, we being by ourselves, and I having a strong suspicion that this ailment sprang from the weak minds of women, who were encouraged in it for the sake of the grandeur, rich dress, and music, which accompany the cure. But how much was I surprised, the moment I struck a light blow, thinking to do good, to find that she became like a corpse, and even the joints of her fingers became so stiff that I could not straighten them; indeed, I really thought that she was dead, and immediately made it known to the people in the house that she had fainted, but did not tell them the cause, upon which they immediately brought music, which I had for many days denied them, and which soon revived her; and I then left the house to her relations to cure her at my expense, in the manner I have before mentioned, though it took a much longer time to cure my wife than the woman I have just given an account of. One day I went privately, with a companion, to see my wife dance, and kept at a short distance, as I was ashamed to go near the crowd. On looking stedfastly upon her, while dancing or jumping, more like a deer than a human being, I said that it certainly was not my wife; at which my companion burst into a fit of laughter, from which he could scarcely refrain all the way home. Men are sometimes afflicted with this dreadful disorder, but not frequently. Among the Amhara and Galla it is not so common."

The title-page mentions Mr. Coffin's journey to Gondar; from the two chapters devoted to which, we shall in our next make a selection.

CHOLERA MORBUS.

THOUGH the accounts from many, and not distant, parts of the continent respecting the mortal prevalence of this disorder are still very appalling—we know not how it is, but so it is, the dread of its approach to our shores seems to have subsided, though the journals of the day contain reports of its actual arrival. We shall nevertheless notice the works which have recently reached us, and to which its menace has given birth. 1. *The History of the Epidemic Spasmodic Cholera of Russia*, by Dr. Bisset Hawkins (12mo. pp. 306; Murray), is

an ample and well-digested account of the disease, from its Indian origin to the present time; with maps, shewing its course and progress. Without maintaining any medical theory, this is a most useful work, and may serve as a foundation for the best opinions as to treatment, should it be our misfortune to be visited by cholera. 2. *Treatise on Cholera Asphyria*, by G. H. Bell (8vo. pp. 150; Blackwood). A residence in Tanjore enables Mr. Bell to offer an account of the nature of this disease; of the causes to which he ascribes it, namely, a suspension of the powers by which the circulation of the blood is carried on; of its mode of propagation; and of the curative process to be adopted against it. 3. *Memoir on the Cholera Morbus of India*, by P. F. Keraudren (Lancet office), a pamphlet of forty pages, translated from the French, to shew that the disease is the mordechi, and epidemic. 4. *On Cholera*, by Medicus; a pamphlet of forty-six pages, considers the disease (agreeing with Mr. Annesley) to spring from the imperfect oxygenation of the blood; and says, that actual cautery on the feet and ankles is a certain remedy in an early stage.

London Bridge, &c. By J. Elmes, Esq. M.R.I.A. Architect, Surveyor to the Port of London. pp. 24. Wood and Son.

A WELL-TIMED pamphlet, which, with an account of the building, and a neat engraving of the new London Bridge, about to be opened with royal ceremony and splendour, gives a concise account of its venerable predecessors. It is a capital manual for Monday; yet so well done, as to possess a more permanent interest.

Tales from Shakespeare; designed for the use of young Persons. By Charles Lamb. Fifth edition. pp. 376. London, 1831. Baldwin and Cradock.

THIS charming little volume has been too long established for further criticism than additional praise; the design being as excellent as the execution is graceful. The present is a very beautiful edition, ornamented with the prettiest of woodcuts, a picture to every story, and a likeness of Shakespeare to face the title-page. The book is neatly bound in watered cloth—a species of binding which has a very good effect, though we fear not very lasting.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR AUGUST.

7^d 10^h 3^m—Sun eclipsed: invisible at Greenwich. It is remarkable, that though this eclipse will be visible from a very large portion of the terrestrial surface, it will not be seen from either Europe, Asia, Africa, or America. To part of Notasia, New Guinea, New Zealand, and most of the islands in the south Pacific Ocean, it will be very considerable. 23^d 11^h—the Sun enters Virgo.

Lunar Phases and Conjunctions.

	P.	M.
● New Moon in Cancer	7	10 3
○ First Quarter in Libra	14	22 24
○ Full Moon in Aquarius	22	22 5
○ Last Quarter in Taurus	29	22 43

The Moon will be in conjunction with

	D.	M.
Mars in Leo	8	14 30
Saturn in Leo	8	17 10
Mercury in Leo	8	21 43
Venus in Virgo	11	0 0
Jupiter in Capricornus	21	30 50

Occultation of Aldebaran.—2^d—This remarkable star will again be occulted: though occurring after sunrise, it may be easily ob-

served with a telescope. Immersion 18^h 23^m 15^s:
emersion 19^h 16^m 8^s.

22^d—the Moon eclipsed: invisible at Greenwich. The commencement will be at 20^h 40^m, and the end at 23^h 13^m: digits eclipsed 5° 48'. This eclipse will be visible to the Japanese isles, the eastern parts of China, the Philippine and neighbouring islands, and the western parts of Notasia.

4^d 5^h—Mercury in conjunction with Regulus.
5^d 4^h—with Mars: difference of latitude 9'.
7^d 12^h—with Saturn: difference of latitude 28'.
16^d—descending node. 25^d 17^h—in aphelion.
31^d—greatest elongation as an evening star, its angular distance from the Sun being 27° 11', or nearly its maximum.

20^d—the beautiful evening star, Venus, will attain its greatest splendour, which happens between the points of greatest elongation and inferior conjunction, and when the planet appears with one-fourth of the disc illuminated, or with a similar phase to that of the Moon five days after conjunction.

2^d 18^h—Mars in conjunction with Regulus: difference of latitude 39'. 12^d—with Saturn: difference of latitude 27'.

The Asteroids.

	D.	R.A.	H.	M.	N.D.	21	31
Vesta ..	4	6	34	21	31
	12	6	48	21	25
	20	7	2	21	15
Juno ..	29	7	16	21	2
	4	7	6	13	33
	10	7	23	12	58
	20	7	40	12	17
	28	7	57	11	31
Pallas ..	4	19	25	17	4
	12	19	30	15	46
	20	19	16	14	19
	28	19	13	12	46
Ceres ..	4	21	12	S.D.	29	15
	12	21	5	29	56
	20	20	58	30	27
	28	20	52	30	47

4^d—Ceres in opposition; but, owing to its low altitude when on the meridian, it will not be satisfactorily seen.

10^d 9^h—Jupiter in opposition. This planet will continue an evening star to the end of the year.

Eclipses of the Satellites.

	D.	H.	M.	S.
First Satellite, Immersion ..	3	12	47	54
emersion ..	12	11	27	42
	19	13	22	44
	28	9	46	41
Second Satellite, immersion ..	2	11	9	36
emersion ..	9	13	37	37
	20	8	20	30
	27	10	55	19
Third Satellite ..	16	13	6	34

Saturn is too near the Sun to be visible.
28^d 20^h 45^m—in conjunction with the Sun.

5^d 6^h 30^m—Uranus in opposition, and in its most favourable position for observation.

Depledge.

J. T. B.

FINE ARTS.

NEW PUBLICATIONS.

The National Portrait Gallery of Illustrious and Eminent Personages; particularly of the Nineteenth Century. With Memoirs by William Jerdan, Esq., F.S.A., &c. Part XXVIII. London, 1831. Fisher, Son, and Co.

THIS No. affords proof of the publishers' diligence, in meeting, with the view to gratify, the public feeling and interest of the time; for besides portraits of Earl Howe and Sir Thomas Lawrence, it contains a capital likeness of Prince Leopold, the now King of Belgium. From the memoir, which is stated to have been communicated to the work "on the best authority," we select a passage or two, which can hardly be read without giving rise to particular reflections at this extraordinary epoch.

"The royal subject of this memoir," observes the writer, "is one of those extraordinary instances of singular fortune, which occur but rarely, even in the widely-spread annals of mankind; and seem to proclaim to us, with an authority not to be mistaken, that

"..... There's a Divinity doth shape our ends,
Rough-hew them how we will!"

The leading incidents of the life of Prince Leopold have not only been remarkable in themselves, but still more remarkable in their coincidence with, and effects upon, the destiny of another exalted individual. We allude to the Prince of Orange, between whom, and two crowns, it has been the fate of His Royal Highness to step; while, as if to render his own career yet more wonderful, a third has been offered to his acceptance. In ancient and in superstitious times, the genius, or ascendant star, of the House of Coburg would have been recognised in these striking events—in our enlightened times they cannot but excite admiration and wonder."

After tracing his birth, advance to manhood, &c.; at the period of Buonaparte's return, discomfited, from Russia, the narrative proceeds.

"The Prince Leopold was among the first to start from an inactivity which was so irksome to him; and, long before the campaign had commenced, he was in the midst of the Russian army, leaving all that was most dear to him at risk, for the great cause of his 'fatherland.' He accompanied the allied army to Silesia and Saxony; was engaged in the battles of Lutzen and Bautzen; and, on the expiration of the armistice, proceeded with the army to Bohemia, and thence to the Saxon frontier; where he particularly distinguished himself with the division of cavalry under his command. For his eminent services on those days, the Emperor Alexander invested him, on the field of battle of Nollendorf, with the Cross of St. George, and the Emperor of Austria subsequently conferred on him the order of Maria Theresa. He was at Leipsic, and throughout the whole of the campaigns which ended in the capture of Paris in 1814. Many of our countrymen formed their first acquaintance with the Prince when he was in the French capital, at this period 'the gayest of the gay.' Hence he passed over to England with the allied sovereigns, in a natural anxiety to witness the land which had aided so greatly the great cause which had been so nobly consummated. At this time the Prince Leopold was a young man, twenty-four years of age, remarkable for his good looks, and distinguished from the crowd of princes with whom he was associated, for great amenity of manners, equanimity of temper, and every accomplishment of good society. The Princess Charlotte of Wales was, at that time, in her eighteenth year, and remarkable, above her years, for great insight into the characters of those with whom she associated. It is not, therefore, surprising that she should have been captivated with the qualities of Prince Leopold; nor is it necessary, at this time of day, to doubt the excellence of her judgment, in her preference of an individual, who made her, without any dispute, the happiest of women, during the short period which she was permitted to call happy, in her short but eventful life. It is well known that her hand had been destined for the Prince of Orange, by the policy of the British cabinet, as well as at the desire of her royal father; and the princess had so far yielded to these wishes, as to consent to appear with him in public at the queen's drawing-room, this year. She was

not, however, of a disposition to be willingly made an instrument of others in a matter so near her heart; and when she found a man more suited to her mind, she at once broke off a forced attachment, and loved him alone with all the intensity of a woman's affection. The British people, unaccustomed to marriages of convenience, admired the spirit which influenced her conduct; and she felt encouraged by their approbation, to carry her point with all the resolution she inherited from her family. When, one day, her equerry, Colonel Addenbroke, returned from Kew to Cranbourne Lodge, in Windsor Park, where the princess at that time resided, and told her the report of the day—that Her Royal Highness was to marry Prince Leopold—she at once evinced the settled determination of her breast, by the reply, 'He is the only man I ever will marry.'

We pass to the conclusion.

"His last act, upon quitting England, was to announce to the ministry his determination, as sovereign of Belgium, to draw no portion of his parliamentary annuity. A degree of indecent haste has been shewn by the public, relative to his intentions in this respect; and this had even been reflected within the walls of the Upper House of Parliament. His claim to this grant (which, as far as His Royal Highness was concerned, was the unsolicited liberality of the country) was as undisputed and as firm as that of the public creditor: but, in truth, he had been always made to suffer for the sins of those who had been thus prodigal in their desire to obtain his early favour. The man, however, whom his enemies had declared to be the most avaricious and miserly of men, actually relinquished the certainty of the affluence, as well as the comfort, of a private station—before he knew what endowment would be made on a crown which he had accepted—upon public grounds alone. Here, then, we close this rapid glance over a life which, for its duration, has been more than ordinarily eventful. The king of the Belgians is still in the maturity of his life, and in the full vigour of his faculties. He has undertaken a task which must be difficult and laborious, and which many people think is not capable of a successful result. He may, however, reflect, that he occupies a throne, the right to which is less capable of dispute than any one in history—for the hereditary sovereigns of the land renounced their claim to Austria, or to France; and the right of conquest alone, and that not a conquest over Belgium, gave it to the kingdom of the Netherlands. He is one of the few sovereigns who, without even the birthright to the land of his rule, has obtained a crown without the sword having been drawn, or a drop of blood spilled, in the acquisition of it. If he should happily succeed, he will deserve the gratitude of four millions of subjects, and the applause of surrounding nations,—if he should fail, he will lay down a sceptre which he never sought, and return to that private station, the splendid prospects of which few could have had the virtue to have quitted, although the object were to retain the blessings of peace to Europe, and to consolidate the principle of constitutional government."

The Right Rev. William Van Mildert, Lord Bishop of Durham. Engraved by T. Lupton.

THIS is a very fine engraving, after the very fine portrait painted by Sir Thomas Lawrence, so late as 1830. We have often had occasion to praise the taste and skill with which Mr. Lupton transfers the likenesses of eminent artists to his plate; but we have not

before seen a more striking example of his abilities than he has displayed on the distinguished prelate who is the subject of the present publication. For purity of style and execution, nothing can surpass it.

The History and Topography of the United States of North America. By John Howard Hinton, A.M. Parts 16, 17, and 18.

It is not so much with reference to the picturesque beauties of American landscape, (although many of these must excite great admiration,) that the plates which illustrate this work are peculiarly interesting, as with reference to the residences of man, and especially to the numerous and splendid public edifices which adorn the various cities of the United States. It is no less surprising than gratifying to observe how rapidly the arts of Europe have extended, and are extending themselves, through that flourishing republic; which, among its other aspirations, evidently aims at rivalling the old world in architectural magnificence.

Patrick Gibson. Painted by Luke Macartan; engraved by Thomas Lupton. Moon, Boys, and Graves.

IN our 755th number, together with some circumstances of the life, we mentioned the death of this veteran, which took place on the 1st of July, at the extraordinary age of 111. The print under our notice is an excellent resemblance of him, and is very firmly and well executed. It is engraved from a portrait which appeared in the last Exhibition at Somerset House.

A Tax-Receiver. A Tax-Payer. Designed by H. Alken; engraved by J. Zeitter. Tilt and Co.

Two prints embarking the arts in the cause of Reform. One represents a jolly, well-clad fellow, surrounded with luxuries; the other a ragged starveling: the former declaring that no reform is wanted, the latter clamorous for any change. By the same publisher we see "God save the King," very fancifully and beautifully printed, with emblematic ornaments and superb initials in brilliant colours and gold.

ORIGINAL POETRY.

THE WORLD.

I love to listen to the ocean swell,
And let my spirit muse.—*M.S.*

THE shadows of Almighty wings advance
Upon the world, that darkens as they come!—
The heart of empires, cradled in the sea,
Or on the earth outspread, doth heave and swell
With wild emotion; for the fate of man
For ages seems to take a colour now.
Amid our streets a solemn murmur rolls—
The gather'd meaning of a thousand hearts!
And in our chambers Levity hath hushed
Her tones, that die away in deeper words
Than youth is wont to utter; times and states,
Or battle-scenes, before them are adjudged;
Wide o'er the universe the hand of Heaven
Is traced; the Present and the Future meet,
And each on each a sad defiance frowns!
When the dark tide of twenty years hath rolled
Away, and tombs are piled o'er living heads
Which now are pond'ring,—what shall Time
relate?

The answer sleeps in heaven; but dim the eye
That cannot see portentous shadows veil
The earth around, reflected from above!

And thou, my Country! Ocean's darling isle,
Amid the swell of o'er-excited hope,

The rush of mind, and haughty discontent,—
Unmoved wilt never be:—thy soul is stirr'd,
Thy blood is quicken'd, on thy brow is throned
The high intention and the warlike aim;
And when I think how Heaven hath favour'd
thee

With one unalter'd smile; how nature moulds
Thy clime to beauty; how the Seasons love
To tint thy vales, and touch thine every
scene;—

Some fears of unaffected power are felt,
For what dark cloud may overhang thy doom!
Yet noble hearts and spirits pure are thine!
And what a past, from whence proud Memory
fills

Her soul with valour, such as heroes graced!
There high examples of celestial worth
Abound, with all that makes dead ages speak
A spirit-language to adorning thought.
Then let thy past a warning present be;
And should the banners of brave England rise,
Or once again the island Empress hall
Her champion vessels thund'ring o'er the
deep!—

The star of glory—shall it not attend
Her might, and shine upon each holy cause?

Thus o'er the shadowy track of things to
come

The spirit flies, on wings of fancy borne:
But ere I leave this all unworldly spot,
Whose quiet, like remember'd music, makes
A calm within, the glitt'ring prospect view.—
Alone upon this gray aerial cliff
I stand, and hear the sea-swell load the wind.
A dazzling arch of noon's unclouded heav'n
Hangs o'er me, 'mid whose azure realm of
light

The soaring larks invisibly exult
And sing:—behind me, lo! a mingled sweep
Of hill and mead, and lanes of lovely gloom,
Or verdant twilight, shed from arching boughs
That roof the pathway, where the streamlet
roams.

But, hark! the glorious and almighty sea!
The miracle of waters!—at yon rock
The maniac surges with incessant foam
Are raving, in a wild and savage glee;
But on the midway, bright and breezy all!
The pomp of billows heaving far and wide
Extendeth, twinkling with the star-like flash
Of beams, that flutter o'er the ocean's face.

Oh, Solitude! how beautifully felt
Thy heaven-like freshness by the weary heart!
Whose martyrdom of dull or feverish cares
Is here forgotten, while the spirit frames
A world of loveliness, wherein it breathes
And moves awhile, a disembodied shape
Of peace and glory!—soon, alas! dissolved.
Reality her throne resumes, and Life,
The stern and true, the unethereal life
Of men and things, around us coldly reigns.
In solitude angelic purpose arms
Our better moods, till high sensations throb
Within us, and our spirit godlike grows
In Eden walks, and worships in her bowers;
But action comes, and resolution dies!

Oh! tell me not the lesson'd worldling dares
Each height and depth where proud Experience
roves;

While dreamers are but apparitions vain,
Who in their sickness of soul are lost
To healthful feeling, such as wisdom owns.
Some dreams are truer than realities
Which in the drama of our daily life
Are acted, boasting a substantial form.
For is not life one vast hypocrisy?
Each wears his mask, and tames his nature
down, [mock!]
And sheathes his spirit, lest the world should

Thou Great Inspirer of the human soul,
Undying! not for this was man endowed
With energies that breathe the immortal power:
A spirit chainless, and a heart sublime—
In hallow'd union when shall these arise,
O'erawe the world, and set our natures free?

Society.—how oft that word profaned
We find, in scenes where nothing social dwells!
Where numbers mix, but sever'd hearts abound,
Each meanly covered with a mask of smiles.
But when a nature, noble in itself
And gifted, from the throne of greatness falls
Amid the mass, to sacrifice the soul
Round petty altars which the world has reared,
Who does not mourn a prostituted mind?
There was a festival where fairy shapes
Of bright-eyed women, and of courtly men
Convened; and one to whom my fancy knelt
In sympathetic, high, and lonely hours,
Was there, supreme above the glowing throng.
His boyhood was a fiery thirst of fame
Which manhood had fulfilled; and oh, how oft
The page of beauty where his thoughts had
burned,

And all the verdure of his soul arrayed
Each word with life and freshness—filled my
mind

With ecstasy, till e'en this outward world
A hue of glory from his heart derived!
Love, Truth, and Joy, each varied scene and
sound

From him a mystic inspiration caught;
Where'er I went, some intellectual gleam
Or radiance told of his abiding power—
For he had clothed the universe with light
To me, and every where his presence ruled.
And oft in secret had I shaped the form
That shined a spirit such as I adored.
We met; and never on the cheek of life
Has death a with'ring change so quickly set,
As on my heart fell disappointment's blight!
Society had marred his noble mind;
His thoughts were muffled in unmeaning words;
The stately nothingness of gaudy life
Alone he worshipped; not a tint remained
Of his true nature; not a tone revealed
The lofty music of the soul within.
A thing of artifice, and wooing smiles,
And fawning speeches, rank with falsehood's
breath,

Was all he proved, whom wonder had arrayed
With attributes of glory!—seldom past
From light to darkness such a soul as his!

O World! and is it thus thy victims fall!
Then grant me, Heaven, some few confiding
hearts

Where truth abounds, and deep affections dwell:
The stern may laugh, or wisdom call it vain;
But life is holy when the heart is free!

July 20th, 1831.

R. MONTGOMERY.

SKETCHES OF SOCIETY.

CORONATION.

As the coronation of William IV. is now a subject of interest, the annexed may be revived. We fear not, as a precedent, productive of courtly splendour and popular recreation. It is a description, from a contemporary, of the coronation of Charles II. on his restoration.

"A.D. 1661. The entrance of this year was made famous by the magnificent coronation of King Charles the Second. On the 23d of April he made his cavalcade from the Tower through London to Westminster, against which time four magnificent triumphal arches had been erected by the city (as their charter obligeth them) for his majesty to pass through. The first of which was placed in Lundenhall street,

representing his majesty's happy arrival in England; the second was near the Royal Exchange, being a naval representation; the third in Cheapside, representing the temple of concord; the fourth in Fleet-street, representing the garden of plenty. On the following day, April 3d, and the day of the coronation, his majesty disposed of the regalia unto the noblemen hereafter mentioned, to be carried by them from Westminster Hall to the Abby Church.—Saint Edward's staff to Vice-Admiral Mountague, Earl of Sandwich; the spurs to the Earl of Pembroke; the scepter with the cross to the Earl of Bedford; the pointed sword (born on the left hand of curteyn) to the Earl of Darby; the pointed sword (born on the right hand of curteyn) to the Earl of Shrewsbury; King Edward the Saint's sword, called curteyn, to the Earl of Oxford; the sword of state to the Earl of Manchester; the scepter with the dove to the Duke of Albe-marle; the orb with the cross to the Duke of Buckingham; Saint Edward's crown to the Duke of Ormond; paten to the Bishop of Ex-eter; and chalice to the Bishop of London. Then the king, with his nobles, officers, and attendants, made their proceeding, upon blue cloth spread on the ground, from Westminster Hall to the Abby Church, whither his majesty being come, he was received with this anthem—“I was glad when they said unto me, we will go into the house of the Lord.” &c. Then, after some ceremonies, this anthem was sung by the gentlemen of the king's chapel—“Let thy hand be strengthened, and thy right hand be exalted,” &c. Then, after that, the king had offered the pall and a wedge of gold of a pound weight at the altar, and that the regalia were laid thereon, the Bishop of London said this prayer: “O God, which dost visit those that are humble, send down thy grace upon this thy servant Charles,” &c. This done, the Bishop of Worcester began his sermon on these words: “For the transgressions of a land many are the princes thereof; but by a man of understanding and knowledge the state thereof shall be prolonged.” *Prov. xviii. 2.* And during the sermon his majesty wore a cap of crimson velvet, turned up with ermine. Sermon being ended, the king uncovered his head, and took the usual oath, “To confirm the laws to the people, and namely the franchises granted to the clergy by Saint Edward the Confessor, to maintain the gospel established in the kingdom, to keep peace, execute justice, and grant the commons the rightful customs.” Then followed this hymn, “Come, Holy Ghost, eternal God,” &c., a prayer for the king, and the Litany; which being finished, and his majesty seated in the coronation chair, the Archbishop of Canterbury anointed him, first in the palms of his hands in the manner of a cross, pronouncing these words—“Let these hands be anointed with holy oil, as kings and prophets have been anointed, that thou mayest be blessed and established in this kingdom, and among this people whom the Lord thy God hath given thee to rule over.” After which the quire sung this anthem—“Sadoe the priest and Nathan the prophet anointed Solomon king, and all the people rejoiced and said, God save the king.” At the end of which anthem the archbishop said, “Look down, Almighty God, with thy favourable countenance upon this glorious king,” &c.; and then proceeded to anoint the king's breast, between his shoulders, on both his shoulders, the bowing of his arms, and crown of his head; which being done, the anointing was dried up with fine linen, and

two short prayers followed. Then the Dean of Westminster put on the coif with the colobum sindonis, or surplice, upon the king; whereupon the archbishop prayed, saying, “O God, the King of kings and Lord of lords, by whom kings do reign, and lawgivers do make good laws, vouchsafe, we beseech thee, in thy favour to bless this kingly ornament, and grant that thy servant Charles our king, who shall wear it, may shine in thy sight with the ornament of a good life and holy actions; and after this life ended, he may for ever enjoy that life and glory which hath no end,” &c. This said, the tissue hose, sandals, and super tunica, were put upon the king; then the sword of state was received by the archbishop from the Lord Chamberlain, Earl of Manchester, and laid upon the altar, and a prayer made, “That it might be sanctified to protect and defend churches, widows, orphans, and all the servants of God; and that it might be a fear and terror to all those that lie in wait to do mischief.” The prayer ended, the archbishop and bishops delivered the sword to the king, saying—“Accipe gladium per manus episcoporum;” whereupon the lord chamberlain girt it about the king, and the archbishop said—“Receive the kingly sword, which is hallowed for the defence of holy church, and delivered unto thee by the hands of the bishops, though unworthy, yet consecrated by the authority of the holy apostles,” &c. Then successively the armit and mantle were put upon the king, Saint Edward's crown upon his head, a ring upon the fourth finger of his right hand, into each hand a scepter; all were severally consecrated by the archbishop, as the colobe sindonis and sword of state had been. Then the archbishop and bishops present did their homage to the king, kneeling down before his knees, and promising to be faithful to him and his heirs kings of England; which said, they kissed the king's left cheek. After them the temporal nobility did their homage at the king's knees in these words: “I do become your liegeman of life and limb and of earthly worship, and of faith and truth I shall bear unto you, to live and die against all manner of folks, so God me help;” which said, they singly ascended the throne and touched the king's crown, promising by that ceremony to be ever to support it with all their power. Then the king went to the altar, there presented another wedge of gold, received the sacrament; after which an anthem was sung, and the king put off Saint Edward's crown, and had the imperial crown set upon his head, the scepter with the cross put into his right hand, and globe into his left, immediately going back to Westminster-hall, where himself and nobles feasted.”

Upon the subject of coronations, we beg to recommend the following letter, addressed to us, to the attention of Ministers, and the country generally. We more than coincide with the writer, that a coronation shorn of its splendour is not only economically, but nationally, a gross miscalculation. We hope there is yet time to amend the programme, and not to condemn truly royal ceremonies to the opening of bridges, instead of their own proper sphere.

“I am a reformer, but not a friend to change for the worse. I have always understood that the ceremony of a coronation was a great national compact between the king and his people, for the security of the latter—the former then swears to govern according to law. And lest any part of this essential compact should be omitted, the ceremony has hitherto been performed in the face of the country, before all ranks and conditions of men, women, and

children, that the splendour of the spectacle might make an impression, the recollection of which would ensure its transmission to posterity; the nobles and aristocracy within the walls of Westminster Hall and Abbey, and the people at large without, assembled for the purpose of seeing the procession pass and repass.

“It is now announced, that a proper regard to economy has induced his Majesty (who is ever ready to benefit his people) to dispense with the greater part of the publicity of this ceremony, and most of its pageantry. To save the public purse, is, I believe, the most anxious wish of his Majesty, who, as well as his ministers, are only actuated by a desire for the people's welfare; but were any other ministers in power, their sincerity might be doubted, if they had issued such a proclamation in his Majesty's name as has just appeared, which, on the score of economy, is, in fact, making a hole-and-corner business of the solemn administration of the oath which is intended to secure the people of this country their liberties.

“The expense of the coronation of the late King was something under 240,000*l.*, in the first instance; but I would ask you if more than that sum was not returned to the nation in the taxes on the increased expenditure? Did it not give food and raiment to thousands in all parts of the kingdom, and cause a stir in business amongst the manufacturers and tradespeople, which made even the countenance of the poorest cheerful? Why, Mr. Editor, the money does not come out of the pockets of the poor, but the rich man's wealth is made by such a pageant to flow into the hands of the poor, the industrious, and the needy. The plea of economy, therefore, is economy for the rich, which dries up the sources of the poor man's wealth. On these grounds, the miser and the usurer will add his interest to his capital, without expending one penny on the weaver's loom or the smith's forge. The wretch who loves money, and possesses wealth, although he does no act to relieve the wants of others, always extols to the skies the economy which condemns the use of that pageantry which would touch his bags to relieve those wants. He forgets that the rich man's expenditure in equipages, and all other luxuries, which belong to his station, is bread to the poor, and food and raiment to the artisan, the smiths, the builders, the masons, the carpenters, the spinners, the trimmers, the weavers, the curriers, &c. of the nation.

“The bulk of the lower orders of the people are thus directly interested in the luxuries of the upper. And the discontinuance of a ceremony which has hitherto been the means of giving employment to so many poor and industrious persons, is the reverse of economy. Pensions, places, and gifts, bestowed on the unworthy, are a prostitution of the public purse, and we should not complain of their discontinuance; but of the omission of this most ancient ceremony, on the score of economy, we, who are most interested, do complain, and condemn the policy as most erroneous.

“Tradesmen, artisans, mechanics, manufacturers, and all you who live by your labour or ingenuity, for you are all equally interested, join forthwith and petition our kind-hearted and patriotic King, and the best and kindest of Queens, whose heart is ever feelingly alive to your interests, that such an opportunity of conferring a benefit on the poor may not be passed over, especially as the rich have no desire to be spared the necessary expenditure, but are always ready to come forward on occasions of public distress,—that we have a coronation

suit to the dignity of the nation: for the aristocracy of England are both able and willing to give the expenditure, and to surround their beloved King and Queen at their coronation in a suitable manner."

MUSIC.

NEW PUBLICATIONS.

WE are in such arrear with our musical notices, that we hardly know whether to head our critique *new music or old*: we dare say there is some of both; some now fashionable, some already forgotten.

Of the former we are sure must be, 1. *Characteristic Quadrilles*, by Louisa Sophia Dance (Cramer and Co.), which are charming compositions for the piano-forte (in imitation of the styles of Weber, Bishop, Rossini, Cramer, and Schlesinger), and display a great deal of taste and talent. Though rather late in the season, we recommend them cordially to our fair quadrille-dancers. 2. *The Circassian*, a ballad, by T. H. Bayly, Esq. (same publishers), is sure to become popular, through its sweetness and simplicity. 3. *The Bower* (the same). In the air we recognise our old favourite, with pleasing words by Mr. Bayly. 4. *Popular Waltzes*, &c. (S. Chappell), "performed," says the title-page, "at the nobilities balls;" yet quite simple, and extremely pretty. What is of more consequence, "Meet me by moonlight," and other airs, are here delightfully arranged for dancing: what more can be reported of the agreeable trifles? 5. *O! men, what silly things you are!* (J. Barnett and Co.); a cavatina by N. C. Bochsa, who has contrived to make the air pretty, and capital for practice. 6. *Lord of all Being* (J. A. Novello), the words by R. Montgomery, the music by S. Mathews, M.B. Cambridge. This is a fine composition, and will be heard with much gratification, either in public or private. The music throughout is admirably adapted to the words: perhaps it is rather long; but the beauty of many parts will excuse that blemish. 7. *I'm thine for ever!* (Purday), a ballad, sung by Mr. Wilson, the poetry and melody by W. R. Hayward, Esq. Wilson can make almost any thing pretty; but in others we have found this common-place and monotonous. 8. *Songs for the Grave and the Gay* (Purday), by T. H. Bayly; and, like the generality of his ballads, pretty simple pieces. The first is extremely sweet, both in words and music. Mr. Bayly assuredly excels in the grave and touching. 9. *Songs of the Camp* (Goulding and D'Almaine), written and composed by G. Linley, Esq. A truly beautiful book of songs. We may instance "Sweet Palencia," "Maiden of Seville," and "Friend in the Battle-day," as particularly charming. The latter, indeed, is one of the most harmonious compositions we have heard for a long time.

DRAMA.

ENGLISH OPERA, ADELPHI.

THE evenings' miscellanies at this theatre are now running in smooth and gratifying variety; and while still greater novelties are announced, the managers have hit on a capital and very attractive source of amusement, by calling in the aid of Mr. Collins, alias the English Paganini. This musician has his first appearance on Tuesday, and with complete success. Comparisons, it is said, are odious; and therefore we shall refrain from subjecting ourselves to that imputation, and simply state the fact, that Mr. Collins on Tuesday, and every night since, has contrived to amuse a crowded house

for half an hour, and to call forth rounds of hearty applause by his performances on the violin. Two novelties seemed especially to delight his auditors; he produced tones like a distant organ, by loosening the hair of the bow, and then passing the stick under, and the hair over, the strings of the instrument. The next was rather a trick than any thing extraordinary,—he placed the bow upright between his knees, and played an air by moving the violin up and down against it; and, in truth, played the tune very well. The air upon one string was beautifully executed, and the performer loudly applauded.

LITTLE Regondi's concert on Saturday, we are happy to say, was well attended, and the audience seemed as much pleased as we were with the extraordinary performances of this interesting boy.

VARIETIES.

French Opera.—The French papers say, that M. Victor Hugo is at work converting *Notre-Dame de Paris* into an opera, of which Rossini is to compose the music; that Taglioni is to have a character in it; and that the part of Quasimodo is to be played by the dwarf of the Cirque Olympique.

New Fossil Crustaceous Animal.—Professor Scouler, of Glasgow, describes, in the last number of the *Edinburgh Geographical Journal*, a very extraordinary fossil crustaceous animal, under the name of *Eidothea*, it bearing a remarkable similarity to the human skull. The shell is entire, and exhibits no vestiges of any division. It has a tail, consisting of several articulations. The eyes are placed on short peduncles.

New Power Machine.—Mr. Richards, an engineer of Bristol, states, that he has perfected an "Endless Power Machine," which is now in action; and which he asserts will supersede the use of steam in every case. The engine is self-acting, and may be made equal to 250 horse power.

Roscoe.—We observe with pleasure that a subscription for a public monument to the memory of this elegant scholar, has been proposed at Liverpool; a town deeply indebted to his literary and patriotic labours.

Buckingham Palace.—The recent statements in the newspapers of the insecure state of this building, and of the probability that it may suddenly fall into a heap of ruins—a meet termination to an undertaking of such absurdity—induces us at least to postpone the further remarks which it was our intention to make on Colonel Trench's plan for converting it into national picture and statue galleries, and into a college.

Numismatics.—We are glad to learn that the *Institut de France* has liberally corroborated the opinion we gave upon the "Illustrations of Anglo-French Coinage," (see review, *Lit. Gaz.* No. 699), by awarding to its author, a general officer in the English service, their numismatic prize, the gold medal.

Gin-wine Bread.—In a recent *Gazette* we gave an account of the curious discovery, that bread in the process of baking emits a vapour which, being condensed, proves to be a spirit of great strength. The experiments are still going on, and the results most satisfactory. A quartern loaf yields several drams of pure spirit, with something of the flavour of *noyau*, (it is thence proposed to call it *dough-yau*); and from the general quantity of baking, it is estimated that 800,000 gallons per annum may

thus be produced from what has hitherto been utterly wasted. But we are not now going into the scientific history of the discovery, and we only mention it, during the progress of its tests, to record the humorous ingenuity of a baker near the place where the experiments are carrying on, who has placed in his shop-window the following placard, "Bread sold here with the Gin in it!"

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XXXI. July 30.]

A pamphlet on the (Political) Influence of the Press is announced, from the pen of W. Jordan.

The Life and Correspondence (embracing nearly sixty years) of the late Mr. Roscoe, are, we learn, in preparation for the press by some of the members of his family.

LIST OF NEW BOOKS.

Stories for Young Children, by Mrs. Marcet, 18mo. 2s. hf.-bd. — Woman in her Social Character, by Mrs. John Sandford, 12mo. 6s. bds. — Weiss on Surgical Instruments, 8vo. 15s. bds. — Medical-Chirurgical Transactions, Vol. XVI. Part II. 8vo. 7s. 6d. bds. — Linley's Guide to the Orchard and Kitchen Garden, 8vo. 16s. bds. — Otley's Notices of Engravers, Vol. I. 8vo. 12s. bds.; large paper, 18s. bds. — Moore's Life of Lord Edward Fitzgerald, 2 vols. post 8vo. 11. 1s. bds. — Lardner's Cabinet Cyclopaedia, Vol. XXI. Lives of British Statesmen, Vol. I. fcp. 6s. cloth. — Rev. Thomas Dale's Sermons preached at St. Bride's, 8vo. 10s. 6d. bds. — Lardner's Cabinet Library, Vol. VII. Historical Memoirs of the House of Bourbon, Vol. II. fcp. 5s. cloth. — Wakefield's Facts on the Punishment of Death in the Metropolis, post 8vo. 6s. 6d. bds. — Hawkins on Cholera, post 8vo. 7s. 6d. bds. — French and Skinner's Translation of the Proverbs, 8vo. 5s. 6d. bds. — George Don's General System of Gardening and Botany, Vol. I. 4to. 31. 2s. bds. — Family Library, Vol. XXXIII. An Account of a Tour through Holland, 18mo. 5s. cloth. — A Bird's-eye View of Foreign Parts, fcp. 5s. bds. — A Tale of Tucuman, 18mo. 5s. bds. — Manuscript Memorials, crown 8vo. 7s. cloth. — Lynch's Law of Elections in the Cities and Towns of Ireland, royal 8vo. 6s. bds. — Family Classical Library, No. XXX. Lucilius, Vol. I. 18mo. 4s. 6d. cloth. — Hughes' Divines, No. XV. Jeremy Taylor, Vol. III. 8vo. 7s. 6d. bds. — Roscoe's Novelist's Library, Vol. II. Roderick Random, 12mo. 5s. cloth. — The Club Book, by various Authors, 3 vols. post 8vo. 11. 4s. bds. — Standard Novels, Vol. VI. The Last of the Mohicans, by J. F. Cooper, 18mo. 6s. cloth. — Rev. M. Oxenden's Sermons before a Country Congregation, 8vo. 8s. 6d. bds. — Danby's Thoughts on various Subjects, post 8vo. 7s. 6d. bds. — General O'Connor's Letter to General Lafayette on the French Revolution of 1830, 8vo. 2s.

TO CORRESPONDENTS.

While the falsehood and scurrility of low periodicals respecting the *Literary Gazette* are confined to their own small spheres, we leave them to the obscure contempt which alone they have the power to provoke; but having admitted into our pages to-day (in the way of business) an advertisement which will thus afford to such abuse a publicity otherwise unattainable, we deem it right to accompany it with a few words of remark. Belonging to that class of the press which finds it easier to struggle into a narrow and ephemeral notoriety by the shameful means of slander and personalities, than to prefer a wide-spread and permanent claim to the public regard by meritorious efforts in the cause of literature and improvement, we might well leave the Magazine in question, and the impudent lies it has intruded into our own columns, to the degradation earned by the one, and the speedy oblivion which is sure to overtake the other. But we will publicly tell the propagator of these attacks upon us (which he knows to be utterly false, and which are rendered personal by a preceding part of the advertisement), that the individual who can so readily violate the least burdensome, though not the least imperative of human virtues, gratitude to a benefactor, is not the best calculated to inform or benefit mankind as the editor of a periodical work: but his vocation, like that of his fellows, is not to promote any good or useful purpose. Entitled, as we feel we are, to the general confidence, and rewarded by a circulation far beyond any literary Journal that ever was published, we shall continue to despise the base detractions of unsuccessful envy. [To guard against misapprehension, we should say, that a private friend of ours, a gentleman whose name is frequently mentioned as editor of this Magazine, but who declines that responsibility, is not in the slightest degree alluded to in this notice of a stupid and worthless calumny.]

We are sorry to be obliged to postpone a farther notice of Mr. Jacob on the Precious Metals, and Wakefield on the Punishment of Death.

We are not acquainted with any farther particulars of the Mary-le-bone Literary and Scientific Institution than we stated in the *Literary Gazette*. Inquirers must look to the prospectuses or advertisements of the plan.

β is fanciful—but the rhymes, &c. won't do.

We are obliged to S. A. M.; but if he knew the trouble it cost us to make Hofer's letter as correct as it was, he would not ask us to embark on further verbal criticisms.

Wadham Pembroke has no original thought to recommend to the distinction of publication.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s.—Catalogue, 1s.
WILLIAM BARNARD, Keeper.

EXAMPLES OF GOTHIC ARCHITECTURE.

By A. PUGIN, Architect; consisting of a Series of Seventy-five Plates of Plans, Elevations, Sections, and Details, selected from the most admired Edifices in England. This Work is now completed, with the Letter-press Descriptions, and can be had (neatly bound, price, in medium 4to. 4s.; in imperial 4to. large paper, 6s.) of the Author, 105, Great Russell Street, Bloomsbury; Taylor, High Holborn; and Priestley and Weale, High Street, Bloomsbury.

Mr. Pugin begs to inform the Subscribers that the Letter-press Description of the Work, which is given gratis, with Two additional Plates, may be had, upon immediate application, at either of the above Addresses, by presenting, signed, &c. the notice which is affixed to the Fourth Number.

OPENING OF LONDON BRIDGE by HIS MAJESTY.

The Observer, price Seven-pence, of Sunday next, July the 31st, will contain Two picturesque and accurate Views of this splendid Ceremony, taken from the South-west and London sides of the Thames; together with Minute Particulars and Programme of the whole of the intended Proceedings.

A Monday Afternoon Edition of the Observer, price Seven-pence, adapted for Country and Foreign circulation, is regularly published, at Four o'clock, every Monday Afternoon, at No. 169, Strand.

LITERATURE, SCIENCE, and ARTS.

The Proprietors of the *ATHENÆUM*, from their own keen anxiety, and in compliance with the desire of many well-informed persons, to extend as much as possible the diffusion of general Literature and useful Knowledge, have resolved, that on Saturday next that Paper shall be reduced in price from Eight-pence to Fourpence!

Each Number of the *Athenæum* contains, on an average, 26 Columns of Reviews, with copious Extracts, of all important New Works; and in addition, 26 Columns, comprising Reports of the Proceedings of Learned and Scientific Societies, (some exclusively and by authority); Original Papers by distinguished Writers; Early Notices of Scientific Voyages and Travels; Criticisms on the Exhibitions, Opera, Theatrical Concerts, Music, &c.; with Miscellaneous, including all that is interesting in Literature, Art, and Science. Handsomely printed in Sixteen large 4to. pages! To prevent disappointment, Subscribers in Town or Country are requested to give their Orders as early as possible, to a Bookseller or Newsmen in their immediate neighbourhood.

FRAUDS IN PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for writing the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

4th. Cedar Pencils.—These pencils contain the same quality of pure Camberland lead as their silver patent pencils.

Warranted Protection.—The Lock with seven guards is the most secure and the Leads for writing in use. The key cannot be copied, nor can an impression be taken from it: neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonesty and curiosity equally guarded against.

"S. Mordan and Co. Makers, London," is stamped on each Lock.

Scientific gentlemen and others are invited to inspect the Manufactory, 22, Castle Street, Finsbury.

MUSIC.

This day, for August, 2s.

THE HARMONICON. Contents.

Overture (Le Trésor support) Mehul—Adagio, Clementi—March, Facini—Ballad (M.S.) Mrs. Orme—War-Song, Miss Smith—Song, the "Parting," (Bellini) arranged by S. D.—Arietta, Verini—Shawl-Dance, Aubert.

Memoir of Mario Clementi—Polka-Composers—On Vocal Music—Faganini—Hummel at Manchester—Melodists' Club—The Good Old Dance—Diary of a Dilettante—Concerts—Review of New Music—Foreign Musical Reports—The Drama, &c.—London: Longman and Co.; and sold by all Booksellers.

BOOKS IN THE PRESS.

With an Engraving by Comte Armstrong.

THE LIBRARY of the FINE ARTS.

Contents.—I. Memoir of J. Northcote, Esq. R.A.—II. Life of Francesco, with an Engraving.—III. Sketches by a Travelling Architect, Nos. 3–IV. Dogmas on Art, No. 5; Criticism on Fine Arts—V. Essay towards Establishing the Principles of Real Beauty—VI. Letter, by the late J. Flaxman, Esq. R.A. (now first published), on a Naval Monument—VII. Exhibition at the Suffolk Street—VIII. Exhibition of Painters in Water Colours, No. 2. IX. Critical Notices—X. Ancient English Architecture—XI. Miscellaneous—XII. Sir J. Reynolds's Discourses continued.
M. Arnold, Tavistock Street, Covent Garden; and all other Booksellers.

NO. XXIII. of the FAMILY LIBRARY;

being a Family Tour through South Holland, up the Rhine, and across the Netherlands, to Ostend. Illustrated by a Map of the Route, and Ten Views taken on the Spot, etched by Lieut.-Col. BATTY.

John Murray, Albemarle Street.

New Featage, Extinct, Dormant, and in Abeyance. A necessary Companion to all other Featages.

Nearly ready for publication, beautifully printed in double Columns, uniformly with Burke's Featage and Baronetage.

A DICTIONARY of the ANCIENT PERAGES of ENGLAND, SCOTLAND, and IRELAND, Extinct, Dormant, and in Abeyance.

By JOHN BURY, Esq.

Author of a General and Heraldic Dictionary of the Peerage and Baronetage of the British Empire, &c. &c.

This work, formed on a plan precisely similar to that of Mr. Burke's very popular Dictionary of the Peerage and Baronetage, will comprise the whole of the Perages of the three kingdoms which have been suspended or extinguished since the Conquest, particularising the members of each family, in each generation, and bringing the lineage, in all possible cases, through either collateral or females, down to existing houses. It will connect, in many instances, the new with the old nobility; and it will in all cases show the cause which has influenced the revival of an extinct dignity in a new creation.

When it is considered that the most illustrious peers of England were swept away in the devastating conflicts between the Houses of York and Lancaster—in the wars of the Edwards and Henrys—and more recently, in the season of civil commotion, it is presumed that a work of this description, not confined to mere names and dates, but supplying much historical, biographical, and domestic detail, cannot fail to engage public attention, and to be considered as a great desideratum in all libraries. It should be particularly useful to this new work will appear, containing nearly as much to extant as to extinct persons of distinction; for though dignities pass away, it rarely occurs that whole families do. The editor has therefore sought, with the utmost assiduity, those branches still remaining amongst the nobility and gentry, which have sprung from old and illustrious stocks, and he trusts that his researches will be found to have been extremely successful.

Henry Colburn and Richard Bentley, New Burlington Street.

Influence of the Press. Speedily will be published,

WHAT IS THE INFLUENCE of the PRESS? (Political).

By WILLIAM FERDAN, Esq.

James Ridgway, 130, Pall Mall; and through every Bookseller in the Kingdom.

On Monday will be published, price 5s. 6d.

PRACTICAL OBSERVATIONS ON PROLAPBUS, or Protrusion of the Lower Bowel. With Cases and Plates.

By FREDERICK SALMON, Author of "A Practical Essay on Contraction of the Rectum, &c. &c."

By this work it is shewn that the disease may be cured without any operation, and that the latter is rendered expeditious and safe, when its performance is absolutely requisite.
Whittaker and Co. Ave Maria Lane.

French Language. In a few days will be published, 2d edition, much improved,

LE TRADUCTEUR; or, Historical, Dramatic, and Miscellaneous Selections, from the best French Writers, on a plan calculated to render Reading and Translation peculiarly easy and interesting.

THE NEW MONTHLY MAGAZINE.

A retrospect of the progress of the New Monthly Magazine since the commencement of the present year, has been a source of gratification to its proprietors. They trust it will be allowed them to remark with confidence, that the work has been improved by the addition of several new features, and by increased activity in its general management. Among the improvements which, it is hoped, will most readily be admitted, is the Series of Literary Sketches, or estimates of the genius of the principal authors of the present day, according to the merits of their works; and the Proprietors pledge themselves to unremitting exertions in continuing to secure the co-operation of the most able and popular writers of the age.

The Number for August will be embellished with a Portrait of R. P. Ward, Esq. the Author of "Tremaine." The following is a list of the engraved Portraits of eminent Literary Persons which have appeared in this Magazine since the 1st of January last.

January 1. Sir Walter Scott, from a Bust by Chantrey.
February 1. The Hon. Mr. Norton, from a Drawing by Hayter.
March 1. The Author of "Paul Fry," from a Painting by Pickersgill.
April 1. J. F. Cooper, Esq. Author of the "Spy," &c.
May 1. E. L. Bulwer, Esq. Author of "Pelham," &c.
June 1. Thomas Haynes Bayly, Esq.
July 1. Thomas Colley Gratten, Esq. Author of "Highways and Byways," &c.
August 1. R. P. Ward, Esq. Author of "Tremaine," and "De Vere."
Henry Colburn and Richard Bentley, New Burlington Street.

3d edition, 1 vol. 8vo. pp. 406, price 10s.

NEW ILLUSTRATIONS OF PRO-PHECY, in which an Attempt is made to elucidate some highly interesting Predictions of Scripture that appear to be now accomplishing, in the present disordered and agitated Circumstances of Europe.

By W. VINT,
Tutor of Alredale College.

Containing, I. Five Dissertations:—On an Infidel Power—The Abyss, or Bottomless Pit—The Symbolic Dragon—The Millennium, and the Coming of Christ.
2. Strictures on the Rev. Dr. Morrison's Discourse on the Millennium.
3. An Inquiry into the Origin of Opinions relative to an expected Millennium.
4. A Sermon on the Dispersion and Preservation of the Jews.
5. Another, on the Kingdom of Christ.

London: Printed for Sherwood, Gilbert, and Piper, Paternoster Row.

Henry Colburn and Richard Bentley, New Burlington Street.

THE BEAUTIES OF THE COURT OF KING CHARLES THE SECOND.
Edited by the Authors of "the Diary of an Ennuyé."

A Series of Portraits of the beautiful and celebrated Women of the court and reign of Charles the Second, forming a splendid Illustration of the Grammar of the Court, the Disposition of Evelyn and Pepys, and other works connected with that gay and interesting period; with Biographical and Critical Notices, which the editor has been collecting for many years, from the most authentic sources.

Lord Orford observed, fifty years ago, that "the Beauties at Windsor ought to be engraved to illustrate the Memoirs of their charming historiographer, Count Hamilton." It is singular that since that time no attempt has been made to produce these lovely portraits in a style worthy of the beauty and interest of the subjects. Of the fourteen pictures at Windsor, six only have hitherto been engraved; it is therefore hoped that the present work will supply what has long been a desideratum in the fine arts.

The size of the plates is six inches by four and a half; engraved by the most distinguished artists from the original pictures in the Royal Gallery at Windsor, and elsewhere. Royal 4to. 11. 1s.; Imperial 4to. Proofs on India paper, 21. 2s. each No.

The First No. contains the Portraits of the Queen, Lady Castlemaine, the Countess of Grammont (La Belle Hamilton), and the Countess of Ossory; all after Sir Peter Leary.

The Second No. contains the Portraits of the Duchess of Richmond (La Belle Stewart), the Duchess of Somerset, Neil Gwyn, and Mrs. Lawson.

The Third Number contains the Portraits of the Countess of Chesterfield, Lady Denham, the Countess of Rochester, and Lady Southesk.

The whole Work will be shortly completed in Five Numbers. Henry Colburn and Richard Bentley, New Burlington Street.

LA BELLE ASSEMBLEE, No. 80, New Series, for August, is embellished with a highly-finished Portrait of Lady Kerrison, engraved by Dean, on steel, from a Painting by Sir Martin Archer Shee—a View of St. James's Cemetery, Liverpool—and two Plates of Fashions, containing five full-length Figures, exhibiting the latest London and Parisian Costumes, properly coloured, and accompanied by appropriate descriptions. The literary portion of the Work is varied and interesting. Price 3s. 6d.

Vol. XII. just completed, contains the Portraits of Princess Esthara, Lady Darham, Dowager Countess of Eroll, Lady Cumming Gordon, Lady Elizabeth Jane Leslie, and Countess Gower and Child.

The July No. is embellished with a Portrait of the Marchioness of Stafford.
Printed for Whittaker and Co. London; Waugh and Innes, Edinburgh; and Wakeman, Dublin.

In 12mo. price 2s. in boards, or 3s. 6d. bound.

FRASER'S MAGAZINE for TOWN and COUNTRY. Published monthly, price 2s. 6d.

each Number, by James Fraser, 315, Regent Street, London; John Anderson, Jun. Edinburgh; and Grant and Holton, Dublin.

On the completion of his Third Volume, the Publisher has to return his best thanks to the Public for the very liberal patronage which they have bestowed upon his Journal. Its great success will sufficiently bear testimony to the ability with which the Publication has been conducted; and the numerous attacks made upon it, both by anonymous and avowed writers, will simply prove that its criticisms have been given forth in mainly, fearless, and uncompromising language;—a plan of dealing but little in fashion until the appearance of Fraser's Magazine. From the station which the existing Magazines had taken, on the first publication of Fraser's, the Publisher was convinced that his only chance of success lay in the bold promulgation of sound opinions, both literary and political, and in the co-operation of the principal writers of the day. In both objects he has succeeded to his utmost wishes; and to the satisfaction of his friends and connexions. The contributors to his Journal are the very first in their several capacities; and should it be thought necessary to increase their number, he will be at all times enabled to do so, through his own means and the assistance of his friends.

The principles of the Magazine are in favour of Church, King, and Constitution. It is not in connexion with any large or other publishing house, and its opinions are in every way honest. It certainly discards from its pages all light and trifling matter connected with the "fashionable manners" of the day, in the indulgence of which some of its contemporaries take great satisfaction; but, for this deficiency, it amply makes up by Papers on Religious and Political Controversies, the Drama, Criticisms on the principal Publications, Tales, Historical Sketches, and Reviews of Foreign Literature. Among other valuable materials in course of publication, are Lives of the Statesmen of France and of England, and a series of full-length Portraits of the leading Literary Characters of the day, done expressly for this Journal, and accompanied by brilliant Literary Notices; of these, the following fifteen have been already published, and a Portrait will be given in each coming Number.

William Jordan, Esq. Editor of the "Literary Gazette."—Thomas Campbell, Esq. late Editor of the "New Monthly."—John Gibson Lockhart, Esq. Editor of the "Quarterly Review."—Samuel Rogers, Esq. Author of the "Pleasures of Memory."—Thomas Moore, Esq. Author of "Lalla Rookh."—Sir Walter Scott, Author of "Waverley."—John Galt, Esq. Author of "a Life of Byron."—Dr. Maginn, Co-Editor of the "Standard."—T. C. Croker, Esq. Author of the "Irish Fairy Legends."—Mrs. Norton, Author of the "Undying One."—Professor Wilson, Editor of "Blackwood's Magazine."—Miss Mitford, Author of "Our Village."—Don Telesforo de Trenchia y Cocio, Author of the "Exquisite."—Earl of Munster, Author of "a Journey from India to England."—Lord John Russell, Author of "Memoirs of the Affairs of Europe."

As a specimen of the manner in which his Journal has been noticed, the Publisher desires to give the following remarks at

"We have already taken occasion to notice the 'glorious revolution' in the state of periodical literature which was effected by the appearance of 'Fraser's Magazine,' and the full benefits of which are now signally apparent in the renewed activity and vigour developed in all the departments of 'certain monthly publications,' which," says Oliver Yorke, 'we are credibly informed, affect to call themselves our contemporaries, and to share with us in the public favour and attention.' We have to express our gratitude to 'Regina,' for having further united the spirit of criticism with the charm of wit, and the spirit of the 'Standard,' for having been long the only one of its kind. Up to her appearance, the inanity, folly, filthiness, and obscenity, of the trashy novelties issuing from Burlington Street and elsewhere, were permitted to carry their pollution abroad into the world without being once branded or denounced as impure;—nay, on the contrary, blushing thick under the paid-for puffs of hireling reviewers, and their noxious inroads into the bosoms of honest men's families, smoothed down and facilitated by hypocritical praises of their morality, and of the pious tone of their religious sentiments! The majority of critical publications had either entered into an unwholesome alliance with the booksellers, or had fallen under their control; and were in either case rendered alike impotent to scourge impurity and nonsense. The public was thus not only deprived of its constituted guardians, but those whose duty it was to protect the public taste, and the public morals, and the public purse, from degradation and delilement and cozening, were turned into its most insidious foes; and, under the mask of friendly and honest advice, were undermining its best interests. To say that 'Fraser's Magazine' has wholly subverted this tyranny of evil, were to go too far, so long as we see the 'New Monthly' still leaning to puff, and insistent to praise the greatest trash of its publisher; and so long as the 'Standard' is the coadjutor of the 'Irish Fairy Legends.'—A publication which our contemporary, the 'Aberdeen Magazine,' has justly designated 'the common sewer of the vilest bibliopoli corruption.' But if Fraser has not overthrown 'the reign of chaos and old night,' he has, in his own pages, shown an example of free and impartial criticism, and has himself sturdily laid the lash to the loathsome back of dulness and nonsense. If his power has not been sufficiently strong to crush the hydra of the Burlingtonians, it has availed, at least, to set a mark on them by which they may be avoided. If he has not persevered, there is no doubt but that he will abash, perhaps, even the 'New Monthly' itself, if not into honest exposition, at least into a silent admission of the demerits of the inane publications of its proprietors. Fraser still keeps up the great superiority over his contemporaries with which he started. His rich wit, his rough honesty, his inimitable humour, his profound philosophy, his amusing ultra-Tory politics, his sterling sense, his vigour and spirit, honourably continue to distinguish him from the weak, doubly diluted, sickly sentimentality of the 'New Monthly,' the antiquarian drivellings of the 'Gentleman's,' the pragmatical twaddle of the 'Monthly Review,' the stalling pseudo-scientific of the 'Edinburgh Review,' the stalling pseudo-scientific of the 'Monthly Magazine,' and the rayless, hopeless, irretrievable dulness of the 'Metropolitan.' He is unquestionably, after 'Blackwood's Magazine,' (a small portion of whose ancient spirit burns within him), the best of the Magazines."

Not to exceed the limits of a prospectus, the Publisher is compelled to content himself with short extracts from other Journals, but he refers with pride to the numerous flattering testimonials by which his exertions have been cheered and rewarded.

Critical Notices of Fraser's Magazine.

LONDON.

Morning Herald.—"Oliver stands in an insulated position at present, and can only be sustained by the aid of genius, talent, and of this he seems aware, for his numbers are decidedly good in quantity and quality of matter."

Standard.—"Full of extravagant humour, keen satire, critical shrewdness, and varied and agreeable matters of information."

News.—"The articles are written with the same freedom of style that distinguishes all its numbers."

Paul Pry.—"Much miscellaneous and interesting matter is in this number, which may take rank with the ablest of its predecessors."

Age.—"Conducted as it is by the highest talent, it has almost entirely supplanted all rivals."

Le Siècle.—"De tous les ouvrages périodiques qui se publient en Angleterre, il n'en est point qui soit mieux rédigé, et qui contienne tant de bons articles, soit sérieux, soit plaisans, que le magazine de Fraser."

United Kingdom.—"This is an admirably arranged and well-conducted monthly, which may appropriately be termed the 'Blackwood of the South.'"

Standard.—"The contents are numerous, and manifest ability of the first order."

World.—"The present number surpasses the preceding in energy, variety, and novelty."

Constitution.—"Excellent papers are contained in it."

Gazette of Variety.—"Much information and acuteness of argument displayed in all the articles."

Country Times.—"Abounds in original satire and severity of view."

Globe.—"Shows great talent, and seems likely to cut the feathers out of its northern contemporary."

Weekly Free Press.—"All doubt that we may have previously entertained of its taking a high place in periodical literature, is now removed."

Morning Journal.—"With the same talent, the same principles, the same independence, and the same genius that it has hitherto displayed, Fraser's Magazine may confidently step forth on the 'Babylonian' arena, without the fear of meeting with an antagonist capable of coping with it."

Atlas.—"The papers are solid and intellectual."

Quarterly Review.—"We make the following interesting extract."

Courier.—"Amongst the periodicals published, this Magazine takes the lead, and is replete with talent of the first order."

Star.—"Contains interesting articles."

Political Letter.—"Regina continues to maintain the high rank which she assumed on her first starting."

National Omnibus.—"Every thing in Fraser is first-rate."

Litrary Beacon.—"Not only in the critical department Fraser's takes the lead, but in the literary, in the poetical, in the dramatic, it is distinguished by brilliancy and force that we do not meet with in the pages of its contemporaries."

Academic Chronicle.—"Has again put forth a more than ordinarily good number."

Aldon.—"The character of this periodical is well sustained in the talent and variety displayed in every number."

Observer.—"Rich in force and variety, and anxious to win the favour of the public."

Weekly Times.—"A well-sustained reputation of being one of the most spirited, well-written, and varied of the periodicals."

Sunday Times.—"Rich in banter, and articles of interest."

Ballot.—"Always amusing, and becoming popular, having presented its readers with some first-rate articles."

Intelligence.—"Contains specimens of the most caustic and biting satire that has ever issued from the tomahawk school."

Dispatch.—"In good truth, Fraser is one of the most amusing periodicals of the day."

Spectator.—"Has made considerable progress since our former mention of it."

St. James's Chronicle.—"Full of clever and curious papers."

Morning Post.—"The variety of articles, and their general excellence, render this new publication very deserving of encouragement."

Literary Gazette.—"We are much gratified with the contents."

Athenum.—"Contains judicious and well-written papers."

John Bull.—"The clever sketches in Fraser's Magazine."

ENGLAND AND WALES.

Berkshire Chron.—"Decidedly the most witty, pungent, comic, satirical, and clever of all the monthly periodicals, the only rival of Blackwood, and in some respects his superior."

Blackburn Gazette.—"The writers are by no means destitute of talent."

Bolton Chronicle.—"This periodical fully maintains its reputation."

Bristol Journal.—"The political articles are all of them admirable and consistent."

Bury Herald.—"Regina need not tell her new 'Berlin Bonnet,' even in the presence of her great co-rival, the 'Maga of the North.'"

Brighton Gazette.—"In politics, able and fearless."

Bath Chronicle.—"Full of rich, powerful, and original talent."

Bath Herald.—"Abounds with acute remark, fearless criticism, and saucy wit."

Birmingham Journal.—"A talented and increasingly popular periodical."

Birmingham Monthly Argus.—"Second to no periodical of the day."

Bristol Mirror.—"Extraordinary exhibition of talent."

Birmingham Free Press.—"Rather an ambitious title; but the talent engaged on the work warrants its adoption."

Brighton Guardian.—"Among the periodicals, this Magazine stands distinguished."

Bury Post.—"Much good and careful writing in it; the serious parts are not heavy, and the humorous not empty."

County Chron.—"An interesting and instructive mélange."

County Herald.—"Got up with a master hand."

Cheltenham Chronicle.—"This interesting miscellany fully maintains its usual high character."

Cerintale Journal.—"A Magazine of great and varied talent."

Cambrian.—"To appreciate the merits of this work, our readers must order of their bookseller."

Cornwall Gazette.—"Light, sharp, and sprightly in its varied contents."

Cheltenham Journal.—"A Magazine which has been crowned with unprecedented success."

Cornubian.—"There is an opulence of genius, a fulness of intellectual light in the numbers before us, rarely surpassed in periodical literature."

Carlisle Patriot.—"We have before spoken warmly in praise of Fraser, and after another examination, are more than ever disposed to do so."

Cheshamford Chronicle.—"We recommend to our readers a careful perusal of this Magazine."

Colchester Gazette.—"There is no falling off, as we conceive, in those resources of wit, sarcasm, and talented invective, by which its early Numbers were distinguished."

Devonport Telegraph.—"This periodical continues to be conducted with much spirit and ability."

Derbyshire Courier.—"The present number of this clever wit is particularly effective."

Devonshire Chron.—"Regale with wit and deep thinking."

Doncaster Telegraph.—"Bold ways turn over the leaves of Fraser with an agreeable relish."

Durham Advertiser.—"This is the Blackwood of London, and a very clever and talented publication it is."

Exeter Gazette.—"Light, sharp, and sprightly, with a spice of philosophy running through the whole."

Exeter Herald.—"Varied as is its contents, we have much that is valuable."

Exeter Standard.—"Regina may now fairly claim to be the legitimate successor of old Ebony on English ground,—it is every thing that Blackwood was."

Exeter Herald.—"The numbers contain excellent and purely literary articles."

Exeter News.—"This incorrigible is as amusing as ever; he cuts away at our Whig ministry in good earnest."

Gloucester Courier.—"This periodical, which may not inaptly be termed the English Blackwood, still pursues its unflinching course."

Hull Advertiser.—"Maintains and bids fair to increase its popularity."

Hereford Journal.—"There is a manifestation of bold moral feeling in its articles, highly commendable."

Huddersfield.—"Continues to be carried on with spirit and decision."

Hull Beckingham.—"Supplied with matter suitable to all tastes, and well got up."

Hampshire Telegraph.—"We recommend perusal for its able articles."

Isleworth Journal.—"Ranks very high, we may say first, among the monthly publications of the day."

Kendal Advertiser.—"A spirited and talented Magazine."

Leeds Intelligencer.—"As usual, lively and clever. We hear good accounts of the trade. It is rapidly rising in circulation, and merits success."

Liverpool Journal.—"As usual, lively and personal, and will, perhaps, please more readers than the other Magazines."

Liverpool Saturday Advertiser.—"We ascribe to this lately established monthly, miscellaneous, a position of merit not below that of any of its competitors for public favour."

Liverpool Courier.—"This highly spirited publication owes its deserts to take rank amongst the oldest and most respectable of the periodicals."

Liverpool Mercury.—"Highly talented, with evident marks of genius, and no lack of information."

Liverpool Mercury.—"An interesting and entertaining periodical."

Manchester Chron.—"This is a great improvement on the best of the preceding ones, capital as they all have been."

Manchester Courier.—"Whether critical or political, the contents are excellent."

Monmouthshire Merlin.—"This Magazine has established itself in the first rank of periodicals."

Malden Journal.—"Has very considerable pretensions to occupy a high station among periodical literature."

Northampton Mercury.—"The present number may justly be cited as a powerful proof of the high station to which the periodical literature of the day has attained."

Northampton Journal.—"Every effort is made to render this periodical worthy of universal perusal, and we are sure that an extensive circulation must reward its spirited proprietor."

Nottingham Journal.—"One of the most spirited and best-conducted periodicals of the day."

Plymouth Herald.—"Few, if any, periodicals ever attained such a high degree of celebrity in so short a time as this work has done."

Preston Pilot.—"We cannot help complimenting the conductors of this new and interesting publication on the zeal and ability with which they get through their work."

Reading Mercury.—"Abounds with acute remarks, fearless criticism, and saucy wit, which have so highly distinguished the periodical from its birth."

Sheffield Iris.—"Has discriminating and well-written articles."

Staffordshire Advertiser.—"A periodical which is peculiarly distinguished by one trait, namely, that of being no respecter of persons or parties."

Just published, dedicated to Her Most Gracious Majesty Queen Adelaide.

Fraser's Panoramic Plan of London.

consisting of a Plan of the Cities of London and Westminster, and the Borough of Southwark, with Eighteen of the principal Views of the Principal Public Buildings in the Metropolis. Beautifully engraved on Steel by Josiah Neale.

This splendid Map, which will be found to combine utility with elegance, may justly be termed a gem of art; the plan panoramic in its conception, and the execution in the most complete and accurate manner, affords a pleasing idea of the magnificence of the largest and most important Metropolis in the World.

Price.

On Black Roller, coloured and varnished 10 6

On Mahogany ditto, French polished also 12 6

In a Black Frame ditto 18 6

Critique on Fraser's Panoramic Plan of London.

Literary Gazette.—"A complete Bvion of a map, and not less useful than elegant."

Athenum.—"A very neat, clear, and useful map of London."

Christian Encourager.—"This is one of the most splendid little maps we ever had the good fortune to meet with."

Spectator.—"This is a most complete and compact plan of London, and very elegant in its appearance."

Atlas.—"Unquestionably the best map of London we have seen."

Exeter Standard.—"Without any exception, this is the most beautiful map we ever beheld."

PRICE 8d.

REVIEW OF NEW BOOKS.

The Private Correspondence of David Garrick with the most celebrated Persons of his time. 4to. pp. 660. London, 1831. Colburn and Bentley.

As this massive tome only sees the light to-day, and has been but a short while in our prepossession, we may be excused from going into any detail of its multifarious contents, or giving any decided opinion of its merits. That such a collection must embrace much of intelligence and amusement is obvious; and that a good deal of matter not of much interest, but which it was yet difficult to separate from the rest, should be mixed up with what is more worthy of publication, is another feature that might readily have been anticipated. A biography of Garrick, of sixty-four pages, precedes the Correspondence, which is brought down from his first start from Litchfield to London, with letters of recommendation, in February 1736, to August 1774, when he was manager of Drury Lane theatre: the memoir itself is but indifferently written as to style. It tells us, what the Correspondence amply proves, that Garrick had a numerous and very miscellaneous body of correspondents, whose letters he preserved, and also kept copies of his own: so that the whole presents a curious picture of dramatic history and criticism.

From these sources we shall now trace some of the features; beginning with the Memoir. Garrick's predilection for acting was evinced at an early age, and he had acted Sergeant Kite in his eleventh year, at school (1727), previous to being sent to Lisbon to his uncle, a wine-merchant resident there.

"His stay at Lisbon (says his biographer) was not a long one, for the next year saw him returned to Mr. Hunter's care, and his time was spent between the school and the capital. In the one he advanced his classical acquirements, and in the other indulged his passion for the theatre. In these visits to town he had opportunities of studying the art as it was exhibited by Quin and Cibber, and Macklin. The houses he could frequent were then, as now, Drury Lane and Covent Garden theatres; that in Lincoln's-inn Fields; that in Goodman's Fields, which he soon enriched himself; and Aaron Hill's rooms in Villier's Street, where the *Zara* was first tried, of which he afterwards became the enchanting Lusignan. But notwithstanding the interruption given to his studies by these trips to London, there is full evidence that his progress in the school had been far from a slow one. Johnson had assisted in his studies but a few months, and therefore to Hunter much praise is due for fixing so mercurial a spirit. In his eighteenth year his friend Walmsley writes of him, that he was not only an amiable young gentleman, but a 'good scholar;' in other words, the grammar-school had done him justice. As his father could not afford to send him to the University, he was to study philosophy, the mathematics, and polite literature, under Mr.

Colson, then residing at Rochester, in Kent. To shew at once all that was required; 'Few instructions,' says Walmsley to his friend, 'on your side will do, and in the intervals of study he will be an agreeable companion for you.' Thus we see Colson was to be to Garrick, what Johnson, less calculated for tuition, had recently been, and the master and the scholar were to live in a friendly intimacy together. And this leads us to the celebrated journey to London, by Samuel Johnson and David Garrick, from the same place, with views, however, widely different; the scholar to work his way ultimately at the bar, and the master to produce his genius upon the stage. The result is well known to the reader; Johnson acquired the degree of Doctor of Laws, and the intended lawyer became the sovereign of the stage;—happy both of them in this, that in their respective walks they were alike transcendent; Johnson the first name in literature of his age, and Garrick the first actor of his own, if we may not rather think of any age. The opportunity may be here taken of offering a very few remarks upon the objects of Garrick's fellow-traveller, as they are described by Gilbert Walmsley: 'Mr. Johnson,' with that most forlorn of all hopes to a stranger, 'to try his fate with a tragedy' upon the stage; 'and to see to get himself employed in some translation, either from the Latin or the French.' He goes on without the slightest affectation:—'Johnson is a very good scholar and poet, and I have great hopes will turn out a fine tragedy writer. If it should any way lie in your way, I doubt not but you would be ready to recommend and assist your countryman.' REGARD for the profound critic and moralist may induce us to regret that his rewards should have fallen so far short of his friend's. The sage, like another Cato, gives laws to a little senate of his admirers, and struggles through life, almost in vain, to be above want. The actor is the *arbitrator elegantiarum*, the 'observed of all observers,' the man to welcome whom the proudest rank drops its barrier, and in-treats an intimacy as a boon. He is, almost at his outset, patentee and proprietor of the first theatre in Europe; and living a life of splendour, more valuable by its liberality, be-queaths at his death property considerably beyond one hundred thousand pounds!"

It is amusing to us, after having so recently followed the revived biography of Johnson, to be thus called upon to study a contemporary, elevated by the partiality of his historian to so superior a station: in Boswell's Johnson, Garrick is but a secondary figure, and even lower, the Punch who has no feelings: here he is the hero, and Johnson sinks into the comparatively poor and obscure personage. It is true, however, that Garrick's career was from the beginning a brilliant and successful one, from his *début* at Ipswich, as Aboan, under the name of Lyddal, in 1741,* and subsequently in London,

* Where he also performed Chamont, Captain Brasen, Sir Harry Wildair, and Harlequin, with the greatest éclat.

where he appeared as Richard III. on the 19th of October, in the same year, to the final closing of the scene on the 20th of January, 1779. In 1749 he married the celebrated Miss Viollette or Violletti, who, his biographer assures us, was in no way related to the Burlington family, her great patrons and the munificent donors of a wedding portion of 6000*l.*; but the daughter of a person of the name of Veigel, at Vienna, from which capital this *violate* was sent by Maria Theresa, in consequence of attracting too much of the notice of the Emperor by her beauty and grace as a dancer. With her, Garrick appears to have enjoyed a state of uninterrupted felicity: but we pass over that, and all the familiar points of his theatrical life, and select a passage or two from a later date. 1774.

"Mr. Garrick's health had continued sufficiently good to enable him to enjoy the society of his friends at Hampton in the fine weather, and in the Adelphi during the winter. He occasionally visited the House of Commons; and one night, during a stormy debate, the standing order was enforced to clear the gallery. Mr. Garrick kept his place by acclamation of the whole house; and the member for Shropshire, who moved it, underwent the castigation of Burke, who there called Mr. Garrick the great master of elocution, by whose lessons they had all profited. Garrick avenged himself of the tasteless member by some verses, which reminded him of that unlucky animal, whose *bray* every hearer of delicacy and refinement instinctively flies. He does not seem to have troubled himself with the theatre in any remarkable degree. He wrote a prologue or two, gave the younger Bannister some instructions in *Zaphna*; and his pupil acted it with great applause to Mrs. Robinson's Palmyra. That beautiful and fascinating woman has long quitted us: but Bannister is living happily and vigorously, and would be young Bannister still, but for a lameness in one of his feet, that affects his gait, it is true, but spares his gaiety."

"Two incidents call for notice, and for reprobation of very different strength. At a dinner of the Actors' Fund, Mr. Garrick, to do them honour, visited his former friends, elegantly dressed, and expecting both to give and receive pleasure by his company. As to himself, Mr. Garrick saw no signs of cordiality; as to each other, the actors were split into parties; and where it had been a virtue to practise the dissimulation of the stage, they indulged themselves in exposing their natural infirmities. Tom King's explanation and apology to Garrick are at least well intended. The mortification felt by Mr. Garrick he in fact shews by his letter to that gentleman. The other occurrence is of a graver die. At the very time that a fatal malady was dragging him to the grave, the villainous enmities that persecuted him were threatening his moral destruction, and endeavouring to practise upon his solicitude for his reputation. The weapon

* She survived him 43 years, and died October 1822, in her 90th year.

of the assassin is preserved in the 'Correspondence'; the villain himself has escaped the infamy to which we should joyfully have consigned him." [As the Correspondence does not come so far down, we are left in the dark respecting this allusion.]

"As an actor," (the writer observes, in summing up his character), "Mr. Sheridan has done him justice. As a manager, he appears to have been liberal to his authors, and friendly to his actors. The profits to the first, greatly exceed what they can now obtain; when the theatre, too, held at most 330*l*. His performers had weekly salaries that seem now moderate, but were at that time sufficient; he besides wrote for their benefits, and never refused to act for them. He only could fill the house. He encouraged of either authors or actors such talent as he could find, and cherished it, until they alike tried to invade his province as a manager. The authors were for subduing his judgment to the fellow-feeling of their brethren, and the actors were for choosing their own nights for performing, and would discard or resume whatever characters became obnoxious or desirable from their whims or their jealousies. As a man, perhaps he was not equally perfect. He saw his object singly, and perhaps too fondly. Sir John Hawkins, we believe, tells us that he once gave Mr. Garrick some intelligence very material to his interest, but he could not secure his attention; a new pantomime engrossed every moment of his time. He paid great regard to the press, he even meddled with newspaper property, he anticipated attack sometimes, was irritated by it at others, and never practised the policy of being silent. But his self-love as an actor was not alone to account for this. He was a proprietor of a concern, that flourishes but by the 'popular breath'; to engage the public mind, therefore, about himself and his theatre, was essential to the triumph of both. He had writers who were engaged in his interest in such vehicles, and he wrote in them himself. Such was his avarice of fame: but his love of money seems to have been more disputable; or rather, he loved affluence for its independence, and the power it bestowed of obliging the great, and relieving the humble."

We could cite some very curious proof of Garrick's use of the press—his anxious preparations of the public for his reappearance or for new characters; and his puffs collusive, preliminary, &c. &c. &c.—even the actors' arts in our day fall short of these elaborate contrivances.

"As a writer," (continues the summary we have been quoting), "we can hardly tell what to say of his powers: we do not know, touching either character, thought, or expression, how much was really his in the plays of others. The two-act comedy at least was his own. Prologue was his chief province, and his fertility in such compositions inexhaustible. Epigram he made vigorous court to; and Epitaph, in some instances, owned no superior. In the light measures of Prior, he frolics that poet himself, or Voltaire, or Gresset, in the enchanting *Ver-Vert*. To sum up his character:—when we consider the space he occupied in life, his fame in other countries, his pre-eminence in his sphere, the numerous circles of which he may be said to have been the idol, the illustrious men who mixed his talents with their own; that he was never subjected to a single reverse of fortune, never involved in any touching calamity; that he was spared the pangs of family connexion, and rejoiced that he was without children; in spite of severe an-

noyances from the malignant, and some chronic disorders, that clung equally to him in his course;—we cannot but regard him as having enjoyed one of the happiest lots that ever gratified the ambition, or rewarded the energy of a human being."

It is now our business to select a few of the letters which appear to us most likely to interest readers of the present time.

Mrs. Frances Sheridan, the wife of Thomas, and the mother of Richard Brinsley Sheridan, a lady of great acquisitions and striking ingenuity. Garrick acted in her *Discovery*, and every body has read her *Nourjahad*. The following is a very spirited and clever letter from her to a Mrs. Victor:

"Blois, Nov. 16, 1743.

"Dear Madam,—I am much obliged to you for your punctuality in writing to me under the chastisement of two blisters. You did it, I am sure, with a design to deliver me from a very disagreeable sensation, called suspense; under which, I must nevertheless assure you, I laboured not at that time; for I was very sure that had the comedy been even approved (about which you know I was not over sanguine), it was too late to be received; and the only thing with which I flattered myself was, that perhaps between this and next season there might be time to mend what should be thought most to want amendment; and it was with this view you may remember I told you I should (and indeed I endeavoured to) send it over as early as possible. I am very sorry that you and your good man have had so much ineffectual trouble about it; but I know you neither of you begrudge to take a little pains for your friends. Thank Mr. Garrick in my name for delivering his sentiments so frankly; it shews, at least, that he has some opinion of my philosophy, though he has none of my genius. I thank you for transmitting them to me so faithfully; and must now, in my turn, beg you will be so kind as to let him know what I have to say on the subject. It is but a disagreeable task to defend one's own writing, but in the present case I think my honour at stake, and that I am bound to justify myself to you and Mr. Victor, for having put (as it appears upon the face of the evidence) a worthless stranger under your care, with no other recommendation than that of its own natural parent, and who, upon trial, has had so unfavourable a verdict returned, that perhaps you may condemn the poor culprit according to law, to return from whence it came, and thence to the place of execution (the fire), without vouchsafing it a second hearing. I have the utmost deference for Mr. Garrick's opinion; I think extremely well of his wit, and still better of his discernment in judging what will or will not succeed with the public; and for his abilities in his own profession, you know how highly I rate them; yet notwithstanding all this, and that I live too at present in a Roman Catholic country, I allow not infallibility to mortal man. People of the best understandings may differ widely in their sentiments of one and the same thing; we have all a certain perception which, for want of another name, goes by the general one of taste, and which if the subject to be decided on does not hit, we are apt sometimes to withhold the suffrage of our judgments, and to confound one with the other, though they are in fact distinct things, however one (to be perfect) ought to be founded on the other. I have heard Johnson decry some of the prettiest pieces of writing we have in English; yet Johnson is an honourable man—

that is to say, he is a good critic, and in other respects a man of enormous talents; but the works I speak of have not been to his *goût*, and he has indiscriminately condemned the whole, which, though perhaps not perfect, had still merit enough to save them from general condemnation. From what I have here said, I would be only understood to mean, that I believe Mr. Garrick, not having leisure to give more than a very hasty perusal to my play, and not finding himself pleased upon the whole, could not allow himself the time to separate the good from the bad; but, in the warmth of his disappointment, passed at once on it such a sentence, as put me in mind of your husband's ever-memorable description of Rantavan, viz. that he found there neither meat, drink, washing, nor lodging, which reduced our friend B.'s house to a desert, as my poor comedy is, to something worse than the desert island. There are four heavy accusations laid against it: any one of which being sufficient to weigh the stripling down, I think it a maternal duty to exculpate my child, as far as it is in my power, from so many complicated faults, more especially as these vices have not been acquired by evil communications, but were born with it, and consequently take their rise originally from myself. Imprimis, the play is without fable; secondly, all the scenes are detached; thirdly, there is nothing to interest the audience; and lastly, it has no humour. Tell Garrick I have thrown my gauntlet down, and am going to defend myself. To the first charge I plead not guilty, and will maintain that the fable is fully sufficient to build a series of events upon,—that there is as much as most of our comedies have, and more than in many which have been well received. For the second, I cannot pretend to say (contrary to the opinion of so good a master of his art) whether the scenes are laid with that rigorous exactness that theatrical architecture may require; but thus much I will venture to assert, that their succession is regular and natural, and that they all tend to the main purpose of the drama, which is comprised in the two or three last lines of the play. For the third objection, perhaps, I may be singular in my opinion; but I own, I do not think it absolutely necessary to interest the audience in a comedy; in a tragedy it is indispensable; but if the comic muse can excite curiosity enough to keep up the attention of the audience, she has, in my mind, acquitted herself of her duty; and I think this seems to be the general style of some of our most entertaining comedies, and the one in question, I should hope, is not entirely void of this merit; as the fate of an unworthy project against two innocent young people, artfully carried on, on one side, by a designing pair, and ridiculously supported, on the other, by an absurd pair, is not decided till the very last scene. As for the fourth charge, I shall leave it as I found it: for unless I were to use Bayes's expressions, I should be at a loss for words to defend it—I promised you but pleasant, and if I have utterly failed in that, I am more unfortunate than I expected to be. Just give me leave to add, what I think will not be denied me, that there is a good moral, and some character, in this piece. The latter of these two articles seems to be growing fast out of fashion: the late writers treating the taste of the times as physicians do the stomachs of their sick patients, which, finding too weak for substantial food, they supply with slop. But the reason of this is obvious: our present race of poets not abounding with invention of their

own, have taken stories they found ready to their hand, which never having been intended for representation, the authors did not think themselves tied down to rules with which the stage ought not to dispense; yet I thought that Mr. Garrick, who himself knows so well how to support this grand requisite of dramatic works, would willingly have encouraged every effort which had the least pretensions to merit of this kind. I have but just room left to thank you for the verses on the Mummy, which I think an excellent epigram. Mr. Sheridan joins me in best wishes to you and Victoribus. I am, dear Mrs. Victor, yours sincerely, F.S."

The following passages occur in a letter of Lord Rochford's to Garrick, about 1745:

"My lady desires her compliments, and is obliged to you for the trouble you have been at in getting her the tincture. She continues to ride, and is in [good] spirits, which, I agree with you, are the essential happiness, not only of *Easton*, but to every place else. I don't know why, but when I see a man of a gloomy disposition, I am apt to suspect he has done something wrong; and I have made it my observation, that men of a cheerful, gay disposition, seldom turn out very great villains. Give me, as *Cæsar* says, men that sleep a' nights. I make a great difference, though, between men that are naturally gloomy, *sans savoir-pourquoi*, and those who have met with distresses and accidents in life: they indeed are to be pitied. I can't help, since I am upon this subject, describing to you a sort of men that I have met with in my lifetime, that are my utter aversion; and such are they who are not melancholy enough to hate society (for then one should at least be rid of them), but when they are in it, become observers of one's words and actions, and never communicate any thing they know themselves, not even to those they call their dearest friends. Such men are born natural spies, and I believe the devil had a hand in their creation; but to describe more strongly to you the sort of man I hate, I must, without flattery, tell you he is the reverse of you."

In 1746 (Nov. 3), Mr. Walmsley writes from Bath to Garrick as if Dr. Johnson were in London, for he says—"When you see Mr. Johnson, pray [give] my compliments, and tell him I esteem him as a great genius—quite lost both to himself and the world." This is, it will be remembered, the period of Johnson's life which it has been found difficult to account for. The editor adds, in a note—

"This, we know, was exactly the fact. His attachment to Savage had done him great injury. Between the years 1745 and 6, he literally wrote nothing. The rebellion, that was then raging, perhaps inspired him with the hopes that attached to his political principles. He loved the house of Stuart, and in the success of the Pretender might anticipate his own independence. The reader will be delighted with this letter from the venerable Walmsley. He returns upon Johnson, like the mighty shade of Denmark, to admonish him in his course and stimulate his exertions—

'Do not forget; this visitation
Is but to whet thy almost blunted purpose.'

It is obvious that Walmsley had been anxiously expecting from his friend performances adequate to his powers; but at length almost despaired that he could ever be roused to activity, and useful strenuous occupation of his time."

From Garrick to Hogarth about 1755.

"Dear Hogarth.—Our friend Wilson hinted to me the last time I saw him, that I had of late been remiss in my visits to you—it may be

so, though upon my word I am not conscious of it; for such ceremonies I look upon as mere counters, where there is no remission of regard and good wishes. As Wilson is not an accurate observer of things, not even of those which concern him most, I must imagine that the hint came from you, and, therefore, I shall say a word or two to you upon it. Montaigne, who was a good judge of human nature, takes notice that when friends grow exact and ceremonious, it is a certain sign of coolness, for that the spirit of friendship keeps no account of trifles. We are, I hope, a strong exception to this rule. Poor Draper, whom I loved better than any man breathing, once asked me smiling,—'How long is it, think you, since you were at my house?' 'How long? Why a month, or six weeks.' 'A year and five days,' replied he; 'but don't imagine that I have kept an account; my wife told me so this morning, and bid me scold you for it.' If Mrs. Hogarth has observed my neglect, I am flattered by it; but if it is your observation, wo betide you! Could I follow my own wishes, I would see you every day in the week, and not care whether it was in Leicester-fields or Southampton-street; but what with an indifferent state of health, and the care of a large family, in which there are many froward children, I have scarce half an hour to myself. However, since you are grown a polite devil, and have a mind to play at lords and ladies, have at you. I will certainly call upon you soon, and if you should not be at home, I will leave my card."

Dr. Warburton, in one of his letters to Garrick, speaks thus irreverently of editors:

"When every religion, and even every trade, has its mysteries, it would be hard to deny it to the worshipful company of editors. Besides, these dealers in other men's sense should give a sign, at least, that they have some of their own: like your haberdashers of small wares, who have always a back-warehouse of their own manufactures."

Of Dodsley—"Dodsley is a wretched fellow, and no man ever met with a worse return than you have done, for your endeavours to serve him. I deny your position, that scholars and men of ability applaud his trumpery; for, take my word for it, a learned blockhead is a blockhead still. I think the applause given to it by Spence, Lowth, and Melmoth, was very sincere; and though I hardly think the same of Sir George's, who is certainly as great a critic as politician, yet I excuse him, for he is like Enobarbus in the play, 'he will speak well of any body who will speak well of him.' As to Master Robert Dodsley, I rate him at his worth; and he being worth nothing, we shall hardly come to a bargain."

The Bishop of Gloucester to Mr. Garrick.

"Prior Park, Feb. 17, 1761.

"Dear sir,—Before I left town, I talked very seriously with Millar concerning that scoundrel poem, and more scoundrel subject of it. He appeared truly concerned; and, as he told me, spoke to Wilks with great resentment of the injury done him, by incurring your displeasure, through his perfidy. But do such wretches as the writer of the poem and the hero of it deserve a serious thought from you? I think you and I have all the standard dunces of the kingdom on our hands: you the rhyming, and I the prosaic dunces. Yours have most of the nature of that sort of vermin Dryden speaks of—

'So little and so light,
One could not know they live, but that they bite.'

Mine, most like that which Sir Hugh, in the play, calls 'a familiar beast to man, and signi-

fies love.' On this account I must tell you a story. Two English soldiers, travelling through the Highlands, were one night in particular most miserably lodged, and, before morning, half eaten up with these two sorts of vermin. As day-light approached, they resolved to make an ample sacrifice for the violated rights of *Jupiter hospitalis*; but the first attack was so ill-planned, that a great part of the enemy had escaped, had not one of these commanders, observing the absurd manœuvres of his fellow, called out, 'What the devil, comrade, are you about? Let us first secure the light-horse; the heavy-armed foot lie at our mercy.' And now, should you and I, think you, be better employed than these two brave misers, did we seriously set about revenging ourselves on the worthless vermin that molested us? I was pleased to see you in sentiments more characteristic of you, the last time we were together, when you hinted to Mr. Berenger and me your inclination of being the means of diverting some rays of the king's favour, to shine on the other house. I said nothing to you then, but you will pardon me for giving you my thoughts now. Were the king's using your house intended as matter of mere favour to you, your modesty and generosity would be well employed to serve your neighbour. But since the king, in this consults only the gratification of his own amusement, which your acting is necessary to, modesty and generosity would seem to be misplaced in hinting any thing in behalf of the other house.

"I had not seen 'The Fribbleriad.' It is excellent both in the fable, the sentiment, and the wit. Pope, in speaking of the *cock fribble* of his time, compares him to a *gilded bug*. I remember Middleton used to say to me, the description was very faulty, because there was no such thing in nature as a *gilded bug*. I replied, it suited the purpose the better, for a fribble was as much out of Nature. I have my fribbles as well as you. In the 'Anecdotes of Painting,' just published, the author, by the most unprovoked malice, has a fling at your friend obliquely, and puts him in company where you would not expect to find him, (it is vol. i, pp. 106, 107,) with Tom Hearne and Browne Willis. It is about Gothic edifices, for which I shall be about *his pots*, as Bentley said to Lord Halifax of Rowe. But I say it better; I mean the gally-pots and washes of his toilet. I know he has a fribble tutor at his elbow, as sickled over with affectation as himself.

"I have seen the first edition of the poem you mention, 'The Rosciad,' and I was surprised at the excellent things I found in it; but took Churchill to be a feigned name, so little do I know of what is going forward."

We now make another selection from another sort of correspondent.

Signor Joseph Baretti to Mr. Garrick.

"Venice, July 10th, 1764.

"Dear sir,—Countess Bujovich, the lady who told me of her miraculous remedy against the ecstasia, has been out of town these three weeks, and I know not when she will be back again. But if I recollect well, the plaster is made with some Venetian soap and the yolk of an egg, well mixed together, applied to the painful part on a bit of blue paper. Have you forgot the black hen? Do not neglect that particularity, and abstain from laughing, you incredulous mortal! To be serious, I heartily wish Mrs. Garrick a perfect recovery of her health, and should be very glad to hear her

bettered by this simple remedy. I was much pleased to hear from more than one friend, that she is much better now than she was when she left Venice, and that she has dismissed her stick, and walks bravely about. Could I absent myself from here, I would certainly come to Albano, and wait daily on her in our Italian character of cavalier serviente, although she wants a stick no more. My best wishes and compliments wait on her instead of me. Now, friend Garrick, give me leave to be a little peevish with you. How could you be such a witless man as to think that you could find Italian literature existing to the sum of thirty sequins? I scarcely think you would find literature in the whole world worth such a sum. I reckon that you have about twenty sequins' worth in England, three sequins' in France, a couple of sequins' in Germany, and another couple in the rest of the world, which sums put together do not fully come up to what you laid out in that of Italy only. Yet, though literature worth money be so very scarce, in my opinion, every where, I am not quite of your mind as to the books you bought, considered as books. Some of them—(for I saw a list of them in Mr. Beaucherk's hands)—some of them are valuable for their printer's sake, some for this, and some for that other foolish reason; and whenever you think of selling them again, I firmly believe that it will not be any hard matter to get you your money again. Mr. Beaucherk, meanwhile, offers you twenty sequins, if you are fully persuaded of having made a very bad bargain. So you see you will but lose ten sequins instead of twenty. I wish I had seen the books themselves—I could be more positive, in all probability, as to your having done yourself no harm; for I firmly think that you have done by chance what many more people in Venice would likewise do deliberately. Be comforted, then, and do not consider yourself as a great sufferer for a trifling loss that you may make, at the very worst. The great sufferer is your lady, who is obliged to stop in a sorry place, physicking, instead of rambling about merrily in cheerful places."

A letter from Burke:—

"My dear David,—We have now got a little settled in our new habitation. When will you and Mrs. Garrick come and make it comfortable to us by your company for a day or two? You have promised us, and we are a sort of persevering folks, and will not easily let you off. You shall have fowls from our own poultry-yard, and such beef and mutton as our next market-town yields; and to make it complete, we will assure you it is our own feeding, and then you will find it very good. In all sadness we wish, Madam Burke, all with us, and myself, most hugely to see you, and will take it ill if you go and see the new paymaster before us starving proscribed folks. You know the unfortunate are always proud and touchy. We only wish you would give us a day's notice, that we may not ramble. Adieu, my dear Garrick, and believe me most sincerely and affectionately, EDMUND BURKE."

"Mrs. Burke desires her compliments to Mrs. Garrick. If you bring your neighbour, the Thames, with you, it will be quite agreeable."

We conclude with one which relates to characters always of public interest.

Mr. Samuel Sharp to Mr. Garrick.

"Geneva, Aug. 18th, 1765.

"Dear sir,—I am just come from Mons. Voltaire's, and can give you the fullest assurance

that neither your letter nor any other part of your conduct has given him the least umbrage. There was no company at dinner but myself; his nieces and nephews talked more and louder than other men and women usually do in France; however, I every now and then, as I sat next to him, got hold of his ears, and our chief topic was our English actor. When I signified to him that I should write this evening to Mr. Garrick, and that it would be the greatest pleasure I could do you, to say he was in good health; 'No, sir,' said he, 'do not write an untruth, but tell him, *Je suis plein d'estime pour lui*.' When I represented how mortified you was in having lost the opportunity of paying him your respects, his answer was such, that I am persuaded you never offended. All the conversation turned on a tragedy, represented at his own theatre last Friday evening: unfortunately for us, the night of our arrival. Mademoiselle Clairon, the subject of their applause, left him this morning to visit some friends, so that I shall not have the pleasure of seeing her: in about six days she sets out for Provence: Antonio, however, waited on her yesterday, and made some proper apology, in answer to her complaints against you for not writing. I confess to you, though I am conscious of her merit, I never was so fatigued with panegyric; the women screamed, and acted, and stared so violently in repeating the fine passages; Voltaire sat placid, every now and then either nodding or speaking his approbation. At length one of the ladies asserted, in contradiction to the other, that it happened in the course of five acts, that Madem. Clairon was not equally excellent, and an appeal was made to their uncle; he turned to me, and said, his answer should be the same that Madame Dacier gave to a critic who pointed out to her a real *ottuse* in Homer: 'Ah, Monsieur, dit-elle, ce n'est que dire.' The story is not the best Voltaire ever told; but I will tell you one: he wept in recollecting and repeating Clairon's manner of asking, '*Où est ma mère?*' To conclude, he had been all the morning busy in composing an *épître* to Madem. Clairon, which he read in the rough draught with wonderful vigour and emphasis, but at the same time with a tone and accent so different from those of the English, that I have no doubt that was you to repeat any passage of Shakspeare before the same assembly, they would feel but little pleasure from your recital. Sick as I was of all the praise I heard this afternoon, it revived my spirits to be told by Voltaire, that when Madem. Clairon was sent to prison, you made her an offer of five hundred louis; and I was not a little flattered to see him turn round to the company and ask them if there was a duke or a mareschal in France, generous and honourable enough to do such an action. Wilkes is here, very busy, writing and printing some things, which I hope his friends will prevent him from publishing. I am his well-wisher, and could wish he was not quite so zealous; such zeal may tend to the good of mankind, as martyrdom advances religion; but I should be sorry that my brother or David Garrick were the instruments in either case. Antonio continues to be an honest, worthy, and sensible conductor to my daughters and me. He flatters us you may possibly give us a rendezvous at Paris next May. I will not attempt to tell you how much such an event would delight us. Should the scheme take place, we will endeavour to accommodate our return to your arrival at Paris. I happened at dinner to assign as one reason why you would act no more, that our theatre was over-

run with sing-song. His eyes sparkled at the indignation I expressed, and I found afterwards it was from the similarity of the two nations; for this charge makes the subject of some lines in his *épître* to Madem. Clairon. Voltaire thought his theatre would hold but 50 persons, and they crowded in 120; he is going to enlarge it so much as to admit an audience of 200 or 250."

Unimoro: a Dream of the Highlands. By Professor Wilson. Blackwood's Magazine.

ONE day the beautiful princess Margaret, (she who was afterwards Queen of Scotland) as she was passing through the hall, saw Alain Chantier, the most celebrated minstrel of his time, asleep on one of the benches. Pausing for a moment at his side, she bent down and kissed him. Some of her attendants, not entering into her enthusiasm, marvelled greatly that she had not bestowed her favour on some fairer face. "Nay," replied the princess, "I did not kiss him, but the mouth from which proceeds so many beautiful things;"—thus, says the old chronicler, justifying an extraordinary action, on the plea that it had an extraordinary motive. Now we are about to commit an action quite out of our common course—and we, in like manner, plead that its motive is quite enough out of the common course to justify it. There is, and there can be, no just criticism passed by one periodical on another; censure is too often the expression of rivalry; and still oftener is praise only given for "value received." When periodicals are polite to each other, it is on a mercantile system of reciprocation; and when they deal in abuse, the public are apt to remember that a pseudo judge is in reality a contending advocate. Beyond, therefore, the mention of a new beginning, we have always abstained from passing any species of judgment on our contemporaries; but the present departure from our general rule will, we think, be its own excuse. So much of change has taken place within the last few years, that the poets of whom Wilson is one, rather belong to the past age than to the present. The man who broke up the sweet waters of poetry, and made the desert of English imagination blossom like the rose, are still among us—but they walk with eyes that look back, and wish scolded lips. Of all hands that of literature is the last of which we can say, that there

"The voice of the nightingale never is mute;" on the contrary, we may rather address song in Shelley's words—

"Rarely, rarely comest thou,
Spirit of delight."

Actual, calculating, and looking to the outward world, to-day has none of the characteristics of a poetical age; and the poetry which still remains is like the crimson of evening, that lingers

"To shew that sunshine has been there."

But Wilson belongs to

"The golden hour of morning prime;"

when a thousand fine influences were abroad, and the success of one aspirant encouraged another; and the Isle of Palms, and the City of the Plague, have long passed to fame through "the gate called the Beautiful." *Unimoro* is their worthy companion. Perhaps Wilson's poetry may be best characterised by saying, it is of that species which seems especially to deserve the term "inspired." Creative and fanciful, it appals earth in the "glory and the freshness of a dream," but a dream that has all the depth and tenderness

of life! It is a spirit that pours itself over the land like a summer shower, refreshing and brightening all that it touches, and giving to the commonest leaf and flower a beauty belonging to them, and yet not of themselves. Wilson delights in taking the beauty of nature, and identifying it with human love and sanctifying it with human sorrow. But to the proof; and with regard to our criticism, we must observe, that it will be confined to pointing attention to some of our favourite passages. The same poet, in the Isle of Palms, says—

"Oh many are the beautiful isles
Unknown to human eye,
That sleeping mid the ocean-smiles
In happy silence lie.
The ship may pass them in the night,
Nor the sailors know what a lovely sight
Is resting on the main."

Beautiful passages in a poem are like these "beautiful isles" in the ocean—and the critic's task is to discover and draw attention towards them. What a Claude-Lorraine picture is the following of sunrise!

"Morn, and Morn, and Spring, and Solitude!
As yet it is scarce sunrise, but the sun
Sends down before him, while his dazzling disk
Is soaring from the sea, a gentle light,
Tender and delicate exceedingly,
"Neath which, as if it were a glittering veil,
Lies the new-woke and undisturbed earth,
Conscious once more of the sweet hour of Prime.
No object in creation now looks dead.
Stones, rocks, knolls, heather, broom and furze, and fern

Have all a life-like semblance in the hush,
So strong is the expression of their joy;
Alive appears each solitary tree:
Half tree, half shrub, birch with its silver stem,
And hazel assure-head, with feeling smiles,
The feeling of its own fresh loveliness,
That budding brake; and these wild briars en-
wreathed

With honeysuckles wild, brimful of life,
Now trail along, and clamber up and fill
The air with odours; by show-dropping bee
Already visited; though not a bird
Within the nested foliage more than stirs,
Or twitters o'er the blissful wilderness.
Life breathes intenser beauty o'er the flowers.
These wither one small round of greenward set
Dew-diamonded daisies, happy all,
In their own sweetness and simplicity:

Or with hawthorn blossoming yew mossy nook
An impenetrable board of primroses,
Heaped up by spring for the delight of morn,
Which at once and prodigal have steeped
The ground striped and starred in colours manifold.

Mosses that 't would be sin to tread upon!

How much of maternal tenderness is in the
quivering description of a mother pining for her
absent child, of whose fate she is uncertain!

"Then came long years of hope, of dismal hope,
Dying one day, and on another bright
As madness; for Imagination dreams
Of all impossibilities, and Love

Will borrow for a time the eagle's wings
To sweep the isles and rocks, and finding not
What she seeks there, the long-lost beautiful,
Goes down into the caverns of the sea,

Commanding them to render up their dead.

So fared it with this lady—and a ship

Sometimes she saw down sailing up the loch,

And called on all the castles to behold

Her Unknown's return. Then with a smile

Pressing her pale hand on her forehead wan,

Of God she asked forgiveness, and knelt down

Into a sobbing prayer.

"On tales the fed

Of battle and of shipwreck, and of boats

Like insect-covered leaves for weeks afloat

On the wide sea, all dropping one by one

From the famish'd sailors, some delirious,

From the frail bark—and of more horrid dooms!

On his shape she madly cursed the sea."

"The woods have burst

Into their full effluence; all the gleam

With green light overflows; the heather bloom,

Anticipating autumn, purples faint

In the moon and mountains; in the forest-chase,

Flowers in each deep herbage dipped their hoofs

The red-deer, and the goat, along the cliffs

On each pulsation of wild fragrance browed;

By night-rain, not heavier than the dew,

Enlanguing all the river's solitudes,

From water-falls, for ever musical,

Deep dimming on the hunter on the hill,
In some short pause of pastime underneath
The cliff, cheer'd as he listens unawares

Far off the hollow noise; the eagle's self,
Along with his wild bark had ne'er been seen
Floating aloft so frequent, in wide rings
Seeking the sun as he would circle it;
For never in the memory of man
Had reign'd so many blue days without break,
O'er the still vastness of the unclouded sky."

Or, by way of contrast to these landscapes, take two portraits of the orphan sisters:

"One face is pale
In its own pensiveness, but paler seems
Beneath the nun-like braddings of that hair
So softly black, accordant with the calm
Divine that on her melancholy brow
Keeps deepening with her dreams! The other bright,
As if in ecstasies, and brighter glows
In rivalry of all those sun-loved locks,
Like gold wire glittering, in the breath of joy
Afloat, on her smooth forehead momentarily
Kindling with gladder smile-light. Those dark eyes!
With depths profound, down which the more you
gaze,

Still and stiller seems the spiritual world
That lies sphere'd in their wondrous orbs, beyond
New thoughtful regions opening far beyond,
And all embued with the deep hush of heaven.
There quiet clouds, there glimpses quieter
Of stainless ether, in its purity
There a lone star! But other eyes are swimming
With such a lovely, such a loving light,
Breathed o'er their surface, imperceptible
The colour of the iris lost awhile
In its own beauty, and then all at once
Perceived to be, as some faint fleeting cloud
Doth for a moment overshadow them,
Of that same hue in which the heaven delights,
And earth religious looking up to heaven
In unwill'd happiness."

The rainbow—

"Oh! look ye on the rainbow, in its first
Exceeding faintness, like a rising thought,
Or a fine feeling of the beautiful,
An evanescence! so you fear must be
The slight-tinged silence of the showery sky,
Nor yet dare name its name; all breathing out
Into such colours as may not deceive,
And undelusive in their heartiness,
O'er all the hues that happy nature knows
Although it be the gentlest of them all
Prevailing the celestial violet,
To eyes by beauty made religious, lo!
Brightening the house by God inhabited,
The full-form'd rainbow gleams! beneath her arch
The glittering earth once more is paradise;
Nor sin nor sorrow hath her dwelling there,
Nor death; but an immortal happiness
For us made angels! swifter than a dream
It fades—it flies—and we and this our earth
Are disenchanted back to mortal life;
Earth to its gloom, we to our misery."

This description is linked to humanity by an exquisite passage.

"Oh mourn not, that in nature transitory
Are all her fairest and her loveliest things;
And frail the tenure as a web of dew
By which they hold to life. For therein lies
The might of the refulgent rose, the power
Of the pale lily's leaf. The sweetest smile
That glides along the face of innocence
Is still the saddest, and the saddest comes
From dim forebodings of an early death.
Those sudden goings-down into the grave
Of the young beautiful, do sanctify
The light surviving in the precious orbs
Of eyes permitted yet awhile to shine;
And fathers seeing in their daughters' eyes
A cloudless heaven in sweet affection,
Sometimes will shudder, as they think upon,
They know not why, a maiden's funeral!"

It is its connexion with life that makes the
interest of natural loveliness: we take the
following lines to witness:—

"Oh! if our eyes could look into the hearts
Of human dwellings standing quietly
Beneath the sunrise in sweet rural spots,
Far from all stir, and haply green and bright
With fragrant growth of dewy leaves and flowers,
Where bees renew their murmuring morn, and birds
Begin again to trill their orisons,
Nature and Life exchanging their repose
For music and for motion, happier both,
And in their happiness more beautiful
Than sleep with all its dreams,—Oh! if our eyes
Could penetrate these consecrated walls
Whose stillness seems to hide an inward bliss
Diviner than the dawn's, what awful sights
Might they behold! heads aspid in hopeless prayers
By dying beds, or pale cheeks drench'd in tears
Beside cheeks paler far, in death as white
As the shroud-sheds on which the corpses lie;
Or tossings of worse misery far, where guilt
Implores in vain the peace of penitence,
Or sinful passion, struggling with remorse,
Becomes more sinful, in its mad desire

To reconcile with God's forbidding laws
A life of cherish'd vice, or darily
Doubts or denies eternal Providence!"

One fine reflection, and we must conclude:

"No pity needeth penitence, for soft
And sweet, like distant music, are her dreams;
But all the tears that pity hath, too few
To give unto remorse, that swalloweth up
Its own, nor in them any blessing knows
Through pour'd in floods, all falling fruitlessly
As tropic torrents on the desert sands."

Our "pleasant task is done;" and we beg to
congratulate Mr. Wilson and the public, that they
have still left so much beautiful and touch-
ing poetry.

Cabinet Cyclopædia, Vol. XXI. Eminent British Statesmen, Vol. I. London, 1831.
Longman and Co.

A VERY delightful volume, and on a sub-
ject likely to increase in interest as it pro-
ceeds. The pages before us contain the lives
of Sir Thomas More, Wolsey, Cranmer, and
Burleigh. All embody much information, and
that of Burleigh is especially well written.
We quote the following, it being one of those
passages of the past which may apply to the
present.

"But the measures which the state of
public affairs obliged him to pursue were not
always so evidently beneficial, or so generally
acceptable. Aware, however, that the nation,
if convinced that the plans of government were
for their advantage, would concur in them far
more certainly than from a dread of authority,
he was anxious to secure the public opinion,
and procure obedience rather by persuasion
than command. He advised Elizabeth, as the
first act of her reign, to summon a parliament.
Here he introduced his proposition for reli-
gious reformation, and called on the catholics
to reply freely to the arguments which he
advanced. In the succeeding period of the
reign, however, the bold doctrines of the puri-
tans, and the queen's exceeding aversion to
any discussion which might touch her prerogative,
prevented him from employing this
channel for the defence of his measures; yet
he seems occasionally to have adopted the prac-
tice of bringing political transactions before
parliament. There is still preserved a very
clear exposition of the designs of Philip II. of
Spain, which he delivered on one occasion in
the house of lords, and the heads of which he
afterwards transmitted to the speaker, for the
information of the commons. In the press he
found a more constant and effectual method of
influencing public opinion. As he never under-
took any political measure without due deli-
beration, he concluded that the same reasons
which weighed with him would weigh with
the nation at large. Though involved in a
vast maze of public business, he did not fail to
bestow a portion of his time in justifying to the
world both the measures of his government,
and his own private conduct. Among the
salutary effects of his political writings, it is
mentioned, that they contributed much to re-
tain the people in their allegiance during the
dangerous insurrections which succeeded Nor-
folk's first conspiracy. There are still extant
several of his pieces on that occasion, in which
he paints the folly and danger of the rebels,
the profligate characters of their ringleaders,
and the miseries which must inevitably over-
take them in the event of defeat. To the
many defamatory libels which the Jesuits pub-
lished, during his administration, against Eli-
zabeth and her ministers, it was his constant
practice to publish replies. He knew too well
the impression made by uncontradicted calum-
nies to let them pass unexposed. Silent con-

tempt, he perceived, might be represented as proceeding from conscious guilt; and to suppress the propagation of slanders by force, would seem to betray both an inability to refute them, and a dread of their effects. He knew that better arguments could always be found in support of truth than of falsehood, and that it was the fault of the reasoner if the cause of right did not appear to the greatest advantage. The great facility of composition, which he had acquired in the earlier period of his life, proved of infinite importance to him in these voluminous apologies."

There is also a remark in the life of Wolsey very characteristic of the British public.

"The cardinal soon experienced, that oppressive taxation was the only grievance which the people of England, during the reign of the first two Tudors, complained of and openly resisted. So extremely tenacious were they of their money, that the same people who saw arbitrary outrages on their national privileges pass without remonstrance, and who saw innocent men of all ranks led to the scaffold without a murmur, actually broke out twice in rebellion against the king's commissioners for levying loans and benevolences."

We again cordially commend this work, both for its design and execution.

London Pageants. 1. Accounts of Fifty-five Royal Processions and Entertainments in the City of London; chiefly extracted from contemporary Writers. 2. A Bibliographical List of Lord Mayors' Pageants. 8vo. pp. 121. London, 1831. Nichols and Son.

It is a treat to be enjoyed, when any temporary and remarkable occurrence tempts the well-read antiquary to recede upon his stores of knowledge, and refresh the memory of the living generation with an account of all their ancestors have done under similar circumstances. Such is the character of the present publication, elicited by the royal opening of New London Bridge on Monday last. It is curious, "upon such an occasion," as city and other orators, at convivial meetings, anniversaries, &c. &c., usually say, at least oftener than once in every address,—it is curious and entertaining, "upon such an occasion," to see what has been done at any time during the last six hundred years, when our sovereigns visited London, and pageants were got up for their reception. Except the ascent of the balloon, it will be gathered that there is absolutely nothing new; nothing that has not been exhibited with far more splendour too in days of yore. But what is still more remarkable is, that it would seem as if identical events returned in a sort of cycle, to render the coincidences more striking. For example, who, with the story of the last Lord Mayor's day before him, can fail to smile at the following precedent (we hope this is almost a bull)?

"In 1662," says Ogilby, in writing of the entertainments of Charles II., "on Lord Mayor's day the king forbore to go to the place prepared for him in Cheapside, 'being advertised of some disturbances'; but he was shortly afterwards entertained by the Lord Mayor at the hall of his company, the cloth-workers."

One might imagine that 1830-31 might be substituted for 1662, and London Bridge Committee for Cloth-workers' Company, and William IV. for Charles II.

From so well-condensed and short a work as the present, which is so well calculated to pass rapidly into every hand, we need not swell our extracts; but when we are threatened with so shabby and mean a coronation, we will quote

a few passages to shew how much more magnificently and wisely we used our national riches in less enlightened times, when no school of economists existed to (mis-)inform us that the circulation of money by the rich, giving employment to the artisan and mechanic, producing a large demand for merchandise and manufactures, and cheering the breasts of the poor generally, was a piece of extravagant waste and folly! Our author, we are glad to see, is of a different opinion; for, speaking of our Augustan age of pageantry, he observes, "Elizabeth, beyond all our English sovereigns, possessed the arts of popularity, and this was one of them." In the procession of James I. there were seven triumphal arches and devices, from the description of one of which, it may be surmised how many artists, workmen, &c. were beneficially employed at such a show.

"The second pageant was erected in Gracechurch Street, by the Italian merchants. Its ground plan was a square ornamented with four great columns; in the midst of which was cut one arch, twenty-seven feet in height. Above the arch was represented King Henry the Seventh, seated, approached by King James on horseback (as he was usually seen), to receive the sceptre from his ancestor. Between the columns were also four allegorical paintings. On the roof, on a pedestal, stood a female figure holding a crown which she seemed to stoop to bestow upon the king. At the four corners were naked figures with trumpets; and over the gateway, on one side, were palm-trees, and on the other, a vine, with angels."

At the entry of Charles II., "the lord mayor and aldermen met the king at St. George's Fields, in Southwark; and the former, having delivered the city sword to his majesty, had the same returned with the honour of knighthood. A very magnificent tent was erected in the Fields, provided with a sumptuous collation, of which the king participated. He then proceeded towards London, which was pompously adorned with the richest silks and tapestry, and the streets lined with the city corporations and trained bands; while the conduits flowed with a variety of delicious wines; and the windows, balconies, and scaffolds, were crowded with such an infinite number of spectators, as if the whole collective body of the people had been assembled to grace the royal entry. The procession was chiefly composed of the military. First marched a gallant troop of gentlemen in cloth of silver, brandishing their swords, and led by Major-general Brown; then another troop of two hundred in velvet coats, with footmen and liveries attending them in purple; a third led by Alderman Robinson, in buff coats, with cloth of silver sleeves, and very rich green scarfs; a troop of about two hundred, with blue liveries laid with silver, with six trumpeters, and several footmen, 'in sea-green and silver; another of two hundred and twenty, with thirty footmen in gray and silver liveries, and four trumpeters richly habited; another of an hundred and five, with gray liveries, and six trumpets; and another of seventy, with five trumpets; and then three troops more, two of three hundred, and one of one hundred, all gloriously habited, and gallantly mounted. After these came two trumpets with his majesty's arms; the sheriffs' men, in number fourscore, in red cloaks, richly laced with silver, with half-pikes in their hands. Then followed six hundred of the several companies of London on horseback, in black velvet coats, with gold chains, each company having footmen in different liveries, with streamers,

&c., after whom came kettle-drums and trumpets, with streamers, and after them twelve ministers (clergymen), at the head of his majesty's life-guard of horse, commanded by Lord Gerrard. Next the city marshal, with eight footmen in various colours, with the city waits and officers in order; then the two sheriffs and all the aldermen in their scarlet gowns and rich trappings, with footmen in liveries, red coats laid with silver and cloth of gold; the heralds and maces in rich coats; the lord mayor bareheaded, carrying the sword, with his excellency the General (Monk) and the Duke of Buckingham, also uncovered; and then, as the lustre to all this splendid triumph, rode the king himself, between his royal brothers, the Dukes of York and Gloucester. Then followed a troop of horse with white colours; the general's life-guard, led by Sir Philip Howard, and another troop of gentry; and last of all, five regiments of horse belonging to the army, with back, breast, and head-pieces; which, it is remarked, 'diversified the show with delight and terror.' The anniversary of this day was appointed by the parliament as the day of thanksgiving for the restoration of the royal family, as which it has continued to be observed by the Church of England."

Will any one believe that such doings were not calculated to benefit rather than impoverish a people?—and even, in our fiscal days, the revenue too? It is short-sighted policy to confine the money in the rich man's purse; and a niggardly nation is as bad as a niggardly individual. Either being misers is a loss and a calamity. Better let us return to the good old times and fashions, when

"'Twas merry in the hall,
And the heads wagged all,"—

though now we may only hope for chin-tufts and mustaches.

The Quarterly Journal of Agriculture, &c. No. XII. February, 1831; Edinburgh, Blackwood.

WE have had many misgivings as to the success of the *Quarterly Journal of Agriculture*, and have watched it sedulously through the hands of different editors; but it has always continued in a gradual train of improvement, supported by a nation fond of the scientific and theoretical part of agriculture, and by the Highland Society of Scotland, whose *Prize Essays and Transactions* are ably edited; we believe by Mr. Magillivray. The journal has not confined itself to agricultural subjects alone; the quarterly report always embraces a variety of topics connected with statistics and political economy—such as the revenue, the corn-laws, the attacks on farming property, to the latter of which it has been the melancholy duty of the editors to revert in this Number.

As we make a point of giving an analysis of all important essays, or a brief notice of their contents, in another part of the *Gazette*, we shall do little more than allude to the contents of this Number.

"On the navigation of the Rhine," is an essay on the question *jusqu'à la mer*, as expressive of to the sea, or into the sea; a question which promised lately to involve others of greater importance. Mr. Macnab on the transplantation of large trees, and Mr. Cruickshanks on planting, are continuations of a discussion of a very limited interest; and as the practical results are now generally known, we think it hardly worth while to investigate whether the individual who first puts the improvement in execution, or he who bases it upon physiological and scientific principles, is

entitled to priority in the discovery. Mr. Dick has contributed a series of generally able dissertations on the diseases of domestic animals, which are not however always faultless; and Mr. James Wilson, who is an elegant and accurate writer, a series of essays on the origin and natural history of the same animals, which are characterised by much minute research and interesting details. Two papers are occupied in the consideration of the manufacture of sugar from the beet-root, principally as connected with the commercial system of France; each taking an opposite view of a subject, in which one party gains additional applause by connecting it with the great question of humanity. The essay on the reduction of the import duty on barilla, as affecting the manufacture of kelp, is written in very strong language. We know, from our frequent visits to the Highlands and Islands of Scotland, how important, on a very large population, would be the effect of such a measure; let us say 60,000 persons, scattered over 4,224 square miles, would be injured in their property; but when we also mention, that the ashes of *fuoi*, commonly called kelp, contain scarcely more than 3 parts in the 100 of soda, while the Spanish barilla affords 25 parts in the 100, and the Smyrna barilla about 40 in the 100—it will be seen that, as in many other cases, our wish to benefit a part of the population must sooner or later give way to the force of circumstances and for the common weal.

The editors notice the Italian rye-grass (*Lolium perenne italicum*) as a plant whose introduction into this country might be valuable. We have no doubt but that this grass is a mere variety of the common rye-grass (*Lolium perenne*), which we have seen attaining a very considerable height in the southern latitudes of the continent, and its glumes seeming almost to promise corn. Its leaves also become larger; and it then answers in all points the description given of the Italian rye-grass. It is evident, therefore, that this variety would, in England, dwindle into the common rye-grass. The specification and designs of the different classes of farms is an important communication; and, upon the whole, the *Quarterly Journal of Agriculture* is a valuable work, embracing in its objects practically useful details and discussions, which are of importance to the national prosperity of the United Kingdom.

Jacob on the Precious Metals.

[Second Notice.]

HAVING generally characterised this very luminous and able work, we shall, we are sure, gratify every reader of intelligence by going somewhat more at large into those ancient data, upon the view of which Mr. Jacob applies his reasoning to our own times. In our hands, indeed, they will look like insulated facts, chosen for their intrinsic curiosity; but in the author's they all bear upon the important questions he has set himself to investigate and illustrate. Before the time of Augustus, Mr. J. observes:

"The hoarding of treasure for purposes of general defence, which began in the patriarchal state of mankind, was continued when larger communities were formed, and was, perhaps, universally practised by all who governed states or kingdoms, whether under the monarchical form, or under any of the several varieties of aristocracy which prevailed in the ancient world. As it is probable that the far largest portion of the gold and silver of the ancient world was thus kept from circulating through

many hands, there would be none of that consumption of them by friction by which coined money is now constantly suffering a loss. Such loss, as will in a future stage of this inquiry be particularly examined, would be almost wholly avoided in the period of the world which we are now considering. The coining of money upon a small scale had been commenced at an early period, and had been considerably extended in Rome after the great influx of gold and silver which followed the conquests of the three centuries before the reign of Augustus; but except after that accession, it is not probable that coins were found in large quantities; for though they were current at fixed rates for small transactions, yet in large payments they always passed by weight, thus making the ascertainment of their country or tale a matter of little importance. Pliny says: 'In ancient time it was the practice to weigh out brass by the *as* or pound, which was thence called *as libralis*, and now *libella*, as the weight of two pounds is called *dipondius*. Hence a fine is called *aris gravis*, that is, brass in mass. Hence what is stated in an account as laid out is called *expensa*,—because all payments were made by weight. The paymasters in the army were called *libripenses*, because they weighed out the pay to the soldiers; and the pay itself was called *stipendium* for the same reason. All buying and selling at this day are usually performed by means of the balance, which alone serves to verify the bargain or contract.' The earliest gold, the darics of Persia, have been already noticed. The next to them were of some of the reigns of the tyrants in the island of Sicily; of Gelo, 491 years before Christ; of Hiero, 478; and of Dionysius, 404 years before that era. Some of them circulated in Rome before any had been coined in that city; specimens of those of Gelo and Hiero are still preserved in modern cabinets; but none of Dionysius that are free from suspicion. There was no gold coin in Greece till Philip of Macedon had put the mines of Thrace in full operation, about 360 years before Christ. They are said by Diodorus to have yielded gold to the value of a thousand talents yearly, which was coined into pieces called Philippi, and became the common name for coins of the same size. The most ancient silver coins of Greece are those with an indented mark on one side, and the figure of a tortoise on the other. The earliest of all have no letters on them; but those of a later period have ΑΠΤ, which Pinkerton thinks means *Ægina*, but which other medallists have supposed means *Ægium* in Attica, and that the tortoise is the sign for the Peloponnesus. Silver is said to have been first coined in Rome in the year of its building 485, or 266 years before our era, which seems to be confirmed by no coins having been found of an earlier date; though, according to Pomponius, a mint had existed there which, twenty-three years before, had been placed under the direction of the quaestor. That establishment was, most probably, only used at its earliest erection for coining brass money. The first gold coin of Rome followed that of silver, but not till after an interval of sixty-two years. Thus silver coin in Rome had existed about two hundred years, and gold coin about one hundred and fifty years, at the time of the accession of Augustus."

"There are no indications of the ancients having attained the art of drawing wire of gold and silver so as to apply it, like the moderns, to the fabrication of gold and silver lace, though it has been thought they had

some means of using it for the purposes of embroidering. This is inferred from a passage in Propertius, where he speaks of interweaving gold (*aurum intessere*), and where he calls the garments made with it *vestes Atticæ*, from Attalicus, or Attalus, who has been supposed to have invented them. As the luxuries of the East were introduced into Rome, the practice of using gold for some ornaments and for domestic purposes accompanied or followed them. Thus the *lectica*, or chair, which was brought from Asia, and was composed, according to Curtius, of solid gold, was imitated in Rome in wood; but, as Athenæus says, had feet of gold. These *lecticæ*, or sedan chairs, became at length so common, that Caesar prohibited the use of them except to persons of a certain age or rank, and on certain days. The bits of the horses' bridles and the collars on their necks were of gold; and the covering for their backs (*strata*) were adorned with gold and purple. Their carriages were ornamented with decorations of precious stones, as well as of gold and silver. The art of enamelling, though it was known in the time of Pliny, seems to have made but little progress. The operation is described by that writer in the following words. 'The ancients contrived to paint silver, that in drinking they might be more devout from seeing their deities painted in their cups. This fashion is become so prevalent, that even the statues which are carried in the triumphs are scarcely valued unless they are enamelled and painted black; and it is really surprising to think how much more valuable they are considered when the natural brilliancy of the metal is hidden and extinguished by such painting.' From the description given by our author of the mode of preparing the enamel, it seems clear that no other colour but black was adopted, and that it was used only for ornamenting drinking vessels, statues, vases, urns, and other large articles of furniture. At the present day, one of the greatest causes of the consumption of gold is the use of it in the smaller personal ornaments, and in a variety of trinkets, whose bases is gold, but whose chief value is the enamelling, which is wrought by skillful artists upon it. These, when the fashion changes, or the work of the artist becomes obliterated, the gold being in very minute portions, are lost or destroyed, or at least the same care is not taken to preserve such fragments as is applied to the larger pieces of ornamental furniture. In the present day it is supposed, both in England and in France, that the quantity of the precious metals applied to these minor purposes by far exceeds that which is converted into larger objects, and that the loss in them is increased in some degree in proportion to the small size of the articles. The consumption of silver in our age and country has been vastly increased by the application of the mechanical powers to the construction of fluting-mills. By these machines a wedge of copper or tin, and another of silver, may be converted into a substance homogeneous to every sense but the sight, exhibiting on one side the most brilliant silver, and on the other an appearance of a different metal. This plated matter when rolled into sheets is converted into those beautiful pieces of domestic furniture which ornament the tables and sideboards of the middle classes of society, and enable them to rival in brilliancy those of the richest families, at a cost more proportionate to their means. There are no traces in any of the writings of antiquity of such an application of silver; and now, owing to the great surface which is exposed to friction, and our neat

and decent habits, which require frequent cleaning and polishing, an enormous consumption of silver is produced in this way. From the difference in these several modes of consumption, which have arisen in part from our increased knowledge in the working of metals, and from the diffusion of wealth into smaller, but not minutely small, portions, which have had a vast influence on the fashions of mankind, a degree of destruction of gold and silver which was scarcely felt in the ancient world, has in modern times been steadily, but of late rapidly advancing, and by its continuance must at length produce a sensible effect on the value of all commodities, when measured by these metals."

The precious metals were accumulated to a prodigious amount in Rome.

"During the long reign of Augustus, regular tribute in silver continued to be drawn to Rome from Gaul; nor do the slight insurrections which occasionally broke out in that country seem to have suspended the transmission of it. Spain, notwithstanding the disturbances which occurred among the Cantabrians and Asturians in the early period of his reign, paid a tribute to Augustus, which was stored up in the two cities he founded—Caesar Augusta and Augusta Emerita, now known to us by the more modern names of Saragosa and Merida. Africa, including Egypt, and even Carthage, which had begun to revive since its last fatal struggle with the Roman power, furnished a proportion of its wealth in the form of tribute.

"Governments which chiefly depend on a military force are compelled to store up large sums of ready money to meet emergencies that may suddenly occur. This was the case with the more provident of the Roman emperors, some of whom owed their elevation, and most of whom were indebted for the retention of it, to having always at command the means of gratifying or preventing the clamours of their troops for pay or for donations. The same necessity existed among the several princes of India, till the overwhelming power of our East India Company released the greater part of them from the fear of attacks and incursions, so sudden as to leave no time for defensive preparations being collected. Even in recent times, Buonaparte is said to have kept a great mass of treasure in reserve; and it is commonly believed, that up to the present day the military monarch of Prussia, the only one of the European sovereigns supposed to be exposed to sudden attacks, has deemed it necessary to keep in his treasury a large sum in ready money, amounting, according to some accounts, to near two millions sterling."

Speaking of the waste in coined metal, Mr. J. says:—

"It is found that the loss by friction is very far greater on the small than on the large pieces of coin; thus the loss on our present sixpenny pieces in the same space of time is found to be more than three times as great as that on the half-crowns, and nearly double as great as on the shillings. With regard to the ancients, we are in utter ignorance of the proportion which the larger and smaller coins bore to each other. The loss by abrasion too is found to be much greater on silver than on gold coins; and of the proportion of the latter which was circulated in

ancient times to that of the former, we have no means of judging; for their relative value varied frequently in the space of time we are contemplating; gold being sometimes of not more than nine times the value of silver, and at other times twelve or thirteen times that value. If the relative values of the two metals had remained constantly the same, supposing that of gold to have been ten times the value of silver, it would by no means be a fair inference that there was ten times the weight of silver in the form of circulating coin than there was of gold. The two metals may be demanded for other purposes than that of coin, and the superior adaptability of one for such purposes may have determined the relative value of one to the other, in as great or greater degree than the demand of it for coin."

[To be continued.]

History of the County Palatine of Lancaster.

By Edward Baines, Esq. Parts V. and VI. Fisher, Son, and Jackson.

AMONG much other curious matter in the fifth Part of Mr. Baines's work, is a narrative from one of the Harleian MSS., entitled "The Originall of Herehawghtes," of the memorable quarrel and combat between the Dukes of Hereford and Norfolk, in the reign of Richard the Second. The following is an extract from it:—

"At the daye appoynted, the 2. valiaunte dukes came to Coventree, accompaigned with the nobles and gentiles of their linages, which encouraged them to the vttermoste. At the daye of combate and fighte, the Duke of Aumarle, that daye highe marshall, entred into the lyste with a greate compaignie of men, apparaild in silke sendale, embroudered with siluer both richly and curiouslye, euery man haviinge a tipped staffe to keepe the field in order. About the tyme of prime, came to the barriers of the liste the Duke of Hereford, mounted upon a white courser, barbed with blew and green velute, embroudered somptuouslye with swannes and antelopes of golde-smithes worke, armed at all pointes. The constable and marshall came to the barriers, demaunding of him what he was, who answered, 'I am Henrye of Lancaster, Duke of Hereforde, which am come hether to doe my deuoyre againste Thomas Mowbraye, Duke of Northefolke, as a traitor vntrewe to God, the kinge, his realme, and me.' Then incontinente he sware vpon the Holy Evangeliste, that his quarrel was iuste and trewe; and therupon, he desired that he myghte enter the liste. Then he put vp his sword (which before he helde naked in his hande), and put down his viser, and made a crosse in his foreheade, and, with speare in his hande, entred into the liste, and descended from his horse, and set him downe in a chaire of greene velute, which was set in a traues of greene and blew velute, at thone ende of the liste, and there reposed himselfe, expectinge the cominge of his adversarye. Soone after him entred into the field, with great pompe, Kinge Richard, accompanied with all the pieres of his realme; and there came with him also the Erle of St. Paule, who came in poste out of Fraunce to see thys challenge performed. The kinge had aboute ten thousande men in harnesse, lest some fraye or tumult myghte rise amongst his nobles by parte takinge or quarrellinge. When the kinge was set on his stage, which was richly hanged and pleasantly adourned, a kinge of armes made open proclamation, prohibitinge all men, in the kinges name, and the high constable and

marshalls names, vpon paine of deathe, not to enterprise, to appoche any parte of the listes, excepte suche as were appointed to order and marshall the felde. Whiche proclamation ended, another haraulde cryed, 'Beholde here Henrye of Lancaster, Duke of Hereforde, appealante, which is entred into the lystes royall, to doe his deuoyre againste Thomas Mowbraye, Duke of Northefolke, defendante, vpon paine to be proved false and recreante.' The Duke of Northefolke howered on horsebacke; at the entree of the lyste his horse beinge barbed with crimson velute, embroudered with lyons of syluer and mulberry trees. And when he had made his othe before the constable and marshall, that his quarrell was iuste and trewe, he entred the felde manfully, sayinge aloude, 'God ayde him that hath the right;' and then he dismounted from his horse, and sate downe in his chaire, which was crimson velute, curtained aboute with white and red damaske. The L. Marshall vewed theyre speares to see that they were at one equall lengthe, and deliuered thone speare himselfe to the Duke of Hereforde, and sent thother speare to the Duke of Northefolke by a knight. Then the haraulde proclaimed, that the traueses and chaires of the champions shoulde be removed, commaunding them, on the kinges behalf, to mounte on horsebacke, and to adresse themselves to the battayle and combate. The Duke of Hereforde was quicklye horsed, and closed his baulier, and cast his speare into the reste, and (when the trompet sounded) set forwarde courageouslye towards his enemy .6. or .7. paces. The Duke of Northefolke was not fully set forwarde, when the kinge caste downe his warder, and the haraulde cried 'Ho! ho!' The kinge then caused theyre speares to be taken from them, and commaunded them to repaire vnto their chaires, where they remained .2. longe howres, while the king and his counsaile deliberately consulted what waye was best to be taken in so waighty a case. Then the haraulde cried Silence, and Sr John Boreys, secretary to the kinge, read the sentence and determination of the kinge and his counsaile, in a longe rolle, pronouncinge it in this maner:— 'My lordes and masters, I intimate and notifie vnto you by the kinges majestie, and his honorable counsaile, that Henrye of Lancaster, appealante, and Thomas, Duke of Northefolke, defendante, have honorably and valiantly appeared here with in the liste royall this daye, and haue bene ready to darraigne to battaile, like .2. valiaunte knyghtes and hardye champions; but because the matter is greate and waighty betweene those .2. greates pynces, the kinge and his counsaile haue taken this order: Firste, that Henrye, Duke of Hereforde, for diuers considerations, and because he hath displeased the kinge, shall, with in XV. dayes next followinge, departe oute of the realme for terme of X. yeares, with oute retourninge, excepte he be by the kinge repealed againe, vpon the paine of deathe.' The harauld then againe cryed 'O yes!' and then the secretary pronounced, 'That Thomas Mowbraye, Duke of Northefolke, by thordinance of the kinge and his counsaile, because he had sowed sedicion in this realme, by his wordes, wherof he coulde make no profe, shall auyde the realme of Englande, and dwell in Hungrye, Boeame, Pruce, or where he like, and neuer retourne againe into England, nor appoche the borders or confines of the same, vpon paine of deathe, and that the kinge wolde stay the profites and reuenewes of his landes in his owne hand, vntill he had receaued suche somes of money as the Duke had taken vp of the kinges

* "These reports from various quarters, which corroborate each other, though none are strictly official, yet are entitled to credit. It has been said that a part of this treasure has been lately drawn forth to buy up some of the funded debt, and thereby to raise its price, and enable the government to reduce the interest on the remainder of the debts."

treasurer for the wages of the garison of Cal-lyce; which were styll vnpaid."

Part VI. of this valuable topographical work also contains much highly curious and interesting information. We subjoin a brief extract from it, describing the origin of counties palatine, and the peculiar form of legal proceedings in the county palatine of Lancaster.

"Counties palatine are so called *à palatio*, because the owners thereof, the Earl of Chester, the Bishop of Durham, and the Duke of Lancaster, had in those counties *jura regalia* as fully as the king had in his palace, *regalem potestatem in omnibus*. The peculiar jurisdiction and form of proceedings of the courts of law in the county palatine of Lancaster, are the result of those privileges which were granted to its early earls and dukes, to induce them to be more than ordinarily watchful against the predatory incursions from the Scotch border, and to prevent their tenants from leaving the territory defenceless and exposed to hostile aggressions, while seeking redress at the more distant tribunals of the realm. Law was to be administered by the officers and ministers of the duke, and under his seal; and anciently all offences were said to be against his peace, his sword and dignity, and not as now 'against the peace of our lord the king, his crown and dignity.' The king's ordinary writs for redress of private grievances, or the punishment of offences between man and man, were not available within the county palatine, such writs then ran in the name of the duke; but in matters between the king and the subject, the palatine privileges could not contravene the exercise of the sovereign power, and the prerogative writs were of force, lest injuries to the state should be remedied. Since 27 Henry VIII. all writs have run in the name of the king, and are tes'd before the owner of the franchise. Hence it is that all ordinary writs out of the king's court at Westminster, for service in this county, are addressed to the chancellor of the duchy, commanding him to direct the sheriff to execute them, and that all processes to that officer, out of the chancery of the county palatine, are not tes'd before the king or his justices at Westminster, as in other counties. The franchise and revenue of the duchy being under different guiding and governance from those of the crown, all honours and immunities, and all redress within this county, with very few exceptions, must be derived from the chancellor of the duchy, as the principal minister of the king, in his capacity of Duke of Lancaster. Justices of assize, of goal delivery, and of the peace, are, and ever since the creation of the county palatine of Lancaster, have been made and assigned by commission, under the seal of the county palatine, and the sheriffs for the county of Lancaster are appointed in the same way."

Albino Poets, No. XV. Poems of Pope, Vols. II. and III. Pickering, 1831.

These volumes have all the external grace of their predecessors, and are both acquisitions and ornaments to either library or bookcase. But we have one very serious objection to make; and one to which we would direct Mr. Pickering's attention: these very neat tomes are peculiarly adapted to female perusal and possession; now we do say there are several poems in this collection of Pope's works which no woman of even common decency should read. The system of republication without selection, is equally injudicious and offensive. The *Wife of Bath*, January and May, &c. &c., really

ought to be omitted in pages which are supposed to have general circulation; and, we must add, Pope himself would be a gainer—for they are as dull as they are offensive.

A Mother's Present to her Daughter. Dublin, 1831. J. M. Leekie.

A VERY pretty little volume, which reflects credit on the Dublin press, and, what is a still higher recommendation, a very judicious selection of compositions in prose and verse, excellently adapted for the perusal and moral improvement of the youthful female.

The Gift; or, Literary Selections in Prose and Verse. Pp. 234. Carmarthen, 1831. J. Brigstoke.

ANOTHER and a provincial appropriation of fugitive pieces, which has found its way to us from Carmarthen. It is a nice little book, with much variety.

Narrative of a Captivity and Adventures in France and Flanders, between 1803 and 1809. By E. Boys, Commander; then a Midshipman in H. M. S. *Phoebe*. 12mo. pp. 258. London, 1831. Dove.

A SECOND and enlarged edition of this interesting narrative, from which we made copious extracts on its first appearance. The miraculous escape of our young midshipman from Valenciennes, and his subsequent adventures, surpass the inventions of the novel-writer.

Family Classical Library, No. XX. Thucydides, Vol. I. London, 1831. Valpy.

A FIT continuation of this well-conducted Library. What ancient can instruct or interest the reader more than Thucydides?

Divines of the Church of England, No. XV. Taylor, Vol. III. Valpy.

CONTAINS ten of the sermons of that great ornament of the church, Jeremy Taylor.

Cabinet Library. Historical Memoirs of the House of Bourbon, Vol. II. Longman and Co.

WE have already expressed our opinion of this unnecessary work: we see no cause for retraction.

Family Library, XXIII. Tour through South Holland. J. Murray.

EMBELLISHED copiously with characteristic views by Col. Batty, this volume, at a glance, strikes us as being quite worthy of the *Family Library*; though the ground traversed presents little of novelty. We would judge the literary portion, however, to be from a young and clever pen: a more leisure perusal will enable us to determine whether we shall prove this by quotations.

Théâtre Classique des Français—Molière, 7 tom. Œuvres Choies de P. Corneille, 4 tom. Paris et Londres, 1831. Treuttel et Wurtz.

WHEN this work commenced, we noticed it in those terms of high praise which its cheapness and beauty so well deserved. Molière is now completed, and Corneille is continued through four vols.; so that the public, like Garrick, may choose between tragedy and comedy. If they follow our advice, they will do like our great actor, and take both. An elegantly-written life, a judicious preface, and some critical notes, are prefixed to the edition. The first

volume of Corneille contains *Le Cid*, *Horace*, and *Cinna*. In this economical age, we should omit the chief attraction were we not to dwell on the low price of these books—three shillings and sixpence a volume: why, to use the bargain-shops' phrase, "It is giving it to you."

Roscoe's Novelist's Library, Vol. II. Roderick Random. Illustrations by G. Cruikshank. Cochrane and Co.

HERE G. Cruikshank is in his glory. Roderick, Weazel, and the whole dramatic personæ of this novel are just fit for his comic pencil; and they flourish in full humour accordingly. The volume altogether is excellently got up, and exceedingly cheap.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.

(June 27th.) THE NIGER.

HAVING accidentally omitted to report the last meeting of the season of this interesting Institution, we shall now endeavour to make amends for our deficiency by a more ample account of it than we could have supplied at the time. Mr. Barrow was in the chair; and it was agreed that his Majesty's donation of fifty guineas should be presented to Richard and John Lander at the first general meeting in November next, in compliment to their memorable geographical discoveries. Some extracts from their Journal were also read; of which we annex the substance. The travellers, as we have previously mentioned, passed overland through the Yarriba country from Badagry to Kíama, their route varying a little from that pursued by Captain Clapperton, and lying through forests of large trees, morasses, and a wilderness of stunted wood, interrupted at intervals by patches of cultivated land. Near Kíama the country was rich, and covered with fine trees and luxuriant grapes; abounding with deer, antelopes, and wild asses, as well as with more ferocious animals—lions, leopards, and elephants. Buffaloes were not seen; but their lowings were heard. Ant-hills were numerous; and as they approached the town, the little cone-shaped huts in which the natives smelt iron ore became frequent. They were met and escorted to the king by a body of horsemen; and the narrative tells us,—"After passing Bennikenni, our course still lay through the forest, whose trees, shrubs, and plants, spread around a delicious fragrance; and, as night came on, the polished spears and silver-topped caps of our escort, with the luminous firefly, a brilliant firmament of stars, and the bright moon, animated the scene around us, till, at about eight o'clock p.m. we reached Kíama, and were immediately conducted to the king's residence."

From Kíama they travelled through the city of Wouwou to Boosà, which they reached on the 17th of June. Here they touched the far-famed Niger, or Quorra; and one of the brothers says, "I was greatly surprised at its reduced breadth. Black rugged rocks rose abruptly from the centre of the stream, and its surface was agitated by whirlpools. At this place, in its widest part, (the end of the dry season,) it was not more than a stone's throw across. The rock on which I sat overlooks the spot where Mr. Park and his associates met their unhappy fate." The king afterwards exhibited to the travellers one of Mr. Park's books, which is described as a nautical book, containing tables of logarithms. On the 23d June, they set out from Boosà for Yáoori.

Only one of the branches of the river which meet at Boossà flows by Kagogie, a small village about six miles north of Boossà: yet this of itself is a mile in width; but large sand-banks are in the centre of the stream; and it is so shallow that, except in one very narrow place, a child might wade across it without difficulty. "June 26.—We had passed the island whereon we had slept last night but a few minutes, and had just entered the main river, when we came to a spot where it spreads again; and each channel was full of dangerous rocks, sand-banks, and low islands covered with tall rank grass. We were conducted up the main channel, but were soon obliged to get out of the canoe to lighten her. During the greater part of the forenoon our canoe was continually striking against concealed rocks, or running on sand-banks, which obliged us to be constantly getting out and in. On the 27th of June we arrived at Yáoori."

Yáoori is nearly due north of Boossà. There is, it is said, no dangerous rocks in the bed of the river above Yáoori, or below Boossà. The Quorra is called the "*Great Father of Waters*;" and in the wet season, i. e. after the *malca*, (fourteen days of incessant rain), all the rivers, which are dry during the rest of the year, pour their waters into its bed.

It then, "by the depth and velocity of its current, sweeps off the rank grass which springs up annually on its borders. Every rock and every low island are then completely covered, and may be passed over in canoes without difficulty, or even apprehension of danger. Many years ago a large boat arrived at Yáoori, on a trading voyage from Timbuctoo; but when they had disposed of their merchandise, the boatmen returned to their country by land, because they asserted that the exertion of working their vessel back so long a way against the stream was too great for them, and therefore they left it behind at Yáoori. The journey from hence to the city of Soccatoo, when no stoppage is made on the road, may easily be accomplished in five days; and this is the regular time the natives take to go there. Coulo is two days' journey from Yáoori. Yáoori is a large, flourishing kingdom. It is bounded on the east by Hausa, on the west by Burgoo, on the north by Cubbie, and on the south by the kingdom of Nouffie. The crown is hereditary; the government an absolute despotism. The former sultan was deposed by his subjects for his violent measures and general bad conduct; and the present ruler, who has succeeded him, has reigned for the long period of thirty-nine years. The sultan has a strong military force, which, it is said, has successfully repelled the continual attacks of the ever-restless Falatahs: it is now employed in a remote province in quelling an insurrection, occasioned partly by the inability of the natives to pay their accustomed tribute, and partly from the harsh measures adopted by the sultan to compel them to do so. The city of Yáoori is of great extent, and very populous. It is surrounded by a high and strong wall of clay, and may be between twenty and thirty miles in circuit. It has eight large entrance gates or doors, which are well fortified after the manner of the country. The inhabitants manufacture a very coarse and inferior sort of gunpowder; which, however, is the best, and we believe the only thing of the kind made in this part of the country: they also make very neat saddles, cloth, &c. &c. They grow indigo, tobacco, onions, wheat, and other varieties of corn and rice, of a superior quality, and have horses, bullocks, sheep, and

goats; but, notwithstanding their industry, and the advantages which they enjoy, they are very poorly clad, have little money, and are perpetually complaining of the badness of the times. A market is held in the city daily, under commodious sheds; yet it is but indifferently attended, and the articles which are exposed for sale have been already mentioned."

On the 20th of September our countrymen left Boossà to descend the river. They passed the boundaries of this kingdom, and entered those of Nouffie. The Quorra was now a noble river, rolling grandly along, "neither obstructed by islands, nor deformed with rocks and stones. Its width varied from one to three miles, the country on each side very flat, and a few mean, dirty-looking villages scattered on the water's edge. Just below the town of Bajiebo the river is divided by an island. At this town, which we left on the 5th of October, we for the first time met with very large canoes, having a hut in the middle, which contained merchants and their whole families." A little lower down, they saw "an elevated rocky hill, called Mount Késey by the natives. This small island, apparently not less than 300 feet in height, and very steep, is an object of superstitious veneration amongst the natives." Lower down still, is the large and flourishing town of Rabba. "Rabba market is very celebrated, and considered by traders as one of the largest and best in the whole country, of which it may be styled the emporium. A variety of articles, both of native and foreign manufacture, are sold there; and it is generally well supplied with slaves of both sexes. Yesterday one of our men counted between 100 and 200 men, women, and children, exposed for sale in ranks. These poor creatures have for the most part been captured in war; and it is said, the Falatahs rarely treat them with unkindness, and never with brutality. The price of a healthy, strong lad is about 40,000 cowries (8*l.* sterling); a girl fetches as much as 50,000, and perhaps more if she be at all good-looking; and the value of men and women varies according to their age and abilities. Slaves are sometimes purchased at Rabba by people inhabiting a country situated a good way down the Quorra; and from thence they are delivered from hand to hand, till they at length reach the sea. Ivory is also sold here; and large tusks may be had at 1000 cowries each, and sometimes cheaper. We had eleven elephants' tusks of our own, which were presented to us by the kings of Wouwou and Boossà; but we were unable to dispose of them at Rabba, because no strangers were then in the city." On the 19th of September, it is stated, "we observed and passed a river of considerable size, which entered the Quorra from the north-west. (This was the Coodoonia, which Richard Lander had crossed on his former return-journey from Soccatoo; and it may be observed, as a remarkable instance of the accuracy of the present and former route, that the coincidence falls within a mile or two.) Very elevated land appeared on each side of the Quorra, as far as could be seen. Egga, the next town we came to, is upwards of two miles in length; and we were struck with the immense number of bulky canoes which lay off it, filled with trading commodities and all kinds of merchandise common to the country. The course of the river was here about E.S.E. Benin and Portuguese clothes are worn at Egga by many of its inhabitants; so that it would appear some kind of communication is kept up between this place and the sea-coast. The people are very speculative

and enterprising; and numbers of them employ all their time solely in trading up and down the river. They live entirely in their canoes, over which they have a shed, which answers completely every purpose for which it is intended; so that in their constant peregrinations they have no need of any other dwelling or shelter than that which their canoes afford them. Cocoa-nuts are sold about the streets in great quantities, and various little parcels of them were sent to us; but we understood that they are imported from a neighbouring country. Egga is of prodigious extent, and has an immense population. Like many other towns on the banks of the river, it is not unfrequently inundated; and a large portion of it was at that time actually overflowed. The soil in the vicinity of the town consists of a dark heavy mould, uncommonly productive; so that, with trifling labour, all the necessaries of life are obtained in plenty, and cheaply. The inhabitants eat little animal food, but live principally on fish, which are sold at a reasonable rate. Hyenas are said to abound in the woods in great numbers, and are so bold and rapacious as to have lately carried away nearly the whole of the sheep in the town. Near this place is a considerable market-town on the opposite side of the river. A few miles below Egga the dominion of the chiefs or kings of territories is no longer acknowledged, and each town or city has its own ruler.—Oct. 26th. At five in the morning we found ourselves nearly opposite a very considerable river entering the Quorra from the eastward."

The next town mentioned is Bocqua, where "some iron hoops were found, and slaves of casks. Bocqua possesses four markets. The chief of Bocqua told us to avoid his enemy, the chief of Atah, and that in seven days we should reach the sea. Both banks of the river below Bocqua still continued hilly and well wooded. At eleven a.m. we were opposite a town, which, from the description that had been given of it, we supposed to be Atah. It was situated close to the water's edge, in an elevated situation, and on a fine greenwood, and its appearance was highly beautiful. The town appeared clean, of great extent, and surrounded with fine trees and shrubs. A few canoes were lying at the foot of the town; but we escaped observation, and passed on. Afterwards, the margin of the river became more thickly wooded than before; and, far upwards of thirty miles, not a town or a village, or even a single hut, could any where be seen. The whole of this distance our canoe passed smoothly along the river: every thing was silent and solitary; no sound could be distinguished, save our own voices and the splashing of the paddles, with their echoes. The song of birds was not heard, nor could any animal whatever be seen; the banks seemed to be entirely deserted, and the magnificent Quorra to be slumbering in its own grandeur. At noon to-day we passed the end of the high hills which had commenced above Bocqua. They were also at some distance from the banks of the river, and changed their direction to the S.S.W. The course of the river this day was nearly S.W., and the breadth varied from three to five miles.—Oct. 27. At Abbezacca, about forty-five miles below the junction of the Tschadda with the Quorra, and the first town to the southward of the mountains on the left bank, we saw an English bar of iron; and, for the

* "This is the celebrated *Shari*, or *Shary*, of travellers; or, as it is more commonly called than either, the *Tchadda*—indeed, it is universally so called throughout the country."

first time since leaving Jenna, in Yarriba, we beheld the graceful cocoa-nut tree, and heard the mellow whistling of grey parrots. The chief wished to know from whence we had come; and having told him we came from Yáoori, a great city on the banks of the river, he expressed surprise, never before having heard of the name. The banks between Attá and this place are low, and in some parts inundated. No towns or villages are to be seen on them for many miles, particularly on the western bank. Below Abbazacca, villages are seen every three or four miles on the eastern bank, but little cultivation. At Damuggoo, the natives have European muskets of English manufacture; the king had six small swivels. The natives are expert in the use of fire-arms, and shoot buffaloes, which, however, are not very numerous. The Quorra fell two feet in as many days, but was still overflowing the town. Here we saw a man dressed in a soldier's jacket, and others partially clothed in European apparel,—all of whom have picked up a smattering of English from the Liverpool palm-oil vessels in the Bonney river. Bonney is said to be four or five days' journey from hence.—Oct. 30. A great part of the population of Damuggoo left the town this morning for the Bocqua market: they take thither powder, muskets, soap, Manchester cottons, and other articles of European manufacture, and great quantities of rum, or rather rum and water: for not more than one-third of it is genuine spirit, and even that is of the worst quality. These are exchanged for ivory and slaves, which are again sold to the European traders." Near Kirree a disaster befell the travellers on the morning of the 5th November, at a place about forty miles further down the river, the details of which do not come within the purpose of the present memoir. It will be sufficient to observe that they were attacked by large parties in war canoes, some of which had forty paddles, containing fifty or sixty men. Their canoe was run down, and many of their effects lost. Kirree is a large town and slave mart, frequented by people from the Eboe country for slaves and palm-oil. Eboe is said to be three days' journey down the river. A small stream runs into the Quorra from the eastward, opposite to Kirree; but it is not improbable that it may be merely the re-union of a branch which runs off at Damuggoo. At Kirree also, a considerable branch of the Quorra turns off to the westward, which is said to run to Benin. Being now on the great delta of the river, a change in the climate had been experienced at a short distance above Kirree. The nights were very cold, with heavy dew, and a considerable quantity of dense vapour covered the face of the country in the morning. The banks of the river were cultivated in some places where they were high, but in most places they were low, and the few villages that were seen were nearly concealed by thick jungle. Below Kirree the river is not so serpentine as above it: the banks are so low and regular that not even a simple rising can anywhere be distinguished; they are assuming a degree of sameness little different from that which prevails on many parts of the sea-coast in the bight of Benin; and here, for the first time, the fibrous mangrove was seen interspersed amongst the other trees of the forest. Both banks, however, are pretty thickly inhabited; and there are many scattered villages, which, though encompassed with trees, and invisible from the river, could easily be distinguished by the number of their inhabitants, appearing on the beach to trade with the

canoe-men.—Nov. 8. Having embarked long before sunrise, a fog prevented our progress; and from fear of mistaking our way, it was agreed we should return to the land. In pursuance of this plan, we hung on by the shore till the gloom had dispersed, when we found ourselves on an immense body of water like a lake, having gone a little out of the bed of the main stream; and we were at the mouth of a very considerable river flowing out of the lake to the westward, being evidently an important branch of the Quorra. Another branch also ran hence to the S.E., whilst our course was in a south-westerly direction, on what we considered to be the main body,—the whole forming, in fact, three rivers of no small magnitude. We wished to be more particular in our observations of this interesting part of our journey, but were compelled to forego this gratification on account of the superstitious prejudices of the natives, who affected to be displeased with the attention with which we regarded the river. The opposite shores of the lake were not seen from our position, nor was the branch which runs to the S.E. Several small rivers are also said to fall in on its N.E. shore. Eboe is a large straggling town, one mile W. from the river. The branch of the river on which we had now to proceed is narrower than above the lake, and at its issue from the lake is not more than two miles wide. The banks in many parts are low, swampy, and thickly wooded. At Eboe, which we reached on the 12th November by a shallow canal, we found many large canoes from the coast, with palm-oil puncheons in them, housed over, and each containing about fifty or sixty persons.—Nov. 12. At seven in the morning we left Eboe. King Boy and his wife also embarked. Our canoe, which was heavily laden, was paddled by thirty-eight men and two steermen—one in the bow and the other in the stern. We had three captains with speaking-trumpets to give orders, one drummer, the king's steward, and his lady's waiting-maid, a cook, and two fellows for baling the boat. At seven A.M. we started;—the captains calling out, with all their might, through their speaking-trumpets, to their *fetich*, for a prosperous journey. We soon glided along at a great rate, passing towns and villages at every two or three miles, and more cultivated land than we had seen for fifteen days past. It contained large plantations of yams, bananas, plantains, Indian corn, but no rice; nor did we see any kind of grain after leaving Kacunda, although the soil on the banks of this river would grow all kinds well. The river was not very wide, and narrowed fast: the widest part, I do not think, was more than two miles, and the narrowest not quite half a mile. At three P.M., its beauty was mostly gone. In many places it had overflowed its banks, through trees and thick underwood, and in the widest part was not more than a mile and a half across. Saw a small branch running off to the west.—Nov. 14, seven P.M. We turned out of the main river, and proceeded up a small branch, towards Brass Town, which runs in a S.E. by E. direction from the main river. Our course this day was due south, and the river continued to run in the same direction when we left it, overflowing its banks, but much diminished in volume. In the widest part it was not more than half a mile across, and the narrowest about 300 yards. As usual, we passed many towns and villages during the day, and where the banks were not overflowed they were cultivated. At half-past eight P.M.

we found ourselves influenced by the tide, and at every ten or twenty miles we were either on a bank or stuck fast in the underwood; so that the men, as on former occasions, were obliged to get out and lift the canoe over. Our track was through avenues of mangroves: in many places the trees were arched over so thickly, that we could see no light through them. We continued on, winding in and out, through small creeks, until nine A.M. on the 15th, when we met three large canoes. In one of them was the old King Fourday, and several *fetich* priests; in another were the brothers of King Boy, and in the third those of Mr. Gun. They had been to the town of Brass, and had brought old King Fourday and the *fetich* priests to escort us into their country. A short time after our arrival at Brass we made fast to the trees, when the tide ebbed, and left us high and dry on black mud half an hour after. After leaving Eboe we passed two small branches running to the west, and also two running in the east. The country through which the river winds is low, without a rising ground for many miles. The banks are for the most part swampy: where they are at all habitable, villages are seen, with patches of cultivated ground. On the 13th we passed a village on the right bank, where the stillness of the water and much white foam we imagined to be the effects of the tide. This place is about seventy or eighty miles from the sea. Near the mouth of the river, and in our way up to Brass Town, the banks were so much overflowed, that the trees appeared to be growing out of the water."

LITERARY AND LEARNED.

ASHMOLEAN LIBRARY.

WE are glad to hear that Mr. Black is now employed in making a catalogue raisonné of the books and MSS. in the Ashmolean Library. This collection, we understand, is valued at 10,000*l*. In the course of his labours Mr. B. has already discovered many very curious and important MSS. not heretofore known to the public. It is expected (as he has not hitherto entered upon the most valuable part of the collection) that many tracts highly interesting to the antiquary and the world at large will be brought to light; and such as are of sufficient value will probably be printed. We trust that this excellent example will be followed, and a good explanatory catalogue given of all the MSS. in Oxford; and the one which has been so long desired, that of the Bodleian Library, be speedily completed.

FINE ARTS.

NEW PUBLICATIONS.

Views in the East. From original Sketches by Captain Robert Elliot, R.N. Part XI. Fisher, Son, and Co.
"MACAO," (rendered peculiarly interesting at the present moment by the absurd conduct of the Portuguese government with respect to that colony), "A Ruin on the Banks of the Jumna," and "Singham Mahal, Torway, Benjapore," are the picturesque embellishments of the ninth part of Captain Elliot's publication. It is impossible to contemplate the last-mentioned plate without acknowledging the justice of the gallant captain's remark:—"The ruined cities of Greece and Italy may boast of temples and palaces of a more refined and classic style of architecture; but they by no means compare with the grace and elegance, and sometimes with the solid grandeur, of the mosques and

mausoleums of eastern kings. The extreme beauty of some of the architectural remains, both Hindoo and Mahomedan, that cover the plains of India, are little known and little appreciated in Europe. There is no portion of the world where the painter's skill might be exercised with more advantage to himself, or more pleasure to others, than amidst the ruined cities of Hindoostan."

Mr. Essex is, we observe, the first artist in the field, with a View of the Ceremony of the Opening of London Bridge.

Miss H. Gouldsmith has again opened an exhibition of her paintings in Bond Street. Since our former notice, we rejoice to learn that her talents have been rewarded by considerable patronage; and we trust this new appeal to the public taste will suffice to complete her projected lottery.

Mr. Scrymgeour, of whose spirited sketch of Aaron's Serpent swallowing up the Serpents of the Egyptian Magicians, we also spoke some time ago, has finished a large and much-improved picture on the same noble and sacred subject; which is forthwith to be shewn at the Egyptian Hall. It is a performance of the highest class, and does honour to the ambition and the abilities of the artist.

ORIGINAL POETRY.

THE VOICE OF THE TIMES.

A VOICE has gone forth over mountain and river— [may,—
The sounds of foreboding, and wrath, and dis-
As the blasts, on the face of the waters which
quiver, [day.
Ere the tempest sails dense o'er the sunlight of
Aroused are the hopes of the ruthless and
daring, [barring;
And the arm of the spotter the blue steel is
And the monarchs of earth, at the signal pre-
paring,
Are gathering the ranks of their banded array.
There is strife in the city—the swart brow of
labour
Frowns stern through the smoke-drift of death
on its foe; [sabre;
The serf has arisen with his grasp on the
The cannon yawns dark by the ford's guarded
flow;
And the steed starts from rest at the trumpet's
shrill warning,
And the drum blends its note with the breezes
of morning;
And the sails of proud fleets, the hoar sea-wave
adorning,
Gleam pale o'er the arming of hundreds below.
Wild spirit of hate and unchecked desolation!
The fields, where thy standards unnumbered
were set, [nation,
When nation came forth in its might against
And earth was one battle-plain—who may
forget? [created—
Asperne, thy dim turrets—Eylan the pine-
And Leipsic's gray wall, with its dun mist in-
vested,
And the strife, at whose closing war's eagle ar-
rested,
Sank scorched on the dust where his legions
were met.
Yet, scorning the past, with its lesson of
sorrow,
Though tenfold the waste, and as deep were the
wo, [borrow
Still seeks the blind impulse of frailty to
New strength for its scourge, and fresh powers
to bestow:

Morn smiles on the harvest of peace freshly
springing,
Noon's warmth round the ear its bright influ-
ence is flinging;
But ere the loud storm and the whirlwind is
bringing— [know?
And who the sealed scroll of to-morrow shall
J. F. HOLLINGS.

SKETCHES OF SOCIETY.

IRISH ECCENTRICITY.*

A GOOD many years have elapsed since Charles James Fox visited Ireland, and some venerable friends of mine still recount the delight my country-folk felt at his frank and Irish manners. A portion of his time, during his sojourn, was spent at the palace of the Bishop of Waterford, — a churchman of the old school, with a cauliflower wig, a gold-headed cane, and as much importance of appearance and address as any one attached to dignity and formality could possibly require. One of his lordship's intimates, or, as he used in brief moments of relaxation to denominate him, "his familiar," was a merry, jovial fox-hunting squire, of large hospitality and small fortune — one of the genuine six-bottle school, with more heart than head, and more wit than judgment — and Dermot O'Dwyer by name. It was, in truth, a strange companionship; to which I can liken nothing, except a species of regard that once existed between a grave Newfoundland dog of my own (Neptune he was called) and a mischief-loving ring-tailed monkey of my cousin's. The great dog would sit for hours, blinking his eyes in the sunbeams, and watching with a sort of sleepy interest Jocko's manifold tricks and capers; and when the skipping thing was tired, permit him to nestle in his thick coat, and submit to the pushing and scratching he exercised to form a bed to his own taste, with extraordinary good nature.

When the worthy bishop succeeded in obtaining a promise from Mr. Fox that he would visit his country residence, it will be easily believed that the reception he purposed giving the great M.P. was in keeping with his usual pomposity. Cards of invitation were duly sent forth, and one of the first despatched to his eccentric friend Dermot. On the appointed day, his tenants were drawn up on each side the avenue, his servants drilled into new stiff liveries glittering with gold and embroidery; even his wife's lap-dog had its little throat garlanded with true blue riband; and every servant maid in the house was compelled to wear shoes, which at that period were an extraordinary novelty, and occasioned much stumbling and more confusion. All things, however, were at length in proper order, every thing arranged *comme il faut*: my lord bishop complimented his lady on the taste and judgment of her dress (stiff flowered satin and high pinners), and she declared that his lordship looked as handsome and far more portly than when he led her to the hymeneal altar. During these old-fashioned courtesies (husbands are not particularly famous for complimenting their wives now-a-days), Dermot O'Dwyer, attended by his favourite hounds, Fan and Freeloze, burst into the state drawing-room. "Come an hour earlier than dinner-time, my boy, to have a long chat with the parliament man. Saw him driving down the hill, threw him clean out at the corner, and, egad, got here first. An't I a luck? — quite the thing, eh?" "Boots!" "Why, what the devil! have me ride without boots? We'll

* In rather dull literary times we acknowledge our obligation to Mrs. S. C. Hall for this authentic Irish Sketch, wherewith to vary our columns.

make a night of it. Ay, here's Charlie, black, muzzled as a terrier — fine face, though, — I wish he hadn't come so soon, for I wanted to read you a speech I intend to make after dinner." The poor bishop was terrified at his friend's oratorical talents: for an entire month he had been lecturing O'Dwyer on the greatness and importance of Charles James Fox, and the necessity for "proper behaviour in his presence;" how was he petrified when, on presenting his friend to the M.P. "as one of the free and independent landholders of the county," Dermot unceremoniously interrupted him, and, shaking Fox by the hand until his very arm ached, exclaimed, "It's part of my lord bishop's trade to blarney the people: you, I suppose, are Charles James Fox, M.P., a sturdy independent fellow; and I am Dermot O'Dwyer, a hater of ceremony and Tories: so there now, my worthy friend in the glorious wig has an acre of breath saved for the next oration." This originality was highly entertaining to a man of Fox's disposition. The party separated at about four the next morning, neither wiser nor better, that I could learn, for having met, which I believe is generally the case at gentlemen's dinner-parties. Certainly the hair-dresser occupied a most unusual time next day in arranging his lordship's wig.

Mr. O'Dwyer lived bachelor fashion, in the dilapidated home of his ancestors, about three miles from the bishop's abode. The house was spacious, and, in one sense of the word, well furnished, for there was no lack of inhabitants; a family of favoured pigeons occupied the attic, and reared their young in undisturbed tranquillity amid the ruin of old bedsteads and mouldering furniture. Whenever there was need of provender, Denis O'Hay, huntsman, footman, head groom, and valet, mounted the once handsome but then decayed staircase, and making his way over piles of broken balustrades and recumbent trophies of field and chase, brought down, to use his own phrase, "two or three dozen birdeens wid the end of a stick, though sorra a mouthful on each, the cratura." The middle rooms were sadly off for want of entire windows, and other little conveniences deemed matters of absolute necessity in English houses; the oak flooring was only partially concealed by tattered carpets, and venerable tapestry hung in fragments from the mildewed walls. Below, indeed, with all my fastidiousness, I confess there was much to interest the lovers of animated nature. Large folding-doors, leading from the great hall to the dining-room, remained hospitably open, the hinges positively refusing to perform the office for which they had been designed some eighty years previous to the date of which I write.

O'Dwyer's miscellaneous favourites had here ample space to range in — various perches were stuck in the painted walls; the principal and largest was occupied by an old white-headed eagle — a noble fellow, who looked with calmness and contempt on the bipeds and quadrupeds which passed beneath his stand. Three or four hawks, a buzzard, and innumerable stuffed birds, skins of foxes, horns of deer, fishing tackle, and fowling pieces, completed the motley garniture. Graceful stag-hounds, — wary terriers, stately yet gentle house dogs, and very many litters of puppies, were scattered in various attitudes and astonishing harmony on the ground; two or three magnificent cats also shared the territory, though their most luxurious haunt was their kind master's bed, which, in one of his usual whims, he had conveyed to the dining-room, where he usually cooked his own dinner after his own fashion.

The morning succeeding his interview with Fox, he arose at his customary hour of six, partook of a stir-about breakfast, traversed the farm, returned home, and suspended by a woollen line, in front of a roaring, sparkling turf fire, a fat and lusty goose—his intended dinner; and leaving it in charge of his nephew (a young collegian, who bore with his uncle's whims for the sake of his inheritance), went to superintend some other matters either in the kennel or stable. The youth twisted and twirled the string, basted the savoury bird with one hand, and held a volume of Homer in the other—meditating on his uncle's oddities one moment, and on the heroic deeds of Achilles the next—when suddenly both his reveries and employment were interrupted by Denis, who, advancing half his unwieldy person beyond the door, ejaculated, "Master Jack! Master Jack! here's the great parliament man and his valet coming riding up the steps: where's master?" Death and destruction! the young tyro to be detected in the vile act of goose-basting!—it was "quite too much." In an instant the dinner was deposited, string and all, in the dripping-pan, and thrust unceremoniously under the bed, the only hiding-place he could at the moment discover. Master Jack then advanced, with shining face, "to do the honours," and despatched Denis to summon his uncle. Dermot O'Dwyer entered, but his eye unfortunately rested on the spot "where once a goose had been;" and, without the slightest notice of the M. P., the exclamation burst forth: "Blood and thunder and turf! where's my goose?—where's my goose, I say?" When espying a small portion of the embrowned string which strayed from its resting-place, he bent on one knee, drew forth the hidden treasure, carefully replaced it, twirled the worsted with skill and dexterity—then, and not till then, cordially welcoming his guest to his hospitable but eccentric abode, saying: "Now, as I've found my goose, the Fox will not, I am sure, refuse to partake of it." How the invitation was accepted as frankly as given—how a merry party joined them in the evening—how the blind fiddle played, and how light feet and bounding hearts seized his music until the gray beam of morning warned them homewards—I cannot now describe; but this I can assert, upon unquestionable authority, that all parties were pleased with each other—a thing of rare occurrence at costly and fashionable entertainments. A few years after this event, O'Dwyer was sadly annoyed by his nephew's wedding a low and inferior person, and resolved to punish his heir presumptive by taking a wife to himself. He judiciously fixed upon a young lady whose father had much influence in the county, and was, moreover, to receive a *real* fortune of a thousand guineas on her wedding-day. The ceremony over, bride and bridegroom prepared to depart for their abode, which, I must say, had been "illigently fitted up," to the discomfiture of beasts and birds. The thousand guineas, which were literally told down, were thrown, as *l'Irlandaise*, into an ancient trunk, amongst other sundries appertaining to Mr. and Mrs. Dermot O'Dwyer. This trunk was strapped at the back of a nondescript gig (rather an uncomfortable machine, of the "makeshift" species); two fine spirited horses were harnessed to it, and so the fair bride was conveyed to her future dwelling. The next morning the bridegroom wanting some money, thought he would go to his black trunk for it; but on counting the sum over—not of his own free will, but by the advice of the afore-named Denis O'Hay—into what he called his cash-box, he was dis-

mayed at the discovery that the sum was minus three hundred and sixty guineas!—"Plaze ye'r honour," says Denis, "that's no way strange, seeing that the mice, or maybe the rats, the beasts! have, by way of employment, eat as good as seven or eight holes in the heart's blood o' the thrunk, bad cess to 'em for a pack o' Tories!"

It was quite true—plenty of holes there certainly were; and now nothing could be done, except trying to get the money back again. In those days there was but one way of effecting this—sending for Father Dillon, the kind but illiterate parish priest, and inducing him to "speak of it from the altar."

"And sure I'll do that same, honey, with all the veins of my heart," he said; "there's not one of them shall dare even to drink a drop of it this warm weather. I'm glad I heard it before the confessions; for in them we're bound, ye understand." Next Sunday Father Dillon* from the altar made the following proclamation:—"Good people—(though, upon my conscience, that's more nor I can say to ye all)—but good, bad, and indifferent, then—just as ye now stand before me—(Mrs. Dacy, ma'am, stuff something into that child's mouth, to hinder him from kicking up such a bobbery)—as I was saying, just as ye are, I want to discourse ye. My good friend and parishioner, Dermot O'Dwyer, Esq., who has lived man and boy in the one place for more than three hundred years, without ever spending cross or coin—(Jerry, Jerry Finan Agra! just clap ye'r wig into the broken pane that's at the back o' my head;—Tim Dooly, you that call yerself glazier, it's astonishing to me, coming to this holy house as ye do every Sunday, that ye haven't had the grace to stick a bit of glass in the window for the love of God and ye'r priest)—cross or coin, as I said, in foreign parts, but spends every farthing he has, and ten to the back of them, amongst you—(ye unruly pack of devil-sarving creatures)—like a gentleman as he is, seeing he could not be otherwise. Well, Mr. O'Dwyer has had the misfortune to drop out of a blaguard hole in his thrunk a matter of about—but the sum's no concern of yours—I know what it is; and, what's more, I know who's got it; and if every farthing o' the money isn't returned by to-morrow morning either to me or to his honour, I'll publish ye, and penance ye, and excommunicate ye;—and it's the devil 'll have nice pickings then, when none dare say God save, or God speed ye! And sure it's the black shame has come over me, to think that the minute ye see the temptation the ould boy threw in yer way, ye didn't come straight to me, and let me know the rights of it. Oh, you in the blue cloak"—(about sixty women wore no other garb)—"twas ill luck took ye so soon from yer own hearth-stone last Tuesday!—but if ye repent and return the money, I'll contrive a penance that will clear ye once more, for yer poor soul's sake. O! O! O! to think how busy the old one was in my parish—easy known I was sleeping at the same time. There's fresh holy water at the door—take plenty of it—sure I never begrudged ye; for, God save us! poor ignorant craythurs like you can't see how the very air is full of evil spirits—things that go buzzing about like blue-bottles, and whisper ye to forget yer God, and yer duty, and yer priest. (Martin Doyle! is the horse gone lame, that ye never sent a sod o' turf to my poor place, and yer own rick built up as

* It is only justice to state, that the priests of the present time are very superior to the Father Dillons of by-gone days.

high as the hill o' Howth! Oh! Martin, Martin, yer a bitter sinner, and so was yer father before ye.) And in regard, as I said, of Mr. O'Dwyer's money: look to it, I say, directly, or else—(and ye'll have reason to think o' my words)—every guinea will be changed into a torch o' fire and brimstone to scorch the flesh off yer bones—look to it, I say, onct more—FOR IF YE DON'T!—there, be off with yerself, every mother's son of ye; and no blessing from me 'ill any of ye have this day:—take care, you with the white stockings and bran new beaver, how you got them! Pack, I say."

It is no less true than extraordinary, as shewing the power possessed by an illiterate but truly honest priest, that before the next morning dawned the money was returned, with the exception of ten or twelve guineas, which were doubtless lost, as some heavy rain had fallen during the night. Our friend O'Dwyer, I must tell you, boasted that he kept regular accounts as long as the guineas lasted; for he never took one out of his cash-box, "that he did not cut a notch in the lid." So much for Irish eccentricity. A. M. H.

July 30, 1831.

DRAMA.

HAYMARKET.

At the Haymarket Theatre has been produced a three-act drama, by Mr. Poole, founded on the French piece of *Madame du Barry*. To avoid the moral disgust of representing a parent as the attempted seducer of his own daughter, he has judiciously made the heroine the child of a faithful old friend of the king; and he has been obliged, in consulting English theatrical taste, to omit the predicting poet who cut such a figure in the original, to the great amusement of Parisian audiences by whom he is understood. Still, ably as Mr. Poole has overcome the difficulties of his choice, we fear that the choice itself is not a very happy one. The play suffered, too, by some of the characters being ill cast: we mean by having parts assigned to good performers, but not parts congenial to their talents. Under these disadvantages, *Madame du Barry* has not been so entirely successful as some of the other productions of Mr. Poole, being, indeed, somewhat heavy. But it was, nevertheless, well received throughout, and has since been acted nightly to approving houses.

ENGLISH OPERA, ADELPHI.

On Thursday evening, near about which time we were putting the finishing hand to our weekly sheet, the *Sorceress*, a new serio-comic opera, the music composed by F. Ries, was performed at this theatre. Of so elaborate a work, comprehending so much for critical notice and approbation, we have not now time to say much;—indeed, it must be heard oftener than once to be understood and appreciated. Suffice it to state, that the lovers of music will have a real treat in many of these compositions; and that H. Phillips, Miss Betts, and Miss H. Cawse, especially, exert great talents in the support of the opera, being ably seconded by Miss Ferguson, Miss Novello, Russell, Reeve, T. Millar, and J. Bland.

SIGHTS OF LONDON.

Ornithology.—We have been very highly gratified by a superb exhibition of ornithology just opened in Bond-street. The indefatigable collector, though yet a young man, has for many years devoted himself to form this fine

and extensive museum, chiefly of birds belonging to the northern parts of Europe. There are hundreds of them in the finest state of preservation; and neither the scientific naturalist nor the mere student can visit them without experiencing much pleasure and delight. Since the dispersion of Mr. Bullock's interesting collection, we have seen nothing like this for the instruction of the young, and the gratification of every age and class of sight-seers.

Another exhibition, just opened, consists of a very complete model, by M. C. Moulin, of the Théâtre Française. It is on a large scale, and as perfect as the theatre in the Rue Richelieu itself. By laying its recesses bare, the whole mystery of scene-shifting, &c. is made familiar to the spectator. It has been, we were told, the work of eight years.

VARIETIES.

Poland: Anecdote.—The Swiss historian, Johannes Müller, once met at Vienna with a document of the secret archives, relating to the first division of Poland. That great princess, Maria Theresa, had inscribed on this sketch of the projected division, with her own hand:—"Placet, because so many great and learned men desire it; but after I have been long dead, men will learn the consequence of this violation of all that, till now, was held just and sacred."

M. Bonpland.—As very important results are justly expected from the researches of M. Bonpland during his long residence in Paraguay, it is much to be lamented that he did not, immediately after his liberation, repair to Buenos Ayres, since, by remaining on the frontier of Paraguay, he incurs the risk of a second detention by Dr. Francia, the dictator. That extraordinary person detained M. Bonpland in his former durance, notwithstanding an autograph letter of intercession from Louis XVIII., and equally urgent solicitations from the Emperor Don Pedro and General Bolívar. The order which he at length issued for the release of the celebrated naturalist, was an arbitrary and unexpected act of clemency, which may have been as arbitrarily revoked.

Mr. Roscoe.—A medal of the late Mr. Roscoe, is, we observe, about to be issued at Liverpool. We wish our die-sinkers would recollect how high this art has stood in former ages, and even in our own time in some foreign countries. Really we have very few works of this class of a superior order to shew to the honour of this country. The London Bridge medals are but poor affairs.

Public Monuments.—During Guizot's administration, an office was created in favour of a man in every way competent to give the intentions of the minister complete effect—in-spector-general of historical monuments; perhaps guardian would have been a better title. It is his duty to protect from the effects of *tempus edax rerum*, and the more destructive hands of modern Vandalism, the remains of antiquity of every kind—Celtic, Roman, and that of the middle ages, ecclesiastical as well as baronial—all over France. He has appointed inspectors for each department, which are divided into districts, under the charge of deputy inspectors, who correspond through the inspector with M. Ludovic Vitet, the inspector-general. On all proper occasions government comes forward with pecuniary assistance from the public purse in aid of the municipal or private funds, according to the locality of the monument requiring aid. M. Vitet's first report to the minister of public works is a masterly pro-

duction. I wish we had some such protection in England; for the race of "Gothic knights" of Guthrie the geographer, is far from extinct in our islands, and many an "Arthur's oven" is yearly sacrificed to mend mill-dams.

The Rev. G. Croly.—It is always with pleasure we hear of rewards or honours conferred upon literary merit; of which tributes to genius there are far too few examples in this country. We are led to the remark by learning that the University of Dublin has done credit to itself by conferring the degree of LL.D. on Mr., now Dr., Croly; one of its sons so highly distinguished in various branches of literature. This voluntary act cannot be the less acceptable to the gentleman in question, from its proceeding under the auspices of so profound a scholar and master of science as Dr. Lloyd, and of the present board of fellows, who are doing so much to exalt the character of the University.

Cholera Morbus.—Among the thousand-and-one different modes of averting this dreadful malady which are offered to the world, is a girdle invented by a M. Champion, rue Grenet-at, at Paris, who styles himself, "fabricant de tissus hygiéniques." It is said that Dr. Larrey strongly recommends the use of these girdles, especially to the inhabitants of cold and damp climates; and that their effect is to excite an abundant perspiration, which suffices to prevent the malady.

Literary Impostor.—Towards the end of last century, Sicily exhibited an instance of literary imposture that has rarely been equalled. A man named Vella, who came from Malta, pretended to an intimate acquaintance with Arabic, though he knew not a word of that language, nor so much as the alphabet. It happened that the government was just then solicitous to inform itself on the subject of the history of the kingdom in the time of the Saracens; this was a point of some importance in the disputes with the Sicilian barons, in regard to their feudal rights and claims. Vella contrived to play his cards so skillfully, that he was employed to translate an Arabic manuscript found in the old archives; and he performed his part for a length of time with such consummate address, as to obtain honours, dignities, and even the professorship of the Arabic language and literature in the university of Palermo! His translation of the Arabic manuscript was nothing but a tissue of his own inventions. He even went so far as to bring forward a Norman manuscript, which he gave out that he had found in an ancient collection. The Sicilian literati, however, began at length to smell a rat, and strove to tear the mask from the impostor. This proved to be no easy task—for the juggler had found means to gain powerful protection. At last he was brought before the regular tribunal on a charge of fraud, convicted, and sentenced to fifteen years' imprisonment.—*Derultery Foreign Reading.*

Agricultural Colonies.—M. le Baron de Silvestre, the perpetual secretary of the Royal and Central Society of Agriculture in France, has proposed a plan, founded on various similar institutions in Holland and Belgium, of establishing agricultural colonies throughout France, in order advantageously to employ the numerous manufacturers of all kinds who are destitute of work. It is calculated that one-sixth of the ground in France capable of being cultivated is not so; and that the diffusion of the colonies in question, while it would relieve the

• We copy this from the letter of a friend in Paris: both the example and the hint are well worthy of public attention.

manufacturing population from the existing pressure, would materially add to the strength and resources of the French empire.

Göthe.—Some of the friends and admirers of the poet Göthe, at the Literary Union, have set on foot a subscription to present him with a seal on his approaching birth-day. The seal itself, though very beautifully executed, and inscribed with a sentence from his own works, will be more acceptable to the illustrious and venerable bard, as a testimony of the high estimation in which he is held in England. The cost is about thirty guineas.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXXII. Aug. c.]

Mr. Alaric Watts is about to publish a volume of his poems, to be entitled *Lyrics of the Heart, the Glass of Agrippa, and other Poems*. The work will be illustrated by from thirty to forty highly-finished line engravings, from paintings and drawings by Lawrence, Stothard, Howard, Leslie, Newton, Chalon, Pickersill, Turner, Ety, Collins, Edwin Landseer, Stanfield, Bonington, Haydon, Bone, Catmole, Henry Thompson, Buxall, &c.

LIST OF NEW BOOKS.

Fletcher's Hymns for Children, 18mo. 2s. 6d. hf.-bd.—Rustic Excursions, 18mo. 6s. hf.-bd.—Law's Forms of Ecclesiastical Law, 8vo. 14s. bds.—Aldine Poets, Vol. XV. Pope, Vol. III. fcp. 8s. cloth.—Andrews' Guide to Southampton and the Isle of Wight, 18mo. 2s. bds.—Salmon on Protrusion of the Rectum, 8vo. 6s. 6d. bds.—Hymns' Integral Calculus, Part I. 8vo. 9s. 6d. bds.—Miller's Hydrostatics and Hydromatics, 8vo. 5s. 6d. bds.—The Origin, Science, and End of Moral Truth, post 8vo. 7s. bds.

Tuesday... 2	— 50. — 75.	29.63 Stationary
Wednesday 3	— 50. — 75.	29.63 — 29.64

Wind variable, N.E. prevailing. Except the 30th and 31st ult., generally cloudy, with heavy rain at times. On the afternoons of the 25th ult. and 3d inst., this neighbourhood was visited with a violent thunder-storm, particularly on the latter day, when the thunder was remarkably loud, and, by the shaking of the houses, bore some resemblance to a slight earthquake. These flashes of lightning, from ten minutes before, till five minutes after three, were particularly vivid. The continued thunder in the N. and E. from fifteen to thirty-five minutes after two, is also deserving a particular remark.

Rain fallen, 25 of an inch.

TO CORRESPONDENTS.

Miss Grove, of the Pavilion Theatre, &c. we have no doubt, a very clever young actress; but we cannot insert O. P.'s anonymous notice.

We do not remember having seen the *Trip to Paris*. We shall give our attention to Mr. Ryan's medical case hereafter: it belongs to an important subject, which ought to be considered on a general, rather than a particular view.

We are not aware of the *Essays on Museums, Sculpture, &c. &c.*

We are very sorry to be informed of the misfortunes of Mr. Mars, the Editor of the *Puree de Londres*, and will cheerfully not only recommend the case of this distressed foreigner to the literary world, but subscribe our note to his relief. His abode in the King's Bench will, we presume, satisfy his creditors!

We shall be happy to promote the useful and benevolent institution for the benefit of French Teachers in England; but we cannot insert long advertisements so forward this object.

Many communications are too late for this week; and the length of our Review of Garrick has superseded some other notices.

UNIVERSITY OF LONDON.—The Professorship of Surgery is vacant. Candidates for it are requested to send their Applications and Testimonials forthwith to Mr. Coates, at the University, in order that the announcement for the next Session may not be delayed.

The Medical School will open on the 18 October next, and the General Classes on the 1st November.

The Chair of Mathematics is vacant. Candidates are requested to send their Applications and Testimonials to Mr. Coates, at the University, on or before the 18th August.

Particulars of both Schools will be advertised in due time.

THOMAS COATES.

28th July, 1831.

TO LADIES who have neglected taking advantage of an early Education, Two Vacancies have recently taken place in an Establishment of the first respectability, for the reception of Parlor Boarders, who, with all the Comforts of a Home, may combine the Advantages of a superior Education. The House is situated in the finest part of the Regent's Park. Address, post-paid, to L. S. D. M. Dawson, 60, High Street, Marylebone, where Cards may be had.

EDUCATION.—A Clergyman of the Church of England, who is educating his Son with the assistance of a Tutor, intends to take into his Family Two Boys, as Companions in Study, to educate with him. His Residence is on the Strand, near the Admiralty, and has every local advantage.

For further Particulars apply to Mr. Upham, Church Street, Hampstead, or (by letter) at the House of Lords, Westminster. The most respectable References will be given.

LITHOGRAPHIC PRINT OF THE NEW LONDON BRIDGE.—From Trafalgar Wharf, South-west, as it appeared at the Ceremony of Opening, for His Majesty, William IVth, on the 1st of August, 1831. Drawn on the spot, by R. H. Essex, and Lithographed by G. Scharf. Price 3s. plain, and 5s. coloured; Proofs on India paper, ditto.

PRINT OF THE OPENING OF NEW LONDON BRIDGE.—To be published on Monday next, by R. Ackermann, Strand, and W. G. Allen, Cambridge, in beautiful Coloured Lithography. Price 3s. India paper; and 7s. coloured.

FRAUDS IN PATENT PENCILS.—S. MORDAN and Co. respectfully solicit public attention to the Frauds which are daily practised upon them, in regard to their Pencils, and the Leads for refilling the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

4th. Cedar Pencils.—These pencils contain the same quality of pure Cumberland as the other patent pencils.

Warranted Protection.—The Look with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it; neither can a skeleton or other substitute key be made with success. The key, capable of inflicting various cuts of that description upon those who attempt to copy, and dexterity and custody equally guarded against.

S. Mordan and Co. Makers, London. Is stamped on each Look.

Scientific gentlemen and others are invited to inspect the Manufactory, 25, Canale Street, Finsbury.

TO COLLECTORS OF ENGLISH PORTRAITS.—The late WILLIAM ROSCOE, Esq., is to be disposed of by Public Sale, at the Crystal Palace, the property of the justly celebrated Character, representing him in the middle period of life, and finely executed by the artist William, of Liverpool. It has never been engraved.

Also, a fine Portrait, in Oil, of Prince Charles (Second) in Armour, by Dobson, (styled the English Vandyck), in an elegant old carved frame, admirably painted.

A capital and well-known Portrait of Dobson, painted by himself, which has been engraved, both in Walpole's Painters, and the Physiognomical Portraits; but in neither very successfully, as far as regards the likeness.

A very curious Portrait of the celebrated Countess of Nottingham, by Marc Gairard. She is represented in her widow's weeds, and holding in one hand a sprig of laurel, no doubt allusive to her husband's victory over the celebrated Spanish Armada. The costume, which is very beautiful, is exquisitely painted.

An undoubted Portrait of Sir Thomas Hykes, by Sir Peter Leys. This eminent man was the long-trusted confidential friend and upright counsellor of Charles First, and upon all occasions during his troubles his undoubted advocate and defender, both by his eloquence and his sword, being Chamberlain of the Exchequer and a General in the Army. His latter capacity he is here represented, being in Armour. This fine Portrait came from Brynston Hall, in Dorsetshire, his then residence, and was purchased from the Heir-at-Law, from whom there is a letter relative to its history, (in the present Proprietor's possession), which will be delivered with the Picture to the Purchaser.

The Collection contains also many other fine original Portraits of eminent Characters, in Oil, which have never been engraved, and may be seen at the place of Sale; together with many very fine and rare engraved English Portraits, by Fathorne, Vanduysen, and other celebrated Masters. By the former, there is one of the eldest of his Works, namely, a Portrait in Armour, of Charles II. with six verses under, beginning—"The Second Charles, heir of the Royal Martyr," &c. It is a most brilliant impression, and of the greatest rarity. Also, Sir Thomas Allen, by Van der Beeck. 4. Next an Arm at rest, (afterwards altered to the Earl of Mar), by the same, extremely rare. And many others, by Marshall, White, Hollar, &c. too numerous to mention in an Advertisement.

Letters, post-paid, addressed to M. D., the care of Mr. Collins, Carver and Orford, Ranelagh Street, Liverpool, will receive immediate attention.

Shortly to be published, by Subscription.

A MEDAL of the late Wm. ROSCOE, Esq. to be engraved by Mr. Scipio Clint, Medalist to the King, from the Medalion by Gibson.

The Medal will arrange with Parker's Series, designed to perpetuate the Memory of the Great Men of the present Age. Price, in Bronze, 16s. 6d.; Silver, 25s. 2s. The size of the Medal, one inch and seven-eighths.

Published by W. Clements, Engraver, &c. 57, Bold Street, Liverpool.

Subscriptions received in London, by Messrs. Treuttel, Würtz, and Co. 30, Soho Square.

PICTURE GALLERY.—To Let, a large Gallery, well known to the Nobility and Gentry, situated at the West End of the Town, suitable for a Painting Exhibition or Lecture Room, with large Warehouses attached, and a separate Entrance.

For Particulars, apply to Mr. Holmes, House and Estate Agent, 9, Pantion Street, Haymarket.

BOOKS PUBLISHED THIS DAY.

Dedicated to the Duke of Devonshire.

On the 30th of July was published, the Third Number of

THE BEAUTIES OF THE COURT OF KING CHARLES THE SECOND.

Edited by the Authoress of "the Diary of an Ennuyée."

A Series of Portraits of the beautiful and celebrated Women of the court and reign of Charles the Second, forming a splendid Illustration of the Memoirs of De Grammont, the Diaries of Evelyn and Pepys, and other works connected with that gay and interesting period; with Biographical and Critical Notices, which the editor has been collecting for many years, from the most authentic sources.

Lord Orford observed, fifty years ago, that "the Beauties at Windsor ought to be engraved to illustrate the Memoirs of their charming historiographer, Count Hamilton." It is singular that since that time no attempt has been made to produce these lovely portraits in a style worthy of the interest of the subject. Of the former pictures at Windsor, six only have hitherto been engraved; it is therefore hoped that the present work will supply what has long been a desideratum in the fine arts.

The size of the plates is six inches by four and a half; engraved by the most distinguished artists from the original pictures in the Royal Gallery at Windsor, and elsewhere. Royal 4to. 11. 1s.; imperial 4to. Proofs on India paper, 5s. 2s. each No.

The First No. contains the Portraits of the Queen, Lady Castlemaine, the Countess of Grammont (La Belle Hamilton), and the Countess of Osnery; all after Sir Peter Leys.

The Second No. contains the Portraits of the Duchess of Richmond (La Belle Sturt), the Duchess of Somerset, Nell Gwyn, and Mrs. Lawson.

The Third Number contains the Portraits of the Countess of Chesterfield, Lady Denham, the Countess of Rochester, and Lady Southesk.

The whole Work will be shortly completed in Five Numbers. Henry Colburn and Richard Bentley, New Burlington Street.

THE NEW SPORTING MAGAZINE

For August contains a Portrait of "Spaniel," Winner of the Derby, engraved by Scott, from a Painting by Herring; and also a future issue of "Black Gaffer," engraved from a Painting by A. Cooper, R.A., and also the following original Articles:—Pedigree and Performances of "Spaniel"—Game Laws and Woodcocks—Description of a Fox-Hunter of the last Century—Reform—Tipping Boys at School—The Road, No. 2, by Daishwood—Sporting Reminiscences; Fishing—On sliding over Water—Archery in Flanders; Shooting at the Poppings—Nim South's Tour; Sir John Cope's Hounds—A May Trip to the Thames—A Day with the "Surrey," the Find and the Finish—Black Game—Anatomy of the Horse, by R. Lawrence—Letters on Hare-hunting, No. 2, by Daishwood—Songs of the Chase—The Last Day of the Hunt—The Hunt-Gear by Sir John Cope—Editor's Scrap-book—General Monthly Miscellany—The Turf; Races to come, Races past—Newcastle—Wells—Lancaster—Gulldford—Indul—Liverpool—Bridgwater—Ipworth—Newmarket—Tatton—Preston—Chesham—Kendal—Enfield—Stamford—Laws of the Mary-le-bone Cricket Club—October, Pigeons, Hares, &c. Sailing Matches—Stud Sales—Horses gone abroad, &c. &c. &c.—Bettings—Hay and Corn Markets—Racing Calendar.

Notice of No. III.

"The 'New Sporting Magazine,' No. III. July. Baldwin and Cradock, Paternoster Row. This new and very Journal is really as refreshing to us as a ride in a green lane, as Byron would say. There is a sprightliness and variety about it which may well entitle it to the cognomen of 'Sporting.' Nim South's Tour is admirable; we ought not how soon be set out on another excursion. The plate of His Majesty's horse Colonel, by Webb, with an account of his pedigree and performance, is highly deserving the attention of every lover of the turf: the plate alone is worth the price of the Magazine. The Plate of the Haunts of the Chamois, by Lieut.-Col. Batty, is beautifully executed, and the account of these singular animals is full of interest. On the whole, this Magazine fully evinces the beneficial effects of competition."

"We have been favoured with proofs of the embellishments of June and July Numbers of the 'New Sporting Magazine,' and we must say that they do the Editor and Proprietors of the work great credit. 'Trout Fishing,' engraved by Scott, from a picture by A. Cooper, R.A., and a 'View in Switzerland,' drawn and etched by Lieut.-Col. Batty, are pre-eminently beautiful."

"A periodical called the 'New Sporting Magazine,' appears to us to be remarkably well done."—*John Bull*, July 17.

Published by Baldwin and Cradock, Paternoster Row; and to be had of all Booksellers in the United Kingdom.

Price 3s. 6d.; or 11. 10s. a Year.

Mr. William Butler's Outline Maps.

GEOGRAPHICAL AND BIOGRAPHICAL EXERCISES.

By the late WILLIAM BUTLER.

The 17th edition, of the late JOHN OLDING BUTLER, and having an entirely new Set of coloured Maps, with a Series of Questions, adapted to each Map and to the Biography.

As a correct delineation of the grand outlines of the four quarters of the globe, and of the British Isles, these maps are entitled to much praise."—*Literary Gazette*, May 7, 1830.

John Harris, Corner of St. Paul's Churchyard.

HISTORICAL RESEARCHES ON THE CONQUEST OF PERU AND MEXICO by the MOQUEL; in the XIIIth Century; with a Supplement now added, confirming the Origin of the Toltecs and Guatemalans from Tala, and the Aztecs from Anam; also proving that the Egyptian Sphinxes, &c. found in Mexico, are derived from the Sirmian Empire.

By the Author of "Wars and Sports of the Mongols and Romans."

The Supplement will be supplied gratis to former Purchasers of the Volume.

Printed for Longman, Rees, Orme, Brown, and Green.

New Works printed for Longman, Rees, Orme, Brown, and Green, London.

SIR EDWARD SEAWARD'S NARRATIVE of his SHIPWRECK, and consequent Discovery of certain Islands in the Caribbean Sea. With a Detail of many extraordinary and highly interesting Events in his Life, from the Year 1728 to 1745, as written in his own Diary.

Edited by JAMES FORTESCUE.

SUMMARY OF THE FACTS hitherto ascer-
 tained respecting the Cholera Morbus of Russia, with a
 Detail of its Progress from Asia to Europe. Illustrated by Docu-
 ments, explanatory of the Nature, Treatment, and Prevention of
 the Malady. With a Map of its Course.
 By HESSETT HAWKINS, M.D.
 John Murray, Albemarle Street.

BOOKS IN THE PRESS.
 In a few days will be published,
**THE HISTORY OF THE INDIAN
 CHOLERA,** in popular Language.
 By JAMES KENNEDY,
 Member of the Royal College of Surgeons, London.
 It has been the object of the Author to strip the subject of
 every species of mystery and speculation, and to lay before the
 reader a multitude of facts, (hitherto unpublished in Europe),
 explanatory of the origin and laws of the pestilence, and of a
 rational method of cure. The inefficient and cruel character of
 the present quarantine regulations is exposed, and the adoption of
 an effective and humane system recommended.
 Published by James Cochran and Co. 11, Waterloo Place.

LONDON: Published every Saturday, by W. A. SCRIPPS, at
 the LITERARY GAZETTE OFFICE, 7, Wellington Street,

SATURDAY, AUGUST 13, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Historical Researches on the Conquest of Peru, Mexico, Bogota, Natchez, and Talomeco, in the Thirteenth Century, by the Mongols, accompanied with Elephants; and the Local Agreement of History and Tradition, with the Remains of Elephants and Mastodontes, found in the New World: containing Invasion of Japan, from China; a Violent Storm; Mongols, with Elephants, land in Peru, and in California; very numerous Identifications; History of Peru and Mexico to the Conquest by Spain; Grandeur of the Incas, and of Montezuma; on Quadrupeds supposed extinct; Wild Elephants in America; Tapirs in Asia; Description of two living Unicorns in Africa: with two Maps, and Portraits of all the Incas and Montezuma. With a Supplement. By John Ranking, Author of "Researches on the Wars and Sports of the Mongols and Romans." London, 1831. Longman and Co.

HALF a column of title-page ought to save the reviewer at least the pains of stating the nature of the work in hand; and such is the case here. By Mr. Ranking's preceding publication we were prepared for curious and interesting researches on the new subject he had undertaken to investigate; nor have we been disappointed, for his volume is full of entertaining matter, collected from many sources. The theory he maintains is, that Mexico, Peru, &c. were conquered and planted by part of a Mongol expedition driven by a storm from the coast of Japan in the thirteenth century;* and he shews, by resemblances in natural history, customs, traditions, fossil remains, and other proofs, that such an event was not only probable in itself, but is corroborated by a multitude of identifications. Nearly 200 degrees on the equator is, it is true, a long voyage to have been performed by Chinese junks, however large, in the state of navigation six hundred years ago; but it is difficult to imagine either the limits or extent of the colonisation which may have been effected on the vast Pacific during centuries of our earth's duration; and we are not the sceptics to deny the possibility of that of which the means are not readily obvious. Allowing, therefore, the first step, the multitude of coincidences which the author brings to bear in support of his hypothesis are, at all events, staggering and remarkable, if not certain and conclusive. How little, even at this day, we know of the world which we inhabit, may be seen from the statement: "At the present period the space in Africa, from lat. 10° north to 30° south, is a blank to the civilised world. An immense territory, between Thibet and Siberia, is imperfectly described. In America, both north and south, there are vast districts which may be termed undiscovered; and if we add to this New Hol-

land, Borneo, and other unexamined regions, it appears, even now, that half of the surface of the earth has not been visited by any one who was qualified to communicate the knowledge of its productions or history to the learned portion of mankind; although the whole extent of the land is not more than about a third of the superficies of this planet. Thus, if we consider that half of the land, besides the depths of the ocean to a still greater extent, are yet hidden from the eye of science; and the natural convulsions that the earth has undergone, how imperfect must be our knowledge of the history and description of man, of animals, and of plants!"

It will be granted, that in a notice such as we can afford to a work of this kind, it must far exceed our limits to enter into even a tithe part of the arguments adduced, and the comparisons made, by the author. The historical fact of the invasion of Japan, the size of the Chinese ships, the periodical winds in the Pacific, the remains of the Asian elephant found in America, and all the annals of the Incas, are referred to, and treated of with great ingenuity: these are fortified from the writings of the earliest Spanish navigators; and the whole offers a *mélange* of uncommon interest. We will quote the commencement, merely as a specimen of the manner.

"In the year 1257 of the Christian era, Kublai, grandson of Genghis Khan, on the death of his brother Mangu, was proclaimed Grand Khan of the Moguls and Tartars. At the conquest of Eastern Bengal, and all the provinces eastward of the Burrampooter, he captured numerous elephants, and subjected many sovereigns to deliver to him numbers of those animals as a part of their tribute; and, from the year 1272, always employed elephants in his armies. We find from Marco Polo that he possessed five thousand of these animals at the period we now treat of. The wars in which the emperor was engaged before his attempt on Japan, were those in Mangi or South China, and against his rebellious relation in Siberia. In the year 1280, in a most terrible conflict by land and sea at Canton, the imperial family of the Song dynasty were destroyed; on which Kublai became master of all China, and first emperor of the Ywen dynasty, under the name of Shi-tsu. At this epoch, Kublai was in possession of a more extensive domination, and infinitely greater numbers of subjects than were ever controlled by any monarch recorded in history, his empire being much more considerable than that of Augustus. The continent of Asia, except Hindostan and Arabia, was under his sway. Of him, it may be said with more truth than the British king is made to say of Caesar, 'His ambition swelled so much, that it did almost stretch the sides of the world.' As soon as Kublai found himself possessed of the whole power of the Chinese empire, he resolved on the conquest of Japan, and 'gave orders to his subjects of Kiang-nan, Fokien, Honan, and Chantong, to construct six hundred vessels.'"

Out of the dispersion of this fleet the whole theory is constructed; to which we beg to refer, not merely as singular in itself, but as most agreeable miscellaneous reading; while the Supplement furnishes us with a more sterling condensation of matter for illustration.

It is entitled, "Confirming the Origin of the Toltecs and Guatemalans from Tula, and the Aztecs from Assam. Also proving that the Egyptian Sphinxes, &c. found in Mexico, are derived from the Birman Empire.' From the resemblance of many objects of the arts found in America to those of the ancient Egyptians, the first impression on the mind of any one who has not examined the history of the ancient Americans would naturally be, that a connexion had existed between the nations of the New World and Egypt. It, however, admits of satisfactory proof, that such similitudes have been brought to Mexico and other places from Tangut and India extra Gangem, the very regions in Asia from which the writer of these notes ventured (in 1827) a conjecture, was the country of Montezuma's ancestors. It is therefore indispensable, in the first place, to identify the Toltecs and Aztecs of America with the people of those countries, and then to shew the existence of Egyptian sphinxes, &c. in that part of Asia, similar to those found in America.

"That the Americans are Asiatics cannot admit of doubt. The following comparisons prove many of them to be from India extra Gangem and Tangut.

"American History.

"1. Montezuma (Purchas), to which zin was added (Gomara, in Purchas, iii. 1126), was a priest.

"2. The number of priests in the great temple in Mexico was five thousand. (Clavigero, i. 270.)

"3. Montezuma was tawny, as all the Indians are; he had long hair on his head, and six little hairs upon him as though they were put in with a bodkin; his thin beard was black. (Gomara, in Purchas, iii. 1126.) The Indians pluck out their beards with a kind of tweezers made of brass wire. (Mr. Jefferson's Notes, 270.) 'When Montezuma approached, three nobles preceded, each holding up in his hand a golden rod. He was in a litter covered with plates of gold, which four nobles bore upon their shoulders; and shaded by a parasol of green feathers and gold embroidery. His mantle was adorned with golden jewels and precious stones; on his head was a thin crown of gold, and upon his feet shoes of gold, tied with strings of leather worked with gold and gems. He was accompanied by two hundred lords, richly dressed, barefoot, two by two.' (Clavigero, ii. 64.) 'The manner of salutation is to touch the earth with the right hand, and to kiss that part of it wherewith they touch the earth, in token of reverence. The brother of the king, and the lord of Ixtapalapa, taking Montezuma, drew him by the arms, so to reverence him, that he might seem to be upheld and supported by the strength of the nobility.'

* "The opinion of the writer is, that Magno Capac, the first Inca of Peru, was a son of the Grand Khan Kublai, and that Montezuma's ancestor was a Mongol grande from Tangut, very possibly Assam."

(Peter Martyr, Decade v. ch. 3, in Hakluyt, iv. 557.)

"4. Montezuma's palace was so large that the Spaniards and their allies, in all about seven thousand, were accommodated in it. The walls had rich hangings of cotton. 'At dinner Montezuma was seated behind a *wooden trestle-work*, and served by the lord steward, barefoot, and in profound silence.' (Gomara, in Purchas, iii. 1126.) 'When the king of Acolhuacan prayed to the Creator, at certain hours, men struck plates of fine metal. When Montezuma dined, there was music of kettle-drums, *snail-shells*, flutes, fiddles, and other strange instruments.' (Clavigero.) Cymbals were much used by the Incas; Vega names them *atabals*.

"5. A skeleton of an elephant was found in a tomb in the city of Mexico (founded in 1324), and in tombs which appear evidently to have been made on purpose. (Clavigero, i. 84; Vega, ii. 394.) 'A king of Mexico was buried with great pomp. They killed his chaplain to serve him in the next world, and some of his wives; the number of victims sometimes amounted to two hundred.' (Clavigero, b. vi.) They bury with the deceased Inca all his vessels of gold and silver, his clothes, jewels, and furniture. The domestics and women most attached were buried alive. It often happened that so many offered themselves by voluntary immolation, that their superiors were obliged to limit the number. (Vega, b. vi. ch. iv. v.) In a tomb of a Peruvian prince, massive gold, value five millions of francs, was found. (Humboldt, i. 92.)

"6. The American Indians suspended themselves by the arms, legs, or sides, to shew their devotion. A boy drew two buffaloes' heads a few hundred yards by cords fixed in the fleshy parts of his sides. (Brackenridge, Missouri, 166.) The slippers (described by Peter Martyr, Decade iv. ch. 9), sewed with gold thread, are exactly such as are made at Dacca.

"7. The festivals of the sun, performed by the Incas at Cuzco, were named Raymi and Citua. (Vega, l. vi. ch. xx.)

"8. There are gipsies in Pernambuco. They lead a vagabond life, buy and sell horses, and gold and silver trinkets; and have no regard to religion. (Southey's Brazil, iii. 787.)

"9. The *Aymores* or *Betocados* are found by the river Sertam, near Minas Geraes. (Southey, iii. 600.)

"10. The *Tapuyas* ate their own dead, as the last demonstration of their love. (Southey, ii. 379.)

"11. The Caribs pluck out their beards with pincers, bore their ears and nostrils, and deck them with jewels of gold. They chew leaves and nuts in either cheek all day. They make lime of shells, and mix it with leaves, which they put up close in *sausages* in baskets, and sell for jewels and maize. They chew fresh leaves every hour. (Peter Martyr, who died in 1525, Decade viii. ch. vi.) In Olmedilla's great map of South America there are *Caribes* marked in south lat. 27° 30', and *Mongolas* in south lat. 24° 40'. The *Araucans* of Chili, in person, courage, arms, and military music, are *Mongols*. (See Choris's folio, Vega, vol. ii. 229.) 'The *Araucans* have a year (*Sipantsu*), which exhibits a greater analogy with the Egyptian year than that of the *Arctos*. Three hundred and sixty days are divided into twelve months, to which we added five complimentary days at the winter solstice. It is possible that they have received this division from Eastern Asia. (Humboldt, ii. 234.)

"12. At the small town of Cowe ('the capital of the Cherokee Indians, on both sides of

the Tennessee, by the Jore mountains,' Morse), at the close of evening, I accompanied Mr. Galahan to the Rotunda, where there was a grand festival, to rehearse the ball-play dance, this town being challenged to play against another the next day. The people being seated in order, and also the musicians, an aged chief makes a long oration in commendation of the manly exercise of the ball-play, recounting the victories the town of Cowe had gained over the other towns; not forgetting to recite his own exploits and those of other aged men present. The musicians then began, both vocal and instrumental, when a company of girls, hand in hand, dressed in clean white robes, ornamented with beads, bracelets, and gay ribands, entering the door, began to sing their responses in a low sweet voice, and formed themselves in a semicircular line in two ranks, back to back, facing the musicians, and moving slowly round and round; after a quarter of an hour, a shrill whoop was uttered by a company of young fellows, who came in briskly with rackets or huris in one hand. They were well dressed, with silver bracelets, gorgets, and whampum, neatly ornamented with mocassins and high plumes in their diadems. They then formed themselves in a semicircular rank in front of the girls, who formed a single opposite rank; the step or motion began at one end of the semicircle, gently rising up and down upon their toes and heels alternately; when the first was on tip-toe, the next began to raise the heel, and by the time the first rested again upon the heel, the second was on tip-toe, thus, from one end of the rank to the other, so that some were always up and some down alternately, without the least confusion; they then moved on sideways, so that the circle formed a complex or double motion in its progression, and at stated times exhibited a grand or universal movement instantly, by each rank turning to right and left, taking each other's places with inconceivable address, accompanied with an elevation of the voice and short shrill whoop. All their dances or musical entertainments seem to be theatrical, varied with comic and lascivious interludes; the women, however, conduct themselves with a becoming grace and dignity, inasmuch that, in amorous interludes, when their responses and gestures seem consenting to natural liberties, they veil themselves; just discovering a glance of their sparkling eyes and blushing faces, expressive of sensibility. (Bartram's Travels in Carolina, Georgia, and Florida, in 1773, p. 367.)

Next follow the resemblances in

"Asiatic History.

"1. Moti was emperor of China A.D. 910. (Du Halde.) Tsoum means venerable. (D'Herbelot, iv. 349.) Zin means great. (Gibbon, vi. 290.) The Chinese name of Mango, Kublai's brother, and supposed uncle of Mango Capac, was Hien-Tsoum. (D'Herbelot, iv. 278, Canon Chronologique.) The proper name of the Delai Lama, in 1696, was Mo-tseu-na-ria. (D'Herbelot, iv. 316.)

"2. Seven hundred priests were attached to the Lama's person for daily offices. (Turner's Journey to Thibet, Sir W. Jones, Sup. vol. i.)

"3. The *Bramas* (Burmans), in Pegu, wear no beards; they pull out the hairs with little pincers made for that purpose. Some of them will let sixteen or twenty hairs grow together upon his face. (Fitch, in Hakluyt, ii. 262.) The boys in Sumatra rub their chins with a chunam (quick lime), which destroys the roots. If any remain, they are plucked out with

tweezers. 'The Engy Teekien, heir-apparent to the throne of Ava, was preceded by a body-guard of four or five hundred men in uniform, in regular files, with muskets, twenty or thirty men holding long gilded wands, eighteen officers with gilded helmets, civil officers in robes and caps of state, then the prince, in a very rich palanquin, without any canopy, screened from the sun by a large gilded fan, supported by a nobleman on each side, and six Cassyay astrologers of the Braminical sect, in white gowns and white caps studded with stars of gold. Close behind, his servants carried his water flagon and gold beetle-box. The display was solemn, and dignified, and orderly.' (Symes, iii. 40.) Whoever has obtained admission to the royal presence is said to have been at the golden feet. (Symes, ii. 226.) The procession of the king would probably be more similar to that of Montezuma. The writer has seen the Nabob of Dacca led by the arms precisely as Montezuma. The touching the ground is well known in India, exactly as Peter Martyr describes.

"4. The public saloon of the Raja of Assam is one hundred and fifty cubits long, and forty broad, supported by sixty-six wooden pillars. His seat is adorned with *lattice-work* and *carving*; within and without are polished plates of brass, which reflect the sun like mirrors. Three thousand carpenters and twelve thousand labourers constructed it in two years. When the raja sits in this chamber they beat the *dhol*, a drum beaten at each end, and the *dand*, a kind of kettle-drum. The rajas of this country have always displayed ostentation and vain glory; they have a numerous train of attendants and servants. (Sir W. Jones, Sup. i. 236.) In Thibet they use the gong, cymbal, drum, hautbois, trumpet, and *sea shells*, at their devotions. (Turner.)

"5. 'When a raja or magistrate dies, they bury him in a large cave, in which they inter his women, attendants, magnificent equipage, and furniture, such as elephants, gold and silver, fans, carpets, clothes, oil, and a torch-bearer. They construct a strong roof over the cave, upon thick timbers. The value of 90,000 rupees was found in an old cave.' (Desc. of Assam, Sir W. Jones, Sup. i. 235.) Some of the tombs of the grandees in Thibet are pyramidal and very high; great quantities of gold are buried with their corpses. (Sir W. Jones, Sup. i. 311.) Elephants have been found in tombs in Siberia. (Bell of Antermony, &c, 154; Coxe, iii. 170.) 'The gold plates, chessmen and boards, and other riches found in the tombs in Siberia, are almost beyond belief.' (Wars and Sports of the Mongols and Romans, ch. v.) The Grand Khan Mango was buried with his horses, and more than ten thousand attendants. (See Marco Polo, b. i. ch. xiv.; Petis de la Croix, p. 382; Barrow's Travels in China, p. 483.)

"6. The writer of these notes resided at Dacca, in Eastern Bengal, many years. He one day found his torch-bearer suspended by a thick hook through the flesh of his back. He has seen Hindoos of the *shoemaker* caste run along, with a tightly stretched cord fastened to posts, inserted in the flesh of each side.

"7. 'The plot of the drama performed this evening was from the sacred text of the Ramayan. It represented the battles of the holy Ram and the impious Rahwaan, to revenge the rape of Seeta, the wife of Ram, whom he forcibly carried away, and bound under the spells of enchantment.' (Symes's Emb. to Ava, &c, ii. 43.)

"8. The gipsies in Europe are, undoubtedly,

outcast Hindoos; their language is Sanscrit, scarce changed in a single letter. (Sir W. Jones, i. 119.) An immense number of prisoners were taken to Samarcand from India, by Timur, in 1399. Many gipsies are now in Persia and Russia. (Wars and Sports, ch. iv.)

"9. A man and woman of the Botocudos were exhibited in Bond Street; their persons were completely Malay.

"10. The Battas of Sumatra consider the practice of eating their own relations as a pious ceremony. Herodotus (b. iii. 99) alludes to them, as having that custom, according to Dr. Leyden (Rees's Cyc. 'Sumatra'), and the same still exists.

"11. The use of the word *maund* is very remarkable, as the first ship from England to India was the *Rere Admiral*, in 1591. All these customs of the Caribs are precisely Asiatic. They are Calmucs 'qui ont une grande affinité avec les Mongols par leur langue, leurs mœurs, et leur figure.' (Voyage de Pallas, i. 485.) Their country is north of Ava, in lat. 45 deg. by Du Halde's map.

"12. This description of a *nautch* in America in the year 1773, it is surprising, has never attracted notice, as far as is known to the writer. Any one who had seen that kind of dance in India, had he been present at a Cherokee entertainment, must at once have pronounced the Americans to be of East Indian origin. With the exception of the men who are engaged for the *ball game*, it is an exact description of the nautches at Dacca! The northern half of the province of Dacca is named *Dacca Momensing*; and there are grazing pastures in Pennsylvania called *Moyomensing*. (Bartram, 186.) Were this a solitary instance, it certainly would not be worthy of notice; but the first Toltecs having named their new city Tula, after their native country (a beautiful region near Lake Baikal), it may have been often done. Thus the river *Chenessee*, which runs into Lake Ontario, has falls of 40 feet, 75, and 96 feet. The *Jenesei* signifies rocky river, where there are waterfalls, and having a rapid current. (Strahlenberg, Hist. of Siberia, p. 385.) The Tungusis inhabit these parts; and the Canadian Indians are exactly the same in person and customs, says Bell of Antermony. When the Toltecs fled from Tula in Anahuac, in 1052, they named the extreme land *Yukatan*; and when they abandoned Asia in the sixth century, *Yakutsk* was conquered by the Turks, and was named Northern Turquestan."

The Sporting Magazine. No. XVI. New Series. August, 1831. London. Pittman.

We are tempted by our own aberration: we will never transgress our good old rules again. Here were we last week finding an excuse for reviewing Professor Wilson's poem, published in a contemporary periodical; and now, such is the ease with which we lapse from one offence to another, we are, without an apology at all, about to notice a second effort of genius in a similar publication. *The Sporting Magazine*, No. XVI., must, if need be, plead for us. Not the picture of Erymus at full speed—not even the portrait of Venus—not an illiterate critic, as the name might suggest, but a white bull-terrier bitch, classically "bred at Oxford"—have misled us on this occasion; but the pure literary merits of the text, and the originality and spirit of its prose and verse. To exemplify this, our first extract shall be from an admirable and spirited production, entitled "*Newmarket July Meeting*." The introduction is worthy of Byron:

"On the 9th July, when all London was smoking
With a Midsummer sun and the brooks of the world,
When the lads of St. Stephen were dimly croaking
Round the flag of reform, now broadly unfurled:
Quite sick of the town, and of the humbug aloft
'Bout the Bill, its schedules, its wordy intentions,
And to see a whole people confidently doat
On this cure for all ills, the brain-new inventions:
As the best luck would have it, I met an old friend
Who was going to Newmarket to order the prads,
And to leave all such stuff for the d-v-l to mend,
And be off to Newmarket 'mongst the sporting lads."

Full of this wise resolve, leaving the House,
With its dog-day atmosphere augmented into
Cholera temperature by six or seven hundred
human breaths, &c., an atmosphere so tainted
that it will require all the taste and talent of
Colonel Trench to purify it, however ingenious
his plan may be;—leaving, we repeat, the
super-heated heat of politics, and the exhan-
sting fatigues of business, to the ambitious
and avaricious slaves of the world, "for the d-v-l
to mend,"—our bard wisely dashes off, to seek
recreation and life at Newmarket. Thither,
without stopping by the road, we will follow
him, and get upon the course. Never was de-
scription finer: Homer! Who was Homer?

"The clock had tolled two, within half-hour of the start,
And Newmarket, with all its disposable force,
Were now busily seen preparing to depart [course].
For the grand scene of action, the well-known race-
There, the first on the list, was a three-year-old go,
For ten sovereigns each, on the two-year-old line;
Which was won very easy, with but little to do,
By a lanky-like d-v-l, Sir Mark Wood's Camarine.
'Tis true, for an instant, Lord Egremont's filly
By Whalebone looked well, like that good race of
clippers;

But the best of good jockeys, Jem Robinson, slyly
Stole a length, and made safe the last of the Junipers.

Now the great race approached, the stakes of July,
Like the same days in Paris, all the world awake
To note the great actors in the scene passing by;
And if old data will do any longer to take.

Out of twenty-eight entered, but seven could be found
Sufficiently good, all sound, all right, and quite fit
For their trainers that day to produce on the ground,
And for the July stakes be able to compete.

As first favourite there stood a Middleton colt—
His dam by Merlin, but beyond of no great kind,
That was to go like a flash from the thunderbolt,
And leave all the others God knows how far behind.

A crowd was around him while in saddling he stood,
To see what they'd heard of the great stable's thunder,
His performances unknown, but they must be good,
Though 'twas whispered 'd he'd but make another Blunder.

He's a large colt, with magnificent middle-piece,
But no liberty forward, a shocking bad mover,
With no point like his sire but the white on his face—
Indeed, the very image of his dam all over.

Then next was the Miss Cantley colt, christen'd Beiram,
By Sultan, and much like him, though hardly so strong;
More leggy, with rather more day-light below him,
But magnificent quarters to send him along.

The files made him fractious, and all in white lather—
But it could not conceal his good actions so true,
Though it put all his friends in a desperate pother
Till the event came off, and he carried them through.

The next was Non Compos, a well-made little pet,
By Bedlamite, to my mind the best of his year;
And if his mares have been good, they'll be some of the get
Of this sire before 'tis long in splendour appear.

Last named was a coarse stumped-up Emilus filly,
Bode by that best of jockeys, most honest of men;
'Twas Chifney's, and so to back it all were so silly,
Though they have paid for it over and over again.

The others were the good Duke Grafton's Destiny,
By Centaur, out of Dervise's dam—a pretty creature;
But race-horses require, in order to *fastina*,
Other powers than those possessed by sweet feature.

Brother to Nessus, and one said to be growing,
Lord Verulam's colt, by Truffle, out of Tredrille,
Handsome and strong; and if he but takes to going,
For now being about last may make amends still.

And now for the grand gale climax, the race:
Bang off they went forward at the very first start,
And were seen scudding along at a thundering pace,
All yet well together, as if never to part.

Can there aught be more thrilling in life's wide expanse,
Than when first this gay crowd of young striplings
appears,
And towards the great goal all unbending advance,
At once to decide the cares and labours of years!"

Shakespeare's celebrated description of The-
seus' hounds is by no means superior to our
author's description of the Middleton colt and

Beiram; and then the burst of poetry at the
close—it is perfect inspiration; our heart pants
while fancy presents the racers to the eye of
imagination,

"All well together, as if never to part,"

and we go along in full tide with the bard in
his sublime apostrophe—

"Can there aught be more thrilling in life's wide ex-
panse?"

We are tempted to tell which won—but
we will not. The glorious uncertainty which
usually affords such excitement before and
during the race, shall by our skilful critical
management in this instance be prolonged after
it; and unless our readers consult the sporting
calendars, they shall never know—at least, they
shall never have their curiosity determined by
us. All we shall disclose is, that "Non Com-
pos was a middling second;" and we shall next
endeavour to match the verse with the prose of
this No.—as fair a match, we think, as ever
was run at Newmarket. The passage occurs
in an account of "the Hounds and Hunting
Men in the West Countree;" where the writer
tells us he will commence with Mr. Bulkeel's
hounds; and thus continues:—"He hunts the
country in the neighbourhood of Plymouth. Give
me power, great Diana of Ephesus! thou goddess
of the hunting-field—thou, the only chaste one
of the whole Olympus company of performers—
give me power to pay a just tribute of praise to
those noble hounds! They are of the largest
size—of beautiful symmetry—of the most fa-
shionable and best breed in the kingdom—and
do an honour to the humble county of Devon."
We love the phrase "most fashionable," ap-
plied to these fine hounds; how much more
deserving than the puppies on whom it is com-
monly bestowed! And how natural is the
sequent desire expressed by the author to im-
mortalise them by name!—how affecting his
moral reflections on the impossibility of doing
so, and their consequently obscure fate! We
have heard of jokes that might make a horse
laugh; but there is a pathos in this which
might make a dog cry.

"I wish I could give to the public the names,
birth, parentage, and pedigree of every one of
them; but I cannot get hold of the kennel-
book. This I am sure of, that the noble blood
from the kennels of the Dukes of Beaufort and
Grafton, Marquess of Cleveland, Lord Fitz-
william, and Mr. Lambton, flows in their
veins. Their noble pedigrees will now probably
sink with their bodies into dust: like many a
merry, stirring mortal, they will be forgotten
before they are half rotten."

Alas! poor canine Yoricks!—But we will
not exceed our bounds farther than to justify
what we have done by one more congenial
quotation from a poem called "Fugitive," but
which is calculated to last for ever. The sub-
ject is more general, but the execution in
keeping with the character of the work, and
the whole perfect. *Ecco signum!*

"Thus, thus is life—e'en man's probation here,
Composed of hope, love, fox-hunting, good cheer!
But as the fairest is the first to die,
So, like a good fox, joy is first to fly."

"Say, what is love? Alas! but few, I fear,
Will have the courage to step forward here.
You who've been coupled twice two years or more,
Say, if love now is what love was before?
View the fond lover—tender, ardent, kind,
To one thing constant, and to all things blind;
Talking of love eternal—fadeless, fond
Of two extremes—the parchment or the pond!
Then see the husband, distant, cold, severe;
The freezing look, the now-and-then 'my dear!'
Self ever uppermost!—Oh! where is now
The fawning tone, the long, the cringing bow,
That mark'd the other? Happier woman's lot,
If lovers lasted when the name did not!"

Any additional eulogy would be impertinent.

Journal of a Tour in the State of New York in the year 1830, with Remarks on Agriculture in those Parts most eligible for Settlers; and Return to England by the Western Islands, in consequence of Shipwreck in the Robert Fulton. By John Fowler. 12mo. pp. 334. London, 1831. Whittaker and Co.

DEDICATED "to Thomas Attwood, Esq., the liberal and enlightened advocate of reform, and the founder of political unions, those great moral engines, which, by concentrating public feeling, sentiment, and energy, have contributed to produce such glorious results throughout the country;" and every opinion of the author expressed in a certain tone, are sufficient indications that he was not one of the ultra-Tory breed, who are accused of visiting America with jaundiced eyes, and writing about that country with prejudiced minds. Whether his acuteness and the briefness of his tour, his previous information, and access to the best opportunities for improving his judgment, were such as to entitle him to publish his opinions at all, is another question; and for ourselves, we confess that we have not discovered any very valid reasons for the making of a book. The Journal, no doubt, had the usual approbation of friends, whom the details of a voyage to New York—all the details too—might interest; but we hardly suspect that the general reader will care much about them. What gratifies the private circle does not, of necessity, please the world; and, with all due respect to Mr. Fowler, we think he has added so little to our stock of intelligence, that he might quite as wisely have confined his lucubrations to Liverpool and his relations and acquaintance. As there is, however, no great pretence about his literary and statistical claims, we shall lend a short space to illustrate his volume.

He travelled, it seems, from New York to Buffalo, saw the Niagara, &c. and returned; re-embarked for England, and was shipwrecked on one of the Western Isles. On his land journey, near Utica, he favours us with a fine bit. "I noticed a peculiarity in the toll-gates as we passed along (which *articles* are much less frequent than in England), namely, their drawing up in portcullis fashion, instead of opening as ours do; a custom in eastern countries referred to by that beautiful and sublime passage in the Psalms, 'Lift up your heads, O ye gates!' &c. Another and a very convenient dissimilarity (he adds) relates to the coachman, who does not expect the slightest fee or remuneration. There is no eternal opening of the door, and 'Please, sir, I stop here;'—'Please, sir, I don't go any further;'—'Please, sir, remember the coachman,' which is not always quite so pleasing as they would kindly desire it to be. Here, the fare paid, generally without opposition, about four cents a mile, you have done with all demands relative to the coach. At the end of every stage the man retires with his horses, which he has to attend upon himself, though this is a much less onerous duty than in England, brushes, curry-combs, &c. being but little in request. I do not, in any instance, recollect seeing him at all assisted even in taking out or putting in. Pretty soon after he has cleared himself away, the driver, who is next to proceed, appears with his team, and though this changing is not quite so expeditious an affair as you may sometimes witness when running opposition with us—I think I have known it performed in twenty seconds—you are off again in as little time as under the circumstances you would suppose possible." Twenty seconds! why it is reckon-

ed a great feat to do in sixty seconds on our best-coached roads, with a man at the head of every horse; so that in America it must be accomplished by magic.

Our next quotation also refers to the travelling in New York. "For the benefit of future travellers, I shall here (says Mr. Fowler)—[the information being for the benefit of future travellers, it would have been as well, after all, to tell of what the dinner consisted]—put on record my bill of fare and charges at Avon. There are two inns, and I think not more than a dozen other houses; but the one I have to do with is kept by a person of the name of Douglas, and stands on the left side of the road from Geneseo to Rochester. It was about eleven in the morning when I arrived, and, previous to commencing our sporting, I took a slight lunch. At a late hour I returned to dinner, which was introduced, with many apologies, as being past its best, &c.; but, without particularising, I wish it may never be my lot to sit down to a worse. To this I was supplied with a pint of tolerable port wine, half of which I *might* drink; and before retiring I took a glass of negus. My lodging, to be sure, was not superb, since the house being rather unexpectedly filled with company at a late hour, and it being inconvenient to accommodate me with a single-bedded apartment, I preferred my cloak and the parlour floor to occupying a room with strangers, according to custom here, careless who or what. This morning (August 28) I am just risen from a breakfast which, if I was to say a good one, is but giving it very moderate praise. The whole and entire charge for the entertainment from beginning to end, amounts to 81 cents (3s. 4½d. English); waiter, 0; chambermaid and boots, ditto; and civility and thanks into the bargain. Will this be credited in England? It will be some time before it is practised, at all events. We should dub ourselves not a little favoured, after such accommodation, sleeping excepted, to be let off with five or six times the sum I have paid." They say comparisons are odious; for our parts, we can see little either fair or applicable in this, as the whole depends not on the cost, but on relative circumstances. Substitute spirits for wine, and there are many parts of Britain where as much accommodation may be had at as low a charge. We say nothing of the bugs, vermin, &c. which are not charged in the American bills, though enjoyed in the utmost abundance.

We have lately alluded more than once to Temperance Societies. In England, where every speculation and project is carried to an extreme, the promoters of such institutions proscribe all kinds of drink; in America, it seems, the operation is directed against the demoralising and deteriorating bane of ardent spirits.

"Great good," says the author, "has been effected in various parts of the state, and I believe I may say states, though much still remains to be done, by the very laudable exertions of what are called Temperance Societies, notwithstanding the unmeaning ridicule and ill-judged sarcasm which some have been disposed to direct towards them. They have been expressly formed to correct what had become a serious and even alarming national evil and disgrace; more or less pervading all ranks, and sapping the moral as well as the civil usefulness and respectability of thousands,—the too free use of ardent spirits. Since they were first established, the consumption of these deleterious articles, which, from their extreme cheapness, are within the reach of almost every one

wishing to purchase them, has been greatly diminished. One or two respectable innkeepers have assured me that they have found it less by one-half, and almost in an inverse ratio has the demand for malt liquor increased, and I trust there is fair reason to hope that this more natural and wholesome beverage, with cider and light wines, will so far supersede the use of the other as to become the common drink of the country."

On the next piece of information Mr. Fowler seems incompetent to speak; we quote it for the initiated, who will wonder at his ignorant remarks.

"Batavia has been further conspicuous as the residence of the notorious William Morgan, the great masonic apostate, and whose revelation of the secrets of that would-be all mystic fraternity not long ago threw the whole neighbourhood into a most violent and disgraceful state of excitement, which even yet has not wholly subsided. What a theme to distract the mind of a rational being, much more to disturb the harmony of any portion of an enlightened republic! I heard the relation with sorrow and disgust."

We may observe on this, that though the author may be *free*, he is certainly not *accepted*.

In consequence of the abundance of water-conveyance, the roads throughout New York (if they deserve the name) are deplorably bad. No system is observed in repairing them; and notwithstanding the regular appropriation of sums by the legislature for that purpose, their being made passable at all seems to depend on the fortuitous exertions of adjoining farmers, when parts became too bad for further passage. As for the inns, we shall now give the author's account of them: he tells us—

"By this time I have seen something more of the routine of affairs at inns, &c. than at the close of my first day's stage travelling, which has but tended to confirm the observations I was then about to have made. They are not the comfortable, do-as-you-like public or private sort of places which the English hotels are; and though the fare may be quite as good, oftentimes in greater profusion, few Englishmen, with the system pursued, would relish it half so well. Suppose a roomy bar, as heretofore described, full of strangers, and residents of the town, who half live at the hotels, standing about, ten minutes before dinner, as impatient as a throng at a theatre, until the ringing of a bell announces the repast ready to be pounced upon. Forthwith one simultaneous rush takes place to the dining, or general, or only eating-room, and each, as near as may be, seating himself in the vicinity of his favourite dish, the dire attack commences. A novice would be apt to conclude, that all had a heavy bet depending upon the quantity devoured in a given space of time; 'tis an affair in which each one is concerned exclusively for himself, carving, or cutting, and cramming down whatever he pleases, leaving his neighbour at liberty to do the same, or to do nothing at all,—all alike to him,—except, as I am pleased to do the Americans the justice to say upon these, as all other occasions, the utmost deference and most respectful attention is ever paid to the ladies. But few words, perhaps, are spoken by the whole company; as each individual clears, or rather dismisses his plate, for it is rarely half cleared, 'another, and another, and another' succeeds, until he has gone the whole round of soup, fish, flesh, pudding, pastry, and dessert,—all frequently upon the table together,—and brought the performance to a close; which is no sooner effected than up he starts, as if some

contagion were spreading round the table, or there were a greater merit in bolting than in properly masticating a meal; in devouring with precipitancy than in eating with decent deliberation; and, hurrying off to the bar, addresses himself to smoking, chewing, &c.—spitting every where, of course, with most perfect freedom: who would suffer restraint in a land of liberty? In the intervals between meals there is usually as much taken in the way of drama, tossed down with equal expedition, as would serve an Englishman at his meals twice over. The difference is, that the one enjoys it, relishes it; the other takes it because it is habitual to him; and, without a moment's reflection in any way about it, is satisfied, for the time, if the act be only performed. I do not give this merely as a specimen of coach travelling—there haste and helter-skelter are often unavoidable—but I consider it a fair outline of these proceedings at hotels, in any part of the country where I have been, as much upon one occasion as another. At private houses, and in good society, there is no want of courtesy, and the most genuine good-breeding and hospitality; but even here I think I have noticed a system of despatch neither necessary nor quite agreeable; a confining and intermixing of courses, &c., for instance; ever understanding that it is heresy itself not to vanish with the cloth, and what to an Englishman would very much give the idea of hurrying over a meal to start a journey."

To a fellow who "likes to have every thing comfortable," all this, the roads breaking your neck at two miles an hour, the beds filled with bugs, the air with musquitos, and the manners of your companions coarsely enough indicated as extremely offensive to our ideas of cleanliness and decency, must be very delightful. But there is always something to compensate evils; for instance, the beau-ideal future of Buffalo, &c.

"The situation of Buffalo, however considered, is commanding and important beyond most. Standing at the foot of Lake Erie—now connected with Lake Ontario by the Welland canal—it has a direct communication with the Canadas; is open to the mighty lakes Huron, Michigan, and Superior, and an almost limitless extent of western continent; and, on the other hand, at the head of what is justly termed the Grand Canal, it is equally connected with the Hudson river, New York, as well as all intermediate places, the eastern states, and, in fine, with the shores of the Atlantic. It is, as it were, the rallying point for the agricultural produce of the west, and the migratory population, the commerce and manufactures of the east, the connecting link of the varied interests of a great portion of this vast empire, and embracing within itself most of the advantages which, separately, may attach both to inland towns and seaports, but which are rarely united as in Buffalo. Spafford, alluding to Rochester, has well, if I mistake not, portrayed the future prospects and destiny of this place:—'Looking forward,' says he, 'a few centuries, or half centuries,—weighing all the balances of probabilities, the changes likely to be produced by steam navigation, by canals, and the march of population, and capital, and business westward,—not to Florida and the shores of the Mexican gulf, but to the shores of the great lakes of the west, extending a line of navigation through Michigan to the Mississippi, and pushing it through the Missouri, and across the Rocky Mountains to the Pacific ocean,—I see a line of perspective so extended, so wide-spread in the sphere of its action, that

it seems boundless almost as the fields of imagination into which the contemplation conducts me."

There is a sublime prospect for you, and mighty well spoken is the view. We are glad our Liverpool man of letters does put forward some things to qualify his unfavourable pictures—for, as a rather professed admirer of the United States, we do not think his descriptions will be altogether relished by his friends in that country. He proceeds:—"I do not know that it remains for me in this general, though very limited survey, to notice more than the religion of the country, and the character, manners, and customs of the people. Of the first, I may say, that although there is no established religion, as we term it, all religions being free alike, and the conscience of every man amenable only to his Maker, yet I must confess, with regret, that I have too often witnessed an unbecoming degree of warmth, and party spirit and feeling, frequently not unconnected with politics, on this momentous subject; a disposition to introduce it as a topic of general, and sometimes light conversation, and much divested of that conciliatory spirit, that reverence and humility, which, as they are its highest ornaments, are no less its distinguishing and vital essence. Far be it from me to judge any one: the foregoing remarks are forced upon me by what struck me, as an unprejudiced stranger, as unpleasantly contrasting with much that I admired, and wholly without seeking for. I have no wish to enlarge, and shall merely observe, that the ministers of all denominations (Friends excepted) are supported by the voluntary contributions of their respective flocks: the odious, iniquitous, and unchristian extortion of tithes is unknown amongst them, nor can any priest or clergyman hold an office under the government."

With this we consign Mr. F. to his public glory. We dare say he has done his best, according to his talent; but we do not think him specially cut out for an author.

Tales of the late Revolutions: with a few others.

By F. W. N. Bayley, author of "Four Years in the West India." 12mo. pp. 359. London, 1831. Dalton.

A VERY pleasant volume, mingling poetry and prose, the gay and the grave, in agreeable variety. The plan itself is a good one. Our author says: "It struck me, that the eventful occurrences of the last few months afforded ample scope for such fictions; and that a romance of present times, involving in some degree their spirit and politics, would prove more interesting than a romance of past history. I accordingly sat down to make the experiment;—and the following *Tales* are the results." Among these, "Potoski and Luwarrow," "Edith," and "Land and Sea Incidents," are our favourites. We have a most grave objection to urge against the one called "the Incendiary, a Tale of the Days of Swing;" its principal incident is a gross and absurd falsehood: what rector of the Church of England ever did, or could, take away the sow from a litter of young pigs by way of tithe? Mr.

"While in Orange County, an elderly farmer, with whom I fell into chat, mentioned to me a rebuff which a gentleman of the order experienced the other day on applying to President Jackson for an appointment to will office. When introduced, the President's first inquiry was after the nature of his present avocation, and being informed that he was exercising the profession of a minister of the gospel, he briefly replied, 'Then, sir, I have nothing better to offer you; go, and faithfully discharge the duties of your calling.' I cannot wish any trader in religion better success."

Bayley allows, in a note, that he has stretched the fact for the sake of his story. We do not consider this an admissible excuse: he is quite clever and various enough in his inventions, without having recourse to common and vulgar cant, as untrue as it is ridiculous. We proceed to quote part of the history of "Old Pobo," as a lesson to those abolitionists who would plunge at once into the general emancipation of slaves, without providing for their future care and maintenance.

"The last time I visited the cottage of Pobo, was soon after his recovery from the fever, and he then seemed to be enjoying himself as much as it was possible for one of his condition to do. His little hut was furnished with every comfort he could desire. There was a table, chairs, bedsteads—with posts, and blue curtains, too—a wooden sideboard, covered with a various medley of calabashes, cups, plates, glasses, sugar-cakes, and oranges. In one corner of the room lay a heap of yams, taniors, and okros; on the table a weighty bunch of plantains; and in a tray under the sideboard, about fifty heads of large, ripe, yellow, Indian corn. All these eatables were the production of his provision ground, and destined for sale in the town market. Outside the door of the hut lay three large bundles of Guinea-grass, which Pobo was that evening to carry to three regular customers in George Town. A long hen-coop, well stocked with fowls, turkeys, and Guinea birds, was fastened to the front of the building; and by the side stood a pig-sty, containing a large sow, and three or four grunners of small dimensions. Two kids were tied to a plantain-bush near, and amused themselves with rubbing their heads against its stem; while Pobo's daughter, a young and good-humoured black girl, sat on the grass, milking a goat into a sort of bottle-gourd. Her old mother, a stout, unwieldy personage—and the lady-love of Pobo—sat on a three-legged stool before the door, and was busily employed in frying jack-fish on a sort of stew-pan, which is very convenient, and in the West Indies forms a substitute for stoves. These persons and things, added to the garden at the back of the cottages, and the full right and title to the produce of the fruit-trees that surrounded it, formed the whole of Pobo's establishment; and when we consider that he had neither rent, tithes, nor taxes, to pay for his property, we think we may aver that his condition was infinitely superior to that of the majority of the English poor; and yet it was little, if at all, better than the condition of the generality of the slaves all throughout our West Indian possessions."

His master dies.

"Pobo, who loved his master, took his death much to heart, and made a point of getting drunk every day for a month afterwards, in order, as the poet hath it,

'To keep his falling spirits up,
By pouring spirits down.'

It was at the expiration of this season of sorrow that the old man discovered that he had not been forgotten in his master's will. M. had left him his freedom, and bestowed the same boon upon his wife and daughter. I was with the manager of the estate when he walked down to Pobo's hut to inform him of this fact; and the old negro, when he heard it, actually danced with joy, and laughed and wept by turns in a most ludicrous manner. 'Oh, massa, him good massa; bery good massa, for make Pobo free. Pobo free man now; Pobo no dam black rascal. Me wife too she be free—me daughter free—bery good massa for gib a we mancipa-

tion. Daddy Wilbyforce say mancipation bery good ting for poor nigger, eh, massa? Ky! you sabbe wha Pobo do now; he lib bery well in him lilly house. He hab wife—he hab daughter—he eat harty—he sleep all night—he drink plenty good rum—he no worke—oh! no; [no] work for buckra now; he sing—he play—he dance. Ah, Pobo happy fellow now he free!

Me da free!
Me da free!
Bery good massa make me free!
Me no worke—me drink rum,
Me da go, me da come;
No one call me, no one send me,
If me want ting, massa lend me—
Bery good massa make me free!

Poor Pobo would have given us a dozen of such extempore ditties; but it was evident that he was wofully mistaken in his notions of freedom, and it was high time for the manager to undeceive him. 'Stop, Daddy Pobo, not so fast, my man; you are all wrong in that tune.' 'No, no, massa, de tune go right; listen, massa.' 'No, Pobo, you must listen yourself; I have something to tell you. Now you know you are free, and you must not live any longer in that house. I expect you to get your traps together, and be off with your family, in less than a week. Daddy Quashie is to get your provision grounds; but I will give you leave to take away whatever you have planted in them yourself. You had better find some little hut in town, and become a fisherman. I think you are a good fisherman; and now that you are free, you will have to work for your living, and clothes, and all those little things; but take care of yourself, Pobo, and don't get sick—for you know, 'no money, no doctor'; and 'massa' can't pay for you now. Don't drink too much rum, Pobo; a free man ought always to be sober. Take my advice—and now good bye; to come to me before you go, and I will see what I can muster for a little present.' The poor fellow, who had seemed almost bewildered with astonishment during this announcement, at its conclusion burst into tears. 'Oh, massa! don't be hard upon poor nigger; do, massa—don't drive me from me house; me no want free; massa good man for make me free—but Pobo bery happy for be slave again; he lobe eberty ting here; he hab all he want—house, wife, fowl, pig, goat, good rum, plenty clothes, doctor when he sick. Oh, massa, me lose all dis den. No make me free; me no want free—me quite happy—what me go do in a town?—how me get money for house?—how me lib?—oh, me go dead if me free—no one care for Pobo den. Oh, massa, let poor nigger be slave—no turn him off;' and the faithful fellow still wept at the idea. But it was utterly out of the manager's power to comply with his request; his manumission had been already registered, and Pobo was a free man in the eye of the law. He was therefore told once more to prepare for his departure. The thoughts of Pobo on the subject of freedom are precisely those which actuate the whole slave population in their conceptions on this subject. They imagine that liberty is synonymous with idleness; and that by a cessation of slavery, is meant a cessation of the labour which devolves on that state, without any deprivation of the accompanying comforts and enjoyments provided for them by their owners. In a word, they conceive that emancipation will furnish them with a full right and title to the negro-huts, provision-grounds, clothes, eatables, and medical attendance on the properties where they reside, without the tedious necessity of balancing the obligation, either by the payment of rent, or the exercise of bodily labour."

He takes up his residence in a hut by the bay.

"For some time Pobo continued to catch fish, and Pobo's lady to fry the same; but he nevertheless found his occupation far more laborious, than his work as a slave had ever seemed to him. His comforts were less numerous—and more hardly got; he had to pay rent for his hovel, and he did not find that either food, clothes, or his own favourite beverage of old rum, were to be got without working for them. His moments of leisure were fewer—and we may say, his moments of happiness, for he now seldom found time to play on his fiddle, or sing his famous parodies. Upon the whole, he was any thing but gratified with the change, and often looked back with regret upon former times, remembering his cottage, his grounds, his good massa, his domestic comforts, his merry moonlight evenings, his old negro companions, and a thousand other nameless incidents, that made him wish himself a slave again. Besides, he was getting old now, and was no longer so strong as he had once been. On M.'s estate he would have been provided for, as all the old people are, and have had no work to do. Now he must provide for himself, although he was getting almost too feeble to do much; and while his necessities increased, his means of subsistence rather diminished than otherwise. Thus his affairs were in a bad way, and unluckily nothing transpired to make them better. At last the old man fell sick, and then it was that he felt, more than ever, the difference between slavery, such as he had known it, and the state of liberty to which he had succeeded. Bodily illness, indeed, was one of the greatest misfortunes that could have befallen him, inasmuch as it reduced him to a state of poverty, from which even the recovery of health would not deliver him. He could afford no doctor, and the luxuries of soup, cordial, wine, &c. which he would have procured on his master's estate, were now not to be thought of. His wife, indeed, was his only attendant, and on her exertions he now mainly depended for the prolongation of life. She, poor woman, did her utmost; but having no fish to fry, she had therefore no fish to sell; and the consequence was, that money was scarce, and without money nothing was to be got. At length she was reduced to the necessity of selling the canoe, then the fishing tackle; and when the little funds derived from these sources were expended, she disposed one by one of every article of furniture, until at last she had nothing left in the hovel but the bed on which the sick man lay, and one other movable, which she also proposed to sell. This was Pobo's fiddle; but as it had been the gift of his young mistress, he would not listen to her request, being determined to die rather than part with it."

However, he recovers, and his wife dies.

"Old Pobo, on his wife's death, being tired of his life in Grenada, had determined to try his fortunes in the mother country; and for this purpose (knowing he could procure a passage by no other means) had, with the connivance of the cabin boy, concealed himself in the hold of the Dandy Lion, and succeeded in remaining undiscovered until she had proceeded thus far on her voyage, and certain promptings of hunger urged him to step forth from his hiding place, as above described. We shall say nothing of the captain's danger, nor of the sailor's enjoyment of a good joke: it is enough to narrate, that old Pobo obtained his passage

* Referring to another part of the story, which we have not room to quote.

to England, earning his salt by sundry useful avocations on board, and the tuning of his fiddle to particular ditties for the 'grave and gay,' which alternately amused the lords of the quarter-deck and the fore-castle. For some time, too, after his arrival in London, this same source of all his music was the only means of his subsistence. In fact, he was a strolling fiddler; and by this occupation contrived to pay for a lodging in Thames Court—a court at the back of Old Drury, doubtless unknown to many of our fair readers; and to earn pence enough to get a dinner by diving into the beggar's cellar, and a breakfast by walking into the baker's shop."

We must curtail the end of the narrative, and simply mention that the poor old negro dies in London of neglect and want. There are some amusing parodies scattered through these pages.

A Dictionary of the Architecture and Archaeology of the Middle Ages; including the Words used by Old and Modern Authors in treating of Architectural and other Antiquities, &c. By John Britton, F.S.A. Illustrated by numerous engravings by J. Le Keux. Part II.

To those who have any taste for the beauties and varieties of architecture, this able publication, which will put them easily in possession of all the elements and principles of what Mr. Britton has very aptly denominated "Christian Architecture," will be invaluable. It is singularly copious and interesting in its details. The plates are neatly engraved; and the text abounds with information, conveyed with Mr. Britton's usual perspicuity. A specimen of the former we cannot exhibit to our readers; but the following elucidation of "Pointed Architecture" will give them a notion of the latter.

"Pointed architecture includes a peculiar and very numerous class of buildings, which branches into many varieties, both in its general form and extent, and in its diversified adornment. Commencing about the middle of the twelfth century, it continued to prevail in almost every nation of Europe till the beginning of the eighteenth century, when the neglected Roman orders were revived and adopted. The term pointed architecture applies to a great variety of buildings, and several names have been given to each variety. The earliest specimens of the pointed style occur, intermixed with the semicircular, in the Anglo-Norman church of Barfreston, Kent; in the church of Buildwas Abbey, Shropshire, founded in 1135; at St. Cross, near Winchester, in progress at the same period; and in the west front of the priory church of Dunstable, Bedfordshire. A rapid advance in this style took place in the reign of Henry II., as exemplified in the pointed arch and vaulting of the choir of Trinity Chapel, and of Becket's crown in Canterbury Cathedral, erected between 1175 and 1184. Other specimens of the same period are observable in the Inner Temple Church, London; and in Lincoln and Durham Cathedrals, though the latter of which no edifice is better calculated to display the transition from the Anglo-Norman to the pointed style. In the reign of Henry III. this style attained its highest perfection in the cathedral of Salisbury, and in the eastern part of the Abbey Church at Westminster. The former is remarkable for uniformity and symmetry of proportion, and arrangement of parts, and is the only large church completed from one design in this country. Westminster Abbey Church, from its eastern extremity to the entrance of the

nave, was entirely rebuilt by kings Henry III. and Edward I., and exhibits the pointed style more graceful in its proportions, more ornamental in its details, more scientific in its principles, and lighter and more impressive in its effects, than at any former period. From the beginning of the reign of Edward I. to that of the long reign of Edward III., pointed architecture attained its climax of excellence. During that period it abounds with grace, beauty, and almost endless variety. Richness of decoration, without exuberance, is its character, whilst science and skill are manifested in every part of a construction. The form of the arch then principally used, admitted of an equilateral triangle being inscribed between the crowning point of the arch and its points of springing. Examples of this class may be found in the Chapel of the Virgin, built between 1308 and 1326, at St. Albans; at Exeter, commenced in 1280, and completed 1369; at Ely, in the Priory Chapel, erected between 1321 and 1340; and at St. Stephen's Chapel, Westminster, constructed by Edward III. between 1330 and 1348. In the reigns of Edward I. and II. a great advance, both in intricacy and elegance of design, is evident, particularly in the richly sculptured corbels, in the diversity of subjects ornamenting the key-stones or bosses, and in the variety of patterns in the tracery of the windows: those in Exeter Cathedral are peculiarly diversified. Within this period the spire was very generally adopted. Of corresponding time and class are the beautiful monumental crosses in honour of Queen Eleanor, at Geddington, Northampton, and Waltham cross. The sepulchral memorials of the same era exhibit many fine examples of the richness which distinguished the pointed style. Another period (advancing in decoration) carries us to the beginning of the reign of Henry VIII., and exhibits a complete alteration both in the prominent features and in the ornamental forms of this style: it is generally called the Tudor style, and by Mr. Rickman the perpendicular. Striking parts in the buildings of this era are the horizontal lines of the door-ways, the embattled transoms of the windows, and the vast pendants 'hanging in the air,' which, from their immense weight, seem calculated rather to draw down than to support the vaults they ornament. One of the first examples is the north front of Westminster Hall, erected between 1305 and 1399; and the next is King's College Chapel, Cambridge, commenced by Henry VI. about 1443—'one of the most magnificent triumphs of architectural science in the kingdom.' The Collegiate Chapel of St. George, at Windsor, completed about the tenth year of Henry VIII., and Henry VIIth's Chapel at Westminster, then follow, and exhibit a profuse increase of masonic and sculptural decoration. The latter chapel is styled by Leland the 'miracle of the world;' and however extravagant that eulogium may appear, there is probably no other edifice on the globe in which such profound geometrical skill has been displayed, mingled with such luxuriance of ornament. 'It would seem, indeed, as though the architect had intended to give to stone the character of embroidery, and enclose his walls in the meshes of lace-work,' so profuse and delicate is the tracery throughout the exterior and interior of this royal chapel and mausoleum. After this period pointed architecture declined; of which Bath Abbey Church is, though not wholly a departure from the character and forms of preceding buildings, an evidence. To investigate the peculiarities of Christian architecture below this period would be foreign to the pre-

sent work; but all its beauties were superseded by the heterogeneous forms of a debased Italian or Roman style, which prevailed in the time of Queen Elizabeth."

Killarney Legends; arranged as a Guide to the Lakes. Edited by T. Crofton Croker, Esq. 18mo. pp. 294. London, 1831. Fisher, Son, and Co.

MOST charmingly illustrated, this unique Guide to the Lakes is a re-modification of Mr. Croker's delightful *Legends of the Lakes*, in two volumes, published about three years ago. It is now a portable volume, with many interesting engravings, and the literary portion of it replete with the drolling of the author; while at the same time it is as good a guide as it is a pleasant companion to every picturesque beauty, striking character, and local curiosity, about Killarney. Having reviewed the former work, all we shall do for this is to quote its preface.

"Dear Killarney, region there is
None like you so formed for fairies;
From the cliff where dwells the eagle,
In his palace high and regal,
To the depths thy blue waves under,
Thou'rt a little world of wonder!
Every glen of calm seclusion
Has its tale of dim delusion;
Every rock and every mountain,
Every bower and every fountain,
Has its own romantic story,
Or its legend old and hoary;
Thou'rt a land of dream and vision,
Like no land, save the Elysian.
Hope and fancy, in an attic,
Can make all things look prismatic;
But amid the mountains round thee,
That in strong enchantment bound thee,
Hearts of lively thought and feeling
Know a wild and strange revealing;
Mighty forms of mist and vapour
Change and wheel, curvet and caper;
O'er thy lake, in furious courses,
Galloping billows white horses!
While the spray, in moonlight beaming,
Seems the steel-clad warriors gleaming;
And the waterfall's hoarse foaming
Voice unearthly gives the gloaming;
Shapes and sounds the mind will cherish,
Till in morning's light they perish.
Once again, on fancy's mission,
To thy storehouse of tradition
Quicker far than thought I travel,
All its secrets to unravel.
I would dive into the mystery
Of O'Donoghue's dark history,
And the tranquil home discover
Of that maiden's airy lover,
Whose heart-touching tale of sorrow
Needs no aid from fancy borrow—
(Worthy theme for gentle London.)
Breast more stern than holy Brandon
Must be his, who feels not pity
At that maiden's plaintive ditty.
How I love thee, dear Killarney,
With thy boatmen's endless blarney;
Moonish tales of misadventure,
Put to flight by Master Callen,
Back return in pleasant vision—
Not that I hold in derision
Pious fathers, who, with praying,
Cloister'd walls grew grave and gray in;
From whose eye the soul was laughing,
On whose nose was mark of quaffing.
They were fellows wise and merry,
Who loved books, nor hated sherry.
Then thy reeks, Mac Gilla Cuddy,
In the sunset looking ruddy—
How I long their heights to clamber,
To find echo's secret chamber,
Where, secure from noisy calling,
Save when shivered crag is falling,
Silence reigns sublime and lonely,
Broken by the tempest only.
O, sweet Mucrus! how I love thee,
From the hills that rise above thee;
I have seen thee, dark and darker,
In the lake a pointed marker;
With thy woods and caves fantastic,
And thy solemn walls monastic;
While from rock to rock the dashing
Of the torrent's ceaseless plashing,
Made a rude and worldly riot,
To oppose their blessed quiet.
These are sights and sounds impressive,
Which could make me grow digestive;
But the limits of a letter
Are a kind of mental fetter.

Dear Killarney—thy well-wisher
And admirer, Mr. Fisher,
For the pocket most compactly
Has thy legends framed exactly.
Let me offer my petition
On behalf of his edition:
Be a patronising creature;
To thy guests 'twill serve as teacher;
For no doubt the merry summer
Will bring many a new-comer,
Who'll about wish to be guided;
Just as once, you know, that I did,
In the full and true conviction,
That of pleasure half is fiction."

The Family Library, No. XXIII. A Family Tour through South Holland, up the Rhine, and across the Netherlands, to Ostend. London, 1831. Murray.

WE find we cannot do better with regard to this volume, after the due consideration promised in our last, than make a brief extract from the preface, explaining the nature of its contents.

"In the autumn of 1828, a family party of six persons, with a male servant, set out from London, with the intention of making the tour of the southern provinces of Holland,—of ascending the Rhine as far as Mayence,—thence paying a visit to Francfort,—returning by the Rhine to Cologne,—from thence crossing the Netherlands by Liège, Waterloo, Brussels, and Ostend, to London. They gave themselves, or circumstances rather obliged them to dedicate, just one month to the performance of this tour, which they accomplished in twenty-eight days, travelling very much at their ease in the carriages of the different countries (*not diligences*),—in treckschuyts and steam-vessels,—saw whatever they considered to be interesting,—put up at the first hotels,—dined sometimes at tables-d'hôte, and at others in their private apartments; and were finally set down from the Ostend steam-vessel on the Tower-hill, having expended on the whole journey just one hundred and thirty-eight pounds. Every one of the party returned with the pleasing recollections of what they had seen, and with invigorated health."

To this we think it but justice to add, that, simply and pleasantly written, the pages now before us will agreeably refresh the memory of those who have travelled the same road; while much information will be conveyed to those who are strangers to a part of Europe well fitted to attract the summer tourist. Miscellaneous extract is the best criticism for a work of this kind, and we select a few which possess, besides their permanent, a temporary interest from the circumstances of the times.

The Dutch.—"Rotterdam, like all the sea-port towns of Holland, will yet require time to regain its former state of activity and prosperity. Before that luckless hour in which the sober-minded and calculating Dutchman was seized with the frenzy of *Vryheid en Gelykheid*—liberty and equality—which ended in driving away the *Oude Stadhouder*, and receiving the fraternal embrace of the French, that is to say, before the year 1793, the number of ships that annually cleared out from Rotterdam is stated to have been about one thousand nine hundred; from that year to 1814, the number had dwindled down to something less than two hundred. They have now again gradually advanced to about one thousand five hundred; and when they shall have reached that point in the scale from which they descended, the citizens of Rotterdam will probably once more build new houses, and renovate some of the once splendid establishments, particularly those connected with their East India

trade and possessions, that have fallen into decay. In the midst of their decreasing prosperity, however, it does not appear that any of their charitable institutions have been neglected or abridged; and absorbed as the Dutch are generally supposed to be, in the ways and means of accumulating 'filthy lucre,' they cannot justly be accused of any disinclination to relieve the distresses of humanity, or to promote the moral and intellectual advancement of their countrymen. They have their Bible Societies and their Missionary Societies; they have a Society of Arts and Sciences, instituted for public benefit; they have a Philosophical Society which takes the name, or rather adopts as its motto, the words 'Variety and harmony'—'*Verscheidenheit an Overrenstemming*'—words that, to an English ear, are not well calculated to convey the idea of harmony. But there is still another society for experimental philosophy, with a name that almost frightens one to look at it—'*Genootschap van Profondervindelyke Wygebierte*.' Its objects are highly important to society, but to this singular country in particular—the improvement of agriculture, navigation, hydraulics, and highways."

Rotterdam.—"To almost every house in Rotterdam, and sometimes to every window of a house on the first floor, there is fixed a single or double looking-glass or reflector, by means of which a person in the room, sitting before the window, can see by reflection the whole length of the street, the passengers, the trees, the canal, and the shipping. When two of these reflectors are placed at right angles, and the right angle pointed towards the window, thus, Δ, a person within directing the eye to that angle will see the whole street both to the right and to the left. In some of the towns of England one may now and then observe one of these reflecting glasses, which is generally supposed to be intended to put the inhabitant on his guard against unwelcome visitors, and on that account they have been whimsically called *dunner-scopes*. In Rotterdam they are universally adopted for the amusement of the ladies, more especially those of the upper classes, who appear but seldom in the streets."

Villas.—"As there is no want of water in any part of Holland, the flower-gardens attached to these villas have generally a fish-pond in some part of them, and when they happen to face the road, the pleasure-house is frequently placed on a hillock in the middle of the garden, and is accessible only by a bridge, or a flight of steps. Each villa has its name, or some motto inscribed over the gateway, the choice of which is generally meant to bespeak content and comfort on the part of the owner, and they afford a source of amusement to the stranger as he passes along. Thus, among others, we read, 'Lust en rust,' Pleasure and ease; 'Wel te vrede,' Well contented; 'Myn genegentheid is voldoen,' My desire is satisfied; 'Myn lust en leven,' My pleasure and life; 'Niet zoo gualyk,' Not so bad; 'Gerustelyk en wel te vrede,' Tranquil and content; 'Vreindschap en gezelschap,' Friendship and sociability; 'Het vermaak is in't hovenieren,' There is pleasure in gardening. And over the entrance to one of the tea-gardens, near Rotterdam, was inscribed, 'Het vleesch potten van Egypte.' Some of the larger gardens abound with fruits and vegetables, and beds and borders of flowering shrubs and plants are laid out in all the grotesque shapes that can be imagined. It must be confessed, however, that an air of comfort presides over these villas. Most of the

dwelling-houses are gaily painted in lively colours, all the offices and outhouses are kept in neat order, while the verdant meadows are covered with the finest cattle, mostly speckled brown and white."

Walking Newspaper.—"One cannot walk the length of a street in Amsterdam without meeting a certain gentleman dressed in black, with a crape depending from his hat, and a sheet of paper in his hand. He is known by the name of *aanspreker* (announcer or reporter), whose business it is to go round to the relatives and acquaintances of a deceased person to announce his death. To give notice to the friends of a birth of a child, a written bulletin is frequently stuck up on the door-post of the house, stating the health of the mother and child to be, as usual, 'as well as can be expected.'"

The Dutch Charitable Institutions.—"The beneficent society and the charitable and disinterested subscribers to the agricultural establishment of Frederick's-oord, is another proof of the active benevolence and humanity which distinguish the people of Holland. It is no speculation founded on the remotest chance of profit, but solely on that of relieving the distresses of their unfortunate fellow-subjects. Of this small canton or district (which *oord* signifies), Mr. Jacob, the comptroller of corn returns, has collected a detailed and most interesting account from the published reports of its progress and condition. This benevolent institution, whose object is to lessen the burden of pauperism and improve the moral habits of the juvenile portion of it, is indebted for its origin and its successful progress to the intelligence, the zeal and indefatigable benevolence of General Van den Bosch. This officer, when in Java, purchased an estate and made the pursuit of agriculture his study. A Chinese mandarin, with a number of emigrants from that country, settled by chance near him. The general soon observed that, with all his labour and care, the crops of his Chinese neighbour greatly exceeded his own. He therefore took lessons of the mandarin; and such was the successful result, that, when he returned to Europe, the estate which had cost him twenty-five thousand rix-dollars, he sold for one hundred and fifty thousand. The general, on his return to his native country, published a little tract on the practicability of instituting a general pauper establishment in the kingdom of the Netherlands. It happened that the good king (for so he may justly be styled) was, in 1817, occupied with a plan for bringing into productive tillage an extensive waste of heath land between Maestricht and Breda. The attention of his majesty was drawn to that of the general. A society was set on foot at the Hague for the intended experiment, under the patronage of the king, of which Prince Frederick, his second son, was nominated president for life. Twenty thousand individuals became members, and their contributions amounted to seventy thousand florins, or 5,833*l.* sterling. The first operation was to purchase an estate near the town of Steenwyk, on the confines of Friesland, Overijssel, and Drenthe, consisting of about one thousand three hundred English acres, together with two thousand six hundred acres of heath land, for which the society paid the sum of fifty-six thousand florins, or about 4,666*l.* The river *Aa*, or *Au*, which runs through it, was made navigable for boats into the Zuyder Zee. Buildings for fifty-two families, to consist of six to eight individuals each, a storehouse, a school, and a spinning-house, were speedily erected. All these opera-

tions were commenced early in September, 1818, and ere the 10th of November following fifty-two indigent families sent by the communes entered upon their new habitations. To each family was granted seven morgen, or fourteen acres of land. The whole outfit for each family, made on a minute estimate, was one thousand seven hundred florins, or 141*l.* 13*s.* sterling, which was to be repaid to the society in sixteen years, while the annual rent, with which the colonists were to be charged, was settled to be equal to the interest of the outfit; and such was the success of this small establishment, that, after a few years' experience, it was found that the annual excess of produce over subsistence, of each of the fifty-two families established at Frederick's-oord, amounted to one hundred guilders or florins, or 8*l.* 6*s.* 8*d.* sterling. Loans were now raised for extending the system, to be advanced by the king in his individual character, or by the government, or by the communes, or charitable corporations, or by individuals, each loan limited to five thousand one hundred guilders, or 425*l.* sterling, the exact outfit of three families. The advantage of thus grouping them together was, that two of them were to consist of six paupers each, and the third of six orphans or foundlings, not under six years of age, with a married couple, or a woman only to take charge of the children. For every such sum the contributors had the privilege of sending three such families. Sixty guilders were to be paid back yearly to the contributors, for the maintenance of each child, which in the orphan and poor-houses was found to cost nearly double; and it is reported that these twelve paupers do more than maintain themselves. The first principle of this society is, that no colonist shall, even for the shortest period, be unemployed; and with this view they are under the inspection of the different officers, who exercise their respective duties with the strictness of military precision. General Van den Bosch, as superior director, superintended in person the whole establishment. A sub-director presided over one hundred families; a quarter-master over twenty-four families; a section-master over twelve, who was required to be a practical agriculturist. 'Thus the whole mechanism,' says Mr. Jacob, 'resembles that of an army, divided into sections, companies, battalions, and brigades.' They are employed in various kinds of labour, as the preparation of lime from shells, making of bricks, building dwellings, barns, &c., but the greater portion is employed in field labour: the chief implements are the spade and the hoe, at which they soon became sufficiently expert. Every kind of labour is performed by the piece—nothing by the day. The women are employed in spinning and weaving. The amount of their earnings is regularly kept, and a card given which procures at the public store food and other articles at fixed prices. The labour with spades of six individuals in digging fourteen acres, and repeating the operation when required, the sowing, and harvesting, may be supposed to occupy but a certain portion of the fifty-two weeks; the rest is chiefly employed in preparing the composts for manure, and on this, in fact, the success of the colony almost wholly depends. The subject is a very curious and a very important one, as without it poor soils such as sand and heath can never be rendered productive, and with it we have here incontestable proof that they can. Mr. Jacob has collected all the details, and very remarkable they are, on this subject; the practice is precisely what General Van den Bosch learnt from his Chinese mandarin. The result of the

experiment is, that the society obtain rent at about twelve shillings the morgen, for the seven morgen, house, and barn; they are repaid the cost of the flax and yarn that has been spun, for the use of the draught cattle, carts, and implements; for the furniture and clothing; and for the provisions consumed before the first crops were harvested; and the seven morgen of land, which cost them originally less than four pounds an acre, will produce a yearly rent of more than that sum. If any proof was wanting of the complete success of the experiment it is this,—that by the last statistical return which Mr. Jacob has received, up to 1825, that is to say, seven years after the first establishment, the number of colonists settled at Frederick's-oord amounted to six thousand seven hundred and seventy-eight individuals, including two thousand one hundred and seventy-four orphans and foundlings; and since then he tells us considerable additions have been made to the loans and to the numbers admitted."

This journey was performed in 1828, and we quote portions of a note relating to the present state of Belgium: much stress may be laid on the opinion of the bystander.

"It is now more than two years since the remarks on Belgium that occur in this little volume were written, and in which no change has been made; but a sad change has taken place in the country itself. We left it under a strong impression of the growing prosperity of every city, town, and village through which we had passed. The anarchy of a few months only has been enough to dry up the sources, and to wither all the branches of that prosperity. From the mild and fostering hand of a beneficent sovereign, the people of this once flourishing country, instigated by a few wicked and designing knaves, have precipitated themselves into the hard and unfeeling grasp of that worst of all tyrannies—the tyranny of a mob; to whose disposal and caprice their lives and properties were for a time surrendered, and placed at the mercy of the will or the wants of that despotic power. . . . To the peaceable and well-disposed, the consequences have been most deplorable. It is admitted by all honest and unprejudiced Belgians, that they had no real cause of complaint against the government. They admit that the commerce and manufactures of the Netherlands had increased threefold since their union with Holland; they admit that Antwerp was yearly rising in commercial importance, and diverting the trade of the less convenient ports of Amsterdam and Rotterdam into its own channel; that the cotton and iron manufactures of Liège were in the most flourishing condition; that the cotton-mills of this district and Ghent had increased fivefold in number and extent; and that Holland alone had taken from them four times the quantity of coal and iron that France had done during the annexation of Belgium to that kingdom. They admit that the king ruled with impartiality; that the officers of state were equally divided between Hollanders and Belgians, and that, on some occasions, the latter predominated; that there was no exclusion, and that no one could be more anxious than the king was to conciliate his new subjects. He could not have given a stronger proof of this than the pains he took to procure a *concordat* from the Pope, and to re-establish the Catholic bishops—to improve the condition of the Catholic clergy—to encourage, by his liberality and example, the establishment of schools for the children of his Catholic subjects. He founded universities and schools for the encou-

agement of arts, sciences, belles-lettres, and religion, in almost every town of note throughout Belgium. When this country became incorporated with Holland, one of the first steps taken by the king was to lay on protecting duties, which had the effect of excluding our manufactures from Holland, and injured the commerce of both countries for the sake of benefiting the Belgians; and thus he incurred the displeasure of his own people and his old ally, in order to conciliate his new subjects. In short, if there ever was a man thoroughly disposed to meet the wishes of his people, it was William, King of the Netherlands. Of the revolt against such a sovereign, the result has been melancholy for his new subjects, and has conferred a partial benefit on his old ones. On the first burst, as is usually the case in all rebellions, massacres, robbery, pillage, and destruction of property, indiscriminately took place,—but mostly that of productive property. One instance of this madness may be mentioned as a sample of what happened in many other cases. An Englishman of the name of Cockerell had established manufactories of various kinds about Liège, and one in particular on a very extended scale. On the banks of the Meuse, between Liège and Huy, the archiepiscopal palace of Sereign had been purchased or ceded to him for the establishment of an iron foundry, in which the king took a particular interest, and is said to have contributed funds towards its completion, his object being that of furnishing the best means for the instruction of his subjects in the various branches of the iron manufacture, and for the encouragement of its progressive improvement in a part of the country which afforded an ample supply of iron ore, coal, and limestone. In this manufactory every species of iron-work, from the heaviest castings to the minutest articles of high polish, was carried on. Steam-engines of every power, from that of two hundred down to ten horses, were constructed, and not fewer than two thousand men employed in the various works belonging to it; but the king's name being also connected with it, it was, at an early period, marked out as an object for destruction. The senseless rage of the populace, the suspension of all order, and the treacherous conduct of the people of Brussels, soon produced, what civil commotions are almost sure of producing, a total stagnation of commerce, gave a deadly blow to manufacturing industry, and threw multitudes of artisans and labourers out of employment: the consequence was, poverty pervading all classes, bankruptcy and ruin staring in the face the merchant, the banker, and the tradesman, and a total want of confidence between man and man; and, what makes a speedy change for the better almost hopeless, the withdrawal from the country of the honest, sober-minded, and respectable portion of the inhabitants, with the wreck of their property,—leaving the De Potters, the Robaulxes, and the rest of the factious demagogues, to triumph over the ruin which they have been so instrumental in making. It is not to be doubted, however, that this evil, like most others, having reached its height, will cure itself, and that a reaction must shortly take place. The faction is fast losing ground, and it is not the worst sign when the popular discontent begins to vent itself in squibs and epigrams against the authors of their misfortunes. One of these, common in the mouths of the populace, is to this effect:—

'When Orange ruled, as our head,
We butter had to smear our bread;
But since the day we hail'd De Potter,
We've neither tasted bread nor butter.'

It must be confessed, however, that the union of the two nations never augured well. The difference of language and religion was of itself repugnant to such an alliance—more especially when toleration on one side had to contend with bigotry and superstition on the other. In this view, a separation may be of benefit ultimately to both parties."

The work is ornamented with a series of beautiful views from Colonel Batty's designs: they are not of the highest class of engraving, but perfect as specimens of graphic truth.

GONDAR.

IN reviewing *Pearce's Abyssinian Travels*, we proposed to make a separate notice of that episode which relates to Mr. Coffin's journey into Gondar; of which our readers will find the following the most characteristic particulars. Mr. Coffin says:—

"Our road lay to-day nearly south, and seldom far from the Tacazzé. The Worari foraged in all directions; and several hundred sheep and goats, and a few cows, were brought in the evening into the camp at Moi Lomin, a beautiful little narrow river, which rises in the different mountains of Samen, and runs very rapidly into the Tacazzé. Moi Lomin signifies Water of Limes; Buckerer Lomin would signify Water of Oranges. Many sour oranges, and vast quantities of limes, grow in different spots of garden-ground, for several miles in its vicinity. It is a deep valley, not in the least affected by the cold from the mountains. A great deal of cotton is cultivated on the banks of this river; it is watered by cuts from above, or small channels about two feet wide, which run along the sides of the mountain, and enable the inhabitants to water the ground with little trouble. In all parts of Abyssinia, indeed, during the dry season, the lands are watered in a similar manner, when near the rivers, and some grounds frequently grow two crops of any sort of grain. The corn that is obtained in the dry seasons by irrigation is called in Tigré *taffagi*; but this corn is not so much esteemed as *taff currump*, which is the corn produced after the rains have fallen. We passed our Sunday in this delightful spot, where I shot some monkeys of a beautiful kind, called *wary*. They have a white beard, black face, yellow hairy body, and a long tail, with a brush of white long hair at the extremity, the skin on the belly being of a bluish silver colour. I kept one of these animals for three years, with several other kinds of monkeys; but I found none so cleanly and cunning as the first. The *chillerder*, another native of Samen, is also a very clean animal for a monkey; this is of large size, with a black face, very dark brown hair, and a red bare cross on the breast; and it has a very particular cry when calling to its companions, or to its young when fearful. I kept one of them for a long time; but the continual mischief she did me and my neighbours caused me to grow weary of her; and, after breaking a looking-glass belonging to a lady of Chelicut, an article that could not be replaced in this country, I, in my anger, set my dogs upon her, who devoured her immediately. I did this more to satisfy my neighbours than from any personal motive; for, often before, when I had tied the animal for her mischievous tricks, she would cry out *Humu* for hours together, so distinctly, and look so pitiful, that I could not help letting her loose again out of mere compassion.

"It is a common custom, in all parts of Abyssinia, for the inhabitants of the villages

to have gudgeads, large pits under ground, plastered within with cow-dung and mud, and having the mouth very narrow, some of which are made to hold forty or fifty churns of corn, between three and four hundred English bushels. These gudgeads are not only made near the villages and towns, but also in the open fields, and, when an invasion is expected, the corn and other valuables are put into them, and the mouths very carefully covered, first with spars laid close together, so that no earth may fall through; after which the part above the spars is filled with earth to bring it upon a level with the adjoining ground. Should the spot happen to be upon ploughed land, then the whole is ploughed over and over again to conceal the mouth of the gudgead; if upon any other ground, it is made to appear like the ground about it; or, if near the town or village, wood-ashes and rubbish are thrown over it to give it the appearance of a dunghill: but, as this custom has prevailed for many years, and wars are so frequent in all parts, the Worari have become so well acquainted with the mode of finding these hiding-places, that they scarcely ever escape their observation. The way they begin to work is as follows. After destroying a village, or finding it deserted by the inhabitants, they form into different parties, and, keeping in a close body, begin to sing their own warlike songs, stamping and going on in a regular pace, keeping time with their song, and throwing their shields over their heads, and holding their spears close to the end of the shaft with the bright glittering blades in the air, turning about at times in a lively way, as if they were not in search of any thing, but dancing and jumping for their pastime. I always thought this a beautiful sight. In this manner they continue until they find the ground sound hollow under their feet, when they lay their shields in a circle round the spot, and every one sets to with both hands, as eager as hyenas after their prey: they soon claw out all the earth, break in the rafters, and then begin to fill their skins or bags. If they suspect any danger from the natives being in ambush near the place, to come upon them unarmed, they put down two people at a time into the pit, till every one has got his load, those above keeping a good look-out. After all are well loaded they take no farther care for their common safety, but set off to the camp in a disorderly manner, which gives the inhabitants an opportunity to kill those who fall tired by the way. In general there is more blood shed in Abyssinia among these straggling parties of Worari than in their regular battles."

"This mountain, as well as other mountains in Samen, has numbers of the curious trees called genvarar, that appear at a distance like naked men. The people will never cut them, owing to a superstitious prejudice they entertain, that something bad would in consequence befall them. I seldom saw any of these trees above eight feet high. It is as well, foolish as it may appear, for me to explain the superstitious notions they entertain about these trees, or trunks, as they have no boughs. They say that these trees contain evil spirits, which have been cast out of human beings; and while they are not disturbed by being cut down, they neither enter nor trouble any one; but when cut down, they again enter into some person out of revenge, though it is believed not in general into those who cut them down. This tree yields a milky substance, which is used by way of ink, for the purpose of writing charms, to be worn on any part of the body as a cure for those who are possessed by evil spirits, and

to prevent their entering those who are not previously tormented with them. I have known people send a person from Antalo and Chelicut, when any of their family has been ill with a lingering sickness, to fetch the milk or a piece of the genvarar from the mountains of Samen."

"A Tigre chief, son to Ito Cofta, had come purposely to kill an elephant, which the youngsters in Abyssinia in general do, to distinguish themselves in their first setting off; and their next exploit is to kill a Galla, or a Shangalla; for until a youth has done this, he has but little to say in company. Cofta having made known his intentions, the gusmati ordered him a guide. Walkayt is the northernmost boundary of Abyssinia west of the Tacazzé. The neighbouring people north and west are Shangalla, or common negroes, who inhabit this country in different tribes far to the north and west; their language differs in almost every tribe; and they are by far the mildest-tempered race I ever saw. Ras Welled Selassé has always near his person a great number of them, who are educated by a schoolmaster, whom he keeps on his premises to teach the slaves of all kinds. The tribes bordering on the territory of the Christians are continually hunted and tormented by them; they inhabit the most desert paths, eat elephants, wild buffalo, camelopard, rhinoceros, rats, snakes, frogs, &c. They are hunted by the Christians, who kill the old men if taken, and make slaves of the young. In and about Walkayt there are numbers of Shangalla who have become familiar with the Christians and Mahometans, and who in the rainy season cultivate spots in the adjoining desert, and sow the grain called marshella, under the protection of the gusmati of Walkayt. Cofta set out in the evening, for the purpose of shooting an elephant, with some gunners. In Walkayt, Ras-el-foel, and Shiré, on the east of the Tacazzé, the elephant-hunters have large and long matchlocks for the purpose, which they lend to those who want to kill, but the owner receives some teeth for the loan. Cofta, being too young to handle the spear, preferred a matchlock. Next morning, the gusmati lent me one of his mules to go with some of his Shangalla horsemen to see them kill an elephant. His nephew, a boy not more than ten years of age, went with us; and we were accompanied by several gunners besides my own servants. The Shangalla were eight in number, with four horses; four of them had spears and shields, the other four had swords such as come from Sennaar, sharp on both edges. On our road we passed through the desert, which is nearly covered with thorny bushes. I observed in several places Shangalla ploughing the sandy earth against the rains, as in general there are a few days' rain in all parts of Abyssinia in the month of April, when they sow the grain. These Shangalla were now preparing for what is called marshella. Two women, naked, with straps over their shoulders, and holding by both hands, dragged the plough, while a man steered it. About three in the afternoon we got sight of a number of elephants and rhinoceroes; when the eight men got upon their four horses, one upon the saddle, with his spear and shield, and another behind with a sword, which is very sharp towards the point. About a span and a half above this they have a piece of hide wrapped round the blade, fitting the right hand, that the edges may not cut them. Some have a cord twisted round the blade, which serves them always when they go a-hunting; if hide is used, they want a fresh piece every time, because,

when dry, they cannot get it off without cutting it; and to soak it in water would spoil the blade, though some of them prefer this trouble, on account of the good and secure hold they have of it. We were ordered by the Shangalla to sit down all together, and not to fire a gun or make the least noise. Some of the elephants were eating the trees about two hundred yards below us. The hunters then rode off in different directions, and selected the elephant they found furthest from the herd. The horses being used to the sport, the men ride at full speed quite in front of the elephant they mean to kill, when they bring the horse up suddenly, and if possible the spearsmen will strike his spear into the eye, or as nearly so as he can. Whether he strikes the animal or not, he turns his horse quickly, and keeps cantering round the beast, which turns as the horse goes round him. After some time the poor beast becomes tired and careless about turning round any more, but either stands still or walks straight on; then the swordsmen, when close to the elephant's hind legs, drops off over the horse's tail, and with both hands gives the beast a cut a little above the heel. The great sinew, which appears more like fat than sinew, being cut, the animal has no longer the power to stand, when they spear him or cut him with knives as they choose. The teeth they take to their masters, who exchange them with the Mahomedans for articles brought from the sea; and the Shangalla cut the flesh into strings and dry it for quantar. The Walkayt Shangalla, as well as the Tacazzé, are not quite so woolly-headed, flat-nosed, and thick-lipped, as the Abawi Shangalla, beyond the Abawi; neither are they so mild tempered as the former. After the sport was over, we mounted our mules, and rode towards home by the same road we came.

"In the day-time our camp was full of the Amhara women, who used to join in gänge, the girls in one and grown women in another, singing to the sound of a drum, which a woman beat at both ends, and carried slung with a string about her neck. They sang the following song: 'Give the Badinsah breeches, and he is a lion: where is the man that will dare to hold his shield to him?' 'Give him breeches' merely means when he is up and dressed he is ready, and no one dare face him. I had many acquaintances here, who brought me as much wine and brandy as I and my servants could drink; and fine peaches and grapes were very plentiful, it being just the season for them. The wine is very good, but what we make in Enderta is much the same; it will not keep more than three weeks or a month before it becomes sour, arising from the want of proper vessels to keep it in, as they have nothing better than earthen jars for the purpose, and these are not glazed within. I have kept wine the whole year round in English bottles. The brandy they make is very strong, and distilled through a hollow cane, called shambacco, from the husks and stones of the grapes, after the liquor is pressed from them. Great quantities come daily to town at this time of the year from Corder Emfras, the grape country. Grapes are found in almost all parts of Abyssinia; but no country produces so much as Emfras, owing to an ancient custom of the inhabitants following the wine business. Here tribute is paid to the king and the Abuna. Every dase of wine pays a jar yearly to the king, as they enter Gondar to the market; and every other article that enters the market for sale pays likewise a portion to the king's officers—butter, pepper, greens of every kind, wood, corn, and cattle,

are exempt from duty. It is the same in all other capitals of Abyssinia, such as Adowa and Antalo. . . . Fish are abundant, especially those called ambazza, an ugly fish, though very good eating, being very fat, having scarcely any small bones, and being without scales like the eel; its skin is very thick. There is another scaly and very good-looking fish, called barki, but not so sweet as the foregoing, and full of small bones. This fish, as well as a smaller one called lombe, and which resembles the English gudgeon, are very good eating; and both are abundant in all the rivers of Abyssinia. The ambazza is also found in most of the large rivers. The inhabitants of Gondar make quantier of them, by drying them with scarcely any salt, in which state they will keep a long time. In the month of August, on the first of which begins the fast called Filaetter, Blessed Virgin, the youths go to Dembea, with large sticks in their hands, and, the lake Tzana being at that time overflowed and the water muddy, they kill great quantities of this fish, which they find in the shoal and muddy water. My acquaintances tell me that one amola, which is a piece of salt worth the ninth part of a dollar, will buy enough ambazza for twenty families' suppers. At that season wine is also very cheap; one amola buys a large jar of about six gallons—from the beginning of March to the end of May, you may buy it at this price. At the same season you can buy three brulya of brandy, which is about three pinta, wine measure, for one amola."

Though this is our fifth continuation, we are not sure that we may not be tempted to make still farther extracts from Pearce's second volume, hitherto, notwithstanding our copious Review, untouched.

The Entire Works of the Rev. Robert Hall, A.M.; with a brief Memoir of his Life, and a critical Estimate of his Character and Writings. Under the superintendence of Olinthus Gregory, LL.D. &c. 8vo. pp. 624. Vol. I. London, 1831. Holdsworth and Ball.

WHAT the title-page states, has to be fulfilled hereafter; for, unlike the usual course, this first volume of a work (of which the extent is unknown) enters boldly at once, without memoir, preface, or note of introduction, into Mr. Hall's Sermons and Charges. Of these it gives us eight, in 369 pages, which have, we believe, been already published; and the rest consists of circular letters on three religious subjects of much interest, and an unpublished sermon "on the Substitution of the Innocent for the Guilty." We can of course have little of critical remark to offer on this fragment; and reserving ourselves for the next volume, or volumes, we shall merely remind our readers that the author attained, and not without eminent desert, a very high character for ability and piety. His works are well worthy of being printed entire for the benefit of the Christian world.

New Illustrations of Prophecy, &c. &c. By William Vint. Second edition. 8vo. pp. 472. London, 1831. Sherwood, Gilbert, and Piper.

THE Rev. J. L. Towers, at the close of last century, published the largest portion of this work; and Mr. Vint, with certain alterations and additions, conceives that his explanations are applicable to the present agitated state of Europe. We confess that we never yet met with any work of this kind which did not prove to us the folly of human judgment pretending

to interpret what was incomprehensible;—nor do Mr. Vint's labours apply one iota more clearly to the events of our own times than any other enthusiast's who has preceded him. We therefore refer his book to those who take interest in such discussions,—who wish to learn the grounds on which Buonaparte is held to be, or not to be, the dragon; and not only to ascertain the precise date of the millennium, but whether there is to be any millennium at all,—the expectation of which Mr. Vint contends is founded on a grammatical misconstruction.

Nature Displayed, in her Mode of Teaching Languages to Man. Adapted to the French by N. G. Dufief. Twelfth edition.

IN the very front rank of those to whom the world is indebted for a relief from that stultifying system of pretended instruction by which it was formerly attempted to possess the mind of a learner with the theory of a language previously to any acquaintance with its practice, stands, undoubtedly, M. Dufief; and we rejoice to see that his most useful work has arrived at a twelfth edition. The destruction by fire of the stereotype plates of the first volume, has enabled the author to make some alterations in his various vocabularies, &c., calculated to forward the attainment of the object which he had in view; and his two volumes in their present shape certainly afford facilities for obtaining a rapid, extensive, and at the same time correct knowledge of the French language, which we do not know where to find elsewhere in so comprehensive a form.

Remember Me: a Token of Christian Affection. 24mo. pp. 180. London, 1831, Simpkin and Marshall; Colchester, Filer and Totham.

A NEAT moral and religious miscellany of original pieces, prose and verse; some of them of a superior, and others of an inferior order. Among the former are contributions by Bernard Barton, Miss Jewsbury, &c.; among the latter we would class "the Sigh," beginning,

"A sigh is the purging of sorrow when flowing
In rivers of tears down an innocent cheek."

And, still more extraordinary, it is

"A glance of the eyes when in anguish they roll!"

A little criticism would have kept such nonsense as this out of a book which is otherwise, generally, very well adapted to its moral purpose.

A Vindication of the South Sea Missionaries from the Misrepresentations of Otto Von Kotschue, Captain of the Russian Navy. With an Appendix. By William Ellis. 8vo. pp. 163. London, 1831. F. Westley.

AN able pamphlet, as might be expected, from the pen of Mr. Ellis. It exposes and confutes many errors and misstatements of the Russian navigator; and possesses great attractions for the friends of missionary labours, and especially those in the Pacific Ocean. As in all controversies, some of the arguments are not so conclusive as others; but the whole is extremely satisfactory.

The Garrick Correspondence, &c.

[Second notice.]

WE have now had time to wade to the end of this ponderous volume; and though we shall probably afford another illustration of it by extracts, we must honestly state our opinion, that it contains an immense quantity of matter which never could have possessed public in-

terest, and the revival of which, after the era of squabbles among theatrical managers, writers, and players, has passed half a century, is ridiculous. The consequence attempted to be attached to such miserable trifling adds to the burlesque; and printing the volume to match with Evelyn and Pepys, completes a farce such as Garrick never acted.

Standard Novels, Vol. VI. The Last of the Mohicans. Colburn and Bentley.

THE Last of the Mohicans, and the first, as well as one of the best, of those novels in which Mr. Cooper began to portray the customs and feelings of the American Indians. It is a most interesting volume, and the frontispiece and vignette beautiful. With such productions, at such prices, this series must be widely and deservedly popular.

ARTS AND SCIENCES.

ROYAL GEOGRAPHICAL SOCIETY.*

MONDAY, John Barrow, Esq., V.P., in the chair; read minutes of the previous meeting, and list of donations since made to the Society's library, viz., two original Chinese maps (one of the empire, the other containing plans of cities in it), presented by Captain Clarence Dalrymple, Hon. E. I. C. S.; an original map of Russia in 105 sheets, published at St. Petersburg by authority; and El Derottero de las Costas de España, por Don Vincete Tofiño; both presented by Francis Baring, Esq., to whom, and to Captain Dalrymple, the thanks of the Society were accordingly voted. Balloted for the following gentlemen, candidates for admission into the Society: Captain Sir J. S. Brook Pechell, Bart., M.P., R.N.; Captain Fitzroy, R.N.; Rev. E. Hankey; J. W. Russell, and J. Deville, Esqrs.; who were unanimously elected. And proposed C. T. Ramage, Esq. to be balloted for at the next meeting.

Subsequently read a very interesting communication made to the Society by Mr. Nind, who was two years surgeon of a small settlement maintained by the colonial government of New South Wales at King George's Sound, near the south-west point of Australia, and now annexed to the Swan River district. During the whole time, he paid great attention to the peculiarities characteristic of the aborigines in that quarter; and his account of them, as thus communicated, exhibits both great patience and sagacity of observation. The land in the immediate neighbourhood of King George's Sound, Mr. Nind observes, is poor; and although susceptible of improvement by cultivation, as was demonstrated by the success with which the English settlement raised garden crops, with the aid of a little manure, the natives are not yet so far advanced as to profit by this; and their whole social existence is affected by the original poverty of the soil which they occupy. They are thinly scattered; erratic in their habits, as the necessity of seeking food compels them to move about; minutely subdivided into families rather than tribes; acknowledge no supreme chief; even their language extends but a little way into the interior; and, whether in peace or in war, they exhibit little or no concert with each other. Some of their peculiar customs are, at the same time, more generally diffused; and some would even seem to indicate a period when some great

* This paper is the only one read during the past session of the Royal Geographical Society to which we could not do justice at the time: we now insert it to complete the series of our reports.—*Ed. Lit. Gaz.*

national feud was stanchd by a solemn treaty, which remains now only as an immemorial rule. There are two castes in particular among them, called Erniung, and Tem or Taïman-man, into which they are all divided; the distinction, however, being merely nominal, as there is a law that they must intermarry in every generation, the children following the mother; so that an Erniungman has all his children Taïmans, and *vice versa*. The young men seldom marry until past thirty; neither do they eat indiscriminately of all sorts of food until the same age, certain meats being forbidden them at different periods, under pain, as they believe, of becoming unlucky or unskilful in the chase. Their greater freedom from incumbrance, however, at this period, and consequently their greater wealth, added possibly to a greater recklessness of enterprise, corresponding to their age, give them now great weight in their several little communities; and the nearest approach which Mr. Nind was able to detect to chieftainship was in the influence possessed by certain individuals of this description. After thirty they generally marry several wives; and it is a maxim to choose them from as great distances as possible, in order to obtain the privilege of hunting over a great variety of grounds. The women are betrothed very young, are sometimes even promised before they are born, are courted by presents made to their father, and are delivered to the husband as early as twelve years of age. Without being positively jealously watched, they are yet looked to with some care; and instances of adultery are consequently rare. When discovered, the woman is punished by thrusting a spear through her thigh, while with the man the quarrel is mortal. Nevertheless, if the parties can escape, and live together till the woman is pregnant, they are usually forgiven, and not separated. And a man may court another's wife, by presents to the husband, so as to obtain the reversion of her after his death; but his attentions to herself must not be such as to excite scandal or suspicion of present intimacy. In general, indeed, the two sexes do not associate much together; they hunt separately, unless when numbers are wanted to surround a covert: in these encampments they are lodged separately, the women and children apart; and Mr. Nind was unable to ascertain whether the women joined in the national dances or not; he never saw them do so in two years. The dress of these people is merely a skin looped up over the right shoulder, so as to leave the arm at liberty; and the largest skins are reserved for the women. They grease and paint themselves a brick colour, smearing their hair especially, as they allege, to protect them alike from the sun and rain. Green boughs are their pledge of peace. Their weapons are rude, and they are not so dexterous in the use of them as the nations on the eastern coast. They seem almost incapable, indeed, of striking a severe blow; and, as they are at the same time extremely alert and agile in escaping the course of a spear, their combats are rarely fatal to more than one or two individuals of either party. When surprised at night, they seem altogether helpless. Flesh-wounds they bind up loosely with a reddish coloured earth, and they soon recover. They are superstitious, and fear to name the recently dead, lest they should see their ghosts; whence it would appear that they have some notion of a future, or at least a separate, state. These, however, seem very indistinct; and when the idea was suggested to them, that perhaps their deceased friends went to the moon, they eagerly

caught at and adopted it. They bury with some ceremony in a deep pit about four feet long, the knees bent up on the chest; and the arms and ornaments of the deceased are deposited with him. During the period of mourning, his relations smear their bodies and faces with large blotches of white paint. His wives reside with his family, and must not be approached even by those to whom they may devolve; and when no specific arrangement has been made regarding them by the husband during his life, they seem to pass, as heritage, to his next of kin. Their domestic arts exhibit a remarkable mixture of skill and rudeness. They are dexterous fishermen, yet can neither swim nor have they any description of boat. They can, on occasions, steal, without being observed, so close to a kangaroo, as to be able to kill it with their spears; yet, excepting rude pit-falls, with which they have not much success in catching some of the larger animals, their general mode of hunting is artificial, consisting chiefly of firing districts of the country in succession, and eating every thing, even to snakes and reptiles, which they thus secure, of the former excepting only those which have undigested food in their stomachs, which they consider unwholesome. Their modes of cooking are equally simple; but we cannot at present follow Mr. Nind into the minute details which he gives on this and many other points. (We hope soon to see his Narrative at full length in the Society's Transactions.) Thanks were voted to him for its present communication, and the meeting adjourned at half-past ten.

LITERARY AND LEARNED. NUMISMATIC DISCOVERIES.

Ketch.
A VERY interesting discovery in numismatics was made last year in the island of Taman. A landowner, living at the farther end of the gulf of the same name, found, after a heavy rain, a small silver medal, of the second size according to the scale of M. Mionnet, representing on one side the bust of Hercules, covered with a lion's skin, and on the reverse, in a hollow square, a horse's head, with the legend, ΣΙΝΔΩΝ, that is to say, coin of the Sindi.

This precious coin, which is finely executed and in a perfect state of preservation, belongs therefore to the Sindi, a tribe of the Caucasus, who, according to the ancient geographers, inhabited the banks of the Black Sea, and the foremost mountains of the Caucasian chain, in the environs of Anapa, from the mouth of the Kuban to Sudjuk Kalé. Some Greek colonies were established in the country of the Sindi, such as Gorgippia, Hermonassa, Apaturam, the Portus Sindicus, &c.; and it was probably in one of those towns that our medal was struck. History and paleographic monuments prove that the ancient kings of the Bosphorus, as well as the great Mithridates, possessed the country of the Sindi. Paerisades styles himself on the monuments, Archon of the Bosphorus and King of the Sindi, the Toretes, the Dandari, and, lastly, of all the Meotians and Thateans (probably inhabitants of the banks of the Thates, otherwise Thapsis,* a river mentioned by Diodorus Siculus). It seems that in the interval of the great break of 170 years, which exists in the history of the Bosphorus, and

* Out of three MSS. of book xx. of Diodorus Siculus, which are in the library of the king of France, in Paris, only one has Thapsis. In the other two it is Thates; a reading which the beautiful inscription of Comosagre seems to confirm, by mentioning a people called Thateans, of whom, however, geographers make no mention: but since we find in Diodorus a river called Thates, it is

during which the power of the princes of this country had greatly declined, the Sindi were governed by kings of their own. Polyanius speaks of one of these kings, whom he calls Hecateus. Our medal seems to prove, that in times perhaps anterior to the conquest of the Sindi Regio by the kings of the Bosphorus, which may be inferred from the beauty of the die, the Sindi were governed by their own laws. But as we also meet with medals of the Odryæ, struck under the monarchical government of the kings of Thrace, it is possible that the princes of the Bosphorus may have left the same right to the Sindi, after having conquered them. However this may be, this unique medal of the Sindi is a more important novelty to antiquaries, as there could be but little hope of finding so beautiful a one struck by a savage tribe of Mount Caucasus.

On this occasion we may mention another medal, equally interesting, lately found at Anapa, in the country itself of the ancient Sindi. It is a silver coin of Rhescuporis V., king of the Bosphorus in the time of Alexander Severus. It bears the date A + 530 of the era of Pontus. This medal is unique; for those of Rhescuporis V., which are extremely rare, have hitherto afforded us only the date of the year 531. This king probably possessed but for a moment the throne of the Bosphorus, and perished in some political convulsion; for the medals of his predecessor, Cotys IV., are also of the years 530, 531; and the first medal of Ninithimeus, his successor, is also of the year 531.

FINE ARTS.

ENGLISH ARTISTS IN ITALY.

SIR,—The duty of defending absent friends is one of the best-defined and most generally acknowledged duties of society. I therefore confidently hope your readers will not think the following statement an unnecessary occupation of your paper and their time.

In the Life of Sir Thomas Lawrence, by Mr. Williams, page 285, vol. i., it is thus written: "Horace's *genus irritabile vatum* conveys no idea of the feelings existing between rival painters. It would seem almost as if each artist's palette had been put into his hand from Pandora's box; and the *vates* are gentle turtle doves compared to painters. It is, I suppose, for this reason, that, at the Roman Academy of St. Luke, two lectures are annually delivered to the students and artists against 'envy, malice, hatred, and all uncharitableness.' It is to be imagined that these lectures have a salutary effect upon the catholic audience, or upon the Italian temperament, and on these alone; for I am credibly informed, by English residents and students at Rome, that the pupils from our own country are remarked for envy, detraction, and over-reaching, more than those from almost any other part of Europe."

With so much of this as relates to the whole body of the profession, it would be impertinent for me to interfere. The English artists here can defend themselves; indeed, their characters are too well known and too much respected for them to be touched by such a libel. The calumny will defeat itself. Not so with my friends in Rome. The poison will long have circulated before it reach the gates of the Eter-

more natural to suppose that there was also a people called Thateans, than to look for a fault in a public monument. There were Tyrites, Boristhenites, and Axiaes, inhabitants of the banks of the Tyrrus, the Boristhenes, and the Axiaes, why should there not have been Thateans, inhabiting the banks of the Thates?

nal City, and much injury may be done by it to many most excellent and unoffending persons. I beg, therefore, to advance my testimony in opposition to Mr. Williams' informers. I have been nearly seven years in Italy, two winters of which have been passed in Rome, besides occasional summer visits; and, during the time of my residence in other parts of Italy, I have been in constant communication with the artists of Rome, sometimes receiving them at my house, and always corresponding with them. The sentiments this long and intimate connexion has left on my mind are, gratitude for kindness conferred on me personally, and admiration for the manly, simple, respectable characters that our countrymen, united in the pursuit of the arts in Italy, maintain in the eyes of surrounding nations. The British students are men having like passions with others, and liable to the same errors. They are, moreover, Englishmen, with English feelings and English habits. They do not congregate like rabbits in a warren, as the Germans do; nor do they dance, and caper, and play the pranks that are played by the more lively Frenchmen: but they do associate for the purposes of mutual improvement and good fellowship; and they do live in the exercise of every kindly feeling, and in the interchange of good offices and brotherly love, ready to afford to each other, on all occasions, professional or unprofessional assistance, and really happy to see the interests of others advancing with their own.

In all this, sir, I speak my own experience, and I confidently appeal to the oldest residents in Rome who are in the habit of associating with, and receiving the artists at their houses, as well as to the majority of those students who, after a long sojourn in the Eternal City, are now returned and settled here, for the truth of what I say. Had the biographer of Lawrence been himself in Italy,—had he seen how the English artists live there,—had he witnessed their quiet, patient, and persevering studies—studies animated by the love of art and by the desire of excellence,—and had he seen, as I have, their conduct guided, in all relations with others, by the most honourable feelings, I am sure he would have been forward to record some marked testimony of his admiration and praise. His book is devoted to the delineation of the life of an eminent painter, and is destined to the hands of the class of persons on whose minds false statements about the character of artists are calculated to make a mischievous impression. How much then is it to be regretted, that he should have allowed such things to creep into such a book! For myself, I rely so entirely on the author's good intentions, that, should his work come to a second edition, I feel confident he will expunge the exceptionable passages, and not allow to go down to posterity, tacked to the name of Lawrence, calumnies which must have had their origin in private pique or personal prejudices.

Yours, &c.

THOMAS UWINS.

25, Parry Street, August 10.

SIR T. LAWRENCE'S COLLECTION OF DRAWINGS.

WE are informed, and every lover of the fine arts must be gratified by the intelligence, that a subscription is about to be immediately formed, with a view to the purchase and preservation, in the British Museum or National Gallery, of the late Sir Thomas Lawrence's unrivalled collection of drawings of the old masters. The council of the Royal Academy, after inspecting the drawings, have voted 1000l.

towards the subscription, in the event of its being completed.

NEW PUBLICATIONS.

The Watering Places of Great Britain, and Fashionable Directory. Part III. Hinton. "SOUTHAMPTON, from the River Itchin," "St. Leonard's Hotel, Hastings," and "Eastbourne," are the illustrative plates of the third Part of this useful publication. It may suggest one means for the entertaining, and not altogether uninteresting, occupation of an hour, to those who are occasionally devoured by ennui when in the comparative solitude of the coast, if we extract from a note the following description, taken from Bishop Watson, of a simple and ingenious mode of determining the proportion of salt in a given quantity of sea-water. It can scarcely be necessary to premise, that the proportion of salt in sea-water varies greatly in various places.

"Take a perfectly clean cloth, dry it well in the sun or before a fire, then weigh it accurately, and note down its weight; dip the cloth in sea-water, wring it slightly till it will not drip; weigh it in its wet state; then dry it, and when perfectly dried, weigh it again: the excess of the weight of the wetted cloth above its original weight, is the weight of the sea-water imbibed by the cloth; and the excess of the weight of the cloth, after being dried, above its original weight, is the weight of the salt retained by the cloth; and by comparing this weight with the weight of the sea-water imbibed by the cloth, the proportion of salt contained in the given specimen of sea-water will be found."

Visits of William the Fourth, when Duke of Clarence, as Lord High Admiral, to Portsmouth, in the year 1827. No. IV.

THE present No. we believe completes, and if so, worthily completes, this little nautical publication. One great charm of Mr. Moser's shipping plates, in addition to their technical accuracy and character, is, that there is in them no straining after effect; no violent contrasts of any kind; but the various scenes appear as in nature when viewed under the mild and unaffected influence of ordinary daylight.

Illuminated Ornaments, selected from Missals and Manuscripts of the Middle Ages. By Henry Shaw, Author of "The History and Antiquities of the Chapel at Luton Park." Part VI. Pickering.

THE plates in the sixth Part of Mr. Shaw's beautiful publication are all from articles in the British Museum. That from Queen Mary's Psalter is exceedingly curious and entertaining.

The Costumes of the French Pyrenees; drawn on stone by J. D. Harding, from original Sketches by J. Johnson, Esq. Part IV. Carpenter and Son.

IF not quite so picturesque as some of the preceding Parts, still pleasing and amusing.

Landscape Illustrations of the Waverley Novels. Part XVI. Tilt.

THIS elegant little work is approaching to its termination; but there is no falling off in its interest. In the present Part the View of "High Street, Edinburgh," is especially valuable. It is engraved from a picture by Stothard, and displays all the peculiarities of that tasteful and veteran artist's pencil. "Nidpath Castle," from a drawing by W. Westall, is also very pleasing.

ORIGINAL POETRY.

FIRST FRIENDSHIPS.

"The voices of my home, I hear them still!"
Mrs. Hemans.

WHEN the heart hath been darken'd by sorrow or wrong,
When the false hopes have fled that beguiled us too long,
How soothing, how welcome, how sacred to hear
The soft tones of some voice that our childhood held dear!
New friendships may bless us, and love may requite
Our passionate vows with a smile full of light;
But the looks and the accents that kindly recall
The sweet dream of our childhood, are blindest of all.

O, when such ties are broken, we soothly may say,
That a bright page is rent from life's volume
And our torn hearts acknowledge how cold is the doom
That consigns all the lovely of earth to the tomb.
But though we may shed, with the fervour of truth,
The warm tear of regret o'er the friends of our youth;
Let us cherish more fondly the few that remain,
As we treasure the last flowers of summer's brief reign.

CATHERINE G. GODWIN.

Burnside, Westmoreland.

SILENT GRIEF.

Soft as the memory of buried love.—Byron.

THERE is a charm in silent grief
That none may feel, that none can know,
Who from the cold world ask relief,
Or deem its gaits a balm for woe.
Oh! rather on some mountain-brow
Awhile thy lonely vigil keep,—
Where the soul's flood may freely flow,
And sorrow, unforbidden, weep—
Till Time his glass relenting turn,
And softer, brighter sands appear,
And memory's consecrated urn
Yield forth her treasures deep and dear!
Oh! then shall steal the grateful tear,
Sweet as the dew of summer-falls;
While fancy to the eye, the ear,
The lost, the lovely one, recalls!
And who such angel-form may trace,
Nor feel a sacred impress given,
Of nobler beauty, purer grace—
A blending dream of earth and heaven?
Or whose the heart that thus hath striven
To win from love its best relief,
But owns in thought sublimed and shriven,
The holy charm of silent grief?

PARAPHRASTIC LINES.

"Scilicet uxorem cum dote, fidemque, et amicos,
Et genus, et formam regina Pecunia donat,
Ac bene nummatum decora Susdela Venusque."
Hor.

I SUED and sighed to win a bride; yet so long
my wooing tarried,
I really did begin to think I never should get
With ma' and miss I ever failed, though no
man's morals sounder;
Till wealth came in, and then I got a thirty
thousand pounder.
When formerly I needed tick—e'en the tailors
were blank looks—
Now all are but too proud to have my name
upon their books;
My lonely doors no friend approached,—I heard
but single knocks;

Now I want beds for those who crowd their dear friend's sporting box.
My family? O no one knew,—all the lip in scorn would curl,—
Now my family's grown old, and I'm third cousin to an earl.
Bull-necked and bandy-legged was I; now the Belvidere Apollo
In form is but a fool to me—I'm told I beat him hollow.
Each painter wants to paint my face, sculptors to cast my noddle;
The academicians, too, have all besought me for a model.
Of yore, if e'er I rose to speak, loud coughing dinned my ears;
"Great cheering" welcomes now my words, with frequent "hears" and "cheers."
The women once were wont to call me bilious, dark, and yellow;
Now e'en the men allow that I'm a "d——d good-looking fellow."
Such do the changes prove, I ween, in this life's mottled span,
Between one when one's not, and when one is, a monied man.

DRAMA.

DULL times for the drama as well as for literature, and every liberal pursuit, except that which in politics is called "liberal."

Haymarket Theatre.—A farce, under the savoury name of *Fricandeau*, has been produced with fair success. It is a translation of the French piece, with Bouffé's personation of *Quoniam*, in which we were so highly amused at the French Theatre. In the English version Harley sustains the same part; but, we know not how it is, we have not the lightness so pleasing in casts of this kind. We generally exaggerate and enforce too much: we are not content with the touch and go, but must dwell and make out every lineament and feature. A sketch is almost unknown to the English stage; every actor labours to make a finished picture, and too much labour mars the effect.

English Opera, Adelphi.—Here the houses have greatly improved; and good audiences encourage, as far as the limits of so small a theatre allow, the spirited exertions of the manager. Ries' music, as we foretold, grows, upon a better acquaintance, more and more into public favour; many parts of the *Sorceress*, indeed, are eminently beautiful. The English Paganini, Collins, has, we believe, finished his engagement, or finishes it to-night, and has fully answered the expectations formed of him. Having established a fame which will carry him through other quarters with considerable emolument, we have no doubt we shall hear of him, like his foreign prototype, long after all his advertised nights are over, performing "by particular desire," "by very general desire," and by all the other desires which induce a man to pocket the money of Master John Bull.

At the *King's Theatre*, on Tuesday, we enjoyed an hour's hearty laughing at the *Petits Danaises*. We know not whether we were most indebted for this delectable refreshment to Potier or Laporte. The comedy of both was most admirable.

VARIETIES.

Cow-Pox.—M. Lucien, of the Agricultural Society of Turin, some time ago presented a paper to the Society on the rot, and on the origin of cow-pox. He shews that inoculation

for the rot, which has been tried on numerous flocks, produces the same results as inoculation with the varicellous virus on man; and he concludes by an examination of the origin, still disputed, of cow-pox; maintaining, in opposition to Dr. Jenner, that the fluid which oozes from the disease called the grease, in horses, has no analogy to the vaccine virus.

Opening of London Bridge.—Any imposing spectacle of this kind is not only apt to encourage the arts and industry of the country, by giving rise to various speculations, but also to revive inquiries of considerable antiquarian interest. We have already noticed engravings, &c. of this ceremony; and have now to mention that, besides Mr. Stanfield, who was so justly introduced to make drawings, (for a painter of higher talent could not have been preferred to the task), Messrs. Fishers were authorised to employ an artist to take a view of this gay and striking scene. Admitted to a favourable position for this purpose on the bridge, we learn that Mr. T. Allom is preparing a beautiful lithographic print for publication, and that it will be ready for delivery early in the ensuing week.

A little weekly contemporary, called the *Casket*, has also devoted its entire No. to illustrate this popular subject. We are sorry that we cannot, at present, do more than allude to the curious remarks it contains on Pennant's long-received statement relative to the turning of the course of the Thames; but we shall notice it next week, and, in the mean time, beg to recommend our authority for controverting that dictum, and its wood-cuts, to the attention of readers.

Education, Crime, and Lunacy.—In a recent French publication, the number of educated persons, of criminals, and of lunatics, as compared with the whole population of England, Scotland, and Ireland, is thus stated:—

Kingdoms.	Educated Persons.	Criminals.	Lunatics.
England ..	1 in 20	1 in 900	1 in 783
Scotland ..	1 in 17	1 in 5693	3 in 652
Ireland ..	1 in 25	1 in 468	1 in 911

Egypt.—Ibrahim Pasha, who is still at Alexandria, frequently amuses himself by driving in his *tilbury* about the European quarter of the place.

Decline of Science in Great Britain.—Captain Herbert, assistant surveyor-general of India, &c. has published a work at Calcutta, entitled *Gleanings in Science*, in which he states that, "If to the labours of the officers of La Chevette we add those of MM. Diard and Duvalnet, of M. Dumasourier, and of a gentleman well known in Calcutta, now busily employed in investigating the natural history and physical geography of India; we shall be forced to confess, however humiliating the acknowledgment, that France will have done more in the short period of the peace for making India known to the scientific men of Europe, than England has in the whole period during which she has held the country."

Atles Frontalis, a new species of *Spider Monkey*.—At a late meeting of the Zoological Society, Mr. Bennett gave this name to a species which he considers to be new, and an individual of which is at present living in the society's gardens. The whole of the hairs, with the exception of a white frontal patch, are jet black; the naked parts of the skin are also black, except a flesh-coloured space on the face, including the eyes, nose, and lips.

Gleanings from Börn's Works.—"Liberty is set before foxes in narrow flasks, and before storks in flat basins. The cunning fox knows his remedy, and snaps off the neck of the flask; but what hope is there for the silly stork? He

suffers himself to be persuaded that the best cure is to allow his bill to be trimmed!"

"Civility is the national bonds of the heart, which frequently bring in an increase of interest proportioned to the insecurity of the capital."—"Morality is the grammar of religion: it is easier to be just than generous.

"A constitutional throne is an elbow-chair, but an absolute monarchy is a stool without a back. Princes are by nature, as well as from the pinnacle on which they are placed, liable to dizziness of the head; and a constitution provides equally for the security of the governed and the governors. Had Napoleon, instead of Lewis the Eighteenth, bestowed a charter on the French, he would not have fallen, when he became dizzy, but have remained emperor of the French to the present hour.

"Napoleon was the high-priest of the revolution, but being impolitic enough to overturn the worship men paid to it, the sacerdotal garment fell from off his shoulders, and his power set for ever."

"Whether we laugh or cry, creep or hop, tremble or rage, hope or fear, believe or doubt, we shall all meet in the grave. But there is one thing that will profit us—a clear prospect; and one thing that will endure—justice; and one thing which mediates for us—love."

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XXXIII. Aug. 12.]

The *Amulet* for 1832, the sixth volume of the series, is announced for early publication, with engravings from four of Sir Thomas Lawrence's most celebrated paintings, that of the Marchioness of Londonderry and her Son, being the frontispiece;—prints from Pickenill's Greek Girl, Haydon's Death of Euclides, the Death of the First-born, by Hayter; Corinne, painted for the *Amulet* by Gerard; landscapes by Stanfield and David Roberts, &c.

The fifth volume of the *Juvenile Forget Me Not*, for 1832, edited by Mrs. S. C. Hall, is also announced to appear, with a considerable number of fine engravings on steel and wood; the literary contents from the pens of the most eminent writers for youth.—A third edition of Dr. Ryan's *Manual of Midwifery*, enlarged—Dr. Morton is about to publish *Remarks on the Subject of Lactation*, &c.

Wind variable, N.W. prevailing.
Mornings generally cloudy—frequent sunshine during the day—rain on the evenings of the 4th, 7th, and 9th. Storms of thunder and lightning on the evening of the 5th and afternoon of the 7th; by that of the former day several lives were lost, and much damage done, at Kingsland and Haggerstone, about 54 miles S. by E. of this place.

Rain fallen, 725 of an inch.
Edmonton.
Latitude..... 51° 37' 33" N.
Longitude.... 0 3 51 W. of Greenwich.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

Notwithstanding the space allotted to our Review, in the absence of other heads of temporary interest, we are still obliged to defer the further notice of Mr. Walsford's volume.

The plant sent us from Wales we find on examination to be the *Epilobium hirsutum*.

Lines by a Youth of Sixteen are immature.
B. F. S. is under consideration.

Amicus seems very obtuse, not to know that the master he alludes to is altogether apocryphal—*scilicet*, a hoax.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall Mall.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s. Catalogue, 1s.
WILLIAM BARNARD, Keeper.

FRAUDS in PATENT PENCILS.

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case. S. B. Mordan and Co. Patentees and Makers, on the body of the case.

2d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

Cedar Pencils.—These pencils contain the same quality of pure Cumberland lead as their silver patent pencils.

Warranted Protection.—The Lock with seven galls is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it: neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonest and dishonestly equally guarded against.

S. Mordan and Co. Makers, London; is stamped on each Lock.

Scientific gentlemen and others are invited to inspect the Manufacture, 25, Castle Street, Finsbury.

SIXTEEN QUARTO PAGES for FOURPENCE.

The demand for the *ATHENÆUM* (No. 197) having exceeded the most sanguine expectations of the Proprietors, the Public are informed that a second impression was published and now continues on sale.

Contents: Private Correspondence of David Garrick—Tour through South Holland, the Netherlands, &c.—Moore's Life of Lord Edward Fitzgibbon—The Club-Book—History of London Bridge, &c.—Letter from the Rev. W. Lisle Bowles—Reading the Stars, by Miss Jewsbury—Letter from Spain—Prima Facie Mistresses—Bird's-Eye View of Rome—French National Workshop—Meetings at the Zoological and Horticultural Societies—Mr. Reid's Etchings and Pictures, with Goethe's Criticism and the Incomprehensible—Fragments of the British Institution—Theatres: La Sonnambula—New Letters—The English Papalists—Babbi the Prompter's Concert; Six Persons present—Poetry: New Play, Madame du Barry—The Sorcerer—Octagonarian Reminiscences—Miscellaneous, &c.

Published every Saturday Morning.
To prevent disappointment, Subscribers are requested to give their orders as early as possible to a Bookseller or Newsmen in their immediate neighbourhood.

MUSIC.

NEW VOCAL MUSIC.—Composed by Edwin Merriott.

I'll meet Thee, Maid, in the Moonlight Bow.

Forsake Thee! Oh, no!
The Broken Heart.

An affecting ballad, founded on a melancholy occurrence in the neighbourhood of Basingstoke, has been set to music by Mr. E. Merriott in a style equally chaste and appropriate, adding to the touching words of the song, a melancholy strain of melody, in perfect union with the subject. —*Berkshire Chronicle*, 1831.
"The Broken Heart," a ballad, both in regard to poetry and melody, of singular sweetness and simplicity, so pathos must touch the heart if it be susceptible of such an impression. —*Hughes Herald*.

Falkner, 5, Old Bond Street; and Goulding and Co. 30, Soho Square.

BOOKS PUBLISHED THIS DAY.

Dedicated to the Duke of Devonshire.

On the 30th of July was published, the Third Number of

THE BEAUTIES of the COURT of KING CHARLES the SECOND.

Edited by the Author of "the Diary of an Banquet." A Series of Portraits of the beautiful and celebrated Women of the court and reign of Charles the Second, forming a splendid illustration of the Memoirs of De Grammont, the Diaries of Evelyn and Pepys, and other works connected with that gay and interesting period; with Biographical and Critical Notices, which the editor has been collecting for many years, from the most authentic sources.

Lord Orford observed, fifty years ago, that "the Beauties at Windsor ought to be engraved to illustrate the Memoirs of their charming historiographer, Count Hamilton." It is singular that since that time no attempt has been made to produce these lovely portraits in a style worthy of the beauty and interest of the subjects. (Of the fourteen pictures at Windsor, six only have hitherto been engraved; it is therefore hoped that the present work will supply what has long been a desideratum in the fine arts.

The size of the plates is six inches by four and a half; engraved by the most distinguished artists from the original pictures in the Royal Gallery at Windsor, and elsewhere. Royal oct. 11. 1s.; Imperial 4to. Proofs with Biographies, 5s. 6d. each No.

The First No. contains the Portraits of the Queen, Lady Castlemaine, the Countess de Grammont (La Belle Hamilton), and the Countess of Osmoy; all after Sir Peter Leys.

The Second No. contains the Portraits of the Duchess of Richmond (La Belle Stewart), the Duchess of Somerset, Nell Gwynn, and Mrs. Lawson.

The Third Number contains the Portraits of the Countess of Chesterfield, Lady Denham, the Countess of Rochester, and Lady Southwell.

The whole Work will be shortly completed in Five Numbers. Henry Colburn and Richard Bentley, New Burlington Street.

Mr. William Butler's Outline Maps.

Price 4s.

GEOGRAPHICAL and BIOGRAPHICAL EXERCISES.

By the late WILLIAM BUTLER.

The 17th edition, enlarged by his son, JOHN OLING BUTLER, and having an elegant Set of coloured Maps, with a Series of Questions, adapted to each Map and to the Biography.

"As a correct delineation of the great outlines of the four quarters of the globe, and of the British Isles, these maps are entitled to much praise." —*Literary Gazette*, March 7, 1839.
John Harris, Corner of St. Paul's Churchyard.

No. XX. (commencing Thucydides), 4s. 6d. of the FAMILY CLASSICAL LIBRARY; or,

English Translations of the most valuable Greek and Latin Classics; with Biographical Sketches, Notes, Portraits, Maps, &c. 4s. 6d. each Number, small 8vo. Published monthly.

Edited, printed, and published by A. J. Valpy, M.A.; and sold by all Booksellers.

"If you desire your son, though no great scholar, to read and reflect, it is your duty to place in his hands the best translations of the best classical authors." —*Dr. Parr*.

The Selection will include those Authors which may be read by both Sexes. The Twenty Numbers already published contain—Demosthenes, Sallust, Xenophon, Herodotus, Virgil, Pindar, Anacreon, Tacitus, Phœdrus, Horace, Theophrastus, Juvenal, Persius, and Thucydides.

Nos. XVI. and XVII. comprise Horace, with Translations of different parts, by Dryden, Pope, Bentley, Swift, Forson, G. Watkiss, Prior, Milnes, Denham, Roscommon, Cowley, and Byron; and of some of the most eminent Poets of the present day.

Any Author may be purchased separately.

"Among the various works at present published in a similar form, Mr. Valpy's 'Family Classical Library' has the greatest claims on the public." —*Edinb. Courier*.

"The 'Family Classical Library' will greatly assist the classical labours of tutors as well as pupils." —*Chesham Journal*.

Summer Excursions, &c. &c.

This day is published, in a thick 16mo volume, illustrated by 94

Views and Maps, price 15s. bound.

THE GUIDE to all the WATERING and SEA-BATHING PLACES, including the Scotch Watering Places; containing full and striking Descriptions of each Place, and of the Curiosities and striking Objects in the Environs; and forming an agreeable and useful Companion during Residence at any of the Places, or during a Summer Tour in quest of Health or Pleasure. With a Description of the Lakes, and a Tour through the Lakes.

A Description of the Scenery of the Lakes in the North of England, by W. Wordsworth, Esq. A new edition, with Additions, and Map. Price 5s. 6d.

The Original Picture of London, corrected to the present time; with a Description of the Environs. Revised, and mostly written, by J. B. Bland, F.S.A., &c. In 18mo, with upwards of 100 Views of Public Buildings in, and Maps of, the City, the Metropolis and Suburbs; including a Map of the County twenty miles round London, &c.; with the Maps only, 6s. 6d. by half bound.

Henry Colburn and Richard Bentley, New Burlington Street.

Works on Botany, Gardening, &c.

Printed for Longman, Bees, Orme, Brown, and Green.

A GUIDE to the ORCHARD and KITCHEN GARDEN; or, an Account of the most valuable Fruit and Vegetables cultivated in Great Britain, with Calendars of the Work required in the Orchard and Kitchen Garden during every Month in the Year.

By GEORGE LINDLEY, C.M. H.S. Edited by JOHN LINDLEY, F.R.S. &c. Assistant-Secretary to the Horticultural Society of London.

Price by the Editor.

The Author of the following work has been occupied, at intervals, during nearly forty years, in preparing for the press materials for a complete account of the Fruit Trees and Vegetables cultivated in the Gardens of Great Britain. The result of these inquiries is now presented to the reader, in a form which, it is thought, is so condensed as to comprehend the greatest quantity of information in the smallest compass, and which, at the same time, is sufficiently diffuse to render it possible for the reader to acquire as much knowledge as is either important or indispensable in regard to any particular variety. Those points which are so peculiarly interesting to all Gardeners, such as the kind of stock upon which a given variety will succeed better than upon another—the comparative value of each kind of fruit,—the aspects that it requires,—the different names under which it is known in England or elsewhere,—the season in which a faithful figure may be found,—the purposes for which it is best adapted, the seasons when it is to the greatest perfection,—and topics of a similar kind, have been in all cases treated with especial care. There are few men more competent to do well than Mr. Lindley, whose long practical experience, and ample opportunities of investigating such subjects personally during a series of many years, have been such as have rarely fallen to the lot of any one.

An Introduction to the Natural System of Botany; or, a Systematic View of the Organisation, Natural Affinities, and Geographical Distribution of the whole Vegetable Kingdom; together with the Uses of the most important Species in Medicine, the Arts, and Rural or Domestic Economy. By John Lindley, F.R.S. &c. 8vo. 15s. cloth boards.

By the same Author,

A Synopsis of the British Flora, arranged according to the Natural Orders. 12mo. 10s. 6d. boards.

An Outline of the First Principles of Botany, with Plates, 18mo. 3s. sewed.

The English Flora, by Sir J. E. Smith, M.D. F.R.S. Free Lin. Soc. &c. New edition, in 4 vols. 8vo. 21. 8s.

"The subject is treated with an intimate knowledge of the subject, with an unobscured accuracy, and with an invariable respect for candour and for truth." —*Monthly Review*.

By the same Author,

A Compendium of the English Flora, 12mo. 7s. 6d.

The same Work in Latin, price 7s. 6d. The 2nd edition.

A Grammar of Botany, illustrative of Artificial as well as Natural Classification, with an Explanation of Jussieu's System. In 8vo. with Figures of Plants, &c. 2d edition, 12s.; or coloured Plates, 11. 11s. 6d. boards.

An Introduction to the Study of Physiological and Systematical Botany. In 8vo. 6th edition, with 15 Plates, 14s. plain; or coloured, 11. 8s. boards.

Musculogica Britannica, containing the Mosses of Great Britain and Ireland, systematically arranged and described, with Plates. By W. J. Hooker, LL.D. F.R.S. &c. and L. S. &c. and T. Taylor, M.D. M.R.L.A. and F.L.S. &c. The 2d edition, in 8vo. 11. 11s. 6d. plain, and 3s. 6d. coloured Plates.

The British Flora, comprising the Phanogamous or Flowering Plants, and the Ferns. By William Jackson Hooker, LL.D. F.R.S. &c. and L. S. &c. In 1 vol. royal 18mo. 12s.

The plan of the above work is similar to that of the first part of Dr. Hooker's "Flora Scotica." The Mosses, and the rest of the Cryptogamia, will form a distinct volume, corresponding with the above, and with the "English Flora" of the late Sir James Smith.

Conversations of Dr. Paley.

Lately published, in 1 large vol. 8vo. 14s.

PERSONAL and LITERARY MEMOIRALS; including Conversations with the late celebrated Dr. Paley, and Sketches of various other distinguished Characters.

By HENRY BEST, Esq.

Author of "Four Years in France," and "Italy as it is." "Mr. Best's amusing work, entitled 'Four Years in France,' must have left so favourable an impression upon every reader of taste and feeling, that the present volume will be resorted to with no ordinary expectations. His works, more than those of any living writer, are identified immediately with their author, and display all his individual peculiarities of mind and disposition. They are the very portrait of a refined, highly-educated, and most amiable gentleman. We resort to them with the same feelings as to our old and ever-entertaining friend, Montaigne. The present volume is full of collected reminiscences, of incidents in life, of anecdotes and discursive thoughts, narrated with what we must call a classic *style*, and affording a calm and delightful pastime." —*Morning Chronicle*.

Henry Colburn and Richard Bentley, New Burlington Street.

Price 11. 8s. boards, and 11. 10s. in silk, illustrated by 56 Vignettes, (26 of which are Landscapes, by Turner),

TALY. A Poem.

By SAMUEL ROGERS, Esq.

T. Cadell, Strand; and E. Moxon, 64, New Bond Street. India Proofs of the Prints, at Moon, Bays, and Co.'s, 6, Pall Mall.

Mr. Grotian's New Work.

By the Author of the "Heiress of Bruges," &c.

"The character of the heroine, which is one of intense interest, strongly resembles, in many respects, that of Mary Queen of Scots." —*Globe*.

"Beautiful and unfortunate, yet bearing up against every reverse of fate with the spirit of a hero, Jacqueline of Holland is a heroine to whom romance delights." —*Literary Gazette*.

Henry Colburn and Richard Bentley, New Burlington Street.

DR. LARDNER'S CABINET CYCLO- PEDIA.

ACCIDENCE; or, First Rudiments of the French Language. A new edition, to which is now added the Syntax.

By P. B. J. GOULY,
French and Classical Master (Assistant at the Rev. Edward Ward's, of Iwer, Bucks).
"This, however, he may confidently affirm, that the following distribution, partly his own, partly selected from others, has contributed more to the grammatical improvement of his pupils, than any of the books of which he has found them possessed."
—*Vide Preface.*
London: Sold by Hamilton, Adams, and Co. Paternoster Row.

Recently imported by Treuttel and Co. 30, Soho Square.
MUSEUM ETROSQUE DE LUCIEN
BONAPARTE, Prince de Canino. Feuilles de 1828 à 1829. Vases Peints avec Inscriptions. 4to. price 30s.
"The monuments discovered by Prince Canino have decided a great question on which antiquaries have long been divided: 'Was it from Greece these arts were introduced into Italy, or was it Italy gave them to Greece?' The 3,000 Etruscan vases found by Lucien Bonaparte bear testimony to the priority of Italy over Greece with regard to the fine arts." —*Morning Herald.*

In post 8vo. price 7s. 6d. boards,
THOUGHTS ON VARIOUS SUBJECTS.
By WILLIAM DANBY, Esq.
Of Swanton Park, Yorkshire.

Printed for the Author, and sold by C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. and G. Todd, York.

Price 7s. cloth,
MANUSCRIPT MEMORIALS.
"I have my employments, my home resources; wet or dry, I can scribble; add if they do no good to others, my writings, at least, keep me from discontent." —*The Agamemnon.*
"There is a good deal of mind in these Memorials, of sound sense well expressed; and these again are set off by wild fables, and sketches in verse, which combine to make up an agreeable medley." —*Monthly Review*, Aug. 1831.
London: Edinburgh Wilson, Royal Exchange.

Price 5s.
OBSERVATIONS ON DISTORTIONS of the SPINE and LIMBS, with Remarks on Spinal Irritation.
By LIONEL BEALE, Surgeon,
Author of a Treatise on Deformities.
Published by Wilson, 16, Prince's Street, Soho.
"Mr. Beale has evinced a perfect acquaintance with the causes and treatment of the deformities of the human body. No one can peruse his works without feeling that he ought and will be consulted in those distressing conditions." —*Med. and Surg. Journal.*
"Modern research has shewn the connexion of nervous disorders with spinal irritation. Mr. Beale has given cases which exhibit this connexion, and throw a new light on these hitherto intractable maladies." —*Taster.*

Price 6s. dedicated (by permission) to Thomas Attwood, Esq. of Birmingham.
A JOURNAL OF A TOUR IN THE STATE of NEW YORK, in the Year 1830; with Remarks on Agriculture in those Parts most eligible for Settlers, and Return to England by the Western Islands, in consequence of Shipwreck in the Robert Fulton.

By JOHN FOWLER.
"It occupies me to turn back regards
On what I've seen or pondered, and or cheery;
And what I write I cast upon the stream,
To swim or sink." —*Byron.*
Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

London and Parisian Society.
Lately published by Henry Colburn and Richard Bentley,
New Burlington Street.
A SECOND PORTRAITURE OF EXCLUSIVE SOCIETY; or, Foreign Exclusives in London.
A Novel. In 3 vols. 12mo. 5s.

The Clubs of London. With Anecdotes of their Members, Sketches of Character, and Conversations. In 3 vols. post 8vo. 18s.
"Two very sprightly volumes for readers of every degree." —*Monthly Review.*
"This is an excellent book." —*Scotman.*

III.
Ecarté; or, the Salons of Paris. In 3 vols. post 8vo. 3s. 6d.
"The work under this title must not be considered as a fiction. It was sketched by the masters of the art, and every character is from the life." —*Globe.*

IV.
The Hermit in London; or, Sketches of English Manners. New edition, 3 vols. 18s.

V.
The Ball; or, a Glance at Almack's. Post 8vo.

VI.
Babylon the Great; or Men and Things in the British Capital. 4th edition, with additions. 3 vols. post 8vo. 18s.
"These volumes treat of all subjects connected with London, from the 'forest of masts' in the river to the eloquence of the corporation—from the Chapel of St. Stephen's to the steam-press in Printing House Square—men, women, books, and newspapers—every thing in and about London that is worthy of notice in an intellectual point of view. Nothing escapes the eye and the lash of the critic; he indites himself into ceteris, and collects their follies—he examines men of every grade and class with an inqualifying precision." —*Atlas.*

Mr. Bayley's New Work.
In 1 vol. foolscap, price 8s. neatly bound in canvass, illustrated with a View of the taking of the Hôtel de Ville, at Paris, in 1830.

TALES of the late REVOLUTIONS, with a few others.

By F. W. N. BAYLEY.
Author of "Four Years in the West Indies," &c. &c. &c.
In these Tales the eventful occurrences of the past year are recorded in the interesting form of fictions, founded on the actual scenes that have taken place in Spain, Belgium, Poland, Italy, and at Home!!!—faithfully narrated upon the testimony of some of those distinguished men who have taken prominent parts in the Revolutions.
London. Printed for W. H. Dalton, 38, Cockspur Street, Charing Cross, and to be had of all Booksellers.

Small 8vo. 5s.

BOOKS IN THE PRESS.
Compensation to the *Waverley Novels*.
Now in course of publication, in small 8vo. beautifully printed and illustrated, price 6s. each.

STANDARD NOVELS AND ROMANCES;
comprising the best Novels and Romances of Modern Times.
Opinions on this Work.
"This publication must ensure a prodigious success, for it is wonderfully convenient, and wonderfully cheap. We may, in deed, say, that we have seen no periodical design more attractive in any way than the 'Standard Novels.'" —*Literary Gazette.*
"We cannot sufficiently applaud a design that promises to give us the best standard works of fiction, at the cheapest rate, and in the most elegant form. This series must become popular, since it will embrace the essence of our British novelists." —*Atlas.*
"When classical and highly priced standard works are thus placed within the reach of humble means, assuredly, before the lapse of many years, there will not be a house which gives the occupier a right to vote, that has not also its little library." —*Standard.*
(See also equally favorable opinions upon this work in almost every Literary Journal in the Kingdom.)
Volumes already published—
No. I. *The Pilot.* By Cooper. Originally published in 3 vols.
No. II. *Caleb Williams.* By Godwin. Originally published in 3 vols.
No. III. *The Spy.* By Cooper. With a New Introduction and Notes, written expressly for this publication by the Author. Originally published in 3 vols.
No. IV. *Thaddeus of Warsaw.* By Miss Jane Porter. With a New Introduction and Illustrative Notes by the Author. Originally published in 4 vols.
No. V. *St. Leon.* By Godwin. Originally published in 4 vols.
No. VI. *The Last of the Mohicans.* By Cooper. Originally published in 3 vols.
Henry Colburn and Richard Bentley, New Burlington Street.

New Peasage, Erticel, Dormant, and in Abeyance. A necessary Companion to all other Peasages.
Nearly ready for publication, beautifully printed in double Columns, uniformly with Burke's *Peasage and Barometage*.
A DICTIONARY OF THE ANCIENT PEASAGES OF ENGLAND, SCOTLAND, and IRELAND, Extinct, Dormant, and in Abeyance.
By JOHN BURKE, Esq.
Author of a General and Heraldic Dictionary of the Peasage and Barometage of the British Empire, &c. &c.

This work, formed on a plan precisely similar to that of Mr. Burke's very popular Dictionary of the Peasage and Barometage, will comprise the whole of the Peasages of the three kingdoms which have been suspended or extinguished since the Conquest, particularising the members of each family, in each generation, and bringing the lineage, in all possible cases, through either collateral or female lines, down to existing houses. It will connect, in many instances, the new with the old nobility; and it will in all cases shew the cause which has influenced the revival of an extinct dignity in a new creation.
"When it is considered that the most illustrious peers of England were swept away in the devastating conflicts between the Houses of York and Lancaster—in the wars of the Edwards and Henrys—and more recently, in the season of civil commotion, it is presumed that a work of this description, not confined to mere names and dates, but supplying much historical, biographical, and domestic detail, cannot fail to engage public attention, and to be considered as a great desideratum in all libraries. It should be particularly noticed, that this new work will appear nearly as much to extant as to extinct persons of distinction; for though dignities pass away, it rarely occurs that families die out. The editor has therefore sought, with the utmost diligence, those branches still remaining amongst the nobility and gentry, which have sprung from old and illustrious houses, and he trusts that his researches will be found to have been extremely successful."
Henry Colburn and Richard Bentley, New Burlington Street.

Messrs. Visetzel, Branstons, and Co. respectfully announce that, early in September, they will publish the First Volume of a new and important Biographical Work, in Four Volumes, crown 8vo. entitled the

GEORGIAN ERA: comprising Memoirs of the most eminent Persons who have flourished in Great Britain, from the Accession of George the First to the Demise of George the Fourth; arranged under the following Classes:

Royal Family	Yenagers and Travellers
Prebendaries and their Adherents	Men of Science
Churchmen	Authors
Dissenters	Painters
Statesmen and other Political Characters	Sculptors
Naval and Military Commanders	Architects
Judges and Barristers	Engravers
Physicians and Surgeons	Composers and Musicians
	Actors

Four Portraits on Steel, viz. those of George the First, George the Third, George the Second, and George the Fourth, Will form the Frontispieces to the respective Volumes, which will also be embellished with nearly Five Hundred Portraits on Wood.

The Work is entirely novel in its plan; embodying, with an immense mass of personal anecdote, a comprehensive detail of the progress of National Events and Political Affairs; Naval and Military Operations; Theology and Jurisprudence; Philosophy, Literature, and Science; Maritime and Inland Discovery; Music, Fine Arts, and the Drama; during the last Hundred and Twenty Years. The whole has been originally written from authentic sources, expressly for this work; and many of the Lives are for the first time presented to the public.
The First Volume will contain nearly Two Hundred and Fifty Memoirs; and include the following Classes:—Royal Family—Prebendaries and their Adherents—Churchmen—Dissenters—and Statesmen.

The Second Volume will be published in November, and will comprise *The Army—The Navy—and The Bar*.
The Third and Fourth Volumes are also in a state of forwardness; and will appear, at intervals of two months each, after the Second.
70, Fleet Street, August, 1831.

REVIEW OF NEW BOOKS.

Narrative of the Ashantee War; with a View of the Present State of the Colony of Sierra Leone. By Major Ricketts. 8vo. pp. 221. London, 1831. Simpkin and Marshall; Egerton; Ridgway.

THE only surviving officer who witnessed most of the events here related on the Gold Coast, it is a melancholy task to follow Major Ricketts' narrative of barbarities and massacres. A long resident in that fatal climate, he saw all his brother Europeans perish around him; and his account of their fate, and of the war waged for years with great loss and little success on the part of the colonists and their native allies against the Ashantees, contains much to interest the reader.

The history begins with 1822, when Sir Charles MacCarthy arrived as governor of the western coast of Africa; soon after which, the disputes with the Ashantees led to blows. It is not worth our while to enter into the minutiae of the quarrel—the demand of tribute, the murder of a sergeant of our colonial regiment, and the feud with the Fantees;—suffice it to say, that every attempt at reconciliation failed. Among other measures, Sir C. MacCarthy went to Annamaboe, whither his journey is thus described:—

“He and his suite were conveyed in carriages drawn by natives, six to each vehicle, which accommodated two persons: the carriages were drawn by these men at the rate of six miles an hour, which, considering the unfinished state of the road, was astonishing,—and the more so, as they were not at all fatigued on their arrival at Annamaboe. Neither horses, donkeys, nor mules, thrive on the Gold Coast. These animals have frequently been brought there from other parts of the coast, but always died in a short time after being landed. At Accra, where the ships of the squadron are chiefly supplied with live stock, consisting of a small breed of cows and bullocks, with sheep and turkeys, obtained near the river Volta, they answer much better than at any other of the European possessions of the Gold Coast; and horses have been known to live there for several years. The manner in which the Europeans travel in the vicinity of the forts where the road will allow of it, and they possess the means, is that which has been just described; and where the paths are narrow, they are carried in what is called a hammock, which is a piece of board about two feet in length, and half as broad, having two holes at each end fastened to a bamboo pole, very tight but strong, leaving sufficient room between to enable the traveller, who sits sideways on the board, with his feet resting on a smaller board below, dependant from the other, leaning his chest against the pole, and resting his arms on it, which is carried alternately on the shoulders and heads of two men. The native chiefs travel in this manner, and also in baskets made like a child's cradle, in which they can recline at full length, or sit up; the basket is also carried on the heads of men. * * *

“It appeared that the King of Ashantee had sent messengers to the Governor of Elmina, thanking him for all favours, and saying that Governor MacCarthy was wrong in his palaver; and he advised that Cape Coast Castle should be enlarged, as he intended to drive the English into the sea: he also recommended that they should arm the fishes of the sea—for all would be of no avail against the army which he intended to bring against them.”

Poor Sir Charles put himself at the head of a force of cowardly Warsaws who would not fight, with a brave fellow called Cudjoe Cheboe, king of Dinkera, and such troops as his own government supplied; and, through the failure of ammunition, was defeated by the enemy. The escape of Captain Ricketts, wounded, from this disaster, affords a horrid picture of the state of the country. He is wandering through the woods with a party of about fifty Warsaws, and he tells us:—

“About one o'clock there was an alarm of the enemy having discovered them; but it turned out to be only two stragglers of the Ashantees, who, perceiving a light, were induced to approach, thinking they might be some of their own people. They were immediately seized, and they insisted for a long time that they were Dinkeras; but a few of that tribe happening to be with the Warsaws, they without hesitation pronounced them to be Ashantees—on which every knife was drawn; and after getting from these two unfortunate persons all the information they could give, they immediately cut their throats. They then sounded their horns, and proceeded by another direction to the river Pra. About six o'clock they fell in with a party of the enemy, and a kind of running fight ensued, and many of them were killed. The Warsaws recovered several of their wives, and many of their children were found in the woods, some of the young infants in a dying state, and others with their brains dashed out; the Ashantees having obliged the women to throw away their children, in order to enable them to carry their plunder. At last the whole party arrived at a deserted village on the banks of the Pra.”

The fate of MacCarthy was more deplorable.

“It appeared by Mr. Williams's statement, that he left the field of action in company with Sir Charles MacCarthy, Mr. Buckle, and Ensign Wetherell; and after proceeding a short distance along the track to Assamacoow, they were suddenly attacked by a part of the enemy, who fired, and broke one of Sir Charles's arms; and that he immediately after received another wound in the chest, and fell. They then removed him under a tree, where all remained awaiting their fate, which they perceived to be inevitable. Immediately after, Mr. Williams received a ball in his thigh, which rendered him senseless; previous, however, to his falling, he saw Ensign Wetherell, who appeared also to have been wounded, lying close to Sir Charles, cutting with his sword at the enemy, as they were tearing the clothes off his friend and patron. Mr. Wil-

liams, upon recovering his senses, perceived that some Ashantees were attempting to cut off his head, and had already inflicted one gash on the back of his neck; luckily, however, at this crisis an Ashantee of authority came up, and recognising Mr. Williams, from whom he had received some kindness in the African company's time, withheld the hand of the savage: on Mr. Williams recovering his senses, he saw the headless trunks of Sir Charles MacCarthy, Mr. Buckle, and Ensign Wetherell. He was then taken prisoner and marched to Assamacoow, where the Ashantee army was encamped. During his captivity he was lodged under a thatched shed in the day-time, and locked up at night in the same room with the heads of Sir Charles, Mr. Buckle, and Ensign Wetherell, which, owing to some peculiar process, were in a perfect state of preservation. Sir Charles MacCarthy's presented nearly the same appearance as when he was alive. Mr. Williams was only allowed for his daily food, during his cruel confinement, as much snail-soup in the morning and evening as could be contained in the palm of his hand. Whenever they beheaded any of their prisoners, they obliged Mr. Williams to sit on one side of the large war-drum, while they decapitated the unfortunate captive on the other. It was said that Mr. Jones, a merchant and captain of the militia, fell into their hands alive; and because he had received five wounds, he was sacrificed to the fetish. It seems that every person, whether Ashantee or prisoner, who may be so unlucky as to receive that number of wounds in one action, is considered as belonging to the fetish. It was also reported that Mr. Raydon, captain in the Cape Coast militia, was taken prisoner; that he was deprived of his clothes; and because he could not keep pace with them, they put him to death. It was the intention of the Ashantees to have sent Mr. Williams to Coomassie; but he not being able to walk that distance, the ball still remaining in his thigh, they endeavoured to extract it by tying the thigh tight with strings, both above and below the part where it was lodged, so as to force it out. Mr. Williams declared that the pain was most excruciating; but not succeeding, he had reason to be apprehensive that they intended to put him to death, when the welcome intelligence of their intention to send him to Elmina was made known to him, after a captivity of two months.”

A Fantee prisoner added, “that the heart of Sir Charles MacCarthy was eaten by the principal chiefs of the Ashantee army, that they might imbibe his bravery; that his flesh had been dried, and with his bones divided among every man of consequence in the army, who constantly carried his respective proportion about with him, as a charm to inspire him with courage.”

It is dreadful to be informed, that these barbarians were enabled to wage the war and commit these monstrous acts in consequence of being supplied with gunpowder from an American vessel, and from the Dutch factory

at Elmina. In 1826, however, in another attempt against the coast, the Ashantees were signally defeated.

"Sir Neil Campbell arrived at Sierra Leone on the 22d of August, and sailed again in the *Lively*, early in September, for the Gold Coast. The *Lively* arrived in Cape Coast roads on the 19th of September, when his excellency learnt that an action with the Ashantees had taken place. The spot where the battle was fought is a plain, with small clumps of trees and underwood at intervals, about twenty-four miles north-east of British Accra, and nearly four miles south from a village called Dodowah, by which the natives distinguish the action. The King of Ashantee had pitched his tent there that morning. It was expected by every person who was acquainted with the Ashantee customs, that they would attack our lines on Monday, that being their prosperous day; accordingly some scouts brought intelligence about eight o'clock in the morning, that the enemy were in motion, and the king's drum was distinctly heard beating the war-march. Our line was in consequence formed with all possible expedition, extending about four miles east and west, which made a very picturesque appearance, from the various dresses and numerous flags, British, Danish, and Dutch, which waved in the air. Our men were decorated with large sea-shells suspended from their necks and shoulders before and behind, or were decked with a stripe of white calico to distinguish them from the enemy. Many of them fought with the cloth hanging from the barrels of their muskets, which added to the novelty and singularity of the scene. A dispute had taken place for several days previously among the kings of Akimboo and Dinkera and the queen of Akim, who should attack the king of Ashantee hand to hand: it was at last agreed, that the former should take up a position on our extreme right, and the two latter on our extreme left; but they were perhaps fortunately disappointed in this arrangement, as it was afterwards known that the King of Ashantee had received intelligence that there were white men in the camp and in the centre; he therefore selected that position to gain more honour. The officers and gentlemen in the battle were Lieut.-Col. Purdon, commanding the whole; Captains Hingston and Rogers; and Lieutenant Calder of the royal African corps; Dr. Young of the staff; Mr. Henry Richter, merchant, of Danish Accra, with his own men, amounting to about one hundred and twenty; Mr. J. W. Harrison, merchant, of British Accra, with his men, in number nearly the same; Mr. John Jackson, merchant, of Cape Coast, with Mr. Bannerman's men, about the same number—Mr. Bannerman being absent in England in bad health; and Mr. Hutchinson, merchant, of Annamaboe, with the Cape Coast artificers, volunteers; part of the townspeople; and Bynie, the native chief, whose people, with the others, amounted to one hundred and fifty men. These formed the centre, and were drawn up in line with the royal African corps, as a reserve on the position previously taken by Captain Hingston. The attack commenced from right to left, at about half-past nine o'clock. Several of the natives came insulting and abusing the centre as cowards; which being represented to the commanding officer, he directed them to advance about four hundred yards, when a heavy and effective fire took place. They went steadily forward amid the work of death, the enemy slowly and sulkily giving way. No prisoners were taken by the natives, but as they fell

they were put to death. Happy were they whose sufferings were short; in vain the gentlemen implored them to hold their hand, or at least to kill them outright; some were ripped up and cut across the belly, when, plunging their hands in, they took out the heart, pouring the blood on the ground as a libation to the good fortune of the cause; others, when they saw their own friends weltering in their blood, would give them a blow on the breast or head, to put an end to their misery. In many instances they dragged each other from the opposite ranks, and wrestled and cut one another in pieces; and fortunate was he whose knife first found out the vital part in his foe during the deadly grapple, though perhaps in his turn to be laid low by the same means. So hard were the enemy pressed at this moment, that a captain of consequence blew himself up, nearly involving some of the Europeans in destruction. The number of the various articles taken from the enemy was very great; but as none were allowed to leave the field, and as they had no spare hands, like the people of the native chiefs, they were thrown aside, when a cry arose that the Ashantees were getting between the centre and the left, which was the fact, as one party from the Dutch town, who supported the right of the Cape Coast people, had given way, and the enemy had rushed into their place. Besides this, the whole of the Danish natives, with their caboceers at their head, had fled early in the action, and the swallow-tailed banners of Denmark were seen safely flying in the rear. The centre were now obliged to fall back and relinquish every advantage, sustaining a galling fire in flank, and closely pressed with the mass of the enemy, who evidently were making a bold push to seize or bring down the whites. Capt. Rogers, who was advancing with a small piece of artillery, would have been taken, had he not very promptly distinguished them as the enemy. This was the crisis of the battle; Colonel Purdon advanced with the reserve and the rockets, a few of which thrown among the Ashantees occasioned the most dreadful havoc and confusion: the hissing sound when thrown, the train of fire, the explosion and frightful wounds they inflicted, caused them to suppose that they were thunder and lightning, called *moowman* in Fantee, by which name they are now known among the natives. Another party of Ashantees having attacked the left of King Cheboe of Dinkera, the Winnebahs fled at the first fire, nor halted till they reached Accra; but a few rounds of grape-shot, thrown over the heads of our people, restored the battle there also, Cheboe being already in advance with part of his people driving back his opponents. On the right, the battle was not for a moment doubtful; the King of Akimboo drove all before him, and penetrating to the King of Ashantee's camp, took them in flank; his path was marked by the column of smoke that rose in front, the short grass being dry, from our forces having bivouacked at the roots of the trees for two nights, together with extreme heat, caused it to take fire. The explosions of some Ashantee captains, who at intervals blew themselves up in despair, which was known by the smoke that arose over the trees, the shouts and groans of the combatants, with the burning grass, and the battle raging all around, formed no bad idea of the infernal regions. Fancy may indeed imagine, but it cannot describe such a scene of havoc and destruction, more resembling the wild fiction of an oriental tale, than one of absolute reality. The Danish natives, who had fled at nearly the first onset,

now perceiving the enemy to be repulsed by the rockets and grape-shot, advanced, and taking possession of the plunder, which was immense, deliberately walked off the field; they sent to request more ammunition, saying they had only received twenty rounds each from their own government; and when upbraided with their bad conduct, they said it was against their fetish to fire on a Monday. About one o'clock, the heads of the Ashantee chiefs began to be brought in. Several of the blood royal and principal captains were known by the residents; when the deaths of any of them were reported to the king, he offered up human sacrifices to their manes in the heat of the battle. Among the sad trophies of the day was supposed to be the head of Sir Charles MacCarthy, which was sent to England by Lieut.-Col. Purdon—it was taken by the Aquapim chief. The king carried it along with him as a powerful charm, and on the morning of the battle he poured rum upon it, and invoked it to cause all the heads of the whites on the field to lie beside it. The skull was enveloped in paper covered with Arabic characters, and a silk handkerchief; over all was a tiger-skin, the emblem of royalty. The whole of the Ashantee camp was taken, together with their baggage and gold; the amount of the latter was said to be very considerable, but the whites never could ascertain what the natives obtained. Towards the end of the day, a great many slaves or prisoners were taken by the natives, who subsequently sold them to slave-vessels to leeward of Accra, being satiated with the multitudes they had killed in the early part of the fight; and until it was dark, parties were coming in with plunder from every quarter. The troops lay on their arms all night, as it was not known but that the king, with his surviving friends, might make an attack upon us in despair, having been seen in front, wandering over the scene of his blighted ambition. Through the night, at intervals, some of our native allied chiefs struck their drums to some recitations, which were repeated along the line, and, as they died away, had a most pleasing effect, but were generally succeeded by deep wailings and lamentations from the glades in front of our position, apparently from some unhappy Ashantee women looking for their friends among the fallen. The loss of chiefs on our part was but small: Mr. Richter was wounded in the thigh early in the action, and obliged to leave the field, but his men did not follow the flying portion of their countrymen. Narboah, the captain-general of the Akimboos, the chief captain of the Queen of Akim, and Quashie Amonquah, chief of Esseeccomah, were the only persons of rank that we lost. The latter was regretted by every one, as several of the natives were always accusing him of treachery, and he was determined to shew in the day of battle his sincerity; he therefore made a bold attempt to seize the king's person, and to take him dead or alive, and even had his hand on the royal basket to pull him down, when he was shot in the neck and secured. The king upbraided him for his treachery, and ordered him to follow, which he refused; order was then given to decapitate him; a party of Cheboes attacked the king, but Amonquah was already killed, and his head, if they have preserved it, is the only trophy which they can exhibit. His brother Abaggy was wounded in the thigh, or, as he says, 'he would have made the king pay dear for his brother's head,' which was not doubted. The number of our forces, from the best information, amounted to eleven thousand.

three hundred and eighty with muskets; that of the enemy was estimated at ten thousand; and much of the fighting was with the knife. We calculated our loss at about eight hundred killed, and one thousand slightly wounded. The enemy, it is supposed, must have lost full five thousand men: a great many of their chief men were killed.

"The Queen of Akim, who evinced much activity in the war, is about five feet three inches in height, with an infantine look; her voice is soft, evidently modulated to interest her audience, but cracked, as a singer would express it, from constant use. She is an excellent beggar for munitions of war and distilled waters. Just before the attack she went along the line with a massive necklace of leaden bullets, and in her hand a gold enamelled cutlass, and she was afterwards in the hottest part of the action. To some of the gentlemen who called on her the day before, she said, among other things, 'Osai has driven me from my country because he thought me weak; but though I am a woman, I have the heart of a man.'"

This decisive battle led to a treaty, which was finally concluded in April last, when the humbled King of Ashantee paid several hundred ounces of gold as a pledge for his future good conduct, and also sent hostages to Cape Coast Castle.

Having finished the war, our author gives us a succinct view of the present state of the colony of Sierra Leone, of which the leading particulars shall appear in our next *Gazette*.

The Principles of English Composition; illustrated by Examples, with Critical Remarks. By David Booth, author of the "Analytical Dictionary." 12mo. pp. 351. London, 1831. Cochran and Pickersgill.

To blend pleasure with instruction is a most desirable object—an object seldom attained to so great a degree as it is in the little work before us. Grammar is a dry study, and composition one which demands much attention; yet Mr. Booth, while displaying a sound and rational knowledge of both subjects, and placing them clearly within the comprehension of his readers, has contrived, by means of well-selected examples and illustrations, to make his volume a very attractive literary miscellany, which may be perused with gratification, and remembered with advantage. Several of the chapters are reprinted from his excellent *Analytical Dictionary*; the rest is new—and every portion is deserving of high commendation.

Of the early and initiatory pages, we need say nothing farther than that they explain, in an able manner, the chief rules of syntax, construction, accent, emphasis, grammar, arrangement, metaphors, figures of speech and thought, and indeed all the branches into which language must be resolved, together with some of the phenomena of mind, which must be understood in order to constitute, not merely an accomplished, but an intelligible writer.

He then glances over the various kinds of poetry, and discusses them in a brief but masterly manner; but, again, we are at a loss to exhibit any specimen of the talent thus displayed; and we are, as it were, compelled rather to diversify our columns with one or two quotations of his quotations, than to shew the value of his original remarks and criticisms.

Treating of lyric poetry, he says: "Simple thoughts chanted to simple melodies are, no doubt, indigenous in every age and country;

and we may cite, in evidence, that what modern musicians understand by harmony was unknown to the Greeks, as it yet is to the Chinese. Song, as distinguished from duets and glees, is the effusion of an individual. The music must be adapted to a single voice; and if other tones are introduced, they must be completely subservient; otherwise 'the auditor is tempted to say as the Chinese did, (when 'God save the King' was played in parts), that the air might be very good, if the accompaniments would let it be heard.'"

Again, on pastoral poetry:—

"The truth is, that the poet lives in a region of his own creation. He takes his fictions for realities, and his imaginations for truths. The train of his thoughts are the illusions of his fancy; but they are powerful illusions, which lead his auditors spell-bound through enchanted ground, forgetful, for the moment, of that world to which they must return. The true poet, like the Pythian priestess, is in a state of frenzy while under the inspiration of the god; and it is only in the shortness of the fits of his delirium that he differs from the insane. Whatever may have been the previous stores of his mind, the revelrie of the maniac is too long continued to be coherent; and his lucid intervals are too few to enable him to mould his tale and correct its incongruities; in consequence of which his flights of fancy are lost to the world. The following stanzas, 'written at the York Retreat, by a young woman, who, when composing them, was labouring under a very considerable degree of active mania,' are strikingly illustrative of what we have here advanced:—

'To Melancholy.

Spirit of darkness! from yon lonely shade
Where fade the virgin roses of the spring,
Spirit of darkness! hear thy favourite maid
To sorrow's harp her wildest anthem sing.
Ah! how has love despoil'd my earliest bloom,
And flung my charms as to the wintry wind!
Ah! how has love hung o'er my trophied tomb
The spoils of genius and the wreck of mind!
High rides the moon the silent heavens along;
Thick fall the dews of midnight o'er the ground;
Soft steals the lover, when the morning song
Of waken'd warblers through the woods resound;
Then I with thee my solemn vigils keep,
And at thine altar take my lonely stand;
Again my lyre unstrung I sadly sweep,
While Love leads me up the dance with harp in hand.
High o'er the woodlands Hope's gay meteors shone,
And thro' thousands blest the ardent ray;
I turn'd,—but found Despair on his wild roam,
And with the demon bent my hither way.
Soft o'er the vale she blew her bugle horn—
'Oh! where, Maria,—whither dost thou stray?
Return, thou false maid, to the echoing sound!
I flew, nor heeded the sweet siren's lay.
Hail, Melancholy! to your lonely towers
I turn, and hail their time-worn turrets mine;
Where flourish fair the nightshade's deadly flowers,
And dark and blue the wasting tapers shine.
There, O my Edwin! does thy spirit greet
In Fancy's maze, thy loved and wandering maid;
Soft through the bowyer thy shade Maria meets,
And leads thee onward through the myrtle glade.
Oh! come with me, and hear the song of eve,
Far, sweeter far, than the loud shout of morn;
Lest to the pantings of the whispering breeze—
Dwell on past woes, or sorrows yet unborn.
We have a tale and song will charm these shades,
Which cannot rouse to life Maria's mind,
Where Sorrow's captives halt thy once-loved maid,
To joy a stranger, and to grief resign'd.
Edwin, farewell! go, take my last adieu:
Ah! could my bursting bosom tell thee more!
Here, parted here, from love, from life, and you,
I pour my song as on a foreign shore.
—But stay, rash youth! the sun has climbed on high,
The night is past, the shadows all are gone;
For lo! Maria breathe the parting sigh,
And waft thy sorrows to the gales of morn.'

The inaccuracy of some of the rhymes of the preceding poem might easily be amended; but, what is more to our present purpose, the con-

fusion of ideas is apparent. Nevertheless, a poetical enthusiasm breathes through every stanza, which probably was never felt by this unfortunate lady in her better days. Wildness of manner, however, is not inconsistent with the occasional flights of the soundest intellect."

And last of all, we think the following may possess novelty for ninety-nine out of a hundred readers.

The Empire of Poetry, by Fontenelle.—"This empire is a very large and populous country. It is divided, like some of the countries on the continent, into the higher and lower regions. The upper region is inhabited by grave, melancholy, and sullen people, who, like other mountaineers, speak a language very different from that of the inhabitants of the valleys. The trees in this part of the country are very tall, having their tops among the clouds. Their horses are superior to those of Barbary, being fleetest than the winds. Their women are so beautiful as to eclipse the star of day. The great city which you see in the maps, beyond the lofty mountains, is the capital of this province, and is called Epic. It is built on a sandy and ungrateful soil, which few take the trouble to cultivate. The length of the city is many days' journey, and it is otherwise of a tiresome extent. On leaving its gate we always meet with men who are killing one another; whereas, when we pass through Romance, which forms the suburbs of Epic, and which is larger than the city itself, we meet with groups of happy people who are hastening to the shrine of Hymen. The Mountains of Tragedy are also in the province of Upper Poetry. They are very steep, with dangerous precipices; and, in consequence, many of its people build their habitations at the bottom of the hills, and imagine themselves high enough. There have been found on these mountains some very beautiful ruins of ancient cities, and, from time to time, the materials are carried lower down to build new cities; for they now never build nearly so high as they seem to have done in former times. The Lower Poetry is very similar to the swamps of Holland. Burlesque is the capital, which is situated amidst stagnant pools. Princes speak there as if they had sprung from the dunghill, and all the inhabitants are buffoons from their birth. Comedy is a city which is built on a pleasant spot; but it is too near to Burlesque, and its trade with this place has much degraded the manners of its citizens. I beg that you will notice in the map those vast solitudes which lie between High and Low Poetry. They are called the Deserts of Common Sense. There is not a single city in the whole of this extensive country, and only a few cottages scattered at a distance from one another. The interior of the country is beautiful and fertile; but you need not wonder that there are so few who choose to reside in it, for the entrance is very rugged on all sides, the roads are narrow and difficult, and there are seldom any guides to be found who are capable of conducting strangers. Besides, this country borders on a province where every person prefers to remain, because it appears to be very agreeable, and saves the trouble of penetrating into the Deserts of Common Sense. It is the province of False Thoughts. Here we always tread on flowers,—every thing seems enchanting. But its greatest inconvenience is, that the ground is not solid,—the foot is always sinking in the mire, however careful one may be. Elegy is the capital. Here the people do nothing but complain; but it is said that they find a pleasure in their com-

plaints. The city is surrounded with woods and rocks, where the inhabitant walks alone, making them the confidants of his secrets,—of the discovery of which he is so much afraid, that he often conjures those woods and rocks never to betray them. The Empire of Poetry is watered by two rivers. One is the river Rhyme, which has its source at the foot of the Mountains of Reverie. The tops of some of these mountains are so elevated that they pierce the clouds: those are called the Points of Sublime Thought. Many climb there by extraordinary efforts; but almost the whole tumble down again, and excite, by their fall, the ridicule of those who admired them at first without knowing why. There are large platforms almost at the bottom of these mountains, which are called the Terraces of Low Thoughts. There are always a great number of people walking upon them. At the end of these terraces are the Caverns of Deep Reverie. Those who descend into them do so insensibly, being so much enwrapped in their meditations that they enter the caverns before they are aware. These caverns are perfect labyrinths, and the difficulty of getting out again could scarcely be believed by those who have not been there. Above the terraces we sometimes meet with men walking in easy paths, which are termed the Paths of Natural Thoughts; and these gentlemen ridicule, equally, those who try to scale the Points of Sublime Thoughts, as well as those who grovel on the terraces below. They would be in the right if they could keep undeviatingly in the Paths of Natural Thoughts; but they fall almost instantly into a snare, by entering into a splendid palace which is at a very little distance,—it is the Palace of Badinge. Scarcely have they entered, when, in place of the natural thoughts which they formerly had, they dwell upon such only as are mean and vulgar. Those, however, who never abandon the Paths of natural thoughts are the most rational of all. They aspire no higher than they ought, and their thoughts are never at variance with sound judgment. Besides the River Rhyme, which I have described as issuing from the foot of the mountains, there is another, called the River of Reason. These two rivers are at a great distance from one another; and as they have a very different course, they could not be made to communicate except by canals, which would cost a great deal of labour. For these canals of communication could not be formed at all places, because there is only one part of the River Rhyme which is in the neighbourhood of the River Reason; and hence many cities situated on the Rhyme, such as Roundelay and Ballad, could have no commerce with the Reason, whatever pains might be taken for that purpose. Further, it would be necessary that these canals should cross the Deserts of Common Sense, as you will see by the map; and that is almost an unknown country. The Rhyme is a large river, whose course is crooked and unequal, and, on account of its numerous falls, it is extremely difficult to navigate. On the contrary, the Reason is very straight and regular, but it does not carry vessels of every burthen. There is in the Land of Poetry a very obscure forest, where the rays of the sun never enter. It is the forest of Bombast. The trees are close, spreading and twined into each other. The forest is so ancient that it has become a sort of sacrilege to prune its trees, and there is no probability that the ground will ever be cleared. A few steps into this forest and we lose our road, without dreaming that we have gone astray. It is full of imper-

ceptible labyrinths, from which no one ever returns. The Reason is lost in this forest. The extensive province of Imitation is very sterile,—it produces nothing. The inhabitants are extremely poor, and are obliged to glean in the richer fields of the neighbouring provinces; and some even make fortunes by this beggarly occupation. The Empire of Poetry is very cold towards the north; and, consequently, this quarter is the most populous. There are the cities of Anagram and Acrostic, with several others of a similar description. Finally, in that sea which bounds the States of Poetry, there is the Island of Satire, surrounded with bitter waves. The salt from the water is very strong and dark coloured. The greater part of the brooks of this island resemble the Nile in this, that their sources are unknown; but it is particularly remarkable that there is not one of them whose waters are fresh. A part of the same sea is called the Archipelago of Trifles: the French term it *L'Archipel des Bagatelles*; and their voyagers are well acquainted with those islands. Nature seems to have thrown them up in sport, as she did those of the *Ægean Sea*. The principal islands are the Madrigal, the Song, and the Improptu. No lands can be lighter than those islands, for they float upon the waters."

Again we warmly recommend this volume to the English student, and indeed to every class of readers.

Introductory Lectures on Political Economy.
By Richard Whately, D.D., &c. &c. 8vo.
pp. 238. London, 1831. B. Fellowes.

WE recollect the surprise that was excited when Dr. Whately was appointed to the chair of political economy. "He is eminent," said every body, "perhaps pre-eminent, in logic, rhetoric, and theology; but what does he know of the balance of trade, or the expansiveness of paper currency? Oriel College is a very good place to study syllogisms, metaphors, and texts; but who ever saw there a bill of exchange, or an invoice? The learned Principal has, without doubt, read many catechisms; but was the 'Catechism of the Corn-laws' among them? We do not question his knowledge of Aristotle; but can he pass an examination in Ricardo?"

To these and similar questions, the volume at the head of this article is a satisfactory answer. Not that it contains a great deal on political economy that is new or that is recondite; but it certainly does imply a perfect acquaintance with that science, so far as it is now understood. At the same time, the whole work is full of proofs that other and very different subjects have been the principal objects of the author's attention. The moral associations of a divine, and the intellectual habits of a logician, shew themselves throughout; and it is curious to contrast political economy in the hands of an author so qualified, with her form when dressed by piety without logic, or by logic without the appearance of any deep-seated feelings. Mr. Ricardo's great work is eminently argumentative—the reader always feels that he is within the province of reason; but it is mere reason. Society, under his hands, seems an oak stripped of its leaves; the ramifications are distinctly apparent, but the bloom and the verdure are wanting. His pictures seem to have been all painted in January, when, melancholy, they resemble

"The bleak wintry scene,
Sad, though unclouded—dismal, though serene."

When more cheerful—

"Then gaily shines the wealthy land,
But all is glistering show,
Like the idle gleam that December's beam
Can dart on ice and snow."

Dr. Whately has, besides his own fervour, all the acute reasoning of Ricardo; and he has, moreover, a fertility of illustration and a force of exposure, a power to clothe a truth and to strip naked a fallacy, equalled by scarcely any writer whatever. The following passages, taken almost at random, will illustrate many of our remarks.

"Men are so formed as (often unconsciously) to reason, whether well or ill, on the phenomena they observe, and to mix up their inferences with their statements of those phenomena, so as, in fact, to theorise (however acutely and crudely) without knowing it. If you will be at the pains carefully to analyse the simplest descriptions you hear of any transaction or state of things, you will find that the process which almost invariably takes place is, in logical language, this; that each individual has in his mind certain major premises or principles, relative to the subject in question; that observation of what actually presents itself to the senses supplies minor premises; and that the statement given (and which is reported as a thing experienced) consists in fact of the conclusions drawn from the combinations of those premises. Hence it is that several different men, who have all had equal, or even the very same, experience, i. e. have been witnesses or agents in the same transactions, will often be found to resemble so many different men looking at the same book; one, perhaps, though he distinctly sees black marks on white paper, has never learned his letters; another can read, but is a stranger to the language in which the book is written; another has an acquaintance with the language, but understands it imperfectly; another is familiar with the language, but is a stranger to the subject of the book, and wants power, or previous instruction, to enable him fully to take in the author's drift; while another again perfectly comprehends the whole. The object that strikes the eye is to all of these persons the same; the difference of the impressions produced on the mind of each is referable to the differences in their minds. And this explains the fact, that we find so much discrepancy in the results of what are called experience and common sense, as contra-distinguished from theory. In former times men knew by experience, that the earth stands still, and the sun rises and sets. Common sense taught them that there could be no antipodes, since men could not stand with their heads downwards, like flies on the ceiling. Experience taught the King of Bantum that water could not become solid. And (to come to the consideration of human affairs) the experience and common-sense of one of the most observant and intelligent of historians, Tacitus, convinced him, that for a mixed government to be so framed as to combine the elements of royalty, aristocracy, and democracy, must be next to impossible, and that if such a one could be framed, it must inevitably be very speedily dissolved.

"Sed quid sequar? aut quæm?"

In points wherein all men agree, they may possibly be all in the right; but where they are utterly at variance, some at least must be mistaken. The illustrations, however, which I have given from other subjects are extremely inadequate; for I know of none in which so much theory, and that most paradoxical theory, has been incorporated with experience, and passed off as a part of it, as in matters concerning political economy. There is no other

in which the most subtle refinements of a system (to waive, for the present, the question as to its soundness) have been, not merely admitted, but admitted as the dictates of common sense. Many such paradoxes as I allude to (whether true or false, we will not now consider), you may meet with in a variety of authors of the present, but much more of the last and preceding centuries; and may not unfrequently hear in conversation. That a state of war is favourable to national prosperity—that it is advantageous to a nation to export goods of more value than it receives in return—that we are losers by purchasing articles where we can get them cheapest—that it is wise for a people to pay, on behalf of a foreign consumer, part of the price for which he purchases their commodities—that it is better to obtain the same results by much labour than by little—that a man is a benefactor to the community by building himself a splendid palace—and many other doctrines that are afloat, may be truths, but they are at least paradoxical truths; they may be abstruse and recondite wisdom—at any rate, they are abstruse and recondite—they may be sense, but at least they are not common sense."

We have room for only another extract, in which perhaps more is meant than meets the eye.

"It will be sufficient for our present purpose to have merely pointed out to you the considerations which deserve your attention, and to have slightly hinted at the circumstances which may occasion one community to avail itself better, and another worse, of the advantages which wealth and civilisation afford, with a view to moral improvement. It is plain, that if of two communities equal in wealth, the one were to make the wisest, the other the most unwise, use of this advantage, their moral conditions would be immensely different; though it would be not the less true, that a real advantage had been placed within the reach of both. Let it be supposed, for instance, that in the one the higher classes were anxiously occupied in diffusing the blessings of education among the people, and had provided adequately for the instruction both of children and adults; taking care that the most essential points of education should occupy the foremost place, and the next to them the next; and exercising the judgment of a cultivated understanding as to the relative importance of each, and as to the best modes of conveying instruction in each—let us suppose their wealth to be employed in making an adequate provision for a sufficient number of respectable religious teachers, and of places of worship, to meet fully the wants of their population:—let the schools, again, for the education of the children of their own class, be conducted on a similar principle; making sound religious instruction, and the cultivation of sincere and practical religious habits, the primary object of attention, and placing every other branch of education in its proper order; taking especial care not to let showy accomplishments become a readier path to distinction than substantial cultivation of the understanding; and guarding most sedulously against that besetting danger, the introduction into their schools of a wrong code of morality—a false point of honour, distinct from, or at variance with, Christian principle:—let their universities, again, and other institutions for ulterior education, be so regulated as to exhibit in the disposition of their endowments the full efficiency of well-directed wealth in carrying on a plan of manly instruction, of which the foundations should have been laid in earlier years;

not sending forth into the world, to assume the office of legislators and directors of public affairs, such as shall have completed their education without having even begun the study of the subjects with which they are to be conversant, except so far as they may have taken upon trust some long-venerated prejudices; but men qualified for the high profession they are to follow, by a preparation analogous to what is required even of the humblest artisan:—let these objects, and such as these, occupy the attention, and employ the resources, of an enlightened and opulent community—let them be, I do not say perfectly attained (since perfection is not to be expected of man,) but at least sedulously aimed at, proposed as objects—thought of—(and this surely is no impossibility);—and let the other community, perversely or negligently, pursue, in all or in many of these points, an opposite course; and it is easy to pronounce which of the two is employing its wealth with the better prospect of success, in attaining superior objects;—which is likely to improve, and which to stand still or to fall back, in respect of true national greatness;—which is the more advanced, and has the fairer prospect of advancing, towards a higher and better kind of civilisation than any nation has hitherto exhibited. And yet each party shall have received perhaps the very same number of talents, though the one promises fair to double them, and the other is in danger of having them taken away."

THE GARRICK CORRESPONDENCE.

[Concluding Notice.]

WE hinted that we might probably, out of compliment to the bigness of this book, bestow upon it another notice; and the dearth of novelties induces us to do so, ere we lay it on the shelf to rest. A rather lively letter from Dr. J. Brown, dated Newcastle, Oct. 27th, 1765, besides other matter, gives us intimation that Garrick's contemporary correspondents entertained some idea of the future publication of their letters, from the habits and character of that gentleman.

"My dear sir,—Visits and engagements have prevented me from sooner answering yours. I am glad to hear of your recovery from your illness, and hope you will have no occasion for your epitaph these fifty years, except to give your friends the pleasure of reading it, which I desire you will do the next time you write to me. I think you were a little quick two or three times in your last letter, which I do not much dislike in a friend, by the by, especially when there is not much reason for it, as I look upon it as a proof of his regard—at least it is so with me. I have now and then a little anger in reserve for my friends; I have always contempt in abundance for my enemies, whether they be mock patriots at Stowe, or ballad-makers in Grub Street. I had seen the ballad long before in a newspaper, and looked upon it as one of those many honours of late conferred on me by the scribblers of the times. On some future occasion, I will write to you more particularly about the affair of Stowe, and will desire you to lay by the letter, to be put into a collection which will hereafter appear in print. * * * I have seen some extracts from Johnson's preface to his *Shakespeare*. In my humble opinion, he is as improper a critic for that great poet as any that have yet appeared. No feeling nor pathos about him! Altogether upon the high horse, and blustering about imperial tragedy! How is this work relished by the public?"

We find several other of Garrick's correspondents expressing similar opinions upon Johnson's work.

There is a long dispute between him and the elder Colman, respecting their relative shares in the *Clandestine Marriage*. In one of his letters, the latter says—

"I understood it was to be a joint work, in the fullest sense of the word; and never imagined that either of us was to lay his finger on a particular scene, and cry, 'This is mine!' It is true, indeed, that by your suggestion, Hogarth's proud lord was converted into Lord Ogleby, and that, as the play now stands, the levee scene at the beginning of the second act, and the whole of the fifth act, are yours; but in the conduct as well as dialogue of the fourth act, I think your favourite, Lord Ogleby, has some obligations to me. However, if that be the part of the play which you are desirous to rest your fame upon, I would not have differed with you about the glory of it; but cannot help being hurt at your betraying so earnest a desire to winnow your wheat from my chaff, at the very time that I was eager to bestow the highest polish on every part of the work, only in the hopes of perpetuating the memory of our joint labours, by raising a monument of the friendship between me and Mr. Garrick."

There may be some interest in preserving the literary history of a sterling joint comedy; but what, at the distance of more than half a century, could render it advisable to publish such rubbish as the following?—it is from Colman at Paris:—

"I have not been well since I left you, and yesterday se'nnight had so serious an attack of a very bad sort of fever, that Dr. Genn's melancholy face looked ten times more melancholy than usual. The fever is off; but the devil has got into my bowels, as well as poor Thomas's, and makes a little hell of my inside. Add to all this, I have had another boil, which, falling on my thigh, was inflamed by my breeches, and has brought me under the hands of a surgeon. Such is the present state of your friend."

In a subsequent letter we have two facts stated, which we quote; the first, as shewing the Gallic propensity to pillage and disguise English works of art; the other, as mentioning a publication, a copy of which we should like to possess.

"There hang out here in every street pirated prints from Reynolds's picture of you, which are underwritten *L'homme entre la Vice et la Vertu*." (Garrick between Tragedy and Comedy!!)

"Do you know any thing of the quarrel between David Hume and Rousseau? It makes a great noise here. Baron d'Holbach has had three letters from Hume about it, who, it seems, is to publish a pamphlet containing the whole story. Suard seems vastly hurt at Smollett's letters, and I suppose will give a suitable account of them in the *Gazette Littéraire*."

We have observed that a too considerable portion of these letters is occupied with angry theatrical squabbles, which are now of no consequence, except it may be to shew that the stage and its professors are always the same,—torn by rivalry, jangling, and intrigue. Some of the most characteristic epistles are from Gainsborough the painter; and it is a striking proof of the manners of the age to see that not

* That this may not be thought singular in its elegance, we quote the beginning of a letter from Garrick himself to his brother. "In the first place, I am grown so fat as a hog; and you may measure with me at my return without tucking in your guts till your face is as red as bull-beef."

only this rough artist, but Dr. Hoadly,* as well as Colman and Garrick, (whose style we have already exhibited), and others, were guilty of the most gross and vulgar language, only to express not less gross and vulgar ideas. We cite Gainsborough:—

"Bath, July 17, 1768.

"Dear sir,—I, as well as the rest of the world, acknowledge your riches, and know your princely spirit; but all will not do; for, as I told you before, I am already overpaid for that shabby performance; and if you have a mind to make me happier than all the presents London can afford, you must do it by never thinking yourself at all in my debt. I wished many years for the happiness of Mr. Garrick's acquaintance, and pray, dear sir, let me now enjoy it quietly; for, sincerely and truly, I shall not be easy if you give way to any of your romantic whimsies: besides, d—n it, I thought you knew me too well, you who can read hearts and faces both at a view, and that at first sight too. Come, if you will not plague me any more upon this frightful subject, I will tell you a story about *first sight*. You must know, sir, whilst I lived at Ipswich, there was a benefit concert in which a new song was to be introduced; and I being steward, went to the honest cabinet-maker, who was our singer instead of a better, and asked him if he could sing at sight, for that I had a new song with all the parts wrote out. 'Yes, sir,' said he, 'I can.' Upon which I ordered Mr. Giardini of Ipswich to begin the symphony, and gave my signal for the attention of the company; but behold, a dead silence followed the symphony instead of the song: upon which I jumped up to the fellow: 'D—n you, why don't you sing? did not you tell me you could sing at sight?' 'Yes, please your honour, I did say I could sing at sight, but not *first sight*.'"

"Bath, 22d August, 1768.

"Dear sir,—I doubt I stand accused (if not accused) all this time for my neglect of not going to Stratford, and giving you a line from thence as I promised; but, Lord! what can one do such weather as this—continual rains? My genius is so damped by it, that I can do nothing to please me. I have been several days rubbing in and rubbing out my design for Shakespeare, and d—n me if I think I shall let it go or let you see it at last. I was willing, like an ass as I am, to expose myself a little out of the simple portrait way, and had a notion of shewing where that inimitable poet had his ideas from, by an immediate ray darting down upon his eye turned up for the purpose; but G—d d—n it, I can make nothing of my ideas, there has been such a fall of rain from the same quarter. You shall not see it, for I will cut it before you can come. Tell me, dear sir, when you purpose coming to Bath, that I may be quick enough in my motions. Shakespeare's bust is a silly smiling thing, and I have not sense enough to make him more sensible in the picture; and so I tell ye, you shall not see it. I must make a plain picture of him standing erect, and give it an old look, as if it had been painted at the time he lived; and there we shall fling 'em, dam' me. Poor Mrs. Pritchard died here on Saturday night at eleven o'clock; so now her performances being no longer present to those who must see and hear before they can believe, will, you know, my dear sir.—But I beg pardon, I forgot—Time puts all into his fob, as I

do my time-keeper—*watch* that, my dear. Who am I but the same, think you? T. G. "Impudent scoundrel!" says Mr. G—k. 'Blackguard!'"

There is a good deal of curious portraiture in the following from Murphy, touching the Westminster election, 1769.

"Next Thursday, it is expected, will be a busy day. Large sums are actually insured upon Lutterell's life; but he is game, and will face the danger boldly. Tiger Roach (who used to bully at the Bedford Coffee-house, because his name was Roach) is set up by Wilkes's friends to burlesque Lutterell and his pretensions. I own I do not know a more ridiculous circumstance than to be a joint candidate with the Tiger. O'Brien used to take him off very pleasantly; and perhaps you may, from his representation, have some idea of this important wight. He used to sit at a table all alone, with a half-starved look, a black patch upon his cheek, pale with the idea of murder, or with rank cowardice, a quivering lip, and a downcast eye, which, if it was ever raised, was raised only like poor Dido's (I do not mean Reed's Dido, but Virgil's)—

'Quæsitæ coelo lucem, ingemuitque reperta.'

So far for the description of my hero. In that manner he used to sit alone; and his soliloquy, interrupted now and then with faint attempts to throw off a little saliva, was to the following effect: 'Hut! hut!—a mercer's 'prentice with a bag wig; d—n my s—l, if I would not *skiver* a dozen of them like larks! Hut! hut! I don't understand such airs!—I'd cudgel him back, breast, and belly, for three skips of a louse!—How do you do, Pat? Hut! hut! God's blood—Larry, I'm glad to see you—Prentices!—a fine thing indeed!—hut! hut! How do you do, Dominick? D—n my s—l, what's here to do?' These were the meditations of this agreeable youth. From one of these reveries he started up one night, when I was there, called a Mr. Bagnell out of the room, and most heroically stabbed him in the dark, the other having no weapon to defend himself with. In this career the Tiger persisted, till at length a Mr. Lennard brandished a whip over his head, and stood in a menacing attitude, commanding him to ask pardon directly. The Tiger shrank from the danger, and with a faint voice pronounced, 'Hut! what signifies it between you and me?—well! well! I ask your pardon!' 'Speak louder, sir; I don't hear a word you say.' And indeed he was so very tall, that it seemed as if the sound sent feebly from below could not ascend to such a height. This is the hero who is to figure at Brentford. Some dreadful consequences, I fear, will happen there. I this moment see an advertisement in the papers, requesting votes for my friend the sergeant; being a person every way qualified to make the Bill of Rights perfectly easy, and let it sleep in its bed, as it has done ever since the revolution. I do not mean that these are the exact words of the advertisement. I have not seen him; but if he is in earnest, I most heartily join with you in wishing him success. Your letter to the reverend elector of Middlesex went by the post the very day I received it. Shall I tell you a piece of bad news? I was counsel last Saturday at the Old Bailey against a man who stood indicted for publishing a libel, in which it was most virulently said, that Lord M—d had long disgraced the public justice of this kingdom. The law and the fact were clear; and yet in three minutes a London jury came into court and most deliberately brought in a verdict, not guilty. Baron Smith, who tried the fellow, was amazed. 'Pray, gentle-

men, do you collect from the evidence that he did not publish the pamphlet?' 'My lord,' says the foreman, 'we have considered the whole, and that is our verdict.' Pleasant times these are! the brightest talents are no security against calumny and malice."

By way of variety, we conclude with a rhyming application for a loan.

"Mr. Bickerstaff to Mr. Garrick.

Still, dear sir, so much good-nature
You have shewn to me your creature,
That 'tis now a thing of course,
And you are my first resource.
Fifty times, as I suppose,
I have troubled you in prose;
Let me, if I can, a while
Strive at least to change my style:
Change of style is all my aim,
For my subject is the same:
And in prose or verse a craver,
I must write to beg a favour.
'Well!' cry you with peevish brow,
'What the plague's the matter now?
Tear'd and worried at this rate:
What's enclosed here—after date?
Promise in six months to pay
Griffin—ay, this is his way!
Every now and then to send me:
To these Irishmen commend me!
But if in again I'm drawn,
Next he'll send his brogues to pawn,
And expect me at his need:
Fifty pounds!—not I indeed.
Hark'e, George, come hither quick,
Give this paper back to Bick;
Tell him that I gladly would
Do him any sort of good;
But demand upon demand,
Forces me to stop my hand;
And in short—(but don't be rough)—
Say I can't, and that's enough.'
Thus, dear sir, however I
Your good-nature mean to try,
'Tis not but I know in fact
How your judgment ought to act;
And whatever my success,
I am not obliged the less:
But while memory endures,
Shall remain for ever yours."

Wakefield on the Punishment of Death.

[Second Notice.]

WE return to this volume, with some degree of regret at having been obliged to postpone our review of its contents so long.

The scene of the recorder's report is well described, and the painting of a condemned sermon masterly. We select a portion of each.

"Generally, the recorder's report reaches the prison late at night. If there be any convicts in the school under sentence of death, all the boys in that ward are made to sit up during the night when the report is expected. About midnight the ordinary, attended by some officers of the sheriff, enters the school, dressed in his canonicals, and calls over the names of those under sentence of death. They step forth from the crowd, three of them, let us suppose, of the respective ages of fourteen, twelve, and ten. The ordinary, in his most solemn tone, says—'I am happy to inform you, A. B., and you, C. D., and you, E. F., that your cases have been taken into consideration by the king in council, and that his majesty has been mercifully pleased to spare your lives.' Instantly the boys fall on their knees and recite a thanksgiving to God and the king for the mercy graciously vouchsafed to them. To an uninstructed observer this sight might be very edifying; but to those engaged in the scene it is, in truth, only a mockery. The whole scene is got up betwixt the ordinary, the schoolmaster, and the boys,—the ordinary instructing the schoolmaster, and the schoolmaster instructing the boys, as to the part which these last are to play in the farce. The boys, amongst themselves, will recite the whole scene beforehand; sometimes giving it a different turn, by causing one of themselves, who plays the ordinary, to say, that the king has

* Refer to p. 525 for a very severe, but very coarse epigram, by this divine.

ordered the law to take its course; when those who play the convicts will act the most violent distress. Of course, the idea of what they are always made to profess, viz. gratitude to God and the king, never enters their heads; since every one is convinced that, as to these children, there never has been a question of danger. It is curious, however, to observe the satisfaction of the boys who are distinguished by taking a part in this ceremony. Their pride appears to be gratified by the distinction; and they have just the same air of agreeable excitement and self-importance, for days before the scene takes place, as marks a Westminster boy when he is about to be distinguished by acting in public. The other boys, waiting for trial or sentenced to transportation, envy those who are to kneel and give thanks to God and the king; whilst the whole party look forward to the midnight mockery as likely to be very amusing,—‘to make,’ in their own language, ‘a good bit of fun.’ That they should be so easily amused is not surprising, when one considers the monotony of a prison life.”

But the ceremony of the condemned sermon is the most horrid mockery in all this fatal drama.

“In the centre of Newgate there is a chapel, which will contain all the inmates of the prison. The duties of the chapel are performed by the ordinary, a clergyman of the established church. Every prisoner, except those who are sick and those who act as servants in the prison, attends the chapel once a-day during the week for about half an hour, and twice on Sundays, when the ordinary church service is performed, and a sermon is delivered to the prisoners. In the chapel, as elsewhere, there is some classification of the prisoners. A gallery to the south is given to the women, who are screened by a curtain. The opposite gallery is usually filled by capital convicts, whose sentences have been remitted, and others under sentence of transportation. Beneath the two galleries sit the mass of prisoners for trial; and between these, in the body of the chapel, other prisoners for trial, of what is called ‘the more respectable class’—that is, persons who, arriving at the prison well-dressed and strangers to the keeper, are placed in a yard by themselves—as well as the schoolmaster and his boys, who sit round the communion-table opposite to the pulpit. In the midst of the chapel is a large pew painted black, which is called the condemned pew. Those who sit in it are visible to the whole congregation, and still more to the ordinary, whose desk and pulpit front the centre of the condemned pew, within a couple of yards of it. On either side of the pulpit is a small gallery, one called the sheriff’s and the other the keeper’s, both of which are occasionally occupied by strangers. The condemned pew, it will be understood, is the seat of prisoners under sentence of death. It is more or less filled by the results of every Old Bailey session, and is emptied by each decision of the council, which consigns some of those who had occupied it to the hulks, and the rest to the gallows. Let it be supposed that the condemned pew has been lately emptied, and that a new batch of convicts has just been sentenced to death. On the following morning all the inhabitants of the cells attend the service, and sit in the condemned pew. Their demeanour on the occasion, as well as that of the other prisoners, is highly instructive. In that of the mass of prisoners, one observes an expression of pity and respect towards the convicts; but that of the convicts shews many differences of feeling. Some tremble, and sigh or weep;

some swagger to their places, tossing their heads, smiling, nodding to their friends, and pretending to glory in the distinction of their danger; others appear stupefied, creeping into the pew, looking around them vacantly, as if unconscious of their state; and some, again, really behave with the most perfect, I mean with real composure, appearing, as they really are at the time, proud of the distinction of being amongst the condemned, but without any admixture of fear,—since these last are either boys whose youth they know protects them, or men convicted of offences, such as returning from transportation, which are never punished with death—or criminals so hardened by constant contemplation of death by the hangman, that they can look forward to it as their own fate with comparative indifference. The entrance of a new batch of convicts into the condemned pew creates some sensation amongst the other prisoners, and produces a display of various feelings amongst the condemned themselves. But after the day when the condemned pew is refilled, a stranger visiting the chapel would be at a loss to distinguish the capital convicts from the great mass of prisoners for trial. If, however, he were to attend the chapel after an interval of some weeks, he would observe a striking change in the physical condition of most of the capital convicts. In several instances I have seen brown hair turned gray, and gray white, by a month of suspense such as most London capital convicts undergo. In the same short period the smooth face of a man of twenty-five becomes often marked with decided wrinkles on the forehead, and about the eyes and mouth; and, in certainly three cases out of four, one month of the cells of Newgate causes a great diminution of flesh over the whole body. ‘How thin he grows!’ is the common remark of the other prisoners, when speaking of one who has passed a month in the condemned pew. But except these changes in the physical state of persons under sentence of death, their appearance in the condemned pew presents nothing remarkable after the first day or two, when the novelty of their situation has worn off. At length the suspense of the majority is ended by the decision of the council; and these on the following day appear in a gallery of the chapel, placed in the front row, for the purpose, I conclude, of more fully seeing and being seen by their late comrades, who still remain in the condemned pew. On first meeting in the chapel after their separation, the two parties generally regard each other with fixed attention, and are closely watched by the rest of the congregation. What their respective feelings may be on the occasion, I pretend not to divine; but having witnessed the scene more than twenty times, I can form some guess at the feeling which it excites in the other prisoners. My own strongest sentiment on these occasions was one of anger—of that sort of anger which is commonly produced by witnessing gross injustice. One sees twenty-five fellow-creatures, who yesterday were all under sentence of death—twenty of them are saved, and five are utterly condemned. Are the five the most guilty? By no means. Perhaps two or three out of the five are within a degree of being the least guilty, whilst half of the twenty are the most guilty. But guilty in what respect?—in the eye of the law? No—for in the eye of the law they are all equally guilty. How then?—why, in respect to the degree of injury which the crime they have committed inflicts on society; by which rule alone ought to be measured, and in point of fact is mea-

sured, the anger of society towards criminals. Here, then, we see left for execution an ignorant creature, who, in some measure pressed by hunger, has stolen a sheep; or a broken tradesman, who, in the hope of retrieving his affairs, has passed a forged acceptance for 20*l.*, firmly intending to ‘take up’ the bill, and therefore not to commit a robbery; whilst there is snatched from death a notorious hardened burglar, a criminal by trade, whose every crime tended to murder. By whom was the selection made? Look back, reader, to the account of the fourth trial, and then say whether a sight like this would not rouse your indignation? Just, I do believe, as there is gross injustice in every decision of the privy council, so every separation of capital convicts who are to be saved, from those who are to be hanged, produces in the minds of those who witness the separation, a strong feeling of anger—a feeling which, considering who the persons are in whose breasts it is excited, soon becomes desperation; the very worst state of mind for any one, and the last, therefore, which it is the true object of punishment to excite amongst the criminals of society. In a desperate mood the prisoners in Newgate are called to pray for all their fellow-creatures, and ‘especially for those now awaiting the awful execution of the law.’ These words are introduced into every morning service between the decision of the council and the execution of those whom it has condemned. I would not undervalue the power of religion for the reformation of criminals, if it were used in conjunction with a rational and just system of punishment; but used as it is, in conjunction with gross injustice, and even as part of an act which that very religion describes as the greatest of crimes, the whole scene becomes a mockery equally of reason and religion. Murderers about to be executed do not pass through any religious ceremonies; they are not prayed for by their fellow-prisoners; and if they have the benefit of religious offices, that consolation is bestowed on them in the strictest privacy! And why? The answer I have always received is, that it would be wrong to *show* the least tenderness towards a murderer, and still more wrong to excite in his fellow-prisoners a sentiment of compassion and sympathy, by causing them to pray for him. Then why show tenderness, and excite the sympathy of criminals generally towards certain other criminals on whom you inflict the punishment awarded to the murderer? What is the object of your distinction? It has no object. From the moment that a prisoner enters the cells of Newgate, no pains are spared to excite in him a strong sentiment of religion; and this course is pursued towards all, without distinction, who are considered to be in danger. I doubt very much whether the attempt ever succeeds until after a prisoner is ordered for execution. The Rev. Mr. Cotton, the ordinary of Newgate, who has been chaplain of the jail for more than a dozen years, has often acknowledged to me, that he does not remember an instance of what he considered sincere conversion to religious sentiments, except in prisoners who were executed. A very great show of religious fervour is often made by prisoners even from the moment of their entrance into Newgate, still more after they enter the cells; but in such cases, when the punishment is finally settled at something less than death, the prisoner invariably behaves as if all his religion had been hypocrisy. Still there can be no doubt that a considerable number of those who are executed, die with a firm expectation of

happiness in another world. I cannot explain the contradiction—let the reader judge for himself. Two persons, say A. and B., are ordered for execution. They both display the liveliest faith in the doctrines of Christianity. Apparently the minds of both are equally filled with religious thoughts, to the exclusion of what belongs to this world. And the sincerity of both is equally manifest; for any one who watches them, may be sure that they have *ceased to think of their own situation*, otherwise than as they look forward to the approaching execution 'as the happiest moment of their lives.' I quote the words which are frequently uttered by persons ordered for execution, and to all appearance with entire sincerity; for it is an indubitable fact, that nearly in all such cases of religious fervour, the bodily health of the enthusiast is excellent, his sleep sound, his appetite good, his pulse steady, and his skin moist; whilst, speaking generally, he who goes to the scaffold scoffing at religion is full of bodily disease, of which the main symptoms are want of appetite and sleep, a rattling or fainting pulse, and a skin hot and dry, as if he were in a burning fever. Now in the supposed case of A. and B. the physical symptoms are precisely alike, whilst the language and conduct of the two men indicate the same degree of religious fervour. A. is hanged, blessing the executioner, and lost to all but one sentiment—that of confidence in his own salvation by faith. B. is spared, and within a week is heard laughing and railing at all religion. I have said before, that it is chance which generally decides who shall be hanged and who spared. Consequently, we are not to suppose that A.'s greater criminality was the cause of his greater enthusiasm; nor can we, indeed, presume that his religious feelings were more profound than those of B. Judging from several actual cases of this kind, I should say, that if B. had been hanged and A. spared, the same conduct would have attended the same circumstances, without regard to the person concerned. It is not often that much religious fervour is displayed by convicts until after they are ordered for execution; nor are the same pains taken to imbue them with religious feelings previously to the decision of the council. As soon as a man is ordered for execution, the great increase of his danger produces extraordinary exertion on the part of those who administer the offices of religion to the inmates of Newgate. These are the ordinary, a Catholic priest, and one or two dissenters, who volunteer their services, but who do not confine their offers of service to persons of their own sect. The Catholic priest attends the cells only when a Catholic is in danger. As soon, then, as the council has selected from a body of Old Bailey convicts those who are to be executed, the ordinary and his assistants visit the press-yard frequently every day, and indeed almost live with the condemned men, exhorting them to repentance, prayer, and faith. In about half such cases the exertions of religious teachers are most successful, and are attended, undoubtedly, with the happiest effects on the prisoners—the effects described above, as produced by religious sentiments. In about one case out of four no religious impression is produced; but the prisoner goes through all the ceremonies of his situation with an air of indifference, being occupied to the very last moment with the hope of a reprieve. In the fourth case, not only do the teachers fail in their endeavours to produce a religious feeling, but those very exertions have an effect directly opposite to the one intended, causing the pri-

soners to rail, I may say to rave, against religion, in terms of ridicule, scorn, and violent hatred. I should but shock the feelings of many, and without any countervailing advantage, by repeating the language, or particularly describing the conduct, of those prisoners who take offence at the anxiety of the chaplain and others to imbue them with religious sentiments. But I may add, that on almost every execution day on which several are hanged, the chaplain is subjected to the most outrageous insults from one or more of the doomed men. He will readily confirm this statement. And it may be further proper to say, for the information of religious persons amongst those who make our laws, that every year several of their fellow-creatures are cut off in front of Newgate in the very act of scoffing at God, and Christ, and the Holy Sacrament. Let us return to the condemned pew, supposing it to contain four persons ordered for execution. The rest of the congregation, I have said already, pray for the condemned during each morning's service; but on the Sunday preceding the execution, there is a grand ceremony, usually called 'the condemned sermon,' when, besides the sermon, which is of course made for the occasion, appropriate hymns are sung—such as 'the lamentation of a sinner;' and if the execution be to take place next day, part of the burial service is performed. The condemned service is conducted with peculiar solemnity, being attended by the sheriffs in their great gold chains, and is in other ways calculated to make a strong impression on the minds of the congregation, who may be considered as representing the criminals of the metropolis. Whether the impression be a good or a bad one, I leave the reader to decide: but in order that he may have the necessary materials for deciding justly, I lay before him the following description of a condemned sermon, premising only this—that not a circumstance is stated which I have not witnessed. The sheriffs are already seated in their own pew, accompanied by their under-sheriffs, and two friends drawn thither by curiosity. Not far from them appear two tall footmen, swelling with pride at their state liveries. The ordinary is in his desk; his surplice is evidently fresh from the mangle; and those who see him every day, observe an air of peculiar solemnity, and perhaps of importance, in his face and manner. The clerk is busied searching out the psalms proper for the occasion. The tragedy begins. Enter, first, the schoolmaster and his pupils; then the prisoners for trial; next the transports, among whom are the late companions of the condemned men; and then the women. Lastly, come the condemned: they are four in number. The first is a youth, about eighteen apparently. He is to die for stealing in a dwelling-house goods valued at more than 5*l*. His features have no felonious cast;—on the contrary, they are handsome, intelligent, and even pleasing. Craft, and fear, and debauchery, have not yet had time to put decided marks on him. He steps boldly, with his head upright, looks to the women's gallery, and smiles. His intention is to pass for a brave fellow with those who have brought him to this untimely end; but the attempt fails—fear is stronger in him than vanity. Suddenly his head droops; and, as he sits down, his bent knees tremble and knock together. The second is an older criminal, on whose countenance villain is distinctly written. He has been sentenced to death before, but reprieved, and transported for life. Having incurred the penalty of death by the act, in itself innocent, of returning to

England, he is now about to die for a burglary committed since his return. His glance at the sheriffs and the ordinary tells of scorn and defiance. But even this hardened ruffian will wince at the most trying moment, as we shall see presently. The third is a sheep-stealer, a poor ignorant creature, in whose case there are mitigating points, but who is to be hanged in consequence of some report having reached the ear of the secretary of state that this is not his first offence; and, secondly, because, of late, a good many sheep have been stolen by other people. He is quite content to die;—indeed, the exertions of the chaplain and others have brought him firmly to believe that his situation is enviable, and that the gates of heaven are open to receive him. Now observe the fourth—that miserable old man in a tattered suit of black: he is already half dead. He is said to be a clergyman of the church of England (Rev. Peter Fenn), and has been convicted of forgery. The great efforts made to save his life, not only by his friends but by many utter strangers, fed him with hope until his doom was sealed. He is now under the influence of despair. He staggers towards the pew, reels into it, stumbles forward, flings himself on to the ground, and, by a curious twist of the spine, buries his head under his body. The sheriffs shudder; their inquisitive friends crane forward; the keeper frowns on the excited congregation; the lately smirking footmen close their eyes and forget their liveries; the ordinary clasps his hands; the turnkeys cry 'hush!' and the old clerk lifts up his cracked voice, saying, 'Let us sing to the praise and glory of God.' People of London! is there any scene in any play so striking as this tragedy of real life, which is acted eight times a-year in the midst of your serene homes? They sing the Morning Hymn, which of course reminds the condemned of their prospect for to-morrow morning. Eight o'clock to-morrow morning is to be their last moment. They come to the burial service. The youth, who, alone of those for whom it is intended, is both able and willing to read, is, from want of practice, at a loss to find the place in his prayer-book. The ordinary observes him, looks to the sheriffs, and says aloud, 'the service for the dead!' The youth's hands tremble as they hold the book upside-down. The burglar is heard to mutter an angry oath. The sheep-stealer smiles, and, extending his arms upwards, looks with a glad expression to the roof of the chapel. The forger has never moved. Let us pass on. All have sang 'the lamentation of a sinner,' and have seemed to pray, 'especially for those now awaiting the awful execution of the law.' We come to the sermon. The ordinary of Newgate is an orthodox unaffected church of England divine, who preaches plain homely discourses, as fit as any religious discourse can be fit for the irritated audience. The sermon of this day, whether eloquent or plain, useful or useless, must produce a striking effect at the moment of its delivery. The text, without another word, is enough to raise the wildest passions of the audience, already fretted by an exhibition of gross injustice, and by the contradiction involved in the conjunction of religion with the taking away of lives. 'The sacrifices of God are a broken heart: a broken and contrite heart, O God! thou wilt not despise.' For a while the preacher addresses himself to the congregation at large, who listen attentively—excepting the clergyman and the burglar, of whom the former is still rolled up at the bottom of the condemned pew, whilst the eyes of the latter are wandering round the

chapel, and one of them is occasionally winked, impudently, at some acquaintance among the prisoners for trial. At length the ordinary pauses; and then, in a deep tone, which, though hardly above a whisper, is audible to all, says—"Now to you, my poor fellow-mortals, who are about to suffer the last penalty of the law." But why should I repeat the whole? It is enough to say, that in the same solemn tone he talks for about ten minutes of crimes, punishment, bonds, shame, ignominy, sorrow, sufferings, wretchedness, pangs, childless parents, widows and helpless orphans, broken and contrite hearts, and death to-morrow morning for the benefit of society. What happens? The dying men are dreadfully agitated. The young stealer in a dwelling-house no longer has the least pretence to bravery. He grasps the back of the pew; his legs give way; he utters a faint groan, and sinks on the floor. Why does no one stir to help him? Where would be the use? The hardened burglar moves not, nor does he speak; but his face is of an ashy paleness; and, if you look carefully, you may see blood trickling from his lip, which he has bitten unconsciously, or from rage, or to rouse his fainting courage. The poor sheep-stealer is in a frenzy. He throws his hands far from him, and shouts aloud—"Mercy, good Lord! mercy is all I ask. The Lord in his mercy come! There! there! I see the Lamb of God! Oh! how happy! Oh! this is happy!" Meanwhile, the clergyman, still bent into the form of a sleeping dog, struggles violently; his feet, legs, hands, and arms, even the muscles of his back, move with a quick jerking motion, not naturally, but, as it were, like the affected part of a galvanised corpse. Suddenly he utters a short sharp scream, and all is still. The silence is short. As the ordinary proceeds "to conclude," the women set up a yell, which is mixed with a rustling noise, occasioned by the removal of those whose hysterics have ended in fainting. The sheriffs cover their faces; and one of their inquisitive friends blows his nose with his glove. The keeper tries to appear unmoved; but his eye wanders anxiously over the combustible assembly. The children round the communion-table stare and gape with childish wonder. The two masses of prisoners for trial mutter and slightly murmur; while the capital convicts, who were lately in that black pew, appear faint with emotion. This exhibition lasts for some minutes, and then the congregation disperses; the condemned returning to the cells; the forger carried by turnkeys; the youth sobbing aloud convulsively, as a passionate child; the burglar muttering curses and savage expressions of defiance; whilst the poor sheep-stealer shakes hands with the turnkeys, whistles merrily, and points upwards with madness in his look. Of what use are the religious ceremonies in which persons about to be hanged are made to play a part? The question should not give offence to the most religious, since it applies only to the ceremonies. These, it would appear, are of no peculiar service to the condemned—that is, all the good which he derives from religion might be bestowed on him without any public ceremonies. The object, then, of the religious ceremonies in which he shares, is to make a useful impression on the other inmates of the prison. Is this object effected?"

We never read a more graphic sketch than this; but its extent precludes us from offering a few remarks, as we purposed, in this Number, on the matters of which Mr. Wakefield treats. These being deferred, we shall now

only add one recent instance of the worse than folly exhibited on the execution of capital convicts. Motley, hanged at Lincoln for arson, says the *Lincoln Times*, "had obtained the comforting assurance of pardon from Him to whom the cry of a broken and contrite heart was never raised in vain; and never do the rays of Divine mercy appear so resplendently beautiful as when reflected from the tear of repentance on the cheek of the dying culprit!"

Jacob on the Precious Metals.

(Third Notice.)

CONTINUING our review of the interesting matter contained in these volumes, we now come nearer home.

"It has been supposed that in the present day, in this country, the quantity of gold and silver in actual existence, including utensils, ornaments, jewellery, trinkets and watches, is three or four times as great as the value of those metals which exists in the form of money. In case circumstances should arise to induce the conversion of plate into money, there would be a resource which could furnish a supply: but in the Roman empire, the plate and jewels of two thousand wealthy families would have been but a feeble aid to the money circulating in that powerful empire, which comprehended within its limits the most populous and extensive parts of the known world. The cities of Herculaneum and Pompeii were buried by an eruption of Vesuvius about the year 79, when the Roman power and prosperity had shewn no visible tokens of that decline which began a few years afterwards. The latter was one of the most industrious and populous cities on the coast of Italy. Within the last century their ruins have been examined. Pompeii was covered with ashes and cinders, rather than with lava, and the investigators have been more successful in their examinations there than at Herculaneum. In some of the houses skeletons of the inhabitants have been discovered; in all, domestic utensils and personal ornaments. But among the utensils none have been found either of gold or of silver; but those for which in our day silver is almost exclusively adopted by the middle class of persons, are composed of iron or brass. These antiquities give a correct idea of the domestic arrangements of the people, such as they were at the period when the catastrophe occurred, and they shew most clearly that gold and silver were not to be found in the dwellings of the inhabitants; though the size of the houses, the paintings, the statues, the books, and other objects, sufficiently prove that the proprietors of them were persons at least in easy circumstances. From their durable nature, if gold and silver had been in these houses at the time of the calamity, they would have been found there, as the iron and bronze have been, of which their spoons and forks were made; and which retain their original shape after a lapse of more than seventeen hundred years."

The following is a curious superstition, which we must copy in its insulated position.

"The inhabitants of Pesquaire," says Dr. Belon, "and of the borders of the lake of Gard, and also of Salo, are firmly persuaded that the carp in those lakes are nourished with pure gold; and a great portion of the people in the Lyonnais are fully satisfied that the fish called humble and emblons eat no other food than gold. There is not a peasant in the environs of the lake of Bourgil who will not maintain that the laurets, a fish sold daily in Lyons, feed on pure gold alone. The same is the belief of the people on the lake Paladron in Savoy, and

of those near Lodi. But," adds the doctor, "having carefully examined the stomachs of these several fishes, I have found that they lived on other substances, and that from the anatomy of the stomach it is impossible they should be able to digest gold."

Our next extract is a historical view, in which much of important research is compressed into a wonderfully small compass.

The Middle Ages—"It is further to be observed, that the coinage of the middle ages was conducted with little skill and still less taste. The operation had been rendered hereditary in certain families who were answerable for the intrinsic value of the pieces they issued, but troubled themselves very little about their beauty, being only compelled to stamp on them the name of the reigning sovereign. On account of the scarcity of silver about the year 1213, the Emperor of Germany established numerous mints in several cities; and, that the moneyers might practise no deceit, a number of persons were placed in each, under the title of *adjoints*, whose duty it was to buy and receive the metals, to watch carefully all the transactions regarding the real value of the coins, and especially of those of inferior standard; but, above all, to superintend the securing those emoluments to the emperor to which he was entitled for his seigniorage. Those precautions were found, however, so ineffectual, that it became necessary to issue penal ordinances, by which the punishment of the galleys in some cases, and of death in others, was decreed. Without further mention of the productions of the mints in the middle ages, it is sufficient to observe, that the coins of that period being clumsily formed, were thicker than those of more recent date; and as they thus exposed a much less surface to friction, there was proportionally less loss on them than on modern pieces of money. There is good reason to conclude, that during the period we are viewing, a very small part of the produce of the mines of gold and silver was permanently applied to other purposes than that of money. A portion of it was undoubtedly used for domestic utensils, for religious institutions, and for personal decorations; but it would appear that such portions were small, and dispersed among the higher classes of society, including the ecclesiastical communities, in very small quantities. We should be justified in concluding, that whatever existed in other forms than that of money, was, with the money, held to be at the disposition of the government whenever the necessities of the public required it to be put in requisition. Thus, when Richard, king of England, was a prisoner in Austria, Louis of France in Egypt, and John of France in England, their redemption was effected by placing in requisition, as has been already noticed, the plate of noble individuals and of religious houses in all parts of their dominions. The gold and silver articles, of whatever kind, so collected, would be converted into coin, either by those who delivered or those who received them, and become a part of the general mass of current money. In more tranquil seasons, when peace gave a breathing time for the indulgence of luxuries, the coin might and probably would be recovered into objects of gratification. These changes might increase the waste of both metals. As far as relates to silver, there is a small portion of waste at every melting; and though gold suffers no loss by that operation, yet, in its application to objects of personal decoration, it is divided into such small particles, that some of them, from their very minuteness, become insensibly mixed up

in other substances, from which they are only separated at an expense of time and labour which exceeds their value. In some of the ancient chronicles, notices are to be found which would give a higher value to the stock of silver and gold in the possession of some individuals than appears to be justified by a more rigid examination. In the gold, silver, and jewels, taken from Piers Gaveston, the favourite of Edward II., it is said by Rymer, that some of the silver articles in his collection had cost four times the value of the metal in workmanship. The workmen on the precious metals, except, perhaps, on the inferior parts of the work, were not mere mechanics, but men of a superior order, like artists, such as Cellini in Italy at a later period. Among the operators on gold and silver in England, we find several ecclesiastics noticed, especially one Alan de Walsingham, a monk of Ely, who, as well as others of his class, were celebrated for their superior skill in the goldsmith's art. Whilst the fabrication of any articles is confined to artists, they must necessarily be rare; and when they become subjects of extensive demand and use, the labour will be executed by common mechanics or manufacturers. In that now usual appendage to the dress of almost every decent person, the watch, though it had been introduced as early as the beginning of the fourteenth century, only the outer case was made of silver and the inner one of copper, and a gold watch was not known till a period long subsequent to the first invention. As far as is known of the jewellery of that day, it appears to have derived its great value from the precious stones, and in a very small degree from the gold or silver in which it was fixed. Thus, when our Henry the Third pawned his jewels for five thousand marks, or ten thousand pounds, to the King of France in 1261, the gold of the rings, in number three hundred and twenty-four, however heavy they may have been, could have borne no proportion in value to the sum borrowed, the security for which must have been founded on the precious stones. From the great value thus created in articles of which gold and silver bore a part, we infer that great care must have been taken of their preservation, and that the articles of silver whose value was increased by the costly workmanship, and those of gold by the stones imbedded in it, were rarely used, and that consequently there was but little loss occasioned by that degree of friction to which they were exposed. The art of gilding and plating had been carried to some considerable extent, and the metal which was thinly coated with gold or silver was fraudulently sold for those metals. To prevent such frauds, and also to prevent the use or waste of too much gold and silver, as the preamble recites, the act of the fifth Henry the Fourth, cap. 13, was passed, which enacts 'that no artificer or other man shall henceforth gild or silver any locks, rings, beads, candlesticks, harness of girdles, chalices, hilts, nor pummels of swords, nor covers for cups made of copper or latten, upon pain to forfeit to the king one hundred shillings; but that the said artificers may work (chalices excepted) ornaments for the church of copper and latten, and gild or silver the same; so that always on the foot or some other part of the copper or the latten shall be plain, to the intent that a man may see whereof the thing is made, for to eschew the deceit thereof.' We conclude, therefore, that during the period in question, there could be but little consumption of the gold and silver which composed the money; or of that used as utensils or ornaments in an un-mixed state; but that, up to passing the act

quoted, in the year 1403, there must have been a considerable quantity consumed by gilding and plating on the inferior metals."

With this we conclude Vol. I.

An Original Essay on the Immateriality and Immortality of the Human Soul; founded solely on Physical and Rational Principles.
By Samuel Drew, A.M. Fifth edition. 8vo. pp. 364. London, 1831. Fisher, Son, and Co.

A LITTLE-MINDED, querulous sceptic having annoyed Ugo Foscolo with a number of frivolous questions upon matter and mind, asked him, among other queries, Whether he believed in the immortality of the soul—or, in fact, whether such an essence had any existence or not? Foscolo, calling to mind the individual insignificance of him who put the question, answered, "I do not know whether you have any soul—but I am quite sure I have." We have related this anecdote for the benefit of all those who are anxious to ask similar questions to that put to Foscolo by his sceptical companion, in order that we may refer them for a number of satisfactory answers to Mr. Drew's able work on this subject. If plain writing and straightforward reasoning carry with them any claim to recommendation, we can vouch for the present volume being entitled to attention, and secure of well-deserved popularity; if, indeed, that need be predicated of a volume originally published in the country, which has of its own merit, without quacking or puffery, run through four large editions, and is now ultimately improved by the last affecting and important touches of the admired and venerable author. The train of argument throughout the essay is perspicuous and forcible—the result of a clear-sighted and clever mind dedicating to its object that unwearied earnestness which so momentous a point of inquiry demands from all who venture upon its discussion. We give the following chapter relative to the soul in sleep. We do not wish it to be considered as a favourable specimen; this would be unfair—for we have quoted, not selected.

"Another argument urged against the immateriality of the soul, which is as specious as it is unsound, is generally stated thus:—'If the soul be a thinking immaterial substance, and consciousness be essential to its nature, it must follow, that the soul must always think: but this is contrary to what every man experiences. We have no recollection of what passes in sleep; and having no recollection, we are left destitute of all proof that consciousness at that time existed. And to suppose an immaterial substance to exist, and to allow consciousness to be essential to its nature, and yet to admit an interval in which this consciousness can afford no evidence of its existence, is to admit as certain, a consciousness of which we have no evidence;—it is to suppose a man to be conscious and not to be conscious at the same time.' To combat theory with fact and incident must always be forcible, and sometimes conclusive; and when theory can be fairly confronted with such incidents, as its design was to invalidate and overcome, fact and incident must always be decisive in favouring the point in debate. But when theory is established on the firm and immovable basis of solid and conclusive reasoning, fact itself must be presented fairly to the mind, to counter-balance the efficacy of such arguments as it has to oppose. The phenomena of appearance are no proof of reality. Speciousness may dazzle the eye, but it cannot produce conviction.

The inquiring mind investigates with accuracy, and moves with slow but steady steps, from link to link in the great chain of causes and effects. To give to the objection that solidity which it claims, it is necessary that it should be made to appear, that every man, or some individual man, is not always conscious. And when this is established, the conclusive part of the objection must be admitted; and it will then appear, that it is contradictory to suppose consciousness to be essential to the nature of an immaterial principle, while an interval can be proved in which this consciousness has no existence. Of every fact which we attempt to establish, we must have some conception; without this, we cannot be certain that it is fact; and every idea which we have of any fact, supposes the existence of this fact. But for any man to prove, or rather attempt to prove, that the mind is not always conscious, is to prove the positive existence of a negation. Should it be asserted, that man is not always conscious, I would ask, How can that fact be known? It must be deduced from reasoning, must be self-evident, or must exist in common experience. And, if I mistake not, it is not difficult to prove that it can be in neither. To prove by reasoning, the reality of what is supposed to have no existence, is proving exactly the reverse of what is wanted to establish the supposition—it is proving the existence of a nonentity; it cannot, therefore, be known by reasoning. To suppose it to be self-evident, is also to admit the existence of what is presumed to have no existence; and which, could it be once granted, would necessarily destroy the very supposition it was designed to establish; it would prove exactly the reverse of what it ought. It would prove that an individual is sometimes conscious that he is unconscious. What, therefore, is presumed to have no existence, cannot possibly be self-evident. Neither can it be by common experience. Of whatever we admit on the ground of experience, we must be conscious; without this, the very term is done away. It is preposterous to suppose that we experience the absence of consciousness, while the very supposition itself, wherever it exists, establishes the fact which we attempt to deny. And for any man to suppose himself destitute of consciousness, is in effect for him to suppose, that he is conscious of the absence of all consciousness—that he now experiences what he does not experience—and that he now knows what he does not know. It is proving the non-existence of a thing by the existence of the thing itself. A nonentity, therefore, cannot be proved; and the fact which was necessary to support the conclusive part of the objection, has vanished into air. To assert that a continuation of thought may be inferred from a continuation of life, may probably be deemed more presumptuous than conclusive, because it seems to assume the point for which proof is demanded. But though this inference should be declined, the regularity with which animal life proceeds, during the recess of nature, cannot but furnish us with some striking analogies. The man who is asleep is as insensible that he is alive, as he is that he is conscious; and should we appeal to him for proof, he would find it equally as difficult to furnish evidence in the former case as in the latter. But, however insensible he may be of his condition, we well know that his lungs heave, his breathing continues, his heart beats, his blood circulates, and his pulsation goes on. And yet when he wakes, he has no knowledge whatever of these facts, and nothing can induce

him to admit them as such, but information and analogy. If, then, the functions of animal economy may be, and actually are, carried on in the hours of sleep, without our knowledge or sensibility, why may not the mind continue its operations also, even though we never could know the manner in which it is employed? We well know, that frequently while we are asleep, the mind is occupied with dreams, many of which so far engage the attention as to leave an impression which continues when we are awake. Nay, some of these are recollected with pain or pleasure after a series of years, and even continue through life. Among these dreams a great number are totally forgotten when we first start from sleep; and sometimes it is the case, that some occurrence which happens in the day recalls the impression, and brings it to our memories in all its vividness. Sometimes days, and even weeks, elapse, before these sleeping impressions are recalled; and yet when they return, no person can convince us that our minds were unconscious through the whole of that night on which they were first made. But should any person, during the interval which passed between the dream and our recollection of it, assert, that our consciousness was suspended, that the mind did not operate, and that all our mental powers were destitute of activity, we should have no means of contradicting the assertion, until a recollection of the impression returned. But whenever this took place, we should want no arguments to convince us that his opinion was unfounded. In like manner, it may with safety be admitted, that we have no reason to conclude that the mind is unconscious either when we sleep or when we wake, merely because we do not recollect what passed through our minds during these questionable hours. No doubt a multitude of dreams occur to the mind, to which even then we pay little or no attention, and which we never recollect afterwards. Though, could these be collected in the regular train of succession in which they occurred, it is highly probable that they would leave but few intervals in which the perpetual consciousness of the mind could be questioned. These considerations are sufficient to silence objections against the perpetual consciousness of the mind during the hours of sleep, even though they may be deemed insufficient to prove that consciousness does actually and unremittently exist. But it would not affect the immateriality of the soul, although it could be proved that there were intervals in which the mind paid no attention to its own operations, even at the time that it was engaged. This fact, the occurrences of our waking hours will sufficiently prove. And every instance in which the attention is suspended, whether sleeping or waking, will demonstrate the fact. That men do not always attend to their own consciousness, I readily admit; but it does not follow from hence, that consciousness during these intervals has no existence. It proves that we have no apprehension of the thing, but it does not prove the non-existence of the thing itself. The existence of a faculty of the mind and of its actions, and our apprehension of their existence, are distinct ideas. The former may exist independently of the latter, but the latter cannot exist if the former cease to be. The existence of a faculty must necessarily precede, in the order of nature, our apprehension of its existence; and the action of this faculty must, for the same reason, precede our knowledge of it. If, then, the existence of consciousness and thinking must necessarily precede our apprehension of them, our apprehension of them

can in no way whatever be essential to their real being. It is, therefore, not only possible that the soul may think during the hours of sleep, though we may be totally ignorant, when we awake, of those objects which then approached the mind, as well as insensible of the manner of our intellectual operations; but it appears absurd to suppose that the operations of the mind, and our apprehension of them, should be co-existent with one another. And, consequently, where recollection fails, those subjects which occupied our thoughts must be totally unknown. Although the faculty of the soul be always the same, it may, nevertheless, vary in the manner of its operations. Thinking may diverge itself into a thousand directions, and consciousness may be employed about as many different ideas; but it does not follow from thence that we must always understand the manner in which the former operates, or that in which the latter is employed. Hence, it is no more necessary to our idea of thinking, that we always understand the manner in which the faculty operates, than it is necessary to the operations themselves, that we should always comprehend the secret springs by which they move. In like manner, it is no more necessary to the existence of consciousness, that we always recollect the manner in which it was employed, or the ideas about which it was occupied, than that we should be acquainted with those mysterious laws by which consciousness is governed, or that both should be supposed to depend for their existence upon our knowledge of them. Our being conscious of any given fact, is a simple action of the mind operating upon that fact, while our attention to what is passing is a reflex act of the mind operating upon its own operations. The former must precede the latter in the order of nature, and therefore must exist independently of it; while the latter, founded on the former, is dependent on it for its existence. But whether the latter exist or not, it implies neither contradiction nor absurdity."

We strongly advocate Mr. Drew's work, not only from its obvious utility in supplying the means of defence against the assaults of scepticism, but as a source at once of gratification to the mind from its matter, and of beneficial exercise from the clear tone of reasoning which pervades its pages.

The Prospect of Reform in Europe. Pp. 55. London, 1831. Rich.

A PAMPHLET re-edited from the *North American Review*, published at Boston six weeks ago. *Fas est ab hoste doceri* should be its motto, for it contains much important matter, on which the English reader should chew the cud of sweet and bitter thought. In favour of reform, it disguises none of the mighty effects now in progress, and discusses many of the topics connected with this engrossing question so ably, as to be well calculated to open the eyes of the public to the real bearings of the case.

ARTS AND SCIENCES.

NEW AND DESTRUCTIVE ENGINE OF WAR. WE have this week been favoured with the sight of some experiments made with a newly invented pistol, for which a patent has been taken out.

This important invention, which appears destined to produce a new era in modern warfare, is decidedly the most destructive weapon, in all its forms, that has ever been offered to the consideration of any government. Its ex-

treme simplicity, the facility with which it can be cleaned, its prodigious and varied powers, render it peculiarly applicable to every purpose of naval and military warfare to which firearms can be applied.

1st, A pistol, either for cavalry, for the defence of breaches, or for boarding, which can be loaded and fired ten times in one minute, projecting at each discharge 12 missiles in one horizontal line, diverging laterally from 12 to 18 feet, and within an elevation of 6 feet, at the distance of 30 or 40 yards. Each man discharging 120 missiles per minute, 100 men in ten minutes are enabled to discharge 120,000 missiles, each equal in effect to an ordinary pistol-ball. Suppose that a squadron of 100 men charge an enemy's squadron of equal numbers, and that 75 direct their aim so badly that not one of their missiles took effect, there still remain 300 well-directed missiles at the first discharge; or, even imagine it possible that only 1 in 100 was efficient, 100 men in ten minutes could put 1200 *hors de combat*.

2d, A short carbine, capable of being discharged with the same rapidity as the pistol, but propelling 16 instead of 12 missiles, and particularly applicable to naval warfare, as 50 men, directing their fire on the enemy's deck, while the fire of 50 more was directed against the men on the masts and rigging, would in one minute pour a shower of 16,000 missiles over the whole vessel; thus rendering her defenceless, and the boarding and capture consequently easy and almost instantaneous.

The Marquess of Clanricarde, who has taken a great interest in the perfection of this instrument, was present at the experiments, together with Colonel Buller, and several other gentlemen. They were conducted by Mr. Wilkinson, the eminent gun-maker in Pall Mall, and completely succeeded in producing all the effects we have enumerated. The pistol was about 3½ lbs. in weight, with an elliptical muzzle, and loaded with great ease and simplicity at the breech. The specimen was admirably finished as a piece of workmanship, and the balls were thrown with such force that they rebounded from a brick wall, at thirty yards, more than half-way back. It seemed to us impossible that any military force could exist in the face of so terrible an engine; and for the protection of houses from burglars, we never saw so irresistible a weapon. The invention, as improved by Mr. Wilkinson, is applicable to cannon as well as smaller arms; and as it is about to be tried by our public boards, we have no doubt it will soon become well known to the world.

FINE ARTS.

THE ROYAL CLARENCE VASE.

WE have seldom been struck with more surprise and admiration than we felt on entering the apartment of the Queen's Bazaar in Oxford Street, in which this magnificent specimen of human ingenuity, perseverance, and taste, is exhibited. The form of the vase is classical and beautiful, the size stupendous, the execution rich and varied beyond conception. When illuminated by numerous gas-lights, the effect is in the highest degree splendid and brilliant, and realises the wonders of the Arabian Nights. This unique and extraordinary work of art is fourteen feet in height; its diameter is twelve feet; its weight upwards of six tons; and it is capable of containing eight pipes, or about five thousand four hundred bottles of wine,—a tolerably sufficient provision for a small convivial party. The inventor of this striking novelty (the value of which is estimated at ten thousand

guineas) is Mr. John Gunby, of Birmingham; and we extract the following passages from a sketch of its origin, history, and character, which recently appeared in a Birmingham journal:—

"It is now nearly four years since Mr. Gunby invented and executed two small vases, about eighteen inches high, the first specimens of the art, which he shewed to some of his friends; and by their recommendation he was induced to procure an introduction, through Sir Frederick Watson, to his late majesty George IV., who was pleased to express his unqualified approbation of the invention and execution, and commanded Mr. Gunby to execute a vase on a much larger scale, suitable for one of his palaces. Thus encouraged by the countenance of so distinguished a judge, Mr. Gunby returned to Birmingham, and in a few hours finished a rough sketch of a vase of the purest Grecian form, and of the prodigious dimensions of the one now exhibiting at the Queen's Bazaar, Oxford Street, London. This original sketch, though produced in the incredibly short time of a few hours, has undergone few or no alterations either in the outline or in the detail; and the boldness of the conception is no less creditable to Mr. Gunby, than the great taste he has shewn in the rich variety and harmony of the colours, and the extraordinary mechanical ingenuity displayed in the general adaptation of the parts, forming a mass of glass-work hitherto unequalled in magnitude, and presenting a combination of beauty and magnificence altogether unexampled in the arts. The prevailing colour of the exterior of the vase is gold, which for the most part has the appearance of being richly embossed, and which is very agreeably relieved by a vivid emerald green and scarlet. The different compartments of the exterior are judiciously diversified,—not irregularly and without system, but exhibited in tiers continued round the bowl, and forming distinct patterns of the most dazzling beauty. This effect perfectly astonished us, and is certainly a new era in the art of glass-cutting; but on a nearer inspection, we perceived it was produced by the most elaborate cutting either on the upper or under side of the glass; and by the skilful management of a variety of gilding and colouring all underneath the surface, a richness and brilliancy is produced equal to the most finished specimens of enamel, possessing at the same time the rare merit of being equally durable, the gold and colouring being securely protected from the action of the atmosphere. The interior surface possesses less brilliancy than the exterior; but we think it is calculated to please the general spectator by the contrast it exhibits in its subdued colouring. The colour of the ground is a warm lavender, with the vine-leaf of vivid green flowing gracefully from the upper lip to the centre of the vase. The arms, which are in bronze and highly finished, were modelled by Mr. William Hollins, of this town, from a design of his own. Each of the arms consists of two griffins' heads, grasping a massive chain between the teeth, and supported by a scroll, from which flows the elegant and classical acanthus leaf, embracing the bowl on either side, and, being of bronze, forms a fine relief to the general character of the work."

NEW PUBLICATIONS.

The First Sign in Egypt. Painted by J. M. Scrymgeour.

This picture is now exhibiting at the Egyptian Hall; and if an effort to accomplish a production of art of the highest class, and distinguished

success in so noble an aim, are deserving of patronage, then will M. Scrymgeour meet with no stinted share of public encouragement. The subject is the evidence of the divine mission of Moses and Aaron, given to Pharaoh by the serpent-rod of the Hebrews swallowing up the rods of the Egyptian magicians. The artist has presented us with Pharaoh in splendour upon his throne, the magicians discomfited and enraged, Moses looking upwards for heavenly assistance, and a multitude of people variously affected by the miracle. The architecture, covered with hieroglyphics, has a superb effect; and a distant view of the pyramids, together with an extraordinary and powerful light, which is introduced with great effect, add wonderfully to the general beauty of the design. The colouring throughout is brilliant;—the whole a work of genius, the more to be admired, when we reflect on the difficulties to be encountered by the aspiring painter of any picture of this exalted order.

Richmond, and its Surrounding Scenery. Engraved by, and under the direction of, W. B. Cooke; from Drawings by eminent Artists. With Descriptive Letter-press by Mrs. Hofland. Part I.

No work that we can conceive, of a similar character, could come before the public associated with more pleasing sentiments, or exciting a more classic interest, than this. Few dwellers in the metropolis, and few occasional visitors to it, but are well acquainted with the picturesque beauties of Richmond and its neighbourhood; and there is scarcely any foreigner by whom they have been seen, who does not allow that their claims to admiration equal those of the richest pastoral landscape of his own country. The representation of such delightful scenery, treated by such artists as those who are engaged in the present undertaking, cannot fail to be favourably received by the public in general, as well as by the lovers and encouragers of the fine arts. The publication will be comprised in two Parts, each containing twelve plates. In this, the first Part, the drawings, with the exception of four by his able pupil Mr. Barnard, are from the pencil of Mr. Harding, whose high rank among our water-colour painters is well known; and the plates, with the similar exception of four by his able pupil Mr. Frederick Smith, are from the graver of Mr. W. B. Cooke, to whom we have too often paid the just meed of approbation in the *Literary Gazette*, to render any further eulogium on his powers necessary. The subjects have been selected with great taste and judgment; and the fidelity of the delineation of them is unimpeachable. There are also several clever little wood vignettes, which ornament a letter-press illustration of the work by Mrs. Hofland, whose literary talents, whose love of the beauties of nature, and whose former residence at this enchanting spot, eminently qualify her for the task.

Mr. C. Davis, His Majesty's Huntsman, on his favourite Mare Columbine. Painted by R. B. Davis, Animal Painter to His Majesty; engraved by W. Giller. Moon, Boys, and Graves.

THE title of this beautiful print gives but a very inadequate notion of its variety. It is not only a portrait of Mr. Davis on his mare, both painted in fine and spirited action, but it represents a pack of hounds in full chase through a rich and picturesque country; the whole executed with great vigour and taste, and with that striking intelligence and discrimination of

animal character by which Mr. Davis's pencil is distinguished. The plate is charmingly engraved.

William the Fourth. Dobbs.

A FINE profile resemblance of his Majesty, embossed on tinted paper. The name of the artist by whom the die was sunk ought to have been introduced, that he might not, like one of Ossian's heroes, be "defrauded of his fame."

View of the New London Bridge, from Trafalgar Wharf, Southwark. By R. H. Essex. On stone, by Scharf. Dickinson.

ANOTHER view, in which we see more of the structure of the bridge and the boats, &c. on the river below. Mr. Essex is, we believe, a young artist; but he belongs to a family eminently gifted with taste and talents, especially in music, and he shews himself to be worthy of his kin.

Ceremony of opening London Bridge. Procession on the Bridge. Drawn by Thomas Allom. Fisher and Co.

THIS print affords a true and lively idea of the gay scene which presented itself upon the new bridge when the royal party promenade it. Though on so small a scale, the likenesses of the principal personages are well preserved; and the *tout ensemble* is at once accurate and pleasing.

Christ crowned with Thorns. Painted by L. Caracci. Drawn on stone by F. Wilkins, Esq.

RISEING from human to divine, Mr. Wilkins has here exercised his lithographic powers on a head, the size of life, from the fine painting of an ancient master. The execution is very skilful, and the delicacy with which the Mass of Sorrows is represented does infinite credit to the art. The original partakes of the pathetic rather than of the sublime, and the engraver has faithfully caught the expression. Indeed, we have seen nothing on stone of this kind more honourable to the English school.

BIOGRAPHY.

MR. PETER NASMYTH.

THIS distinguished and extraordinary painter died on Wednesday, at his lodgings in South Lambeth, in the forty-sixth year of his age. His death was occasioned by his ruling passion. Not recovered from the influenza, under which he had been some time suffering, he went to Norwood to make a study of one of those scenes on which he especially delighted to exercise his pencil, and in the execution of which he stood alone. A severe cold was the effect of this exposure. He was thrown back upon his bed in a state of weakness that nothing could restore. The most skilful professional aid, in the kind attentions of Mr. Wardrop, and the affectionate care of his relatives, were of no avail.

Peter Nasmyth was the eldest son of Alexander Nasmyth of Edinburgh, whose talents as a painter of landscape have been known and estimated through half a century, and who still lives in the vigorous exercise of his powers, surrounded by a numerous and gifted family. The earliest recollections of Peter tell of his devoted attachment to nature. Nature was in truth his school; for this the schoolmaster was neglected,—and the truant boy was found, not robbing orchards, nor indulging in sensual gratifications, but with a pencil in his hand, drawing some old tree, or making out the anatomy of a hedge-flower. To lash him into the study of books was impossible—the attempt was given up in despair. He was allowed to take his own

course, and to follow out in his own way the dictates of his powerful genius. A remarkable circumstance occurred at a very early age, which proves how strongly his imagination was impressed with the objects of his study. He was going on a sketching excursion with his father. In making some preparations the evening previous, his right hand was disabled, and it was thought his part of the undertaking would be abortive. His friends did not know his powers. Peter set off—his right hand was disabled, but he had another; and with this left hand he made sketches which are sought after now by collectors for their truth and fidelity. His ingenuity suggested many contrivances to facilitate the study of nature in the stormy atmosphere of his native mountains. One of these was a travelling tent, which may be recollected by his companions as more creditable to his enthusiasm than to his mechanical skill.

At the age of twenty he came to London, where his talents were soon appreciated, and he got the name of the English Hobbins. Hobbins and Ruydael seem to have been his favourite masters. Without being a copyist of their manner, he may be said to have infused their spirit into his works; but Peter was still original. His pictures have been sought after, and will continue to be collected, for their own intrinsic excellence. The most distinguished amateurs of the day may be ranked amongst his patrons; and there is scarcely a collection in England that does not boast the possession of some of his works. Sickness found him, in the midst of employment; and he may indeed be said to have "felt the ruling passion strong in death." In the late thunder-storm, when too weak to support himself upright, he wished the curtains to be drawn aside, and begged his sisters to lift him up, that he might register in his memory the splendour of the passing effects. In these breathings after his favourite art his life passed away: death seemed mere exhaustion, without pain or visible disease.

In his habits Peter Nasmyth was peculiar. Deafness, which had come upon him from sleeping in a damp bed, at the age of seventeen, robbed him of many of those advantages which others enjoy. Shut out, in some measure, from society by this affliction, he was too apt to indulge, in his solitude, in excesses, from which many of his most distinguished countrymen have not been entirely free. It must not be disguised that his constitution was undermined by these habits. Illness, when it came, found a frame unprepared to resist it. Happily for mankind, these habits are no longer considered necessary to talent; and let us hope that Peter Nasmyth may be the last man of genius who shall be named as having followed Burns in other things besides his enthusiasm for poetry and his love of nature.

DRAMA.

KING'S THEATRE.

MR. MASON, who has become the lessee of the King's Theatre, at a rent of 16,000*l.* for next season, is the gentleman whom we mentioned in a former *Literary Gazette* as the author and composer of an Italian opera, on a stirring subject in Irish history. He is, therefore, though new as a manager, possessed at least of qualifications which eminently fit him for an undertaking of this kind. His plans and projected improvements are, we learn, of great variety and novelty. A constant succession of new operas hitherto unknown to the English

public; morning promenade-rooms for ladies, with refreshments and accommodations for taking boxes, &c. &c.; the whole pit divided into seats, which may be secured for individuals at the usual price; a spirited opening of the season, instead of waiting till near its close for exertion; the engagement of new and excellent singers—are among the arrangements contemplated. We believe Mr. Mason will make the Opera in this country what it ought to be, for its own credit, and for the expense bestowed upon it.

ENGLISH OPERA, ADELPHI.

ON Monday, after the *Sorceress*, in which Miss H. Cawse continues to sing and play delightfully, and the fine organ of H. Phillips is heard with increase of admiration, we were amused with a lively operetta, part and parcel of a piece performed at the Queen's Theatre, called *Arrangement*, from the pen of Don Telesforo de Trueba. The rise of this writer in our literature may be estimated by the quantum of scurrility which he provokes in that division of the periodical press of which personality and scurrility are the staple; and we dare say *Arrangement* will obtain its due share of abuse. Much, however, would be thrown away upon it,—like putting an elephant's castle on the back of a kid,—for it is a mere lively and playful little trifle, made sufficient for half an hour's entertainment by the bustle and vivacity of Wrench. This clever actor is quite in his element as *Tom Trim*; a fellow who, in arranging every thing, counteracts not only all his friends' projects, but his own—procures the marriage of his intended to a rival, and at last finds himself the only unit in the drama for whom there is no arrangement whatever. The idea is pleasant, and it is wrought out in a light and laughable fashion, with a few pretty songs by Mrs. Keeley and Mr. Bland, to diversify the scene. It was very favourably received.

On Thursday a new romantic musical drama, called the *Evil Eye*, was produced here with complete success. The music, by Mr. Rodwell, is effective and pleasing; the acting, by Miss Kelly, O. Smith, Reeve, Miss Poole, Miss H. Cawse, and other less prominent characters, is all that an author could wish. On Thursday performances we have, however, no time to dilate; and we can only congratulate the frequenters of the English Opera upon a new source of great gratification and amusement.

VARIETIES.

Benevolence.—A work, entitled "Original Compositions in Poetry and Prose," illustrated by a few original drawings, and some pieces of music, is announced by a union of accomplished young ladies for the benefit of a most respectable family in reduced circumstances. The Queen has graciously patronised this undertaking, the nature of which induces us to wish it all possible success. We love to see literature engaged in the cause of charity.

Medal Engraving.—A Society for the encouragement of Medal Engraving in Great Britain is about to be formed. It is to consist of an unlimited number of members, at a small annual subscription; its object being to promote and encourage the art of medal engraving, by publishing continually medals commemorative of eminent men or remarkable events, and employing none but native artists to execute them.

Orphan House.—Among the most distinguished institutions of Greece must be placed

the Orphanotrophium at Ægina, under the able direction of A. Mustoxidi, its president, who has superintended it for nearly two years. Such children of Grecian families as were wandering about friendless and alone, and were adopted by the state, and provided for first in Poros, and afterwards in Napoli, found at length a permanent asylum in the new Orphan House in Ægina. At the end of 1829 their number amounted to 495, of whom 145 were from the Peloponneseus, 175 from Greece Proper, 25 from the islands of the Archipelago, and 156 of Greek families who had been obliged to abandon their country. In the year 1830, when many Greek parents who had been parted from their children by slavery, or other accidents of war, returned to their country, and found their long-lost offspring in the Orphanotrophium, many expressed a desire to remove them to their native places. The government consented, and ninety-eight went back with their parents.

Grecian Antiquities.—The Greek government some time since issued a decree, commanding all antiquities found in the interior to be brought to the national museum, in order to preserve them from future destruction, and also to prevent their exportation. It already consists of 1090 painted vases, of various forms and descriptions; 108 lamps, and 24 smaller statues, of terra-cotta; 16 small earthen vessels, 19 glass vases, 34 alabaster vases, 137 copper utensils, comprising pateræ and other sacrificial vessels; 71 stone tablets, with inscriptions; 24 statues, 14 bas-reliefs, 53 fragments of sculpture, and 339 coins and medals.

Schools in Greece.—Though the internal administration of the new Grecian state has hitherto been prevented, by the want of proper teachers, and the requisite funds, from establishing an adequate number of public schools for the instruction of youth, it has nevertheless succeeded in founding elementary schools in the principal district towns. Unremitting exertions are making in the different provinces to obtain collections of pecuniary and other resources for the establishment of public schools; and, besides those already in operation, the building of twenty new ones has been commenced, and will soon be completed.

New Island.—The *Semaphore*, of Marseilles, states, on the authority of the captain of a brig, sailing between Trafani and Girgenti, that an island was formed by a volcanic eruption in the middle of July, in that part of the Mediterranean. The phenomena are represented as being very striking. An immense mass of water was thrown up to the height of sixty feet, accompanied by a sulphureous smoke and great noise. The result of the submarine explosion is an island, in 37° 6' north lat. and 10° 26' east long. from the meridian of Paris. It is an active volcano, with a crater in its centre, whence lava flows. The sea all around is a hundred fathoms deep.

Divinity in Greece.—To supply the want of well-educated clergymen, the convent of Saint Moni, in the island of Poros, was erected into a theological seminary at the end of October 1830. Two professors are to instruct the scholars in ancient Greek, the catechism, and in the duties of the ministerial office.

Lakes of Killarney.—It was only last week we noticed Mr. Croker's admirable little Guide to the pleasure-tour of Killarney; and we consequently perused the following newspaper paragraph a few days after, with feelings of greater compassion. "The most awful thunder-storm ever recollected within the memory of the oldest people in the neighbourhood of

Killarney, took place on Thursday last at Glan-fleek, near that town, about two o'clock after noon. The peasantry in that romantic glen were astounded with its frightful peals, which were succeeded by several water-spouts pouring from the heavens until the whole glen was deluged; and occurring, as it did, on a sudden, assailed a number of humble habitations, which, together with the unfortunate inmates, thirty-eight in number, were, without a second notice, hurried literally off the face of the earth, and at once consigned to an endless eternity. The unfortunate sufferers were the tenants of O'Donoghue of the Glens; and in every instance whole families have been swept away altogether."—*Western Herald*.

The Casket.—The following is the account relating to London bridge, which we noticed last week in the *Casket*; against which periodical, by the by, we have a reclamation accusing it of having pirated its woodcuts and much of its letter-press (without the slightest acknowledgment) from *The Chronicles of London Bridge*; a very interesting work, of which we spoke highly in our review at the time of its publication.

It is stated that "Canute, king of Denmark, when he besieged London, was impeded in his operations by a bridge, which, even at that time, must have been strongly fortified, as it obliged him to have recourse to the following expedient. He caused a prodigious ditch to be cut on the south side of the Thames, commencing at Rotherhithe, and which he continued, at a distance from the south end of the bridge, in the form of a semicircle, opening again into the western part of the river. Through this he drew his ships, and effectually completed the blockade of the city. Evidences of this great work were found, and are still to be seen, in the place called Dock Head, at the end of Tooley Street, where it was first commenced. Fascines of hazels and other brushwood, fastened down with stakes, were discovered in digging that dock in 1694; large oaken planks, and numbers of piles, have also been discovered in other parts of its course. So far the above account, as related by Pennant and other historians; but, with due deference to them, without resorting to speculative arguments on the great improbability of such a gigantic canal having been made, so as to alter, artificially, the course of the river, and completed in so short a space of time, and under such circumstances as those antiquarians relate, the author of this paper personally observed one fact, in 1827, that was more convincing than a thousand such speculative arguments as Pennant's can be, to account for all the oak, timber, piles, and hazel-wood, &c. found at different times, in digging about that neighbourhood, which goes to prove that they were deposited there by *natural*, not *artificial*, causes. In 1826-7, an excavation was made the whole length of Bermondsey Street, into Tooley Street, for the purpose of building a new sewer; and the following is a correct description of the ground cut through; viz. the first few feet of course, were made ground, merely rubbish; then came a thick close sedimentary deposit, of alluvial clay and Thames-river mud, averaging about seven to ten feet thick, which evidently had its origin in the tidal and sedimentary matter from the adjacent river; below this mud and clayey deposit was a close stratum of peat, tightly compressed, varying materially in thickness in different places along the street, but averaging from two to four and five feet in thickness. This peat was chiefly composed of

preservation), fragments of oak, beech, and other trees, and leaves and stems of various plants confusedly intermixed, the wood and hazel-nuts and the oak differing in no respect in their character from what might be grown at the present time in the same neighbourhood. This peat and wood had undergone no apparent chymical change; it was highly saturated with moisture, had rather an agreeable odour, of a light brown colour; and fragments of the hazel and oak wood, on being kept in a dry situation for two or three months, shrunk into about one-tenth of their original size by the evaporation of the combined water, but left the outside bark in its original shape, while the remaining inside ligneous fibre of the hazel or oak became (on cutting it with a knife) nearly as black and as hard as ebony. Below this stratum of peat came the usual angular fragments, called by geologists diluvial gravel; consisting of fragments of flint, reposing on the great argillaceous deposit of the blue London clay. The writer of this paper has also distinctly traced a continuous formation of the above peat stratum, and the alluvial mud and clay reposing on it, along the banks of the Thames at Limehouse, and at the new entrance now digging for the London Docks, as well as at the excavation of the East India Docks, Blackwall, and in that neighbourhood. From the above statement of facts, one or two interesting inferences or deductions may be drawn. First—that, at the time when the above hazel-trees and wood were growing (at the depth now of ten or twelve feet), the relative level of the height of the water in the Thames must have been at least twelve feet lower than it is at present. Secondly—it is highly probable that, even long anterior to the time of the Romans, this forest or wood must have become submerged by the vast accumulation of the Thames' sedimentary mud and clay, thereby accounting for the progressive rise in the relative level of the river to that which we at present witness at high water."

Memorial to George III.—About eight or ten years ago, a subscription was entered into for the erection of a monument to the memory of the father of his people, our venerated sovereign George III. The design was supplied by Matthew Wyatt, Esq. (whose monument to the Princess Charlotte, at Windsor, is one of the finest works of art of which England can boast), and consisted of a full-length figure of his Majesty in a car, drawn by four horses: these horses were much admired as noble specimens of animal sculpture. The subscription, however, owing to some misunderstanding in a high quarter, did not amount to a sufficient sum to enable the artist to execute the proposed work; and the expense necessarily incurred in models, advertisements, &c. still farther diminished it. At length a general meeting was called, and it was resolved that whenever 3000*l.* was realised, it should be employed in the erection of such a suitable monument as that sum could command, in a fitting site in the metropolis. The period having arrived, another general meeting was held yesterday, pursuant to public advertisements; and the above resolution was confirmed. Lord Kenyon, Colonel Trench, M.P., J. Ramsbottom, Esq. M.P., Sir John Campbell, Colonel Gaiskell, Mr. C. Bleden, and Mr. Jerdan, were chosen a committee, with full powers to complete the design.

Quare!—The following advertisement appears in a shoemaker's window in the Strand; what it means we cannot tell: it is simply this, "*Women's men wanted.*"

Duke of Saxe Weimar.—The commander of a division of the Dutch army is a literary character, and has written a volume of travels in America. He is a very large man, and, though full of activity, is more like a Falstaff on horseback than a Percy.

French Journals.—*Le Globe*, which is the organ of the Saint-Simoniens in Paris, recommends the publication of the names of the writers in the various French journals; and, by way of example, has published the names of its own editors and contributors.

A Dramatic Sketch.

Dramatis Personæ.

I, is the first person.

Thou, is the second person.

He, She, or It, is the third person.

Scene.—*The residence of Lindley Murray, Esq.; the entrance occupied by Mutes.*

I. Those sentinels, in sable clad,
Why stand they there supinely sad?

Thou. To mimic sorrow they convene,
And mark the door where death has been;
But vain it were if I should ask
For whom they speed their mournful task,

Since he, whose door they have surrounded,
Has said that mutes cannot be sounded.

He, She, or It. Death, then, if I have rightly
Was so irregular a word, [heard,
That Murray, though he might define it,
Was quite unable to decline it.

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertiser*, No. XXXIV. Aug. 30.]

We observe, from a prospectus sent to us, that the Works of the late Rev. R. Hall are to consist of six volumes; the *Memoirs of his Life*, by Dr. Gregory, to be in the last.

An improved edition of Ellis's *Polynesian Researches*, with the fourth and concluding volume.—The Greek Testament, with English Notes by the Rev. S. T. Bloomfield, D.D.—*Rough Sketches of the Life of an old Soldier*, during a service in the West Indies, the Peninsula, France, &c. by Lieut.-Col. J. Leach, C.B., is announced.—The *Topography and Antiquities of Rome*, by the Rev. Richard Burgess.

LIST OF NEW BOOKS.

Alice Seymour, 12mo. 4s. 6d. bds.—*Hammond's Parliamentary Debates*, Third Series, Vol. III. finishing the Session of 1830-31, royal 8vo. 2*l.* bds.; 2*l.* 3s. 6d. hf. bds.—Rev. J. Knight's *Discourses on Miracles*, 8vo. 12s. bds.—*Malcolm's Dictionary of the Bible*, 18mo. 3*l.* 6d. hf. bds.—*Bayley's Tales of the late Revolutions*, &c. fcp. 8s. cloth.

METEOROLOGICAL JOURNAL, 1831.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society, July 1831.

Thermometer.—Highest.....	78.50°
Lowest.....	42.50
Mean.....	56.77822
Barometer.—Highest.....	30.05
Lowest.....	29.35
Mean.....	29.73323

Number of days of rain, 10.

Quantity of rain, in inches and decimals, 3.4625.

Wind.—3 East.—5 West.—6 North.—4 South.—2 North-east.—0 South-east.—9 South-west.—4 North-west.

General Observations.—With the exception of last year, the month was hotter than since 1827, and the minimum of the thermometer was above any in the same month for the last eight years; the barometer was also high, and bore the same similarity to the year 1827, as respects the mean and both the extremes: upwards of an inch more rain than in last July, and it fell chiefly in thunder-showers, of which there were six during the month; some very heavy, particularly on the 16th and 23rd, when the thunder was very loud, and the lightning vivid: during a great part of the month the air was in a highly electric state—the wind chiefly from the north and north-west. The evaporation 0.70635 of an inch.

TO CORRESPONDENTS.

The morbid feeling in B. F. S.'s lines recommended them to our attention; but the composition is not such as to warrant publication.

We cannot insert the young (very young) lover's complaint of his mistress's unkindness, beginning—

"Oh! why do I gaze with such rapture on thee?"

And why do I foolishly sigh?"

And the "why" thus accounted for:
"Oh! why, like the storm, dost thou fill the young rose?"

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery, with a Selection of Pictures by Ancient Masters of the various Schools of Painting, is open daily, from Ten in the Morning until Six in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

FRAUDS IN PATENT PENCILS.—

S. MORDAN and CO. respectfully solicit the public attention to the Frauds which are daily practised upon them, as regards their Pencils, and the Leads for refilling the same. To guard the Public against impositions, the Patentees are induced to make the following remarks:—

1st. Look for the London Hall mark on each silver pencil-case.

2d. S. Mordan and Co. Patentees and Makers, on the body of the case.

3d. The genuine Leads in boxes have a yellow belt, bearing S. M. and Co.'s seal.

4th. Genuine Pencils. These pencils contain the same quality of pure Cumberland Lead as their silver patent pencils.

Warranted Protection.—The Lead with seven guards is the most secure and the most durable one in use. The key cannot be copied, nor can an impression be taken from it: neither can a skeleton or other substitute key be made with success. The key admits of infinite variety, so that duplicates are entirely precluded, and dishonesty and curiosity equally guarded against.

"S. Mordan and Co. Makers, London," is stamped on each Lead.

* Scientific gentlemen and others are invited to inspect the Manufactory, 22, Castle Street, Finsbury.

Gothic Ornaments in York Cathedral.

Complete, in extra cloth boards, lettered on morocco, 6s. 6d.

THE GOTIC ORNAMENTS in the CATHEDRAL CHURCH OF YORK.

By JOSEPH HALFFENNY.

A new edition, printed from the original Plates, and Letter-press verbatim.

* This work consists of 175 Specimens, together with Four General Views of the Interior; faithfully drawn, and etched on 106 Copper-plates.

* No single Number will be sold separately. Some account of the destructive fire in the Choir and "Chapelle of our Lady," in 1859, is given in the last Number.

York: Published by John and George Todd, Stationers; and sold by Messrs. Nichols and Son, Longman and Co., and Baldwin and Co., London.

MEDALLION OF THE KING.—Messrs.

DOBBS and CO. have just published an embossed Medallion of His present Majesty, which, for correctness of likeness, and elegance of workmanship, they trust will be found to equal that of his late Majesty, to which it is intended as a Companion. To be had of Messrs. Dobbs and Co. 134, Fleet Street, and 15, Soho Square. Price 4s. 2s. 6d., and 2s.

TO BE DISPOSED OF, on Eligible Terms,

THE BUSINESS OF A BOOKSELLER and STATIONER, in a large and populous Town in the West of England. The Business has been carried on by the present Proprietor during a period of Twenty-four Years, who, being on the spot, would render every assistance to a person unacquainted with the business, in the way of information and introduction to a connexion of the highest respectability. Coming in, about £1,000.

Apply, if by letter, post-paid, to Mr. F. M. Pherson, Bookseller, 4, Middle Row, Holborn; Messrs. Brown and Reid, Booksellers, Bristol; Mr. Upham, Bookseller, Exeter; and Mr. Currie, Bookseller, Plymouth. A letter, post-paid, may be addressed to W. W. care of Messrs. Longman and Co. Paternoster Row.

MUSIC.

New Music.

Snow Harris on the Transient Magnetic State of different Substances—Mr. Davies Gilbert on Negative and Imaginary Quantities—Professor Barlow on the Phenomena of Terrestrial Magnetism—Mr. Ivory on the Equilibrium of Fluids, and the Figure of a Homogeneous Spheroid—Professor Davy on an Electro-Chemical Method of Detecting Metallic Poisons—Mr. Barry on Atmospheric Electricity—Mr. Lloyd's Survey of the River Thames, from London Bridge to the Sea—Mr. Fox on the Variable Intensity of Terrestrial Magnetism—Mr. Palmer on a Graphical Register of the Tides and Wind—Professor Barlow on the Errors in the Course of Vessels from Local Attraction—Mr. Lubbock on the Meteorological Observations made at the Royal Society—The Meteorological Journal of the Royal Society, from June to Dec. 1830.

Dedicated to the Duke of Devonshire. On the 20th of July was published, the Third Number of THE BEAUTIES OF THE COURT OF KING CHARLES THE SECOND.

Edited by the Author of "the Diary of an Ennuyé."

A Series of Portraits of the beautiful and celebrated Women of the court and reign of Charles the Second, forming a splendid illustration of the Memoirs of Dr. Grammont, the Diaries of Evelyn and Pepys, and other works connected with that gay and interesting period; with Biographical and Critical Notices, which the editor has been collecting for many years, from the most authentic sources.

Lord Orford observed, fifty years ago, that "the Beauties at Windsor ought to be engraved to illustrate the Memoirs of the charming historiographer, Count Hamilton." It is singular that since that time no attempt has been made to produce these lovely portraits in a style worthy of the beauty and interest of the subjects. Of the fourteen pictures at Windsor, six only have hitherto been engraved; it is therefore hoped that the present work will supply what has long been a desideratum in the fine arts.

The size of the plates is six inches by four and a half; engraved by the most distinguished artists from the original pictures in the Royal Gallery at Windsor, and elsewhere. Royal 8vo. 11. 1s.; imperial 4to. Proof on India paper, 21. 5s. each No.

The First No. contains the Portraits of the Queen, Lady Castlemaine, the Countess de Grammont (La Belle Hamilton), and the Countess of Osnery; all after Sir Peter Leary.

The Second No. contains the Portraits of the Duchess of Richmond (La Belle Stewart), the Duchess of Somerset, Nell Gwyn, and Mrs. Lawson.

The Third Number contains the Portraits of the Countess of Chesterfield, Lady Denham, the Countess of Rochester, and Lady Seely.

The whole Work will be shortly completed in Five Numbers. Henry Colburn and Richard Bentley, New Burlington Street.

D. A. Talboys, Oxford; and William Pickering, London.

THE FIRST BOOK OF the ILIAD;

BATTLE OF the PHROGS and MICE; HYMN to the DELIAN APOLLO; BACCHUS, or the ROVERS, &c.; Translations from Homer.

STANDARD NOVELS and ROMANCES; comprising the best Novels and Romances of Modern Times.

Volumes already published—

No. I. *The Pilot*. By Cooper. Originally published in 8 vols.

"We consider this to be the best of Mr. Cooper's works."—*Literary Gazette*.
"The Pilot for six shillings! This is, indeed, a phenomenon in the history of literature."—*Spectator*.

No. II. *Caleb Williams*. By Godwin. Originally published in 8 vols.

"One of the most singular and powerful works of fiction in our own or any other language."—*Atlas*.

No. III. *The Spy*. By Cooper. With a New Introduction and Notes, written expressly for this publication by the Author. Originally published in 3 vols.

"This tale has been carefully revised, much of it re-written, and forms one of a series of tales better adapted to communicate a thorough knowledge of America, than all the histories and travels that have ever been published of the country."—*Monthly Magazine*.

No. IV. *Thaddeus of Warsaw*. By Miss Jane Porter. With a New Introduction and illustrative Notes by the Author. Originally published in 4 vols.

"Thaddeus of Warsaw has gone through ten editions: what can a critic say after that?"—*Literary Gazette*.

No. V. *St. Leon*. By Godwin. Originally published in 4 vols.

"There are few people who have once read St. Leon, who would not desire in the first place to read it again; and secondly, to buy it, as one of the most acceptable additions to their library."—*Sun*.

No. VI. *The Last of the Mohicans*. By Cooper. Originally published in 3 vols.
Henry Colburn and Richard Bentley, New Burlington Street.

The *Garrick Papers*.

In 1 vol. printed uniformly with Evelyn and Pepps, **THE PRIVATE CORRESPONDENCE** of DAVID GARRICK with the most celebrated Persons of his time, published from the Originals.

Among other Names may be mentioned Lord Chatham—Lord Camden—Duke of Devonshire—Countess Spencer—Lord Lyttelton—Lord Pembroke, and the leading Nobility of Garrick's time—Warburton—Burke—Johnson—Mumse—Gibbon—Sir Joshua Reynolds—Goldsmith—Robertson—Junius—Beattie—Churchill—Mason—Cambridges—Boswell—Colman—T. and J. Watton—Dr. Burney—Barrett—Thomas and R. B. Sheridan—Hugh Kelly—Murphy—Dr. Hoadly—Isaac Bickerstaff—Tickell—Hogge—C. Yorke—Madame Racombe—Mrs. Montagu—Whitehead—Dr. Franklin—H. Beauclerk—Malleson—Mrs. Cowley—John Wilkes—William Gainsborough, &c.—and some others, the following Dramatic Characters: Mr. Curre—Mrs. Cibber—Mrs. Abington—Mrs. Yates—S. Foote—Spranger Barry—Powell—Henderson—Messrs. Parsons—T. King—Smith—Macklin—Moody—Le Kain—Madame Clairmont—Charles Diddon—T. Wilkes—Roddish—Holland—Wreghitt—Mrs. Pope—Bensley—Alchin—Dr. Arne, &c. &c.
Henry Colburn and Richard Bentley, New Burlington Street.

Works of the late Rev. Robert Hall, A.M.

Now publishing, in volumes, price 12s. each, and to be completed with all convenient expedition, in 6 vols. 8vo. price 6l. 18s. (each volume sold separately).

THE ENTIRE WORKS of the Reverend ROBERT HALL, A.M.; with a Brief Memoir of his Life, and a Critical Estimate of his Character and Writings. Under the Superintendence of OLINTHUS GREGORY, LL.D. F.R.S. Professor of Mathematics in the Royal Military Academy.

"Mr. Hall, like Bishop Taylor, has the eloquence of an orator, the fancy of a poet, the acuteness of a scholar, the profoundness of a philosopher, and the piety of a saint."—*Dr. Parr*.
"There is a living writer who combines the beauties of Johnson, Addison, and Burke, without their imperfections. It is a Dissenting minister of Cambridge, the Rev. Robert Hall. Whoever wishes to see the best language in its perfection must read his writings."—*Douglas Stewart*.

The following is the proposed arrangement of the Contents:—
Vol. I. Sermons, Charges, and Circular Letters.
Vol. II. Tracts on Terms of Communion and John's Baptism.
Vol. III. Tracts, Political and Miscellaneous.
Vol. IV. Reviews and Miscellaneous Pieces.
Vol. V. Sermons, from the Author's own Manuscripts, with a Selection from his Letters.
Vol. VI. Sermons, from Notes taken while they were preached; with Memoirs of the Life of the Author, and Review of his Writings.

Vol. I. is now ready.

Vol. III. will be published next week.

The whole will, it is hoped, be published before the end of the present year, 1821.

In the preparation and arrangement of these volumes, Dr. Gregory, in every case where such aid seems expedient, avails himself of the judgment of the Rev. John Foster, author of "Essays on Devotion of Character," on "Popular Ignorance," &c. The Memoir has been undertaken by a distinguished individual, himself one of Mr. Hall's earliest friends, and whose intellectual endowments eminently qualify him for the task. The publishers are not yet authorized to mention his name, but it will be announced in due time.

An accurate and beautifully executed Portrait of the Author will accompany one of the volumes.
A few Copies will be printed on royal paper, with Proof Impressions of the original, price 6s.

Persons wishing to subscribe to the Work are requested to send their names, without delay, to their respective Booksellers, to be forwarded by them to the Publishers.

A List of Subscribers will be printed in the last volume.
Enlarged Prospectuses may be had of all Booksellers.
Holdsworth and Ball, 18, St. Paul's Churchyard.

In 2 vols. 8vo.

MEMOIRS of COUNT LAVALETTE, Aide-de-Camp to Napoleon, including the Secret History of the Trials of Ney and Labeodoyere, and an Account of the Epigrammes endured by the Author.
Written by HIMSELF.

II.

The Dutchman's Fire-side. A Tale. By the Author of "Letters from the South," the "Back Woodman," "John Bull in America," &c. In 2 vols. post 8vo.

III.

Octavo edition, in 2 vols. with numerous Plates, engraved by Pinder.

Captain Beechey's Voyage to the Pacific.
"This expedition will be forever memorable, as one which has added immensely to our knowledge of this earth that we inhabit."—*Mackwood's Magazine*.

IV.

Jacqueline of Holland. By the Author of "Highways and Byways," the "Hedrae of Bruges," &c. 3 vols. post 8vo.

"Beautiful and unfortunate, yet, bearing up against every reverse of fate with the spirit of a hero, Jacqueline of Holland is the very being in whom romance delights."—*Literary Gazette*.
Henry Colburn and Richard Bentley, New Burlington Street.

Price 1s.

"The Weddell volume deserves to find a place on the shelf of every library that pretends to a collection of voyages and travels."—*Quarterly Review*.

Narrative of a Tour through the Moors; giving an Account of the present State of that Peninsula and its Inhabitants, including a View and Description of the Port of Navarre. By Sir William Gell. In 8vo. with Plates, Woodcuts, &c. price 16s. boards.

In 6 large vols. price 11. 10s.

GERALD FITZGERALD; an Irish Tale. By ANNE of SWANSEA, Author of *Deeds of the Olden Time*, *Georgiad*, *Rebels of the South*, *Her Guilty Secrets* in every Mansion, *Upstairs and Downstairs*, *Wonders of a Middle Age*, &c. &c.
Printed for A. K. Newman and Co. London.

BOOKS IN THE PRESS.

New Poems, Extinct, Dormant, and in Abeyance. A necessary Companion to all other Poems.
Nearly ready for publication, beautifully printed in double Columns, uniformly with Burke's Poems and Barometrage.

A DICTIONARY of the ANCIENT PEERAGES of ENGLAND, SCOTLAND, and IRELAND; Extinct, Dormant, and in Abeyance.

By JOHN BURKE, Esq. Author of a General and Heraldic Dictionary of the Peerage and Baronetage of the British Empire, &c. &c.

This work, formed on a plan precisely similar to that of Mr. Burke's very popular Dictionary of the Peerage and Baronetage, will comprise the whole of the Peerages of the three Kingdoms which have been suspended or extinct since the Conquest, particularising the members of each family, in each generation, and bringing the lineage, in all possible cases, through either collateral or females, down to existing houses. It will connect, in many instances, the new with the old nobility; and it will in all cases show the cause which has induced the revival of an extinct dignity in a new creation.

"When it is considered that the most illustrious peers of England were swept away in the devastating conflicts between the Houses of York and Lancaster—in the wars of the Edwards and Henrys—and more recently, in the season of civil commotion, it is pronounced that a work of this description, not confined to mere names and dates, but supplying much historical, biographical, and domestic detail, cannot fail to engage public attention, and to be considered as a great desideratum in all libraries. It should be particularly noticed, that this new work will appear nearly as much to extend as to diminish the number of families; for though dignities pass away, it rarely occurs that whole families do. The editor has therefore sought, with the utmost sagacity, those branches still remaining amongst the nobility and gentry, which have sprung from old and illustrious houses, and he trusts that his researches will be found to have been extremely successful."
Henry Colburn and Richard Bentley, New Burlington Street.

On September 1st, in 1 vol. price 6s.

TREASURE on the SILK MANUFACTURE.

Being Vol. XXII. of Dr. Lardner's Cabinet Cyclopaedia.
Published August 1.

Lives of Eminent British Statesmen, (2 vols.), Vol. I.
To be published Oct. 1.

Treatise on the Manufactures in Metal, Vol. I. Iron and Steel.
The last-published Volume contains a List of those which are published by Longman and Co., and John Taylor.

On September 1st, in small 8vo. 6s. 6d. with a Portrait of Bishop Newton, Vol. V. of the

SUNDAY LIBRARY, containing Sermons by Bishop Newton—Dean Chandler—Dr. Chalmers—Blair—Rev. A. Allison, A. Irvine, Robert Hall, C. W. Le Bas, C. Benson, and J. H. Spry. With Introductory Remarks, Notes, &c. By the Rev. W. F. DILLON, D.D.

Printed for Longman, Rees, Orme, Brown, and Green.

New System of Chemistry.

In a few days will be published, in 2 very large and handsomely printed vols. 8vo. with Woodcuts.

A SYSTEM of INORGANIC CHEMISTRY.

By THOMAS THOMSON, M.D. Regius Professor of Chemistry in the University of Glasgow, &c. F.R.S. &c. &c.

Printed for Baldwin and Crandall, London; and William Blackwood, Edinburgh.

Also, recently published, by the same Author, in 8vo. price 18s. boards.

1. **An Outline of the Sciences of Heat and Electricity.** (Being a Part of the General System of Chemistry, by Dr. Thomson.)

2. **An Attempt to Establish the First Principles of Chemistry by Experiment.** By the same. In 2 supp. 8vo. price 17. 10s. boards.

HANSARD'S PARLIAMENTARY DEBATES, Vol. III. 1820-21.

In order to comprise in this (the Third) Volume the whole remainder of the Business of the Session, together with a new and useful Sessional Index, it has been necessary to extend the stipulated limits. This Volume will therefore consist of thirty-nine instead of forty-five Sheets; to meet the expense of this addition, a proportionate advance is necessary in the price, which amounts precisely to 10s. The regular quantity and price will be reverted to in the forthcoming Volume of the present Parliamentary Series, of which it will be certainly ready in a few days, commencing with a complete revision of the *Business and its Schedules*, now under discussion: also a List of the House on the opening of the Session, followed by a faithful and full Register of the Speeches on either side; the whole forming the most complete History of the Proceedings of the English Parliament which can be produced.
Parl. Debates Office, Parliament Room, St. Paul's.

LONDON: Published every Saturday, by W. G. CHURCHILL, at the LITERARY GAZETTE OFFICE, No. 14, York Street, near St. Martin's Lane; Strand, and 15, South Street, near St. Dunstons Church; sold also by J. Chapman, 55, Royal Exchange; G. PRICE 8d.

REVIEW OF NEW BOOKS.

Memoirs of Count Lavallette. Written by Himself. 2 vols. 8vo. London, 1831. Colburn and Bentley.

THE last half century, so interesting in its events, so important in its results, cannot be too minutely displayed. Every work, whether of history or biography, that gives either a new or more accurate account than has yet been given, has a value independent of its intrinsic merits. The volumes now before us ought to rank high in their class, as the result of the experience of one who had the best opportunities of observation, and time also to reflect on those observations. The name of Lavallette is familiar to all English readers; and as we usually like those we have served, a sort of national interest seems to attach to him, whose life was saved by our own countrymen. Our glance has been a hurried one; but what we have seen of these pages, we like much: they are very French—that is, full of party spirit, using expressions that seem extravagant to our colder, insular ears; but containing much matter, and giving a correct idea of the feelings of the body to which their writer belongs.

We shall now proceed to our extracts, which give the justest notion of the work itself.

"The royal family remained, therefore, surrounded by a few hundred noblemen; whom duty, or the most noble and courageous fidelity, still retained in France; but this fidelity was accompanied with so much hatred of the patriots, and so much foolish presumption, that it proved more dangerous than useful to their master. They were jealous of the National Guards, who did duty in the palace; their everlasting derision and threats disgusted all the citizens honestly attached to the king. As soldiers, the National Guard undoubtedly were not undeserving of some little ridicule; but ought they to have been thus irritated whilst they were giving such disinterested proofs of fidelity, and when they might have been so extremely useful? The commander-in-chief of the Guards was more particularly the object of their bitter satires. This soured our temper, and I observed with regret, that many honest men who would have laid down their lives for the king, took the fatal resolution of abandoning him. I must say, however, that the royal family were far from approving the conduct of their pretended friends. The king and queen always shewed the greatest affability to the National Guards; but their example was not followed, nor were even their remonstrances listened to. I may quote one instance, of which the consequences were fatal. The Duke of Orleans had for some time felt that he stood in an equivocal light, and that his position at court was unworthy of his name and character. He wished to come to a reconciliation with the king and queen. A negotiation, prudently managed, succeeded completely. It was agreed that the first prince of the blood should come publicly to pay his respects—I think it was on Easter Sunday. The apartments were crowded.

The prince appeared at the moment dinner was being served up to the royal family. Immediately some silly young men, thinking themselves very clever, cried out—'Take care of the dishes! Here comes the Duke of Orleans!' Another imagined he was doing some wonderful achievement in brushing by the prince, and saying insolently—'That was a kick!' The prince, seeing himself thus insulted in the king's presence, left the palace abruptly, convinced that the queen had drawn him into an odious snare. From that moment he joined the most violent of the factions; and the fatal and shameful consequences of that step are but too well known."

Speaking of the massacre at La Force—

"The massacre was already raging in all its force. Being less known than my friends, I flew to the prison. Before the wicket that leads to the Rue des Ballets, I found about fifty men at most. These were the butchers; the rest had been drawn there by curiosity, and were perhaps more execrable than the executioners; for though they dared neither go away, nor take part in the horrid deed, still they applauded. I looked forward, and at sight of a heap of bodies still palpitating with life, I uttered a cry of horror. Two men turned round, and, taking me abruptly by the collar, dragged me violently to the street, where they reproached me with imprudence, and then running away, left me alone in the dark. The horrible spectacle I had witnessed deprived me of all courage: I went home, overwhelmed with shame and despair for humanity so execrably injured, and the French character so deplorably disgraced. The particulars of the massacre having all been recorded in the memoirs of the time, I need not repeat them here. I was moreover no spectator of them. They lasted three days, and, I blush while I write it, at half a mile from the different prisons, nobody would have imagined that their countrymen were at that moment butchered by hundreds. The shops were open, pleasure was going on in all its animation, and sloth rejoiced in its vacuity. All the vanities and seductions of luxury, voluptuousness, and dissipation, peaceably swayed their sceptre. They feigned an ignorance of cruelties which they wanted the courage to oppose. And still there existed an assembly, the organ and supreme protectress of the laws, ministers entrusted with the executive power, a paid guard and magistrates. The unfortunate prisoners that were slaughtered had friends and relations, on whom they could not bestow a last look. They perished, after horrible agony, in the midst of the most cruel torments. Twelve hundred persons were killed in those three days."

How thankful ought we to be that such horrors are only known to us by name! Lavallette sets out with some friends to enlist in a free corps attached to the army, the adventure *en route* is so characteristic, that we quote it at full length.

"There were five of us; young, well educated, possessing some fortune, desirous to fight,

but, above all, to leave Paris. M. d'Hilliers received us very well; he gave us orders for our route, and next morning, the 7th of September, at five o'clock, we were on the road to Fontainebleau, our knapsacks on our backs, military caps on our heads, and perfectly well disguised by a sort of sailor's dress called a *Carmagnole*.

"We arrived at Auxerre on the third day after our departure, delighted with having quitted Paris, but full of anxiety for the dear friends we had left there. The Revolution had also passed through that town, and had left bloody traces behind it. The inhabitants were full of consternation, and deploring several young clergymen, sons of the most honourable citizens, that had been slaughtered. We lodged with the uncle of one of these victims, the corpse of whom had been left for three days on a dunghill, his parents not being suffered to bury him. We thought that we ought not to remain long in that city. We set off in consequence for Autun, and we arrived next day at a village, not far from Vermanton, situated amidst woods, and the inhabitants of which got their livelihood by making wooden shoes. Two days before, a bishop and two of his grand vicars, who were escaping in a post-coach, had been arrested by them. The coach was searched, and some hundred louis-d'ors having been found in it, the peasants thought the best way to gain the property would be to kill the real owners. Their new profession being more lucrative than their former one, they resolved to continue it, and in consequence set themselves on the look-out after all travellers. Our sailors' dresses were not very promising, but we carried our heads high,—our manners seemed haughty; and so, a little hunch-backed man, an attorney of the village, guessed we might perhaps contribute to enrich them.—The inhabitants, being resolved not to make any more wooden shoes, applauded the hunch-back's advice. We were brought to the municipality, whence the mob followed us. The attorney placed himself on a large table, and began reading with emphasis, and in a loud voice, all our passports: Louis Amedée Auguste d'Aubonne, André Louis Leclerc de la Ronde, Maria Chamans de Lavallette. Here the rascal added the *de*, that was not in my passport. On hearing these aristocratical names, a rumour began: all the eyes directed towards us were hostile, and the hunchback cried out that our knapsacks ought to be examined. The harvest would have been rich. I was the poorest of the set, and I had five-and-twenty louis in gold. We looked upon ourselves as lost, when D'Aubonne, whose stature was tall, jumped on the table and began to harangue the assembly. He was clever at making verses, and knew, besides, at his fingers' ends the whole slang dictionary. He began with a volley of abuse and imprecations that surprised the audience; but he soon raised his style, and repeated the words—country—liberty—sovereignty of the people,—with so much vehemence and such a thundering voice, that the effect was prodigious. He

was interrupted by unanimous applause. The giddy-headed young man did not stop there. He imperiously ordered Leclerc de la Ronde to get upon the table. La Ronde was the cleverest mimic I ever saw. He was thirty-five years old, of a grotesque shape, and as dark as a Moor. His eyes were sunk in his head and covered with thick black eyebrows, and his nose and chin immeasurably long. D'Aubonne said to the assembly: 'You'll soon be able to judge whether or not we are republicans coming from Paris.' And turning to his companion, he said to him: 'Answer to the republican catechism. What is God? What are the people? What is a king?' The other, with a contrite air, a nasal voice, and winding himself about like a harlequin, answered, 'God is nature; the people are the poor; a king is a lion,—a tiger,—an elephant—who tears to pieces, devours and crushes the poor people to death.' It was not possible to resist this. Astonishment, shouts, enthusiasm, were carried to the highest pitch. The orators were embraced,—hugged,—carried in triumph. The honour of lodging us grew a subject of dispute. We were forced to drink, and we were soon as much at a loss how to get away from these brutal wretches, now our friends, as we had been to escape out of their hands while they were our enemies. Luckily, D'Aubonne again found means to draw us out of this scrape. He gravely observed, that we had no time to stop, and that our country claimed the tribute of our courage. They let us go at last."

Picture of Paris in 1794:

"I arrived in Paris towards the middle of August. When I left that city in 1792, the people, freed from the wholesome restraint of the laws, intoxicated with fury, and elated with their abominable triumphs, were madly enjoying a savage licentiousness, and, ever threatening, ever oppressive, set no bounds to their tyranny. What a change did I not find after the short space of three years! Scarcity was terrible, misery at the highest pitch, and the dethroned sovereign scarcely dared to complain. The people were no better than a vile rabble, devoid of energy, shrinking under the rod that chastised them, but having not even the thought of resistance. In the morning, the city presented a deplorable spectacle: thousands of women and children were sitting on the stones before the doors of the bakers' shops, waiting their turn for receiving a dearly bought bit of bread. More than one-half of Paris lived on potatoes. Paper money was without value, and bullion without circulation; this lasted nearly a year. A still stranger sight struck the observer's eyes. The unfortunate prisoners had recovered their liberty, and having escaped almost certain death, they enjoyed their good luck with a sort of ecstasy. The dangers to which they had been so long exposed excited a lively interest in their favour; but vanity, so ingenious in France, discovered the means of turning their situation to advantage. Each person pretended to have suffered more than his neighbour; and as it was the fashion to have been persecuted, a great many people who had remained safe in their hiding-places, or had bought their security by base concessions, boasted of having languished in prison. An immense number of innocent persons had, in fact, perished on the scaffold; but if credit could have been given to the accounts propagated by hatred and vanity, one might have thought that one-half of Paris had imprisoned or butchered the other half. Confusion was at this period at its highest

pitch in society: all distinctions of rank had disappeared; wealth had changed possessors; and as it was still dangerous to boast of birth, and to recall the memory of former gentility, the possessors of newly-acquired wealth led the ton, and added the absurdities of a bad education to those of patronage devoid of dignity. The class of artists, more commendable, acquired consideration through the general thirst for amusement, and through the necessity many persons were in of seeking a livelihood in the arts of imagination. This same taste for the fine arts so universally diffused, caused in the fashions, and even in the morals of the metropolis, a most inconceivable licentiousness: the young men dressed their hair *en victimes*—that is to say, raised up at the back of the neck as if they were going to suffer on the scaffold. The women, on the contrary, imitated in their dresses the costume of ancient Greece. It is scarcely credible to those who have not seen it, that young females, well-bred, and distinguished by their birth, should have worn tight skin-coloured pantaloons, sandals on their feet, and transparent gauze dresses, while their bosoms were exposed, and their arms bare up to their shoulders; and that when they appeared thus in public places, instead of making modesty blush, they became objects of universal admiration and applause. The palaces and private gardens were changed into scenes of riotous pleasure, called Elysium, Paphos, Tivoli, Idalia, &c. where crowds of people, boisterous diversions, bad manners, and an utter contempt for decency, created both shame and disgust."

These are among the blessings of a revolution. The deduction made from the following account of the state of government is very just.

"The assembly had been loaded with an enormous burthen. The king had been precipitated from his throne, and the monarchy existed no longer. The republic had been established without consulting the people: and the king had been put to death because his existence was troublesome to the assembly. The members soon became few, and they were composed of elements too hostile to one another to be able to direct affairs securely and rapidly; they enacted therefore among themselves a government called the committee of public safety, that was to superintend the general administration of the country, and to direct the exertions of France against her foreign enemies. They instituted also a committee of general safety, that was to suppress the attacks of interior foes. The successes of the Vendéans and of the allied armies carried these two committees beyond all reasonable ideas, and made the Convention feel that it must conquer or die. Defence was maintained with all the force and energy that personal safety and revenge can inspire. The excellent direction given to the armies, which they followed with admirable courage, preserved France from a foreign yoke; but the progress of civil war, and the secret exertions of the royalists, could scarcely justify the massacres and the horrible tyranny under which the country groaned for so long a period. The rulers of the assembly will remain for ever loaded with the odium which their barbarous government (of which history does not present another instance) will excite among future generations. Of all the lessons given by the history of human passions, there is one especially on which the moralist must insist with force—I mean, the impossibility, which the most honourable men will ever experience, of stopping, if once their passions draw them into the path of error. Surely, if a few years before so many

crimes were committed, they could have been pictured before the eyes of the most barbarous among their perpetrators, I fear not to say that all, even Robespierre himself, would have recoiled with horror. Men begin by caressing theories, heated imagination presents them as useful and easy of execution; they toil, they advance unconsciously from errors to faults, and from faults to crimes, till the contaminated mind corrupts sensibility, and adorns by the name of state policy the most horrible outrages."

Madame de Staël.—"Madame de Staël, already celebrated for her superior mind, and a passion for fame, united to kindness of heart that has not been sufficiently appreciated. To say the truth, it was a little her own fault. I am convinced that she did not foresee the cruel proscriptions that oppressed the vanquished party; but I certainly never witnessed so much warmth of persecution. She undoubtedly saw nothing more in the struggle than the triumph of her political opinions,—I should rather say feelings; but still it must be acknowledged, that an absence of all reflection could alone have led her to embrace so openly the part of men who trampled on liberty and national representation, the two most cherished objects of her worship. All that time she carried to enthusiasm her admiration of General Buonaparte. I saw her for the first time at M. de Talleyrand's. During dinner the praises she lavished on the conqueror of Italy had all the wildness, romance, and exaggeration of poetry. When we left the table, the company withdrew to a small room to look at the portrait of the hero; and as I stepped back to let her walk in, she said, 'How shall I dare to pass before an aide-de-camp of Buonaparte?' My confusion was so great, that she also felt a little of it, and our host himself laughed at us. I went to see her next morning. Her reception was kind enough to make me return often to her house; and I do affirm that her lively imagination and her incredible activity continued unceasingly the same up to the catastrophe. She had nothing before her eyes but the counter-revolution, the return of the Bourbons, the revenge of the emigrants, and the loss of liberty."

Wounded vanity in after-years converted the admirer into the enemy: it is really quite extraordinary to think how much in this life is effected by a few civil words. Count Lavallete justifies the Austrian government from all participation in the murder of the French plenipotentiaries: he thus accounts for it.

"A regiment of hussars of Szekler, a sort of pandiers, recruited on the frontiers of Turkey, already surrounded Rastadt, when the French ministers received an order to leave the place. The Baden commander of the town had in vain advised them to set off in the morning, that they might cross the Rhine before night-fall. Their preparations caused delay: they were encumbered with papers they wished to keep, and they were, besides, convinced that their sacred character of ambassadors would shelter them from insult. The day was far advanced when they departed. At a few leagues from Rastadt they were stopped and murdered. I am persuaded that the Austrian government did not give an order for murdering them, but only for seizing their papers; while the soldiers, finding a great deal of money about them, urged by avarice, and probably intoxicated, thought the best way would be to stifle their complaints by murdering them."

Surrender of Malta.—"The grand master, fancying that the Order of Malta was irrevocably lost, and forgetting that from one

moment to another an English fleet might arrive and deliver him, resolved to sign a capitulation with General Buonaparte. The treaty was soon concluded; and, two days after our arrival, the army was master of the city and forts, and the fleet at anchor in the fine harbour of Valetta. General Caffarelli, on examining more minutely the fortifications, said to the general-in-chief: 'It is very lucky for us that there were people in the place to open the gates for us; for if it had been deserted, the army would never have got in, notwithstanding all our exertions.'

Sudden Effort of Memory.—"The first billow nearly submerged us. One more effort was necessary; and while the sailors, pale as death, continued rowing with vigour, one of my travelling companions, an officer in the guides, fell on his knees and began the Lord's Prayer, of which he did not omit a single word. When the danger was over, his courage returned, and, ashamed of an act he could not himself comprehend, he whispered to me: 'I am now thirty-eight years old, and from my sixth year I never said a prayer in my life. I cannot conceive how I recollected that one; and I do declare, that at the present moment I should not be able to repeat a single word of it.' A little allowance for after-affectation will, we think, account for the mystery.

Destruction of the French Fleet.—"It was then that the general-in-chief learned the disaster of our fleet at Aboukir. The news was brought to him by an aide-de-camp of General Kleber. The officer's horse being unable to go any farther, he had written some particulars in an open letter, which I found in the hands of a peasant to whom he had entrusted it. I read the letter, and advancing towards the general-in-chief, I begged him to withdraw for a moment from the group of staff officers which surrounded him. I then gave him the note. When he had read it he said to me, 'You know its contents; keep the secret.' We returned to Belbeys, where we found breakfast on table. Every body was in good spirits, and particularly the troops, who had retaken from the Mamelukes the spoil of the caravan. They were going to sell the goods for almost nothing; but the general-in-chief forbade the officers to buy any of them there, and ordered the soldiers to dispose of them on their return to Cairo. All of a sudden, while breakfasting, the general-in-chief said to his guests: 'It seems you like this country: that is very lucky, for we have now no fleet to carry us back to Europe.' He then acquainted them with the particulars of the battle of Aboukir, and they were listened to with as much earnestness as the general had related them. Every one soon appeared reconciled to the event, and nobody talked any more of it."

The Plague.—"All the physicians died successively; the overseers of the infirmaries went away, and it was no longer possible to enter the hospitals with impunity. We were obliged to take Turks to nurse the sick, and to pay a very great price for their services; while the superintendence over them was so relaxed, on account of the danger with which it was accompanied, that the most flagrant misconduct was not to be prevented. At Gen. Marmont's lodgings we had been obliged to do without table-cloths or sheets; all our clothes were fumigated; the out-door servants had no connexion with those of the interior. The carriage gateway was nailed up; while every thing that was brought to the house from out of doors, and even the meat, was thrown through a wicket into a tub of water. With a view to

avoid the infection among us, we divided ourselves into two brigades; and during the night we pursued each other from room to room, throwing water in our faces, which was the only ammunition we possessed. Among the few soldiers who consented to nurse the sick, there was a gunner who had been in Constantinople, where he pretended that he had escaped the plague. According to his assertion, he possessed an infallible preservative against the infection, which was, to keep his face and hands perpetually moistened with water. But it was discovered that he washed his hands in oil. Indeed, it had been observed in Cairo, that the lamp-lighters never caught the plague."—This latter is a curious fact.

Instance of Courage in a Physician.—"General Buonaparte felt convinced that that fever was really the plague; the physician-in-chief, Desgenettes, alleged, on the contrary, that it was nothing more than a common fever. His opinion and arguments served to tranquillise the soldiers; but they had one bad effect,—that of disposing them to neglect the caution necessary in all contagious diseases. He wished, however, to add practical demonstration to his arguments by inoculating himself with the plague. In the middle of the hospital, and in the presence of all the sick, he plunged a lancet into the bubo of one of the patients, and pricked himself with it in his left side. This act, which was the more courageous, as he afterwards acknowledged that the disease had really all the characteristics of the plague, excited the admiration of the whole army, and insured to the physician lasting glory with posterity."

Poisoning the Sick at Jaffa.—"I must here say a few words on an odious imputation made long since against Gen. Buonaparte,—I mean, the pretended poisoning of the soldiers sick of the plague. It is so contrary to truth that General Buonaparte proposed to poison the unfortunate men, that M. Larry, first surgeon to the army, never ceased to pronounce it an atrocious calumny; and he several times, in the last fifteen years, pressed M. Desgenettes to declare publicly with him the fact through the medium of the press. The latter, having been ill-used by the king's government, recoiled probably at the thought of a declaration which might make his situation still more painful. It is, besides, impossible to name any person to whom the proposal should have been made. Finally, the calumny was spread by the English while they were in Egypt, and propagated by a writing of Sir Robert Wilson, who was then extremely young, and who in maturer age has openly declared that he had been mistaken."

Among the absurdities of that grandiloquent love of simile which distinguishes the French, we must particularise one. The mob forced the king to put on the red cap, then liberty's symbol. "His fate must be deplored, and the barbarous insult of the red cap must be considered in the same light as the crown of thorns placed on the head of the Christian Lawgiver."

We shall resume this work next week; but before we now leave it, we must bestow well-merited praise on the translator, who has executed his task with much spirit and good taste, and has corrected several strange blunders of M. Lavallette.

Crayons from the Commons; or, Members in Relief: a Poem, Satirical and Descriptive. By Peregrine Palette, Esq. 12mo. pp. 107. London, 1831. Cochrane and Co.

We have before encountered the effusions of this writer, and done justice to his talents.

He is a close observer, and a clever man: his Crayons are portraits of some of the most conspicuous members of the House of Commons; and it must be confessed that he has very seldom flattered his sitters. Indeed, except in the case of Daniel O'Connell, there is nothing like panegyric: the agitator himself is, however, extolled to the skies.

The author, we should surmise,—from his evident knowledge of the personal appearance, peculiarities, manners, habits, and style of speaking, of the various persons whose pictures he paints,—is connected with the daily press, and engaged in reporting the debates. He appears on this occasion to have dipped his pen into ink with gall enough in it, and his satire is bitter accordingly. We differ much from him in his estimate of several of the characters; but as we are neither called upon to pronounce an opinion or enter into a controversy, but simply to allow the author to exhibit himself through the medium of a few selections, we shall make these, and leave them to the public without a comment.

There is a poetical dedication to the ex-member for Galway, our old friend Dick Martin, which is followed by a whole-length of the Speaker; and he, in turn, by Lord Althorp, Lord Palmerston, Mr. C. Grant, Sir James Graham, Mr. Stanley, Mr. Jeffrey, Mr. Powell Thomson, Lord Howick, Mr. Spring Rice, Sir F. Burdett, Sir R. Peel, Sir C. Wetherell, Mr. Herries, Mr. Bankes, Sir J. Scarlett, and Mr. O'Connell.

We quote the first and a few other lines of Lord Althorp, as both general and particular.

"When royal William's civil list provoked
Discussion fierce, and Whigs with clamour croak'd—
When pamper'd Tories found their doom decided,
As greedy Whigs triumphantly divided—
When sundry Peels their offices resign'd,
And countless Greys stood gaping close behind;
Both parties then their wonted ground exchanged,
And right and left were hostile forces ranged.
Behold! the viceroy station'd in their van,
A steady, grave, deliberative man,
Pretensionless in manner, air, and tone,
But to the world most favourably known,
As one whose word each promise must ensure,
Which probity and honour could secure.
In simple garb his person stands array'd,
Discarding fashion's adventitious aid;
His temper placid, equable, and kind,
Bespeaks extreme serenity of mind;
Ne'er, in the warmest moments of debate,
Involving questions of the utmost weight,
Does fervid passion kindle A——p's soul,
To need prudential caution or control."

"Embarrass'd, awkward, labour'd, and constrain'd,
His style of speech our ears has ever pain'd;
And with a voice of harsh and husky note,
His accents come half-smother'd from his throat;
While sentences, deliver'd oft before,
With faltering sounds again are stammer'd o'er.
Wanting decision where 'twas needed most,
As minister much moral weight he lost;
Adopting measures vigorous and bold,
But which his spirit failed him to uphold."

Of Mr. C. Grant it is said:—

"This minister is but a convert new
To that grand scheme which Grey had long in view;
Nor, like new converts, does he seem to feel
His spirit heated with increasing zeal;
Reform in him no ardent champion finds—
No fervent passion his attachment binds:
Though he and P——m——rt——n support the 'Bill,'
They do so from expediency, not will;
And both, we think, (though all the world may doubt it.)

Would gladly wish the Whigs could stand without it.
Frigid and formal, Gr——m's reluctant aid,
Like some exacted penalty, is paid;
His colleagues claim, what in his feeling cold,
If power permitted, caution would withhold.
But with the Question now, since one and all
Committed have resolved to stand or fall,
Emergency determining the case,
He reconciles his scruples to his place:
If for his views Reform proceeds too far,
He still must follow its triumphant car."

Mr. Stanley:—

"If 'outward signs' should aptly harmonise
With lineage proud, and shew what birth implies,

Viewed as the action of a noble stock.
Mean, vulgar features, stunted, sharp, and sour.
In peevish mood disclose strong mental power;
His intellect, precociously matured,
Official station speedily secured;
Advanced to place, the young aspirant made
Old practised statesmen own his useful aid;
With aptitude deservedly admired,
He never was found deficient when required.
But suddenly his rising ground he lost,
When Wellesley drove his party from their post.

St.—l—y has talents qualified to sway
The nation's councils at some future day;
Nor doubt we that he may be destined yet
To guide and rule the British cabinet."

Lord Howick (like Mr. Herries, Mr. Thomson, Sir J. Graham, and Sir J. Scarlett) is more unmercifully treated.

"A scraggy stripling of the middle size,
With pallid face, and small contracted eyes,
With nose that points a most plebeian tip,
With teeth protruding o'er his nether lip,
Presents himself upon a bench that backs
The row in front with accessory hacks—
That place he takes (too good a one to miss),
Where Horton left a vacant seat for Twiss.
Sometimes he sports a red morocco box,
Which in the pomp of office he unlocks,
To fix the eyes of Sibthorp, or Leigh Keck,
Upon the noble sub-deputed sec.
Horton's old mantle H—k makes his own,
Across his shoulders whimsically thrown;
And vapid lingo finds a hackney'd theme
In emigration, as a social scheme,
Destined to render th' English nation blest,
By getting rid of paupers as a pest;
If starving hinds and all their tribe will go
Where hungry cravings none can ever know;
Where Indian mothers, and their sucking squaws,
Find ceaseless practice for their copper jaws;
Or where th' Australian to the stranger yields,
In savage sulk, his boundless woods and fields;
Where culprits that escaped the gallows-tree
Become possessors of estates in fee,
And those estates, from general option, choose
In districts stocked with thieves and kangaroos."

Sir R. Peel:—

"Few public men from fortune more have won,
Than Oxford's cherish'd, now discarded son;
Cradled in wealth, and finding in his sire
Ambition that could teach him to aspire,
He wander'd, in the morn of early days,
Along those banks where Isis calmly strays,
And with the Muses pass'd unnumber'd hours,
Where Alfred's temple rears its classic towers.
Hence, in due time, with cultured mind he sped,
Pitt's footsteps marking where young Peel's should tread;
And ardent Tories hail'd, with loud acclaim,
The brilliant prospect of his future fame.
To power he rose, and Ireland was the field
Where first that power he stood prepared to wield.
Long was he deem'd most faithful to a cause
That curst a nation with unequal laws—
That spread distraction and fierce rancour round,
While horrid compacts adverse factions bound;
On him high Tory zealots, in their pride,
With bold exulting confidence relied.
But time advanced, still bearing on its wings
A warning strong to ministers and kings:
The quondam Irish secretary now
Was forced to state the 'wherefore' and the 'how';
His former policy he must abjure,
The safety of this empire to secure."

These specimens must suffice: we have made them with reference to their poetical merits, not to their opinions; they will shew what sort of a production this is, and our critical duty requires neither less nor more.

Transactions of the Royal Asiatic Society of Great Britain and Ireland. Vol. III. Part I. 4to. pp. 189. London, 1831, Parbury, Allen, and Co.; Paris, Dondey Dupré and Sons.

THIS new Part of the *Transactions* of our Royal Asiatic contains much to interest the reader, and is very creditable to the Society and its members. The first paper consists of letters from Sir W. Jones, and is hallowed by the name of that distinguished orientalist, besides possessing many illustrations of the literature and science of India. The second presents us with extracts from the *Muakhjât-i-Dará-Shekhî*, by Major David Price: the third, by Captain James Low, treats of *Buddha* and the *Phrabát*, and is altogether so curious

the general public.

The *Phrabát* is supposed to be a footmark left by *Buddha*; which has been converted into a tabular altar, covered with figures and symbols, and worshipped with great piety by the professors of that religion. Captain Low goes over all the emblems on one of these, and explains them very skillfully. Of it he says:—

"In an impression of a divine foot of *Buddha*, given in Captain Symes's *Ava*, the five toes are represented by five chank shells. But in the one in which the emblem we are now investigating occurs, five flowers of the *Dák mont-ha* (of the Siamese) form the toes. The number alludes manifestly to the five *Buddhas*; while the five flowers may allude to those flowers which appeared when the world had been created; and which, having been deposited in safety by a Brahman, were afterwards distributed, four to the *T'hakurs*, and one to *Sacya*. The Bali account of the *Phrabát* does not describe the types which form the toes; which accounts for the variation found in several *Phrabáts*, and favours the supposition that it was originally a mere hieroglyphical table."

"The more," he adds, (speaking of the interpretation of the legends commemorated in these types), "the more we penetrate into the mythological writings and traditions of the natives of Hindustan, or into those of the extra-Gangetic nations who have adopted kindred schemes of religious belief, the more shall we be satisfied that very few indeed of their legendary narratives are entirely destitute of some foundation in history. It is not therefore advisable to reject what may wear the aspect of pure fable; for such may often lead us to results to which we could not have arrived by any other route."

One of the figures on the *Phrabát* is a dog, and the writer observes: "Thus we have Sirius, the celestial barker, whose heliacal rising announced in Egypt the beginning of the new year, and who is otherwise Anubis with a dog's head; supposed by Mr. Maurice (from whom these two remarks are taken) to have typified the god *Bud-ha*, or to be the horizontal circle personified. Terrestrial dogs are mentioned in the account of the mysterious rites of Isis in Egypt. Maurice imagines that *T-hot-h*, who went from Phenicia, in the earliest ages of the world, to Egypt, and there erected a great empire, was the true Anubis, who was afterwards raised to a conspicuous station in Sirius, the brightest constellation, who was also one of the eight greater gods. The Kou-was, or watch-dog of the skies, is worshipped in Abyssinia, according to Bruce. Sir W. Jones supposed, that the Gymnosophists of Ethiopia professed the doctrines of *Buddha*; and, subsequently to these authorities, further reasons have been adduced (I think by the late Colonel Wilford) in support of the supposition that *Buddha* was worshipped in Africa. There are in that country the mountains of Soma, or the moon: and we know that many accounts make *Buddha* to have sprung from Soma; which title is still retained in Sanscrit. Recent travellers have favoured the supposition that Ethiopia gave its religion to Egypt; and we may believe that it was received into Ethiopia from Chaldaea, or some central country of Asia: but whether the Buddhist and canine superstitions were co-existent or not, it would be no easy task to shew. The dog has howled over the guilty in the infernal regions of Indian, Grecian, and Roman mythology. In the hells of the Hindus, the Burmans, and Siamese, he yells in the ears of the guilty shades, and tears them to pieces. Wilford has shewn, that

dogs of Yama, is indubitably the Carberus of the Greeks; but Yama himself, *Buddha* observed, is merely a name, and has no existence but in the mind's eye. The dog is a sign of dignity both in China and Slam. It appears so, at least, with respect to the former, from the badge which the portrait of Van-ta-gin, in Barrow's *Travels* in China, wears on his breast. And, with respect to the latter, Siamese writings shew that the *Sunak handm*, or 'dog general,' is an honourable title in the field. In Japan the dog is, according to *Kempfer*, held in high estimation; the cause does not appear to have been entirely of a religious nature. *Kempfer* says it was owing to one of their kings having been born under the sign of the dog."

The research crowded into this short extract is sufficient to shew the value of Captain Low's communication. We will now copy from him a description of an Eastern hell.

"It only remains (he says) to describe the infernal regions of Siamese mythology, as derived by them from the Bali; and hence we may judge of the checks which the religion of Siam would give to the passions of the multitude, if perfectly operative; it certainly works greatly on their fears. For this purpose I have extracted the following descriptions from the *Milinda*: 1st, Of the *Maha Naraka-atha*, or eight great hells, and the punishments of the wicked in them. Murderers go into the hell *Sanchisa*. Five hundred years of mankind are equal to a day and night in the mansion or heaven *Chattri Maha Rackéka*, which lies in the latitude of the constellation of the Alligator; and five hundred years of this heaven are equivalent to a day and night of this hell. When the suffering spirits have endured the torments of this immense period, they return to the earth, and animate the bodies of vile reptiles, or ferocious animals. Thieves are precipitated into the hell *Kalasutte*. One thousand years of man are equal to one day and night in *Tapsakages Savan* (the heaven of Indra); and one thousand years in this last form a day and night in the hell *Kalasutte*. When the guilty have been punished for this period, they return to the earth, and animate the bodies of miserable wretches and loathsome animals. Adulterers pass into the hell called *Sanghatta*, where they remain for two thousand ages. Two thousand earthly years are equal to a day and night in the heaven *Yama*; and two thousand years in *Yama* are equivalent to a day and night in *Sanghatta Naraka*. Adulterers, again, ascend to the earth, and animate the bodies of women, to all appearance, but deprived in reality of the sexual distinction. Liars fall into the hell called *Rorúwa Naraka*, and there are tormented for four thousand years. Four thousand years of man form a day and night in *Dutrida Savan*; and four thousand years in this last are equivalent to a day and night of *Rorúwa Naraka*. The guilty soul, when it again visits the earth, becomes a devil, or animal of hideous aspect. Drunkards and sots are precipitated into the *Maha Rorúwa*, or the great hell. Eight thousand earthly years equal one day and night in the heaven *Nime-naratté*; while eight thousand of its years are the measure of a day and night in *Maha Rorúwa*. *Khama*: here the guilty remain for sixteen hundred of its years. *Maha* (or great) *Khama*, where the wicked dwell one half of a *kalpa*. *Maha Avéché*, where the guilty dwell for the period of one *kalpa*. The punishments in all of these hells are proportioned to the crimes of the sinners. There is the *Loka*

Kumbha, or the iron cauldron hell, in which the sinner is boiled. The *Sampaha*, where there are high trees, on which grow long spikes, and upon which sinners are transfixed; while huge birds gnaw their flesh and tear them with their talons. The *Asitohaka* and *Asinaka*, where are great lakes and reservoirs of freezing water, and fields of inextinguishable fire; and where the guilty are punished by being suddenly transported from one of these to the other. *Tamphothaka*, where there are iron pots with liquid fire; and *Pitaka Baphata*, where immense grinding stones and hills roll over and crush the wicked. *Atadha Naga*, the hell of snakes; *Sunaka*, that of dogs. *Yantapatsana*, where the damned soul is hurled down from awful heights, and dashed on rocks. *Kusa*, where there is fire, from which no flame proceeds. *Ayotava*: balls and bars of red-hot iron are here prepared for the guilty to grasp in their hands and bear on their shoulders. Each of the eight great hells is surrounded by sixteen lesser ones; and each of these again by forty still smaller ones: making fifty-seven in all for one group. Each group is enclosed by a massive iron wall, nine *gojanas* thick. In this are four gates, one at each face of the square. The whole of the hells, composing one *Maha Naraka*, amount to four hundred and fifty-six. The rulers in hell are in number sixty-four, and they sit in judgment at the gates; that is, thirty-two remain on the judgment-seats for six infernal months, when they are relieved by thirty-two others. From the corners of the iron square extend four lines of bells, joining with the great one. They are,—1st. *Wetarand Naraka*. In this hell are famous lotus flowers, which swim on the surface of the cold lakes. They are furnished either with sharp spikes to catch the falling sinner, or with downy cups to receive the souls of those who, although sinners, have yet committed more good than bad actions, and are entitled to pardon. 2d. *Asépa Wananaka*. 3d. *Kokkida*. 4th. *Utha Naraka*. In certain spaces betwixt these hells lie iron mountains, dazzling and resplendent, but not hot: they are termed *Kalicka baphat*. Above the infernal regions is the abode of evil spirits, who often ascend amidst the mountains of *Hemavanta*. This passage points out the site of *Mera*.

Some of the ensuing details are very remarkable, but more fit for a scientific work than a periodical for all eyes. We pass therefore to some notes of common interest.

Mankind in the Siamese, as well as the Burman cosmography, become extinct at the destruction of a world. They are reproduced by the descent of certain deities from the abodes of the *Tihevátta*, who are allured from their starry habitations by the sweet scent arising from the crust of the new-born earth. The *Devatas* are believed to be spirits which have formerly animated mortal frames; and when the periods, during which they have been judged worthy to enjoy bliss in heaven, on account of their virtues, have respectively drawn to a close, they must again return to the earth to undergo probation in new states of existence.

Moore might frame new Loves of the Angels out of this strange, but frequently beautiful and highly imaginative mythology. The serpent, it may readily be supposed, figures in the Buddha creed, as in all ancient systems of religion.

When *Garuda* stole the *Amrita*, or water of immortality, from *Kaikk*, some of it fell from his mouth upon some grass. The serpents licked it up, and have ever since had forked

tongues. The *Seshanaga*, or prince of the serpents, is also said to tenant the southern hemisphere, or nether world. The serpent was also called the Malignant Serpent; the Evil Genius; the Dragon of the Hesperides, and the Polar Dragon; and *Asacha*, the principle of good and evil, was represented by two serpents contending for the mundane egg. The king of the *Assurs*, in Hindu mythology, was also the prince of the *Nágas*, or snakes.

"The King of Snakes and *Indra* are great agents in Siamese mythology; and also in history, when any great event is to receive the embellishments of fiction. The former is stated, in the Siamese history of *Ligor*, to have been one of the means of inducing *Tampasukkarat*, Prince of *Avadi*, to settle and people that country. *Bádan* (*Patala*) is his residence. According to Wilford he lived in *Chaciagiri*. *Naga* signifies either a mountain snake, or an elephant."

The following is another and a very poetical symbol:

"*Satta Maha Sara*, in Siamese *Sa Yai Chet*, or the seven great lakes of *Himala*, abounding in every variety of the lotus or water-lily, and filled with wonderful fishes. Their shores are fringed with flowers of exquisite fragrance and brilliant hues: while the forests are tenanted by the rarest and most formidable species of animals. Below a wide-spreading tree, in these regions, lives the mighty Elephant King, who has a retinue of 8,000 followers, elephants like himself, and of four different colours. His wives are three in number, viz. 1st. *Maha Supatsa*; 2d. *Machema Supatsa*; and 3d. *Chumla Supatsa*. These were, no doubt, either queens, or perhaps kings at some former period: for it may be remarked, that spirits migrate into either sex after death. *Sangermano* tells us, the Burmans suppose that from the seven lakes of *Hemavanta* spring five rivers; the chief of these lakes being *Anondit*. The Burman and Siamese geography of *Himala* is nearly the same. In the *Ratana Kalapa* is noticed a great lake called *Sidhantara*, in which nothing will swim."

Another remarkable feature is "*Walahako*. The Siamese *Ma Phalahok*, said to have been the famous horse of *Himala*; termed likewise the 'Horse of the sky.' This seems to allude to the white horse of the *Kali Avatar*, which is yet to come. We cannot help being struck with the coincidence of a white horse being also conspicuously described in Holy Writ. He figures in Hindu chronology as the deity who

"In Lieut.-colonel Franklin's interesting researches on the *Jaynes* and *Buddhists*, published since the foregoing remarks were written, he has given an interesting account of the *Serpent Worship*. He observes, that it was mixed with the Jewish ordinances; that the dragon, or great serpent, was worshipped in Babylon, in the reign of *Cyrus*, as recorded in the *Apocrypha*. Bryant observes that, in the orgies of *Bacchus*, the persons who performed the ceremony carried serpents in their hands, calling with horrid screams upon *Eva*, or the *Serpent*. *Thermuda*, or *Ob-oub*, or *Basileus*, was the royal serpent of Egypt. The *Cuthites* had always some legends of a serpent. At *Colchis*, *Thebes*, and *Delphi*, the same worship prevailed. The serpent, according to *Montfaucon*, was a symbol of the sun; and *Eusebius* has observed that a serpent within a circle, touching it at the two opposite extremes, signifies the good genius, the *Evangelium* of the *Greek*. *Vossius*, in his 3rd chapter, on *Pagan Idolatry*, details the origin of the serpent worship, affirming that it commenced in *Chaldaea*. *Pythagoras* brought the worship from Egypt to Greece, and thence it passed into Italy. The serpentine pillar of the *Hippodrome*, and the temple at *Delphi*, were erected in honour of *Apollo*, in commemoration of his victory over the great serpent *Python*. *Esculapius*, the Grecian god of physic, has a serpent emblem amongst his attributes. In Persia, *Zoroaster*, or *Zerdusht*, is represented as girded by a serpent: and in one hand of the figure, which represents the planet *Saturn*, is the serpent. In India the serpent *Vasuka*, whom the *Surs* and *Assurs* used as a rope in churning the ocean, is too well known to need description. In the time of *Pausanias* a statue of *Minerva* was to be seen at *Argos*

watches over the seven [it ought, perhaps to be eight, unless he himself forms the eighth] parts of the globe, which were guarded by the *Avatara*s, or guardian angels. Perhaps this is a type of the famous white horse of sacrifice at the *Anamada Yag*, or at the sanguinary rites of the *Druids*, who, according to *Maurice*, were obliged to substitute a white steer in place of so rare an animal as the other then was in Britain."

Again: "*Erawanno*. The Siamese *Chang Erawan*. This elephant appertains to *Indra*, the god of the firmament, or *Jupiter Tonans*. In an extract from a Bali work, named *Intrapati*, given to me, he is described as having thirty-three heads. In each head are seven tusks; and in each tusk seven ponds of water. In every pond are seven lotus plants; each of these plants has seven flowers; every flower seven leaves; and each leaf supports seven princesses, each of whom is waited upon by seven slaves. These nymphs incessantly surround the throne of *Indra*, softly gliding through the dance to the melody of the spheres. This is an additional instance of the great antiquity of the partiality shewn by various nations for the number seven. *Erawanno*, according to the *Bali Milinda*, is described as being one hundred and fifty *gojanas* high; and his body is proportioned thereto. He seems to be the same as the *Aravata*, or one of the precious things procured by the gods by churning the ocean with the mountain *Mandár*."

"The woods of the Indo-Chinese countries shelter a species of cattle much larger than the *Yák*. In the woods of the coast of Siam, the bison is a very powerful animal, and seems not yet to have been accurately described. I have only seen its horns, which measure twenty-four inches in length, and nineteen in circumference at the base. The termination of the black part of the horn is twelve inches from the tip, and nine in circumference."

We are glad to find a useful notice of modern natural history in an explanation of ancient superstitions. To the latter, however, we must return.

"*Watta Sangho*. The Siamese *Hae Sang*, i. e. the shell *Sang*. It is the chank shell, or *buccinum*, with the involutions turned from left to right. It is also termed by the Siamese *Sang Thák Hinndwát*. It is most valued when it can be found with this, I imagine, unusual conchological conformation. It is highly prized all over India, and venerated more or less by all classes of Hindus. These shells form a considerable branch of traffic betwixt Ceylon and

made of marble, and which exhibited two serpents unfolded at her feet, and protected by her shield. Colonel F. further notices that the serpent worship prevailed in Russia, and other northern nations, and also in Mexico and Peru. *Faber* describes the *Firstiputari*, or deity of Mexico, as holding in his right hand a staff, cut in form of a serpent; while the four corners of the Mexican ark terminated in carved representations of serpents' heads. Here also was the *Cinacochuacati*, or 'woman of our flesh,' who was represented with a great serpent. The *Evil Being* of the Goths is said to have had two children, *Deuth* and an immense serpent; the latter of which winded himself round the whole globe of the earth. The Goths were a branch of the *Cuthites*, who came from the *Indian Caucasus*; and *Thor* or *Woden*, is the *Buddha* of India, the great father of Scandinavian mythology, who, as the serpent *Midgard* from the bottom of the sea. In *Stomchege* the serpent *Hu* was venerated; and the circle at *Abury* enclosed two other circles, and was attached to an enormous snake formed of upright stones, with a fourth circle for its head. This god is represented with wings. In conclusion, he observes, that it would appear that the royal sacred serpent of Egypt, the serpent *Canophis*, or *Cneph*, as seen in the temples of *Thebes*;—the serpentine deity of Persia, as represented on the walls of *Pemopolis*; and at *Nakshi Rostam*;—the serpentine deities of the Chinese;—the globe and winged serpent of the Chaldean *Magi*;—the great serpent *Ananta Sesha Naga*, and *Vasuka*, of Hindu mythology;—the Mexican serpent;—and the *Midgard* of Scandinavia, all spring from one and the same source."

Bengal, being exported from the former. When the number of convolutions of a shell amounts to ten, the Siamese prize it most, because this is the number of the *Chidi*, or states of existence of *Pjurá Buddha*, which he had passed through previous to his last appearance. Maurice also informs us, that the nine valves of this shell allude to the nine incarnations of *Vishnu*. The *Shaphar* of the Jews seems to accord with this shell, both being applied to religious uses."

"*Khrut* is a favourite bird with the Siamese. But they evidently connect him with some dynasty of kings. I will, therefore, briefly describe one of their legends respecting him, which they told me has been extracted from the Bali *Nipat-ha*. It is wrought into a romantic legend in their own language, and termed *Ru-ring P-hria P-hrommat-hat* of *Pharanási* (or Benares), and *Nang Kaki* his queen. The Bali designations of the king and queen are *Phramad-hat-ha Raja*, and *Kaki Nari*. This princess had a lovely countenance, with a frame of exquisite symmetry, which possessed likewise such a heavenly fragrance, that the senses of ravished man were overpowered to a distance from her of seven *yojanas*, or about sixty-three miles. The king had a prime minister, *K'hon Than*, who had the faculty of being able at any time to transfer his soul into the body of any animal, or to change his own body into the likeness of one. He was likewise a skilful musician. It so happened that *Garuda*, in shape of a handsome youth of polished deportment, visited the court of King *Phrommat-hat*, and was invited to play a game at chess (the *len saka* of the Siamese) by his majesty. While at play, the ladies of the palace, with their attendant maidens, beheld *Garuda*; and instantly, from gazing on his beautiful countenance, forgot the duty they owed their lord and king. *Garuda* soon perceived the impression he had made on the affections of the accomplished queen, and determined in his mind to carry her off. Accordingly, at night he assumed his bird-like form, and approaching the window of her apartment he placed her on his back, and then flew towards *Simp-hati*. The minister, *K'hon T'han*, was aware of the elopement, and devised a scheme to recover the lady. When *Garuda* next played at chess with the king, and was departing, the minister reduced his body to the size of a mite, and fastening himself on the back of *Garuda*, he was in the evening transported by him to his abode. He remained here seven days unknown to *Garuda*, and endeavouring to persuade the lady to return, to which she at length consented. *K'hon T'han*, therefore, on the next visit of *Garuda* to the king, and while they were busy at their favourite game, serenaded them with his voice, accompanied by his violin or guitar—singing these words:—'How elevated is the lover when smiled on by his mistress. Even here my sinking senses are refreshed and delighted by the fragrant zephyr—the breath of that lovely one, whose dwelling-place is in the forest of *Simp-hati*.' The quick ear of *Garuda* caught the tormenting sounds. He speedily returned to his abode; and upbraiding *Kaki Nari* for her coquetry and fleeting attachment, conveyed her back to the palace of her husband."

With this we shall finish what we have to offer from Captain Low's notes upon the *Phrabát*; and while speaking of these divine footmarks, will suggest an inquiry, whether the common practice (visible on every spot visited by travellers—such as church-roofs, mountain tops, rocks, &c. &c.) of shaping a foot on

which to carve initials of names and dates, can have any connexion with these very ancient traditions?

Among the remaining papers are two very circumstantial and curious descriptions of the Marriage Ceremonies of the Hindus and Mahometans; communicated by Sir Alexander Johnston. The former is particularly novel and interesting.

Love; a Poem. By the Author of "Corn-Law Rhymes." 8vo. pp. 131. 3d edition. London, 1831, Steill; Sheffield, Blackwell and Pearce.

THERE are many Napoleons among books—one favourite of fame who emerges from obscurity, and forthwith casts the light of its renown over its less successful elder brethren. This is the case with the volume before us. The *Corn-Law Rhymes*, a singularly original and often beautiful composition, attracted public attention, which extended itself to its predecessors. We have reason to believe that the term assumed, by "a mechanic," was only a poetical license, such not being really the author's calling: but this is not our business, which lies with the volume before us. Modelled on a school long since past, *Love* resembles in form the *Pleasures of Imagination*; and *Akenside* is evidently a favourite author. There is a fine eye for the beauties of nature, and much of poetical feeling; but as a whole, it does not escape the usual destiny of a didactic poem, being both long and dull. It is a composition which gives you a higher idea of the writer than it does of itself; but it is one to furnish some favourite extracts. We shall make a brief selection.

Invocation:—

"Love! eldest Muse! Time heard thine earliest lay,
When light through heav'n led forth the new-born day.
The stars, that give no accent to the wind,
Are golden odes and music to the mind;
So passion's thrill is Nature's minstrelsy;
So, to the young heart, Love is poetry.
God of the soul! illumination, caught
From thy bright glance, is energy to thought;
And song, bereft of thee, is cold and tame—
The hard a cinder, uninstinct with flame.
But when the heart looks through the eye of Love
On Nature's form, things lifeless breathe and move—
The dewy forest smiles—dim morning shakes
The rainbow from his plumage—music wakes
The dimpled ripple of the azure wave—
In fiery floods green hills their tresses lave—
And myriad flowers, all brightening from the dews,
Day's earth-born stars, their golden beams effuse:
Transported passion bids rocks, floods, and skies,
Burnt into song, while her delighted eyes,
To all they see their own rich hues impart,
And the heart's language speaks to every heart."

The following is beautiful:—

"Bless'd is the hearth when daughters gird the fire,
And sons that shall be happier than their sire,
Who sees them crowd around his evening chair,
While Love and Hope inspire his wordless pray'r.
Oh, from their home paternal may they go,
With little to unlearn, though much to know!
Them may no poison'd tongue, no evil eye,
Curse for the virtues that refuse to die—
The generous heart, the independent mind;
Till truth, like falsehood, leaves a sting behind!
May temperance crown their feast, and friendship share!
May pity come, Love's sister-spirit, there!
May they shun baseness as they shun the grave!
May they be frugal, pious, humble, brave!
Sweet peace be their's, the moonlight of the breast,
And occupation, and alternate rest,
And, dear to ease and thought, the rural walk!
Their be no care that withers on the stalk,
But roses clogg'd, that shall not bloom in vain,
And Hope's blest stars, that sets to rise again!
Be chaste their nuptial bed, their home be sweet,
Their floor resound the tread of little feet;
Bless'd beyond fear and fate, if bless'd by thee,
And heirs, oh, love! of thine eternity!"

We conclude with the ensuing description:—

"Dost thou mourn with me
The year's autumnal spring?
Sigh'st thou this second wreath to see,
Of woodbines blossoming?
So late, so pale, with scentless breath,
Like lingering Hope, that smiles in death,

And, e'en when life is o'er,
Leaves on Misfortune's ice-cold face
The sweetness of its last embrace,
To fade, and be no more?
Lo, June's divested primrose sports
A silken colf again;
And, like late-smiling sickness, courts
The coy morn—but in vain!
Lo, half the elm's rich robe is gone!
The ash, a living skeleton,
Deplores his yellow hair;
Yet, while the beech-leaf rustles red,
And while the maple bows her head
In mournful honours fair—
Methinks the armed gorse appears
More golden than when May
Left April dying in her tears
Beneath the plummy spray;
And, for her lover's triumph won,
Danced with her blue-bell anklets on,
And bless'd his burning eye—
Come, Laura, come! and bear the thrush,
O'er autumn's rose, from budding bush,
Pour vernal melody!
Come! and beneath the fresh green leaf
That mocks the aged year,
Thy bard, who loves the joy of grief,
Shall weave a chaplet here;
Not pluck'd from summer's wither'd bower,
Not form'd of autumn's hopeless flower—
Yet sad and wan as they:
Here, still, some flowers of Eden blow;
But deadly pale and stain'd with wo,
Like gulf, they shun the day,
While Folly treads beneath his feet
The daisy of the vale;
Love's rose, though sick at heart, is sweet—
Joy's leaf is fair, though pale.
And worth admires, resign'd and meek,
The tear-drop on the violet's cheek,
And Hope shall death survive."

The narrative parts are the worst; all the characters talk too much: people in utter despair never make long speeches.

Major Ricketts on the Ashantee War.

[Second Notice.]

WE reserved some of Major Ricketts' statements relative to the colony of Sierra Leone itself for our present Number, and with them we conclude our notice of his intelligent volume.

"At intervals during the day in the rainy season, the action of an intensely hot sun on the earth, covered with a luxuriant vegetation, and saturated with moisture, produces a disagreeable sickening smell, which is probably one of the causes of the fever that prevails at this period of the year, as persons recently arrived are generally taken ill in July or August: some, however, have been known to reside in the colony above two years without having been affected by it. If they remain beyond this time, they are certain not to escape much longer, and when at length they take the fever, it generally proves fatal to them. It is considered the more favourable symptoms for a stranger to be seized with the fever soon after his arrival. The havoc which this dreadful disease has made among the Europeans who have gone out, or have been sent to the colony, is well known. On the first arrival of European troops in 1825, they died in greater numbers than at any subsequent period.

The coast is now garrisoned by three companies of the royal African corps, consisting of one hundred men each, stationed at Sierra Leone, at the Gambia, and at *Fernandes Po*: there are also recruiting parties of the first and second West India regiments at Sierra Leone. These regiments have been very successful in obtaining recruits among the liberated Africans, from the villages, who voluntarily enlist, and cheerfully embark for the West Indies. All the European troops have been sent home, and the whole of the coast is now garrisoned by native soldiers. . . . The population of the colony is about twenty-six thousand. Freetown is inhabited by European merchants, who have built houses for their stores and

residences, Maroons, Nova Scotians, blacks (called settlers), discharged soldiers from the West India regiments, exiles from Barbadoes, and liberated Africans who have obtained lots of land in the town. It is well and regularly laid out, and the streets, most of which lately have been properly constructed, are sixty feet wide. Notwithstanding the money which has been expended on public buildings, there are none in the town with the exception of the jail, the barracks, the commissariat, and the buildings of the liberated Africans, that are worthy of the name. The houses, from the destructive nature of the climate, require annual reparation; even iron, unless well painted, will not withstand its effects long. The buildings are erected with a red clay-stone, which is found in quarries in the neighbourhood.

Many persons belonging to the surrounding tribes have taken up their temporary residence in the colony, and the Mahometan religion, which many of them profess, allowing a man to have several wives, is in that respect making much progress. With the exception of the most respectable of the Maroons and Nova Scotians, the native inhabitants have not advanced much in European civilisation, not being so refined in this respect as a domestic slave in the West Indies; but they are fond of dress, and newly liberated Africans soon follow their example to the extent of their means. The Maroons still retain a dialect peculiar to them in Jamaica. Some of the Maroon lads, by being employed in the Europeans' shops, improve themselves much, particularly in their writing. They occasionally give parties, at which there are young ladies who figure away in a country dance, copied from the Europeans; some of whom give a ball and supper, but to which none of the males of colour are invited, except one individual, a merchant, who is often a guest at the dinner-table of the Europeans.

The liberated Africans are now supported by government only for six months after liberation in the colony by the mixed-commission courts, at the rate of two pence per day for each adult, and three halfpence per day for children: a piece of cloth sufficiently large to wrap round the body, and a blanket, is given to each individual, or one blanket between two children, on landing. The men are not located until three months after they are received by the liberated official department, being employed on light work during that time, for the good of the public. When I assumed the government, I adopted the plan of sending half the newly arrived African males to clear land and build huts for themselves, and the remainder was kept in Freetown, and employed in the manner above stated. Thus they were provided with houses and provision-grounds when their time of working for the public had expired. During the six months they have also issued to them two shirts and two pair of trousers each, and when located, provided with implements of agriculture and cooking utensils. The government provide for them, as already stated, during six months, at the expiration of which they are put on their own resources, and are usually assisted by their own country people until they are well able to maintain themselves. Some of the men are occasionally apprenticed to the merchants who are engaged in the timber-trade up the rivers, and favourable reports have been made of them. They will readily hire themselves, but they require much looking after. Many of them, after having resided some time in the colony, acquire a small capital, principally by traffic in European

articles. None of these people hire themselves as sailors on board of ships, nor do they serve as boatmen, owing to their incapacity; but a few of them possess canoes, in which they employ the neighbouring natives, and trade to the adjacent rivers with European merchandise, which they exchange for rice, to retail again in Freetown. Some of the discharged soldiers employ themselves also in this manner. This is the kind of occupation which these people like; and as soon as any of them acquire some capital in another line, they speculate in traffic. Some of them also saw boards, and split shingles, which they sell at Freetown. The women get married, as they are not allowed to be taken otherwise by the men, almost immediately after being landed. Some of the girls and boys are apprenticed to the inhabitants on liberation, and the remainder sent to school in the villages, where they are supported and clothed until they are either apprenticed or able to provide for themselves; some of the girls are also disposed of from thence in marriage."

There are seventeen liberated African villages in the colony; and at "present, except those who are tied to the villages by possessing good houses in them, the liberated Africans move from place to place as their fancy leads them; and as no regular allotment until lately had been given to them, they sit down as they call it wherever they like. Ideas of perfect liberty have too soon been given to these people, considering their utter ignorance. If one of them were now asked why he does not repair his house, clean his farm, mend his fence, or put on better clothes, he replies, 'that king no give him work this time, and that he can do no more than burn bush and plant little cassada for yam' (to eat). The trade in slaves is carried to a greater extent than formerly in the neighbouring rivers; the vessels that frequent them carry for this purpose Spanish dollars and doubloons, which subsequently find their way to Sierra Leone for goods. Many of the liberated Africans have been enticed from the colony, and others kidnapped by the vagabonds already mentioned, who reside in the suburbs of Freetown: they are resold as slaves; some of them after a few months have been recaptured in slave-vessels, and brought back to the colony to be liberated. The numerous creeks in the immediate vicinity of Sierra Leone, which communicate with the rivers, afford great facility for carrying them off.

"The Portuguese and Spaniards impress on the minds of the slaves that the English are anxious to destroy them; in consequence of which the poor creatures are just after capture much dejected; but as they are generally immediately released from their confinement, and every possible attention paid to them, they soon become cheerful, and although totally unacquainted with one another's language, shortly become familiarised by signs or motions, and when anchored in Freetown harbour, awaiting their adjudication, their countrymen located in the colony visit them; and from being acquainted with their approaching delivery, they indulge in merriment and pleasure. Should there be any disease among the slaves on board the ships, they are landed as soon as the necessary legal forms are gone through. Many of these poor creatures arrive in such a deplorable state from want and disease, that it is difficult to preserve their lives. It is really shocking to humanity to see a cargo of children arrive sometimes mere skeletons, in a complete state of exhaustion. The small pox and measles

often break out on board the slave-vessels, as well as the ophthalmia. Slaves are purchased from the natives on an average for about four pounds each, and are paid for in gunpowder, arms, tobacco, ardent spirits, &c. Those taken in the latitude of Sierra Leone might reach Fernandez Po in fifteen or twenty days."

These extracts not only convey much information, but as the author evidently writes without prejudice or partisanship, his statements are eminently entitled to attention, beyond the mere interest which is to be found in their curious details. The work is unambitious, and the style not very polished; some lithographic prints illustrate it; and, upon the whole, we consider it to be a production of merit and value.

Medical Zoology and Mineralogy; or, Illustrations and Descriptions of the Animals and Minerals employed in Medicine, and of the Preparations derived from them, &c. &c. With Figures coloured from Nature. By J. Stephenson, M.D., F.L.S. Nos. 1, 2, 3, 4, 5. London, 1831. Wilson.

THIS work (to be comprised in twelve Numbers) promises to be extremely useful to the medical, and interesting to the general reader. The author acquitted himself so very well in his former undertaking, entitled *Medical Botany*, that we augured favourably of the present since its first announcement; and the Numbers which have appeared justify the anticipation which we had formed. The following extracts will shew the manner in which the work is executed, and the general as well as professional interest which it is calculated to impart.

"That the beaver (*Castor fiber*) was once indigenous to different parts of Britain, particularly to Wales and Scotland, is certain upon the credit of the most authentic records; and the fact of its having been one of the native quadrupeds of Scotland, has received the most ample confirmation from the occurrence of the fossil remains of the animal in Perthshire and Berwickshire. The earliest written authority we have of the existence, in former times, of the beaver in Wales, is contained in a remarkable document of the ninth century, the Laws of Howel the Good, where the price of the beaver's skin is stated at no less than 120 pence. The latest account of this subject is contained in the *Itinerarium* of Sylvester Giraldus, who travelled through Wales in 1188, or about 300 years after the date of Howel Dha. He gives a brief history of their manners, and adds that, in his time, the beaver, distinguished by its descriptive and appropriate title of *lloddydan*, or 'broad tail,' was only found on the confines of the river Teivi, in Cardiganshire. In their natural state they subsist entirely on vegetable food, such as roots, young wood, and the bark of trees: they are very partial to the roots of the *magnolia glauca*, which, in America, is known by the names of white laurel, swamp sassafras, and beaver-tree; the poplar, aspen, and birch, are the favourite food of the European beavers. During summer, when these are to be obtained in great abundance, the beavers wander about the meadows and thickets that border the lakes and rivers which abound in North America. On the approach of winter, they quit their roaming way of life, form themselves into companies, and, instructed by instinct, begin to provide for the wants of the season, and set about constructing those habitations which have so long excited the wonder and admiration of mankind."

After noticing the opinions of Sonnerat,

Temminck, Leach, and others, on the origin and races of the domestic cock, the author remarks:—"The origin of cock-fighting is lost in the periods of remote antiquity; yet even the polished Athenians allotted one day in the year to this barbarous sport: the Romans seem to have borrowed it from the Greeks, and the ancient Britons from the Romans. So addicted was Henry VIII. to this inhuman spectacle, that he caused a commodious house to be built for its exhibition, and which still retains the name of the *cock-pit*; and the practice was perversely promoted in our public schools. In China the rage for cock-fighting is still more prevalent than in this country; and in Sumatra a man will hazard, not only his property, but his wife and children, on a favourite bird."

Dr. Stephenson has given a detailed account of the different poisonous reptiles, and of the effects of, and modes of treating, their bites. Respecting the species of asp which Cleopatra employed to commit suicide, he remarks:—"It has only been since the expedition of the French to Egypt that the true species of the asp has been ascertained. During the period of that expedition, the French philosophers attached to the army observed a species of ophidian, regarded as harmless by Linnaeus and most herpetologists, but considered as extremely venomous by the traveller Forskal. This ophidian is called *Aafé* by the inhabitants; and recent travellers have incontestably proved that it is the true asp of the ancients, which never inhabited Europe; for the reptile which some years since infested the forests of Fontainebleau, and was called by this name, was nothing but a variety of the common viper; and the *aspéring* of the Swedes is quite another species from the one in question. The ancients entertained a notion that the poison of this serpent is more deadly than that of any other venomous creature inhabiting the East; that its bite, though inevitably mortal, produced no pain or violent symptoms, and merely occasioned the gradual diminution of pulsation, which was followed, within twenty-four hours, by a profound sleep, terminating in death. Galen assures us that, in Alexandria, to shorten the punishment of criminals condemned to death, they were bitten in the breast by an asp; and Dioscorides asserts that the wounds occasioned by the bite of this reptile are unaccompanied by any local tumefaction, and that they are so small that they appear to have been made with a very fine needle."

A Catalogue Raisonné of the Works of the most eminent Dutch, Flemish, and French Painters, &c. By John Smith. Part the Third. Smith and Son.

WE are glad to find that the encouragement afforded to the earlier portions of Mr. Smith's most useful work has encouraged him to proceed. The volume before us comprises the works of Vandyke and David Teniers; and, while it is interesting to the general reader, must be invaluable to the connoisseur and collector. Besides a preface, containing a sketch of the history of portraiture, from Raffaele to Sir Thomas Lawrence, there are brief biographical and critical notices of the two celebrated artists whose productions are immediately in question. From those notices we extract the following passages:—

VANDYKE.

"His historical productions, although few in number compared with his other works, are amply sufficient to shew that he possessed the genius requisite to have continued that course with honour, had he made it his exclusive pur-

suit: that he did not do so, may be imputed to two causes; the utter hopelessness of competing successfully with Rubens, and a decided predilection for portraiture. In the various historical subjects treated by his pencil, he has evinced most genius in those of a solemn nature, which excite sympathy and commiseration; such are his *Pietas* and *Crucifixions*. In the latter, the countenance of the suffering Saviour is always indescribably affecting; and in both subjects the agonising grief of the Virgin is depicted with a power of expression which strikingly exemplifies the pathetic appeal, 'Were ever sorrows like unto my sorrows?' still there is a dignified calmness in her demeanour, differing from that of the Magdalen, whose more violent grief arises from grateful attachment: the latter is always weeping and embracing the hands and feet of her Lord. The apostles and holy women are characterised by sentiments of sorrow and devout attachment; and the piety of religious persons is also given with suitable effect and propriety. In the various pictures representing the Holy Family, the Virgin is never devoid of appropriate dignity; and occasionally a look of inspiration beams in her countenance. The same happy choice of intellectual expression does not, however, accompany him in his other figures, as may be observed in his infant Saviour and St. John, which seldom appear to be more than comely children of an ordinary stamp. The subordinate persons in his groups are frequently still more defective. In his compositions he has too often borrowed from Rubens, to be entitled to much credit for invention: witness his pictures of 'Samson and Delilah'; 'St. Ambrose and Theodosius'; and 'St. Martin dividing his cloak.' In many other of his productions may also be detected groups taken from his master's works. Still, it must be admitted that the correctness of his drawing, and a certain air of elegance in the figure, compensate for the plagiarisms. As a colourist he deservedly ranks with the first masters; he could imitate to deception the brilliancy of Rubens, as is instanced in many of his early works; or assume the rich and mellow tones of Titian, as is exemplified by the numerous pictures painted by him when in Italy. If some of his works are censured for the predominant brown tints, it should be recollected that they were not so originally, but have become dark from the protrusion of the ground colour, or from being slight and hasty productions. No painter was ever more skilful or dexterous in his art; his rapid execution was governed by a mastery of touch, accompanied by a lightness and spirit peculiar to himself, and which are frequently the distinguishing characteristics between his works and those of Rubens. In comparison with that illustrious artist, as an historical painter, he was immeasurably inferior; not so in portraiture: in this he rises superior, and may almost claim an equality with Titian. If he has less dignity in expression than the great Venetian, he has infinitely more elegance and grace, as well as natural animation, superadded to chaste and correct drawing, the agreeable art of giving action to his figures, and a more pleasing air to the heads. These excellencies he had acquired by studying the peculiar beauties of the best Italian masters, on which he formed a style entirely his own, and admirably adapted to portray persons of every class and character, which is not the case with the severe and solemn style of Titian. To those who have not attentively considered the works of Van Dyck, it may be useful to observe, that those pictures which he painted in Italy have

more of the Venetian colouring than those of a subsequent period: such are the portraits of a Genoese senator and his lady, in the collection of the Right Hon. Sir Robert Peel; John Count of Nassau, in the collection of Alexander Baring, Esq.; and others already enumerated. Soon after his return to Antwerp he incorporated more of the Flemish mode of colouring into his pictures, perhaps in deference to the taste of his countrymen: amongst the numerous examples of this class may be adduced the portraits of the Chevalier Roy and his lady, now in the Prince of Orange's palace at Brussels; Jacob le Roy, in the possession of Lord Brownlow; the Duke of Nassau and family, in the collection of Earl Cowper; and the Osvartius in the National Gallery. The same delightful colouring glows in his early productions in this country; but in proportion as his sitters augmented, his pictures became lighter or less finished; and many of them were done with such despatch that little more than a day sufficed to begin and complete a portrait: for it is asserted, that he frequently kept his sitters to dinner, and, by working afterwards, finished it the same day. By these means, and the aid of assistants and pupils, he executed an incredible number of pictures, many of which are painted in a very slight and negligent manner; but though thus hurried, they are never devoid of that elegance and grace which give a charm to all his female portraits, nor deficient in that gentlemanly air and style which is no less attractive in those of the other sex."

TENIERS.

"The artist whose life and works form the contents of the succeeding pages, being a pupil of his father, naturally imitated his manner; but, possessing a very superior genius, he gradually abandoned the brown and heavy tones of colour used by him, and adopted those of a clear and silvery kind. His handling is also infinitely more spirited and free than that of his instructor. He could, doubtless, have invented a style of his own, had he been so disposed; but he chose rather to improve upon the one he had attained, as he found it so well suited to express with facility whatever he desired to represent. No painter ever exercised the pencil with greater freedom and address—a few hours sufficing for the production of a picture containing several figures, perfectly formed, and full of animation. With these capabilities, aided by a lively imagination, he was enabled to execute an incredible number of pictures, many of which contain from twenty to one hundred figures, and a few of his productions have triple that number. The subjects which he usually represented were the familiar scenes of peasants or artisans, recreating either with the social pot and pipe, at a *cabaret*, or at their festive and joyous meetings on a village holiday; or in *kermis* time. His genius was not, however, confined to these subjects—it embraced almost every branch of the art. His conversational and musical parties, of persons of distinction, shew that he was well acquainted with the customs and manners of polished society; and whenever he represented himself and family, or his patrons and friends, which he frequently did, in his village scenes, and other subjects, each person was designated by a suitable character of gentility. His grotesque representations of the 'Rich Man in Hell'; of 'Pandemonium'; of the 'Temptations of St. Anthony'; and of other subjects, that admitted the vagaries of fancy, evince the playfulness of his humour, and the fertility of his invention. His landscapes, particularly

those of a small size, please by the light and airy effect which pervades them, and by the animating charm of rustic happiness depicted in the enjoyments of the peasantry. It appears that Teniers was, at one period, so attracted by the energetic and powerful style of Brouwer, that he painted a great number of pictures in imitation of that master; of these the prominent tint is a rich brown, doubtless because more opaque from time. It may also be observed, that the figures in these pictures are usually much larger than in those of his ordinary works, being frequently from twelve to eighteen inches high: this, however, is not a general rule; but they are always painted with a broad, free pencil, full of character and expression. Teniers, like many others in the profession, not content with the orbit in which he moved with splendour, attempted the higher and nobler stations of the art, and produced several historical and even poetical subjects. To accomplish these successfully required something more than the knowledge of common nature, or the blandishments of colour and facile execution; his lofty attempts ended much like the ambitious soaring of Icarus: although the subjects just noticed must have cost him infinitely more time and labour than his usual pictures, they are of much less value in public estimation. There is yet one branch of the art in which the versatile genius of this artist manifested itself with admirable success, namely, in *pastelli*, or imitations of the Italian masters, chiefly those of the Venetian school. In this endeavour he seems to have taken a peculiar delight, having left many examples in the style of Titian, Bassan, Tintoretto, and Giorgione. These possess much of the breadth of handling, richness of colour, and force of effect, peculiar to the works of those masters; their principal deficiency is in expression, and in this may be traced their Flemish origin. The writer has taken considerable pains to ascertain, identify, and authenticate the early works of this master; and, so far as he has been able to learn, they invariably partake of a brown tone of colour; and such appear to have been painted previously to his 30th year, about which period he gradually quitted these predominant brown tints, and adopted a much more clear, and what is termed silvery manner of colouring. Many of his finest works are dated 1647. In his latter time his handling became feeble and tremulous, and his colouring less transparent, with a tendency to a yellow brown. The vehicle, or medium, used by him, in painting, was evidently of the same kind as that with which Rubens, Breughel, and other artists of that school, worked; and, whatever this medium may have been, it is plain that it possessed two very important qualities, namely, of giving transparency to the colours, and being a convenient texture for its application; for nothing short of these, in conjunction with a perfect knowledge of the principles of the art, could have enabled him to produce such an incredible number of pictures, many of them filled with a multitude of figures, displaying the most lively animation and an infinite variety of action. The pictures most esteemed by connoisseurs are those painted on a light ground, formed with a preparation of chalk, or plaster of Paris; over which he scumbled his various tints of brown and pearly grays; the figures, and some of the accessories, were, at the same time, spiritedly sketched in with bistre, and the principal shadows thrown in; these were succeeded by the half tones, taking always especial care to preserve delicacy

and transparency: in the finishing, all the higher lights, and whatever required solidity, were charged with a body of colour; a few sparkling and spirited touches, and occasional glazing tints, completed the work. Some idea may be formed of the extraordinary number of pictures produced by this expert painter, by a quotation of his own words, 'that it would require a gallery two leagues in length to contain all his pictures.'"

Gerald Fitzgerald; on Irish Tale. By Ann of Swansea, author of "Uncle Peregrine's Heiress," &c. &c. 5 vols. London, 1831. Newman and Co.

AFTER all, a novel of the old school is the real El Dorado; gold and jewels are as plentiful as reasons; and heiresses distribute their wealth as if it were advice. The pages before us are venerable, at least, for their antiquity; and we could as soon say any thing disrespectful of our grandmother as of Ann of Swansea. Of the contents we need only observe, that wealth, titles, and beauty, abound: there is also a mystery, a murder, and an elopement; together with a very perfect heroine, who, at fifteen, declaims against idle pleasures, weeps at going to a ball, and is unhappy at having diamonds to wear. Marvels enough, our readers will grant, for one work.

A General System of Gardening and Botany, containing a complete Illustration and Description of all Plants hitherto known; with their Generic and Specific Characters, Places of Growth, Time of Flowering, Modes of Culture, and their Uses in Medicine and Domestic Economy. Preceded by Introductions to the Linnaean and Natural Systems, and a Glossary of the Terms used. Founded upon Miller's Gardener's Dictionary, and arranged according to the Natural System. By George Don, F.L.S. 4to. (in 4 vols.), Vol. I. pp. 818. London, 1831. Rivingtons; Clarkes; Longman and Co.; and most of the principal publishers.

THIS ample title-page so accurately describes the laborious, scientific, and most useful work, of which the first volume has just appeared, that we have little to say, except that it excellently fills up a great desideratum in the gardening and botanical world. Mr. Don is possessed of that practical experience which has enabled him to add the latest information to all the vast stock previously systematised, and his talent and diligence are equally deserving of our highest praise. The Introductions are intelligent, and the following of Jussieu judicious; the newer matter, derived from the Lambertian Herbarium, very valuable. The multitude of wood-cuts are well executed; and the text, though it looks cramp and difficult at first sight, from the number of contracted signs, is yet, after a slight attention, quite easy and plain. The mass of instruction conveyed is prodigious.

Bible Letters for Children, by Lucy Barton: with Introductory Verses, by Bernard Barton. pp. 369. London, 1831. J. Souter.

WE think this little volume does infinite credit to the youthful writer: the selections are very judicious, and told in as near the words of Scripture as possible,—the very words themselves used where of peculiar import; and the lesson dwelt upon and explained in a simple manner, obvious to the most juvenile capacity. Some very sweet verses by her father, Bernard Barton, an old and favourite friend of the

public and ourselves, are fitting introduction to this modest and deserving little work.

First Lines of Zoology, by Question and Answer, for the Use of the Young. By Robert Mudie. London, 1831. Whittaker.

A USEFUL and well-arranged catechism, going through the various branches of zoology in a clear and simple manner, well adapted for the instruction of youth.

Constable's Miscellany, Vol. LXXI.
